Hydraulic models of flow in an MHD generator channel, based on the equations of a two-dimensional boundary layer
p0274 A82-25788
Radiative heat transfer in turbulent MHD channel flow
p0281 N82-19407

CHARACTERIZATION
I-V characterization of solar cells
[INPE-2141-RPE/363] p0227 N82-18699

CHARGE EFFICIENCY
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] p0179 N82-18066
Chargeability of nickel electrodes studied by optical microscopy
p0293 N82-20438

CHEMICAL ANALYSIS
Magmatic gases in well fluids aid the mapping of the flow pattern in a geothermal system
p0243 A82-25373
Coal-gasification instrumentation program (PB 11734)
[DE82-001153] p0247 N82-16381
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] p0249 N82-17317
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] p0179 N82-18068
Analyses of the northern Great Plains province lignites and subbituminous coals and their ash
[DE81-028366] p0258 N82-20280

CHEMICAL ATTACK
Geothermal power plant corrosion experience - A global survey
p0242 A82-24297

CHEMICAL BONDS
Exploratory study of coal-conversion chemistry
[DE82-001104] p0258 N82-20281

CHEMICAL CLEANING
Oil slick dispersal mechanics
[PB82-105560] p0174 N82-16610

CHEMICAL COMPOSITION
Optimization of fuel composition in open-cycle magnetohydrodynamic power generation
p0272 A82-24020
Crude sources and refining trends and their impact on future jet fuel properties
[SAE PAPER 811056] p0242 A82-24391
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000689] p0281 N82-18705
The effect of fuel composition on groundfall from aircraft fuel jettisoning
[AD-A110305] p0262 N82-21424

CHEMICAL ENERGY
Heat storage by means of thermal dissociation reactions. Storage systems and materials
[IKE-5-213] p0294 N82-21766

CHEMICAL REACTIONS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000689] p0281 N82-18705
Studies in shock-tube spectroscopy, chemical reaction rates and mechanisms, utilization of low-Btu gases, and geothermal energy. 1: Shock-tube spectroscopy. 2: Shock-tube studies of chemical reaction rates and mechanisms. 3: Utilization of low-Btu gases. 4: Volcanoes as a source of geothermal energy
p0259 N82-20285
CHEMICAL REACTORS
Epitaxial growth of silicon by CVD in a hot-wall furnace
p0206 A82-24155
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] p0244 N82-16210
Dynamic behavior of moving-bed coal-gasification reactors
[DE82-000595] p0247 N82-16285
Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] p0222 N82-16475
Rapid-rate bituminous coal gasification
[PB82-115478] p0251 N82-17404
Gas/slurry flow in coal liquefaction processes (fluid dynamics in 3-phase flow columns)
[DE82-002562] p0260 N82-20474
CHLOROPHYLLS
A novel chlorophyll solar cell
p0221 A82-28386
CHLOROSILANES
New technologies for solar energy silicon - Cost analysis of dichlorosilane process
p0199 A82-23397
CHROMIUM ALLOYS
Corrosion of stainless steels in the geothermal environments of the Salton Sea known geothermal resource area
p0242 A82-24296
CIRCUIT PROTECTION
Evaluation of control and protection circuits
[PB82-105065] p0251 N82-17450
CIRCUIT RELIABILITY
Effect of shunt resistance and bypass diodes on the shadow tolerance of solar cell modules
p0198 A82-21366
CIRCUITS
Evaluation of control and protection circuits
[PB82-105065] p0251 N82-17450
CITIES
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] p0184 N82-19108
Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] p0257 N82-19383
Energy properties in urban building stock --- in Finland
[VTT-RR-1/81] p0185 N82-19696
Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] p0185 N82-20025
CIVIL AVIATION
Design possibilities for improved fuel efficiency of civil transport aircraft
p0164 A82-20514
Symposium on commercial-aviation energy-conservation strategies
[DE81-020406] p0169 N82-16057
CLASSIFICATIONS
Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data
p0244 A82-27694
CLEAN ENERGY
System economic theory for WECS --- Wind Energy Conversion Systems
p0163 A82-19112
Interfacing wind energy conversion equipment with utility systems
p0271 A82-21140
Replacement of fossil fuels by hydrogen
p0239 A82-21194
OTEC gas desorption studies
p0271 A82-23653
Exergetic analysis of complex multimaterial processes using nuclear coal gasification as an example
p0241 A82-23817
Thermodynamics of solar collectors
p0200 A82-23818
Biomass energy systems and the environment --- Book
p0169 A82-28000
Wind measurements from 50 m high towers in the northern German coastal region
p0261 N82-20779
CLIMATE
Investigation of the natural-climatic aging of the reflective films of mirrors by an electrical method
p0217 A82-24871
Life on a warmer Earth: Possible climatic consequences of man made global warming
[ER-3] p0185 N82-19701
CLIMATOLOGY
Climatic influences of residential energy consumption
p0178 N82-17742
Increase of atmospheric CO2 and possible climatic changes
p0178 N82-17763
Energy and climate in South-East Asia and the Western Pacific
p0178 N82-17764
Applications of climate information and the United States National Climate Program
p0178 N82-17765
Study of climate and its applied aspects
p0179 N82-17766
Effect of climate on the development of natural resources in Asia
p0254 N82-17782
CLINICAL MEDICINE
European Scientific Notes, volume 35, number 11
[AD-A109387] p0295 N82-20138
CLOSED CYCLES
Comparative analysis of CCMHD power plants --- Closed Cycle MHD
p0270 A82-20747
COAL
Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data
p0244 A82-27694
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] p0244 N82-16210
Potential economic benefits from process control of coal preparation plants
[DE82-000881] p0245 N82-16263
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] p0246 N82-16275
Investigation of the use of coal refuse-fly ash compositions as highway base course material
[PB82-101940] p0295 N82-16301
Underground coal mining section data
[NASA-CR-168393] p0247 N82-16454
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] p0249 N82-16557
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2
[PB82-103573] p0174 N82-16618
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] p0249 N82-16918
Rapid-rate bituminous coal gasification
[PB82-115478] p0251 N82-17404
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] p0251 N82-17455
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] p0252 N82-17554
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] p0252 N82-17555
Development of sensitized pick coal interface detector system
[NASA-CR-161961] p0252 N82-17560

The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[RR-151-PT-1] p0252 N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] p0252 N82-17565
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] p0253 N82-17603
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] p0254 N82-17696
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] p0254 N82-18406
An economic analysis of coal supply in the Ohio River Basin Energy Study Region
[PB82-113341] p0255 N82-18414
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] p0181 N82-18679
Coal mine siting for the Ohio River Basin energy study
[PB82-108119] p0181 N82-18680
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103615] p0256 N82-18737
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] p0183 N82-18753
Chemical desulphurisation of coal
[ICTIS-TR-15] p0257 N82-19332
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] p0257 N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] p0257 N82-19385
Hydrological problems of surface mining --- of coal
[ICTIS-TR-17] p0257 N82-19606
Longwall Guidance and Control Development
[NASA-TM-82455] p0257 N82-19637
Analyses of the northern Great Plains province lignites and subbituminous coals and their ash
[DE81-028366] p0258 N82-20280
The development of PVC-modified tars for use in surface treatments
[CSIR-RR-393] p0295 N82-20315
Room and pillar retreat mining: A manual for the coal industry
[PB82-120601] p0260 N82-20632
Heavy-liquid beneficiation of fine coal
[DE81-030965] p0261 N82-21279

COAL DERIVED GASES
Synthetic, coal-derived fuels
p0242 A82-24684
Description of the DOE Coal-Fired MHD Flow Facility /CFFF/
p0167 A82-24689
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] p0255 N82-18407
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] p0256 N82-18690

COAL DERIVED LIQUIDS
Synthetic, coal-derived fuels
p0242 A82-24684
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] p0245 N82-16228
Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol
[PB81-242562] p0247 N82-16286
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] p0249 N82-17315
Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] p0250 N82-17396
Synfuel modified diesel
[DE82-002298] p0251 N82-17400
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402
Integrated two-stage liquefaction Parametric study
[DE81-028756] p0258 N82-20284
Synthetic-fuel aromaticity and staged combustion
[DE82-002453] p0259 N82-20335

COAL GASIFICATION
The application of mixture theory models and numerical solution techniques to coal gasification reactors
p0241 A82-19254
Coal gasification combined cycle power generation simulation
p0241 A82-19255
Exergetic analysis of complex multimaterial processes using nuclear coal gasification as an example
p0241 A82-23817
Molten carbonate fuel cell improvements
p0272 A82-24239
Synthetic, coal-derived fuels
p0242 A82-24684
Solar coal gasification - Plant design and economics
p0221 A82-28388
A continuous two stage solar coal gasification system
p0221 A82-28389
Bi-Gas pilot plant operation
[DE82-000223] p0245 N82-16271
Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] p0246 N82-16281
Concepts of fundamental processes related to gasification of coal
[DE82-000763] p0246 N82-16282
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[DE82-000274] p0246 N82-16284
Dynamic behavior of moving-bed coal-gasification reactors
[DE82-000595] p0247 N82-16285
Coal-gasification instrumentation program (PR 11734)
[DE82-001153] p0247 N82-16381
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] p0247 N82-16462
Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] p0222 N82-16475
Advanced Environmental Control Technology Program
[DE82-000898] p0173 N82-16562
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] p0249 N82-16918
Microstructural effects in abrasive wear
[DE82-003653] p0250 N82-17339
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] p0250 N82-17398
Rapid-rate bituminous coal gasification
[PB82-115478] p0251 N82-17404
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] p0254 N82-18406
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] p0255 N82-18407
Construction and operation of a one ton per hour pilot plant for the VEW coal conversion process
[BMFT-FB-T-81-177] p0256 N82-18712
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] p0183 N82-18751

Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] p0282 N82-19672
Investigations of the changes of coal structure occurring during gasification
[DE82-002652] p0258 N82-20279
Role of C-CO2 in gasification of coal and char
[DE81-027358] p0259 N82-20334
Feasibility study for the production of low/medium-Btu gas from coal for tri-city regional port district Granite City, Illinois
[DE82-002881] p0260 N82-20336
Coal-gasification study for Bethlehem Steel Corporation's Sparrows Point facility
[DE82-002570] p0263 N82-21435
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Reference turbine subsystem design: Phase 2 report
[DE81-030059] p0264 N82-21591
Evaluation of gasification and gas-cleanup processes for use in molten-carbonate fuel-cell power plants
[DE82-003207] p0285 N82-21723

COAL LIQUEFACTION
Synthetic, coal-derived fuels
p0242 A82-24684
Hydrocracking of coal using molten salts as catalysts
p0243 A82-24969
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] p0244 N82-16210
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] p0245 N82-16228
Reversibility of coal liquefaction
[DE81-027804] p0246 N82-16277
Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] p0246 N82-16281
Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] p0246 N82-16283
Advanced Environmental Control Technology Program
[DE82-000898] p0173 N82-16562
Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] p0173 N82-16566
Coal-liquefaction catalyst development
[DE82-000137] p0249 N82-17314
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] p0249 N82-17315
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] p0250 N82-17399
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] p0251 N82-17508
Supported metal carbonyls: New catalysts for liquefaction of coal
[DE82-002659] p0258 N82-20283
Integrated two-stage liquefaction Parametric study
[DE81-028756] p0258 N82-20284
Gas/slurry flow in coal liquefaction processes (fluid dynamics in 3-phase flow columns)
[DE82-002562] p0260 N82-20474
Environmental and economic aspects of indirect coal liquefaction processes: A report emphasizing the relationship between product mix and efficiency
[PB82-103581] p0188 N82-20701
Heavy-liquid beneficiation of fine coal
[DE81-030965] p0261 N82-21279
New catalysts for the indirect liquefaction of coal
[DE82-000892] p0261 N82-21281
Role of the hydrogen donor solvent in coal hydroliquefaction
[DE82-002716] p0262 N82-21283
Research on solvent-refined coal
[DE82-002530] p0263 N82-21437
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Reference turbine subsystem design: Phase 2 report
[DE81-030059] p0264 N82-21591

COAL UTILIZATION
Preliminary investigation of the effect of electrical nonuniformities on frame current distribution of coal-fired MHD generator
[AIAA PAPER 82-0326] p0269 A82-19795
Testing of the low mass flow test train in the DOE Coal Fired Flow Facility
[AIAA PAPER 82-0376] p0165 A82-22097
Processes for reducing emissions of particulates and oxides of sulfur and nitrogen for various coal utilization alternatives
p0242 A82-23950
Magnetohydrodynamics and its hazard assessment
[ASME PAPER 81-WA/SAF-3] p0166 A82-24604
Description of the DOE Coal-Fired MHD Flow Facility /CFFF/
p0167 A82-24689
Trade-offs in NO/x/ control
p0167 A82-25161
Dust removal from small- and medium-sized coal-fired generators
p0168 A82-25666
The impact of mixing cooling tower and power plant plumes on sulfate aerosol formation
p0169 A82-28523
Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] p0244 N82-16213
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] p0246 N82-16275
Coal development in rural America: The resources at risk
[PB81-243313] p0248 N82-16545
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] p0249 N82-16560
Promotion of utilizing primary energy and reduction of emission with grate-equipped heat generators fired completely automatic with solid fuels
[BMFT-FB-T-81-222] p0250 N82-17391
Advanced pulverized-coal combustor for control of NO sub x emissions
[DE82-002653] p0260 N82-20695
Advanced research and technology direct utilization: Recovery of minerals from coal fly ash. Fossil energy program
[DE82-003133] p0261 N82-20698
A procedure for determining the resource utilization potential of coal ash
[AD-A109877] p0261 N82-21111
Mechanisms of fouling, slagging, and corrosion by pulverized-coal combustion
[DE82-001661] p0261 N82-21280

COASTAL PLAINS
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan
p0254 N82-17753

COASTAL WATER
Inventory of emissions from marine operations within the California coastal waters
[PB82-105099] p0183 N82-18757

COATINGS
Investigation of the thermal-engineering characteristics of a solar collector with a selective coating and vacuum heat-insulation
p0217 A82-24870
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] p0227 N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] p0228 N82-18717

COBALT COMPOUNDS
Black cobalt selective coatings by spray pyrolysis for photothermal conversion of solar energy
p0219 A82-26331

COGENERATION
An assessment of alternative fuel cell designs for residential and commercial cogeneration
p0273 A82-24695

New connections for new technologies
p0274 A82-25160
Cogeneration potential: Enhanced oil recovery
[DE81-904202] p0248 N82-16539
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] p0182 N82-18701
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] p0227 N82-18707
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] p0182 N82-18708
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] p0282 N82-19672
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733
Robins Air Force Base solar cogeneration facility, volume 1
[DE82-001922] p0234 N82-21735
Robins Air Force Base solar cogeneration facility, volume 2
[DE82-001866] p0234 N82-21736

COLD FLOW TESTS
Electrocyclone development program
[DE81-025062] p0188 N82-20700

COLD NEUTRONS
The application of dynamic cold neutron fluoroscopy for the visualisation of fuel and oil system operating characteristics in gas turbine development
p0272 A82-23824

COLORADO RIVER (NORTH AMERICA)
Water assessment for the Lower Colorado River region-emerging energy technology development
[PB82-110107] p0184 N82-19398

COMBINED CYCLE POWER GENERATION
Coal gasification combined cycle power generation simulation
p0241 A82-19255
Technical support for open-cycle MHD program --- combined cycle mhd/steam power system analysis
[DE82-001955] p0276 N82-16901
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] p0280 N82-18694
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] p0282 N82-19672
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Reference turbine subsystem design: Phase 2 report
[DE81-030059] p0264 N82-21591

COMBUSTIBLE FLOW
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659

COMBUSTION
Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] p0244 N82-16213

COMBUSTION CHAMBERS
High temperature durable catalyst development
p0270 A82-20739
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] p0256 N82-18690
Advanced pulverized-coal combustor for control of NO sub x emissions
[DE82-002653] p0260 N82-20695
Mechanisms of fouling, slagging, and corrosion by pulverized-coal combustion
[DE82-001661] p0261 N82-21280
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Reference turbine subsystem design: Phase 2 report
[DE81-030059] p0264 N82-21591
Electrocyclone development program
[DE81-030004] p0264 N82-21780

COMBUSTION EFFICIENCY
High temperature durable catalyst development
p0270 A82-20739
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] p0172 N82-16516
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] p0175 N82-16947
Development of adjustment factors for on road fuel economy
[PB81-241986] p0175 N82-16950
Evaluation of the Moleculetor Fuel Energizer under section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-247942] p0175 N82-16958
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] p0176 N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] p0176 N82-16966
Industrial burner and process efficiency program
[PB82-115486] p0182 N82-18731
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] p0184 N82-19543
Preliminary results on performance testing of a turbocharged rotary combustion engine
[NASA-TM-82772] p0284 N82-21194

COMBUSTION PHYSICS
Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] p0250 N82-17396

COMBUSTION PRODUCTS
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] p0249 N82-16557
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] p0249 N82-16560
Exhaust emissions from high-mileage catalyst-equipped passenger cars
[PB82-103326] p0173 N82-16586
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] p0249 N82-17317
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] p0256 N82-18690
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] p0183 N82-18753
Synthetic-fuel combustion: Pollutant formation. Soot-initiation mechanisms in buring aromatics
[DE82-002566] p0186 N82-20277
Calcium silicate cements for desulfurization of combustion gases
[DE82-003245] p0260 N82-20696
Soot formation in synthetic-fuel droplets
[DE82-004257] p0262 N82-21282

COMMERCIAL AIRCRAFT
Operational and performance aspects of fuel management in civil aircraft
p0164 A82-20518
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] p0169 N82-16057
Engines for air transport --- aircraft fuel consumption
[PNR-90066] p0188 N82-21208

COMMERCIAL ENERGY
Government-industry relationships in technology commercialization The case of photovoltaics
p0165 A82-21362
Fuel cell power plants for utility applications
p0273 A82-24692
Phosphoric acid fuel cell plants for dispersed electric power generation
p0273 A82-24693

An assessment of alternative fuel cell designs for residential and commercial cogeneration
p0273 A82-24695
Assessment of emerging energy sources
[DE82-900318] p0240 N82-16519
Code workbook for active and passive solar design: Single-family residential construction
[DE82-000637] p0223 N82-16531
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] p0173 N82-16563
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] p0253 N82-17603
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] p0228 N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] p0228 N82-18726
Energy consumption patterns: Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia (1975)
[PB82-101478] p0183 N82-18734
Evaluation of geothermal energy in Arizona
[DE82-000127] p0264 N82-21761

COMMUNICATION EQUIPMENT
Solar cell/battery plants for telecommunication systems in Denmark - Development of a test facility
p0212 A82-24228

COMPARISON
Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] p0183 N82-18739

COMPONENT RELIABILITY
Operational, reliability, and maintenance experience with photovoltaic concentrator arrays
p0203 A82-24130

COMPOSITE MATERIALS
RPR-10 composite flywheel testing
[DE82-001694] p0294 N82-21725

COMPRESSED AIR
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 3: Preconceptual design
[DE82-001945] p0294 N82-20687
Preliminary engineering design and cost of Advanced Compressed-Air Storage (ACAS) A-5 hybrid
[DE82-900339] p0294 N82-21763

COMPRESSED GAS
Estimation of storage costs for large hydrogen storage facilities
p0239 A82-21196
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] p0176 N82-16959

COMPRESSORS
Open-cycle vapor compression heat pump
[PB82-110503] p0181 N82-18553

COMPUTATIONAL FLUID DYNAMICS
Performance characteristics of open-cycle linearly-diverging diagonal type single- and multiple-load generators
p0269 A82-19297
Three-dimensional flow development in MHD generators at part load
[AIAA PAPER 82-0324] p0269 A82-19794
Influence of correlations and computational methods on the prediction of overall efficiency
p0276 N82-17180

COMPUTER AIDED DESIGN
Performance measurements on the six meter diameter horizontal axis windmill
p0267 A82-19107
Calculation of the flow patterns and performance of wind turbines using streamline curvature methods
p0268 A82-19109
Blade shapes for horizontal axis wind turbines
p0268 A82-19110

COMPUTER PROGRAMS
Solar energy systems simulation and analysis
[DE81-026975] p0224 N82-16542
Development of mobility control methods to improve oil recovery by CO2
[DE82-001960] p0253 N82-17575
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Text and appendices A & B
[DE82-000838] p0254 N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] p0254 N82-17631
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
p0280 N82-18127
RADSOLVER: A computer program for calculating spectrally-dependent radiative heat transfer in solar cavity receivers
[DE82-000833] p0233 N82-21542

COMPUTER SYSTEMS PROGRAMS
Optimization programs for economic energy modelling problems
[NPL-DNACS-51/81] p0189 N82-22106

COMPUTER TECHNIQUES
Potential economic benefits from process control of coal preparation plants
[DE82-000881] p0245 N82-16263

COMPUTERIZED SIMULATION
Simulation and operations of large wind machines
p0267 A82-19052
Coal gasification combined cycle power generation simulation
p0241 A82-19255
The economics of utilizing wind power in apple cold-storage systems
p0271 A82-23652
Hardware simulation of a scaled down photovoltaic power system
p0205 A82-24148
Rankine engine solar power generation. I - Performance and economic analysis
[ASME PAPER 81-WA/SOL-22] p0216 A82-24620
Dynamic analysis and control of a solar power plant. I - Dynamic analysis and operation criteria. II - Control system design and simulation
p0220 A82-26337
Computer simulation of solar cooling
p0221 A82-28392
Solar energy systems simulation and analysis
[DE81-026975] p0224 N82-16542
Technical support for open-cycle MHD program --- combined cycle mhd/steam power system analysis
[DE82-001955] p0276 N82-16901
Developments in rotary wing aircraft aerodynamics
p0179 N82-18120

CONCENTRATORS
Performance of 1 kWp AlGaAs/GaAs terrestrial concentrator solar cell array
p0193 A82-19894
Fabrication of thick narrow electrodes on concentrator solar cells
p0196 A82-20205
Second-stage CEC concentrator --- Compound Elliptical Concentrator for solar energy conversion
p0200 A82-23872
The Sophocle program --- photovoltaic generators using solar energy concentration
p0204 A82-24132
On the conversion of solar radiation with fluorescent planar concentrators /FPCs/
p0204 A82-24136
Low resistance solar cells for the first Spanish concentrating photovoltaic array
p0211 A82-24219
High efficiency large area AlGaAs/GaAs concentrator solar cells
p0211 A82-24221
Automated concentrator cell module assembly
p0212 A82-24223
Description of a concentrating photovoltaic energy system for Wilcox Memorial Hospital on Kauai
p0212 A82-24226
Choice of design parameters for prism-type solar concentrators
p0217 A82-24869

Asymmetric second-stage concentrators
p0218 A82-25110
Convective heat transfer in vee-trough linear concentrators
p0219 A82-26332
Concentration of solar radiation by white painted transparent plates
p0220 A82-28170
Ideal second stages in tandem with parabolic concentrators
p0220 A82-28171
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] p0222 N82-16492
Design, construction, and initial operation of the ANL research
[DE82-001961] p0223 N82-16528
Stagnation temperature test methods for determining solar collector thermal performance degradation
p0230 N82-20638
Theoretical design study of the MSFC wind-wheel turbine
[NASA-CR-3532] p0283 N82-20667
Evaluation of the effects of a freeze/thaw environment on cellular glass
[NASA-CR-166719] p0232 N82-21345
Robins Air Force Base solar cogeneration facility, volume 1
[DE82-001922] p0234 N82-21735

CONDENSATES
MHD Heat and Seed Recovery Technology Project
[DE82-001608] p0276 N82-16900

CONDUCTIVE HEAT TRANSFER
Evaluation of reliability of operational solar-energy systems
p0199 A82-23654

CONFERENCES
International Conference on Thermoelectric Energy Conversion, 3rd, University of Texas, Arlington, TX, March 12-14, 1980, Proceedings
p0267 A82-18900
Wind Energy Workshop, 2nd, Cranfield, Beds., England, April 1980, Proceedings
p0267 A82-19103
Photovoltaic Science and Engineering Conference in Japan, 2nd, Tokyo, Japan, December 2-4, 1980, Proceedings
p0191 A82-19876
Recycling World Congress, 3rd, Basel, Switzerland, September 29-October 1, 1980, Proceedings. Sessions 1-2 /Day 1/, Sessions 3-4 /Day 2/, and Sessions 5-6 /Day 3/

Photovoltaic Solar Energy Conference; Proceedings of the Third International Conference, Cannes, France, October 27-31, 1980
p0200 A82-24101
Power sources 8: Research and development in non-mechanical electrical power sources; Proceedings of the Twelfth International Symposium, Brighton, England, September 1980
p0289 A82-24236
The 1980's - A forest of energy decision trees; Proceedings of the Region Six Conference, San Diego, CA, February 20-22, 1980
p0166 A82-24683
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] p0169 N82-16057
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 1
[DE81-903753] p0245 N82-16273
Proceedings of the 4th International Symposium on Alcohol fuels Technology, volume 2
[DE81-903754] p0245 N82-16274
Energy in the 1980s: A call for leadership. The Public Awareness Symposium
[DE81-027613] p0171 N82-16504
Space Laser Power Transmission System Studies --- conferences
[NASA-CP-2214] p0287 N82-18578
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] p0184 N82-19108
The 1981 Goddard Space Flight Center Battery Workshop
[NASA-CP-2217] p0283 N82-20402

CONGRESSIONAL REPORTS
Solar power satellites, summary
[OTA-E-145] p0180 N82-18305
Synthetic fuels development
[GPO-85-050] p0259 N82-20327
International alcohol fuels
[GPO-78-681] p0186 N82-20328
The natural gas option: New resources and new technologies
[GPO-85-052] p0186 N82-20329
Proposed 5-year plan oil and gas development in the outer Continental Shelf
[PUBL-97-43] p0187 N82-20616
Potential for hydroelectric development in Alaska
[GPO-84-559] p0187 N82-20658
Hydroelectric development in New England
[GPO-84-558] p0187 N82-20659
Ocean Thermal Energy Conversion Research, Development, and Demonstration Act
[GPO-56-801] p0187 N82-20660
Energy demand forecasting
[GPO-83-115] p0187 N82-20666
Risk: Assessment, acceptability and management
[GPO-87-593] p0189 N82-22082

CONSERVATION
Social and Environmental Consequences of Natural Resources Policies with Special Emphasis on Biosphere Reserves
[PB82-113937] p0185 N82-19660

CONSTRUCTION
Design, construction, and initial operation of the ANL research
[DE82-001961] p0223 N82-16528
Community solar demonstration/dissemination center
[DE82-000994] p0225 N82-17632
Construction and operation of a one ton per hour pilot plant for the VEW coal conversion process
[BMFT-FB-T-81-177] p0256 N82-18712
Construction and testing of a test stand for solar cells and concentrating collectors
[BMFT-FB-T-81-179] p0227 N82-18714
Performance of the Norris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] p0182 N82-18728

CONSTRUCTION INDUSTRY
Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] p0225 N82-18437
NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74686] p0184 N82-19103
Convincing the home builder to build solar homes: Evaluation of passive solar workshop for builders
[DE82-001978] p0235 N82-21737

CONSTRUCTION MATERIALS
A solar high temperature kiln --- for baking ceramic building materials in developing countries
[BMFT-FB-T-81-181] p0230 N82-19692

CONSUMERS
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] p0176 N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] p0176 N82-16966
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] p0186 N82-20027

CONTACTORS
Stack gases desulphurization recovery processes in thermal power plants of the world. III - Processes based on absorption by solid materials
p0166 A82-24075

CONTAINMENT
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p0292 N82-19689

CONTAMINANTS
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109418] p0183 N82-18753
CONTINENTAL SHELVES
Procedures for preparing regional transportation management plans --- oil and gas ppelines from outer continental shelves
[PB82-106162] p0287 N82-18075
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-109265] p0256 N82-18800
Proposed 5-year plan oil and gas development in the outer Continental Shelf
[PUBL-97-43] p0187 N82-20616
CONTINUOUS WAVE LASERS
Design investigation of solar-powered lasers for space applications
p0226 N82-18582
CONTROL
Evaluation of control and protection circuits
[PB82-105065] p0251 N82-17450
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] p0182 N82-18728
CONTROL EQUIPMENT
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] p0251 N82-17508
Longwall Guidance and Control Development
[NASA-TM-82455] p0257 N82-19637
CONTROL SIMULATION
Coal gasification combined cycle power generation simulation
p0241 A82-19255
CONTROL VALVES
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] p0251 N82-17508
CONTROLLED FUSION
Fusion - From science to engineering
p0270 A82-20170
CONVECTIVE FLOW
Effects of friction and extraction on the stability of solar ponds
[ASME PAPER 81-WA/SOL-16] p0215 A82-24615
CONVECTIVE HEAT TRANSFER
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659
Forced convection heat transfer for two-phase helical flow in a solar receiver
[ASME PAPER 81-WA/HT-13] p0214 A82-24589
On reducing convective losses from cover glazings of solar thermal collectors
[ASME PAPER 81-WA/SOL-3] p0214 A82-24606
Convective heat transfer in vee-trough linear concentrators
p0219 A82-26332
An evaluation of a transverse slatted flat plate collector
p0220 A82-26335
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] p0223 N82-16511
CONVERSION
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] p0224 N82-17611
CONVEYORS
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[BR-151-PT-1] p0252 N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[BR-152-VOL-2] p0252 N82-17565
COOLING
Active and passive cooling for concentrating photovoltaic arrays
[DE82-003922] p0235 N82-21745
COOLING SYSTEMS
Developments in solar-powered air conditioning: State-of-the-art and prospects for South Africa
[PB81-246076] p0224 N82-16544
COPPER ALLOYS
The effect of degradation of glycols on corrosion of metals used in non-concentrating solar collectors
p0213 A82-24294
COPPER SELENIDES
n-CuInSe2/polysulfide photoelectrochemical solar cells
p0222 A82-28499
COPPER SULFIDES
Cu2S-CdS sprayed solar cells
p0203 A82-24127
Evaporated CdS-Cu/x/S solar cells
p0203 A82-24128
Surface properties of Cu/2-x/S and its influence on the performance of frontwall Cu/2-x/S-CdS thin film solar cells
p0209 A82-24185
An EBIC study of the CdS-Cu2S photovoltaic cell --- crystallograph using scanning electron microscope in Electron Beam Induced Current mode
p0209 A82-24186
Transparent, condective layers of sprayed indium tin oxide in backwall Cu2S-CdS cells
p0209 A82-24187
Cd2nS-Cu2S thin film solar cells
p0209 A82-24189
Integrated Cu/x/S-CdS thin film solar cell panels with higher output voltages
p0209 A82-24192
CORROSION
Geothermal power plant corrosion experience - A global survey
p0242 A82-24297
CORROSION PREVENTION
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-168671] p0231 N82-20649
CORROSION RESISTANCE
Corrosion of stainless steels in the geothermal environments of the Salton Sea known geothermal resource area
p0242 A82-24296
Ceramic technology for solar thermal receivers
[ASME PAPER 81-WA/SOL-24] p0216 A82-24622
CORROSION TESTS
The effects of elevated temperature exposure on the compatibility of glycol solutions with metals used in solar absorbers
p0213 A82-24293
The effect of degradation of glycols on corrosion of metals used in non-concentrating solar collectors
p0213 A82-24294
Corrosion of stainless steels in the geothermal environments of the Salton Sea known geothermal resource area
p0242 A82-24296
Atmospheric corrosion model and monitor for low cost solar arrays
p0214 A82-24299
MHD Heat and Seed Recovery Technology Project
[DE82-001608] p0276 N82-16900
CORRUGATED PLATES
Comparison of test results for flat plate, transpired flat plate, corrugated, and transpired corrugated solar air heaters
[ASME PAPER 81-WA/SOL-18] p0215 A82-24617
COST ANALYSIS
Storing wind energy as a liquid fuel
p0289 A82-19116
Comparison of the expenses required for the on-board fuel storage systems of hydrogen powered vehicles
p0239 A82-20138
The silicon solar satellite power system - A net energy analysis
p0196 A82-20574
Cost and sizing sensitivities for the solar power satellite
p0196 A82-20642
New technologies for solar energy silicon - Cost analysis of dichlorosilane process
p0199 A82-23397
Sunshine Project solar photovoltaic progtam and recent R & D activities in Japan
p0200 A82-24102

U.S. photovoltaic application experiments and market development
p0200 A82-24104
Community television reception centers with solar generator power supplies in Niger - Television retransmitters with alternative energy power supplies in France
p0212 A82-24227
Considerations on the feasibility of a 1 MWp central PV plant to be tied to the European electrical network
p0213 A82-24234
Methodology to determine cost and performance goals for active solar cooling systems
[ASME PAPER 81-WA/SOL-32] p0217 A82-24627
Geothermal resource field development
p0167 A82-24687
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] p0291 N82-16521
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] p0224 N82-17611
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] p0255 N82-18407
An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103268] p0183 N82-18736
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] p0258 N82-19674
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733

COST EFFECTIVENESS
Comparative analysis of CCNHD power plants --- Closed Cycle MHD
p0270 A82-20747
Space platforms - A cost effective evolution of Spacelab operation
p0200 A82-23703
Performance assessment and cost effectiveness of wind energy conversion systems
p0272 A82-24016
Advances in silicon solar cell processing
p0202 A82-24117
Low-cost solar array project progress and plans
p0202 A82-24120
Photovoltaics in the context of off-grid small power systems
p0205 A82-24146
Development of large area, low-cost, solar cell processing sequence
p0206 A82-24161
Engineering development of molten carbonate fuel cell power plants
p0273 A82-24694
Energy properties in urban building stock --- in Finland
[VTT-RR-1/81] p0185 N82-19696
Development of an all-metal thick-film cost-effective metallization system for solar cells
[NASA-CR-168502] p0232 N82-20684
A passive solar retrofit study for concrete block buildings
[AD-A110189] p0233 N82-21718

COST ESTIMATES
The expected cost of electricity generated by the U.S. Mod 2 windmill
p0268 A82-19114
Estimation of storage costs for large hydrogen storage facilities
p0239 A82-21196
The solar material market - Projections, needs and commitments
p0201 A82-24106
Geothermal direct use projects
p0167 A82-24688
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] p0275 N82-16481
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] p0255 N82-18407

COST REDUCTION
Wind energy systems with battery storage and diesel back-up for isolated communities
p0268 A82-19115
Advantages of permanent magnet VSCF generating systems on aircraft fuel economy --- Variable Speed Constant Frequency
p0163 A82-20207
The impact of increasing energy costs upon the design philosophy of avionic fuel management systems
p0164 A82-20517
Operational and performance aspects of fuel management in civil aircraft
p0164 A82-20518
U.S. Department of Energy collector cost reduction program
p0201 A82-24105
A strategy for cost reduction from the point of view of a French industrialist
p0201 A82-24107
Progress toward goals in silicon sheet development
p0201 A82-24113
The Wacker approach to low-cost silicon material technology
p0202 A82-24114
Comparison of solar cells from nonsingle and single crystalline silicon in a pilot production line
p0202 A82-24118
Airline fuel saving through JT9D engine refurbishment
[SAE PAPER 811051] p0166 A82-24395
OTEC power system development and environmental impacts
p0166 A82-24606
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] p0180 N82-18207
Low cost Czochralski crystal growing technology. Near implementation of the flat plate photovoltaic cost reduction of the low cost solar array project
[NASA-CR-168658] p0231 N82-20662

COUPLED MODES
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] p0279 N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] p0279 N82-17641

COUPLING CIRCUITS
Optimization of the P.V. array-load energy transfer by means of an electronic adaptator
p0212 A82-24230

CRACK GEOMETRY
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] p0249 N82-16918

CRASHES
An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] p0240 N82-19196

CREEP STRENGTH
Precision casting for gas turbine engines
p0275 A82-28313

CROP YIELD
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467

CRUDE OIL
Crude sources and refining trends and their impact on future jet fuel properties
[SAE PAPER 811056] p0242 A82-24391
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] p0254 N82-17696
Development of a multidetector petroleum oil in water monitor
[PB82-105206] p0181 N82-18568

CRUSTAL FRACTURES
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery
p0243 A82-26015

CRYOGENIC FLUID STORAGE
Comparison of the expenses required for the on-board fuel storage systems of hydrogen powered vehicles
p0239 A82-20138
CRYOGENIC STORAGE
Estimation of storage costs for large hydrogen storage facilities
p0239 A82-21196
CRYSTAL DEFECTS
Photovoltaic and structural properties of a-Si:H thin films
[DE82-002698] p0235 N82-21751
CRYSTAL GROWTH
Solar collector based on whisker-shaped oxides grown on metallic substrates
p0220 A82-26333
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] p0222 N82-16491
Large area silicon sheet by EFG
[NASA-CR-168680] p0231 N82-20664
Exploratory development of thin-film polycrystalline photovoltaic devices
[DE82-000092] p0235 N82-21746
Photovoltaic and structural properties of a-Si:H thin films
[DE82-002755] p0235 N82-21750
CRYSTAL STRUCTURE
Directional solidification of MG silicon by Heat Exchanger Method /HEM/ for photovoltaic applications
p0202 A82-24116
CURING
Solar production of industrial process hot water. Phase 3: Operation and evaluation of the York Building Products Company, Incorporated. Solar Facility
[DE82-003000] p0236 N82-21762
CURRENT DISTRIBUTION
Preliminary investigation of the effect of electrical nonuniformities on frame current distribution of coal-fired MHD generator
[AIAA PAPER 82-0326] p0269 A82-19795
Parallel- and radial-current stream-line type metal-contacts of solar cell
p0192 A82-19888
Analysis of power takeoff in diagonal conducting wall channels
p0272 A82-24015
CUTTERS
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553
Development of sensitized pick coal interface detector system
[NASA-CR-161961] p0252 N82-17560
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[BR-151-PT-1] p0252 N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[BR-152-VOL-2] p0252 N82-17565
CYCLIC LOADS
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] p0279 N82-17643
CYLINDERS
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] p0252 N82-17554
CZOCHRALSKI METHOD
Fabrication and properties of silicon solar cells using squarely shaped crystals
p0192 A82-19881
Low cost Czochralski crystal growing technology. Near implementation of the flat plate photovoltaic cost reduction of the low cost solar array project
[NASA-CR-168658] p0231 N82-20662

D

DAMS
Tidal power from the Severn estuary, volume 1
[EP-46-VOL-1] p0282 N82-19666
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] p0282 N82-19667
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands
[PB82-113218] p0188 N82-20702
DATA ACQUISITION
Meteorological data basis
p0253 N82-17618
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] p0282 N82-19667
DATA BASES
Applications of climate information and the United States National Climate Program
p0178 N82-17765
DATA PROCESSING
Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data
p0244 A82-27694
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy
p0249 N82-17286
DATA REDUCTION
Information gathering, data reduction, and information dissemination for residential experiment station operations
[DE82-002157] p0234 N82-21734
DAYTIME
Heating/daylighting prototype development, phase 1. Passive and hybrid solar manufactured building project covering research and component design
[DE82-002097] p0234 N82-21729
DECISION MAKING
The 1980's - A forest of energy decision trees; Proceedings of the Region Six Conference, San Diego, CA, February 20-22, 1980
p0166 A82-24683
Risk: Assessment, acceptability and management
[GPO-87-593] p0189 N82-22082
DEEP SPACE NETWORK
Energy consumption for the echo station (DSS 12)
p0170 N82-16139
DEEP WELL INJECTION (WASTES)
Injection and thermal breakthrough in fractured geothermal reservoirs
p0241 A82-23819
DEGRADATION
Update: Viking Lander NiCd batteries. Year six
p0293 N82-20428
GPS on-orbit battery performance
p0293 N82-20429
DEGREES OF FREEDOM
Dynamic and aeroelastic characteristics of complete windturbine systems
p0280 N82-18128
DEHUMIDIFICATION
Simple predictive model for performance of desiccant beds for solar dehumidification
[DE81-023606] p0222 N82-16500
DELCERS
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] p0281 N82-18721
DEMAND (ECONOMICS)
QUSER user's guide
[DE81-030681] p0174 N82-16767
Analysis of federal incentives used to stimulate energy consumption
[DE81-031928] p0174 N82-16935
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] p0176 N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] p0176 N82-16966
Water for non-nuclear energy development in the Great Basin
[PB82-116781] p0176 N82-17581

Energy environment study
[NASA-CR-168458] p0177 N82-17654
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] p0183 N82-18740
Review of the UK transport energy outlook: And policy recommendations
[EP-47] p0185 N82-19664
Energy demand forecasting
[GPO-83-115] p0187 N82-20666
Consumption trend analysis in the industrial sector: Existing forecasts
[PB82-137829] p0188 N82-21770

DEMOGRAPHY
Ohio River Basin energy study: Social values and energy policy
[PB82-101494] p0183 N82-18735

DENSIFICATION
Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-103904] p0255 N82-18408
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101668] p0255 N82-18410

DEPOSITION
Progress in the growth and performance of RAD silicon sheets --- for solar cell manufacture
p0206 A82-24152

DEPOSITS
Deposit formation in liquid fuels. III - The effect of selected nitrogen compounds on diesel fuel
p0241 A82-23238
Coal-liquefaction catalyst development
[DE82-000137] p0249 N82-17314
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] p0178 N82-17672

DESICCANTS
Simple predictive model for performance of desiccant beds for solar dehumidification
[DE81-023606] p0222 N82-16500

DESIGN
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] p0275 N82-16481

DESIGN ANALYSIS
Synthetic battery cycling
p0289 A82-20749
MHD channel performance for potential early commercial MHD power plants
p0270 A82-20750
Choice of design parameters for prism-type solar concentrators
p0217 A82-24869
A new look at long term collector performance and utilizability
p0219 A82-26330
Design and performance of a small shrouded Cretan windwheel
p0274 A82-26614
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] p0275 N82-16481
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] p0251 N82-17508
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] p0252 N82-17554
Design investigation of solar-powered lasers for space applications
p0226 N82-18582
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] p0280 N82-18693
Case-positive versus case-negative designs for low-rate lithium thionyl chloride cells
p0292 N82-20407
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733

DESIGN TO COST
Solar coal gasification - Plant design and economics
p0221 A82-28388
Commercial-scale process design for thin-film solar cells
p0221 A82-28390

DESORPTION
OTEC gas desorption studies
p0271 A82-23653

DESULFURIZING
Stack gases desulphurization recovery processes in thermal power plants of the world. III - Processes based on absorption by solid materials
p0166 A82-24075
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] p0249 N82-16557
Flue-gas desulfurization: Review of selected commercial and advanced technologies
[DE82-001960] p0172 N82-16559
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] p0173 N82-16568
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] p0178 N82-17672
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] p0178 N82-17684
EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115058] p0184 N82-18766
Chemical desulphurisation of coal
[ICTIS-TR-15] p0257 N82-19332
Calcium silicate cements for desulfurization of combustion gases
[DE82-003245] p0260 N82-20696
Evaluation of continuous oxydesulfurization processes
[DE82-002127] p0261 N82-20697
Evaluation of gasification and gas-cleanup processes for use in molten-carbonate fuel-cell power plants
[DE82-003207] p0285 N82-21723

DETECTION
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] p0252 N82-17555

DEUTERIUM
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] p0257 N82-19319

DEVELOPING NATIONS
The Solar Power Satellite - An opportunity for Third World development
p0168 A82-25660
International market assessment of stand-alone photovoltaic power systems for cottage industry applications
[NASA-CR-165287] p0171 N82-16494
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] p0184 N82-19108
Development of simple solar collectors --- for usage in developing countries
[BMFT-FB-T-81-178] p0230 N82-19690
Plan for a photovoltaic applied research laboratory for developing countries
[DE82-003289] p0236 N82-21752

DIELECTRIC PROPERTIES
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] p0287 N82-17448

DIELECTRICS
Efficiency increase of solar cells operated in dielectric liquid
p0192 A82-19889
Macroscopic surface roughness in metal-dielectric composite films - Photothermal absorber applications
p0195 A82-20066
Bandpass filters for thermophotovoltaic conversion systems
p0197 A82-21363
Application of amorphous silicon nitride for MIS/inversion layer solar cells
p0210 A82-24203

Increasing the dielectric strength of interelectrode inserts in an MHD generator channel by air injection
p0274 A82-26769

DIESEL ENGINES
Wind energy systems with battery storage and diesel back-up for isolated communities
p0268 A82-19115
Use of hydrogen in dual-fuel engines
p0240 A82-25781
Development of adjustment factors for on road fuel economy
[PB81-241986] p0175 N82-16950
Synfuel modified diesel
[DE82-002298] p0251 N82-17400
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] p0179 N82-18068
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] p0184 N82-19543
Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] p0184 N82-19544
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] p0258 N82-20022

DIESEL FUELS
Deposit formation in liquid fuels. III - The effect of selected nitrogen compounds on diesel fuel
p0241 A82-23238
Use of hydrogen in dual-fuel engines
p0240 A82-25781
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] p0245 N82-16264
Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol
[PB81-242562] p0247 N82-16286
Synfuel modified diesel
[DE82-002298] p0251 N82-17400
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] p0179 N82-18068

DIFFERENTIAL PRESSURE
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] p0253 N82-17575

DIFFUSE RADIATION
New concepts for static concentration of direct and diffuse radiation
p0204 A82-24133

DIFFUSERS
Diffuser-augmented wind turbine analysis --- for jet stream electrical generation applications
p0274 A82-26216

DIGITAL SIMULATION
Real-time simulation of MHD/steam power plants by digital parallel processors
p0269 A82-19241
Digital simulation of an MHD power consolidation/D.C. to A.C. inverter system
p0269 A82-19242

DIRECT CURRENT
Combined photovoltaic/thermal solar array DC electrical model
p0191 A82-18890
Evolution and development of high voltage /270 volt/ dc aircraft electric systems in the United States
p0273 A82-24382

DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Directional solidification of MG silicon by Heat Exchanger Method /HEM/ for photovoltaic applications
p0202 A82-24116
Evaluation of silicon-on-ceramic material for low-cost solar cells
p0206 A82-24154
Study of the elaboration of semicrystalline silicon ingots
p0206 A82-24160

DISPERSION
Oil slick dispersal mechanics
[PB82-105560] p0174 N82-16610

DISSOLVING
Oil slick dispersal mechanics
[PB82-105560] p0174 N82-16610

DISTILLATION
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] p0182 N82-18732
Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel extension of data
[PB82-127077] p0262 N82-21296
Distilling alcohol with waste automobile heat
[DE82-000143] p0262 N82-21427

DISTILLATION EQUIPMENT
Distilling alcohol with waste automobile heat
[DE82-000143] p0262 N82-21427

DOMESTIC ENERGY
The expected cost of electricity generated by the U.S. Mod 2 windmill
p0268 A82-19114
Potential for a Danish power system using wind energy generators, solar cells and storage
p0163 A82-20141
SHAC - A nation turns to the sun --- Solar Heating And Cooling
p0195 A82-20165
Solar cell/battery plants for telecommunication systems in Denmark - Development of a test facility
p0212 A82-24228
Numerical study of wind energy characteristics over heterogeneous terrain - Central Israel case study
p0243 A82-25468
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] p0172 N82-16549
Energy consumption patterns: Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia (1975)
[PB82-101478] p0183 N82-18734
Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8
[PB82-113747] p0183 N82-18749
Energy conservation in the production of domestic hot water
[EP-48] p0185 N82-19665
US energy for the rest of the century
[PB82-115866] p0185 N82-19697
Energy storage: A short list of interested parties, 1981 and the storage of energy; A wall chart
[PB82-132069] p0294 N82-21772

DOPED CRYSTALS
Characterization of plasma-sprayed silicon layers as possible base material for solar cell fabrication
p0206 A82-24157
Effect of phosphorous and boron impurities on amorphous silicon solar cells
p0220 A82-27010
Efficient GaAs solar cells formed by UV laser chemical doping
p0222 A82-28498
Preparation and properties of evaporated CdTe films compared with single crystal CdTe
[DE82-000228] p0236 N82-22073

DOPPLER EFFECT
Development and testing of high-temperature acoustic Doppler flowmeter
[DE82-003013] p0260 N82-20492

DRAFT (GAS FLOW)
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] p0174 N82-16614

DRAG REDUCTION
Fuel-efficient windshields for transport, commuter and business aircraft
p0166 A82-24304
Developments in rotary wing aircraft aerodynamics
p0179 N82-18120

DRILLING
Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] p0253 N82-17629

Assessment of oil production volatile organic compound sources
[PB82-108176] p0177 N82-17664
DROP SIZE
Soot formation in synthetic-fuel droplets
[DE82-004257] p0262 N82-21282
DRYING
Simple predictive model for performance of desiccant beds for solar dehumidification
[DE81-023606] p0222 N82-16500
DRYING APPARATUS
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] p0177 N82-17669
DUST COLLECTORS
Dust removal from small- and medium-sized coal-fired generators
p0168 A82-25666
DYE LASERS
On the conversion of solar radiation with fluorescent planar concentrators /FPCs/
p0204 A82-24136
DYNAMIC CHARACTERISTICS
Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] p0276 N82-16522
Dynamic and aeroelastic characteristics of complete windturbine systems
p0280 N82-18128
DYNAMIC MODELS
Dynamic behavior of moving-bed coal-gasification reactors
[DE82-000595] p0247 N82-16285
DYNAMIC RESPONSE
Simulation and operations of large wind machines
p0267 A82-19052
Sudden loss of rotor blade from wind power turbine - Calculation of maximax response spectra
p0271 A82-23680
CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165555] p0176 N82-17174
Static and dynamic investigations of different towers for wind turbines
[ISD-274] p0278 N82-17637
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638
Dynamic electrical response of solar cells
[NASA-TM-76686] p0231 N82-20655
DYNAMIC STRUCTURAL ANALYSIS
Stress analysis and test philosophy for wind energy converter blades
[MBB-UD-300-80-O] p0277 N82-17536
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] p0279 N82-17641
Static and dynamic investigations for the model of a wind rotor
[ISD-272] p0279 N82-17642

E

EARTH ATMOSPHERE
Increase of atmospheric CO2 and possible climatic changes
p0178 N82-17763
EARTH MANTLE
Ore deposits in Africa and their relation to the underlying mantle
p0243 A82-26604
EARTH OBSERVATIONS (FROM SPACE)
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery
p0244 A82-28130
EARTH RESOURCES
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery
p0244 A82-28130
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] p0254 N82-17722
Increase of atmospheric CO2 and possible climatic changes
p0178 N82-17763
EARTH RESOURCES PROGRAM
Ecospace --- policy basis for international global resources including outer space
[IAF 81-SL-40] p0169 A82-27851
EARTHQUAKES
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] p0254 N82-17722
Anomalous radon (222) emission and its association with earthquakes and tectonism
p0254 N82-17739
ECOLOGY
Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] p0180 N82-18440
ECONOMETRICS
National energy research and development program --- bibliography of belgian scientific and technical reports
p0182 N82-18707
ECONOMIC ANALYSIS
A review of medium-scale wind turbine generators
p0267 A82-19106
System economic theory for WECS --- Wind Energy Conversion Systems
p0163 A82-19112
A comparison of studies of WECS economics for utility applications --- Wind Energy Conversion System
p0268 A82-19113
The expected cost of electricity generated by the U.S. Mod 2 windmill
p0268 A82-19114
Offshore siting of wind turbine generators in U.K. waters
p0163 A82-19119
Biomass options for the big island of Hawaii
p0167 A82-24690
Pacific Gas and Electric Company - Biomass energy activities
p0242 A82-24691
Solar coal gasification - Plant design and economics
p0221 A82-28388
Modeling solar-energy systems for economic optimization
[DE81-030030] p0223 N82-16518
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] p0250 N82-17398
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] p0178 N82-17684
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] p0255 N82-18407
An economic analysis of coal supply in the Ohio River Basin Energy Study Region
[PB82-113341] p0255 N82-18414
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] p0182 N82-18701
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] p0228 N82-18729
An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103268] p0183 N82-18736
Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104011] p0183 N82-18739
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] p0228 N82-19669
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] p0282 N82-19672
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 3: Preconceptual design
[DE82-001945] p0294 N82-20687

Forecasting the technical and economic characteristics of high power thermonuclear Tokamak reactors
[BLL-CTO-1931-(9091.9F)] p0283 N82-21063
Feasibility study of the commercial production of ethanol from wood. Volume 2: Appendices 1-6
[DE82-002410] p0263 N82-21429
Evaluation of geothermal energy in Arizona
[DE82-000127] p0264 N82-21761
Optimization programs for economic energy modelling problems
[EPL-DMACS-51/81] p0189 N82-22106

ECONOMIC DEVELOPMENT
The Solar Power Satellite - An opportunity for Third World development
p0168 A82-25660
Legal implications of economic activities in outer space
[IAF 81-SL-50] p0169 A82-27828
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103615] p0256 N82-18737
Urban Consortium
[PB82-122789] p0189 N82-22111

ECONOMIC FACTORS
The economics of utilizing wind power in apple cold-storage systems
p0271 A82-23652
The potential economic benefit of using parabolic trough collectors to supplement power cycle boilers
[ASME PAPER 81-WA/SOL-17] p0215 A82-24616
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] p0174 N82-16846
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] p0176 N82-16959
Energy environment study
[NASA-CR-168458] p0177 N82-17654
Study of climate and its applied aspects
p0179 N82-17766
Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] p0180 N82-18438

ECONOMIC IMPACT
Geothermal resource field development
p0167 A82-24687
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] p0170 N82-16259
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] p0228 N82-19669
Environmental and economic aspects of indirect coal liquefaction processes: A report emphasizing the relationship between product mix and efficiency
[PB82-103581] p0188 N82-20701

ECONOMICS
Assessment of technical potential: Problems, methods and results
p0177 N82-17619
Economic evaluation
p0177 N82-17620

ECOSYSTEMS
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] p0181 N82-18679
Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8
[PB82-113747] p0183 N82-18749
Sedimentation plan to assess the impact geothermal activities to the aquatic ecosystem in the Geysers Calistoga KGRA
[DE82-001688] p0189 N82-21701

EDUCATION
Alcohol fuels production, manpower, and education: Where do two-year colleges fit
[DE82-001929] p0263 N82-21436

EDUCATIONAL TELEVISION
Experience acquired in the field of low power photovoltaic application to educational television
p0204 A82-24139

EFFICIENCY
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] p0172 N82-16549
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] p0186 N82-20027

ELECTRIC AUTOMOBILES
Electric car: Is it still the vehicle of the future
[DE81-030437] p0175 N82-16943
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-168425] p0179 N82-18066

ELECTRIC BATTERIES
Power sources 8: Research and development in non-mechanical electrical power sources; Proceedings of the Twelfth International Symposium, Brighton, England, September 1980
p0289 A82-24236
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] p0292 N82-17648
The 1981 Goddard Space Flight Center Battery Workshop
[NASA-CP-2217] p0283 N82-20402
Recent test results on lithium BCX cells
p0292 N82-20406
Case-positive versus case-negative designs for low-rate lithium thionyl chloride cells
p0292 N82-20407
RCA SATCOM in-orbit experience: An update
p0292 N82-20427
GPS on-orbit battery performance
p0293 N82-20429
Comparisons of different plate treatment and designs: An update
p0293 N82-20436
Comparisons of different plate treatments and designs: Analysis
p0293 N82-20437
Chargeability of nickel electrodes studied by optical microscopy
p0293 N82-20438
Life test of 50 AH NiH2 battery
p0293 N82-20441
Economic assessment of battery storage in solar photovoltaic applications
[DE82-004045] p0233 N82-21721

ELECTRIC CHARGE
Electrocyclone development program
[DE81-030004] p0264 N82-21780

ELECTRIC CONTACTS
Parallel- and radial-current stream-line type metal-contacts of solar cell
p0192 A82-19888
Reliable screen-printed contacts on silicon solar cells
p0207 A82-24172

ELECTRIC CORONA
Electrocyclone development program
[DE81-030004] p0264 N82-21780

ELECTRIC CURRENT
Materials, processes and testing laboratory residential technical progress report
[DE82-002816] p0232 N82-21225

ELECTRIC DISCHARGES
Electrochemical models for the discharge characteristics of the NiCd cell
p0292 N82-20416

ELECTRIC ENERGY STORAGE
Redox storage systems for solar applications
p0289 A82-24240
Optimization of a hybrid solar thermal power system
[ASME PAPER 81-WA/SOL-28] p0216 A82-24625
A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168640] p0229 N82-19677

ELECTRIC EQUIPMENT
Evaluation of control and protection circuits
[PB82-105065] p0251 N82-17450

ELECTRIC FIELDS
Large area silicon sheet by EFG
[NASA-CR-168680] p0231 N82-20664

ELECTRIC GENERATORS
System economic theory for WECS --- Wind Energy Conversion Systems
p0163 A82-19112
Interfacing wind energy conversion equipment with utility systems
p0271 A82-21148
Photovoltaics in the context of off-grid small power systems
p0205 A82-24146
Al-air cells - Potential small electric generators for field use
p0272 A82-24249
Geothermal power plant corrosion experience - A global survey
p0242 A82-24297
Materials for flywheel energy storage systems
p0290 A82-25365
Power generation from the East Australian current by use of arrays of submerged Darrieus vertical axis turbines
p0274 A82-26178
The NASA Lewis large wind turbine program
[NASA-TM-82761] p0275 N82-16495
Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] p0276 N82-16522
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] p0276 N82-16525
Electrical generating unit inventory 1976-1986: Illinois, Indiana, Kentucky, Ohio, Pennsylvania and West Virginia
[PB82-112194] p0180 N82-18441
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002055] p0281 N82-18706
Methane utilization from coalbeds for power generation at Bethlehem Mines Corporation Marianna Mine no. 58
[DE81-029791] p0259 N82-20333
Steam Rankine Solar Receiver, phase 2
[NASA-CR-168656] p0230 N82-20643
ELECTRIC HYBRID VEHICLES
Electric car: Is it still the vehicle of the future
[DE81-030437] p0175 N82-16943
ELECTRIC MOTOR VEHICLES
A PWM transistor inverter for an ac electric vehicle drive
p0270 A82-20744
Status, technology and development of silicon solar cells at INES
p0208 A82-24174
Thermal management of batteries
p0289 A82-24241
A nickel oxide-iron battery developed for traction purposes - Advantages and limitations
p0290 A82-24243
A sealed rechargeable metal-oxygen battery for traction purposes
p0290 A82-24248
Upgraded demonstration vehicle task report
[NASA-CR-168424] p0292 N82-18067
Electric vehicle refuelling infrastructure
[ERG-038] p0179 N82-18073
ELECTRIC OUTLETS
Possibilities for avoiding strong variations of the electrical output power of wind energy systems
p0278 N82-17625
ELECTRIC POWER
Energy consumption for the echo station (DSS 12)
p0170 N82-16139
ELECTRIC POWER PLANTS
An impact assessment of MOD-2 wind generators on the TVA power system
p0163 A82-19053
Integration problems with large wind energy conversion systems
p0267 A82-19054
A review of medium-scale wind turbine generators
p0267 A82-19106
A comparison of studies of WECS economics for utility applications --- Wind Energy Conversion System
p0268 A82-19113
The expected cost of electricity generated by the U.S. Mod 2 windmill
p0268 A82-19114

Real-time simulation of MHD/steam power plants by digital parallel processors
p0269 A82-19241
Potential for a Danish power system using wind energy generators, solar cells and storage
p0163 A82-20141
Solar-thermal electric - Focal point for the desert sun
p0195 A82-20167
Comparative analysis of CCMHD power plants --- Closed Cycle MHD
p0270 A82-20747
MHD channel performance for potential early commercial MHD power plants
p0270 A82-20750
A comparison of the solar-gas and solar-electric interface
p0197 A82-21149
Solar energy/utility interface - The technical issues
p0197 A82-21150
Design and construction of a concentrating photovoltaic total energy system in Hawaii
[AIAA PAPER 82-0069] p0198 A82-22040
Testing of the low mass flow test train in the DOE Coal Fired Flow Facility
[AIAA PAPER 82-0378] p0165 A82-22097
Arc mode molten seed electrodes for MHD power generation
p0272 A82-24018
Survey of residential and intermediate photovoltaic applications
p0205 A82-24143
Analysis of a 60 kW photovoltaic power plant after the first year of operation
p0205 A82-24144
Photovoltaic pilot projects in the European community
p0205 A82-24145
A 50 kW photovoltaic power plant coupled to the 15000 V electricity grid
p0205 A82-24147
Hardware simulation of a scaled down photovoltaic power system
p0205 A82-24148
Thermodynamic limitations of direct solar energy conversion
p0211 A82-24212
Construction and testing of experimental plants using solar cells and concentrators
p0212 A82-24224
Interconnection of a photovoltaic power generation system with the grid
p0212 A82-24231
Considerations on the feasibility of A 1 MWp central PV plant to be tied to the European electrical network
p0213 A82-24234
Molten carbonate fuel cell improvements
p0272 A82-24239
Redox storage systems for solar applications
p0289 A82-24240
Geothermal power plant corrosion experience - A global survey
p0242 A82-24297
Magnetohydrodynamics and its hazard assessment
[ASME PAPER 81-WA/SAF-3] p0166 A82-24604
The potential economic benefit of using parabolic trough collectors to supplement power cycle boilers
[ASME PAPER 81-WA/SOL-17] p0215 A82-24616
Rankine engine solar power generation. II - The power generation module
[ASME PAPER 81-WA/SOL-23] p0216 A82-24621
Comparison of electrochemical and thermal storage for hybrid parabolic dish solar power plants
[ASME PAPER 81-WA/SOL-27] p0216 A82-24624
Optimization of a hybrid solar thermal power system
[ASME PAPER 81-WA/SOL-28] p0216 A82-24625
OTEC power system development and environmental impacts
p0166 A82-24686
Geothermal resource field development
p0167 A82-24687
Fuel cell power plants for utility applications
p0273 A82-24692
Phosphoric acid fuel cell plants for dispersed electric power generation
p0273 A82-24693

Engineering development of molten carbonate fuel cell power plants
p0273 A82-24694
An assessment of alternative fuel cell designs for residential and commercial cogeneration
p0273 A82-24695
Trade-offs in MO/X/ control
p0167 A82-25161
Solar multiple purpose power plant in modular superlight weight construction
p0218 A82-25505
Melt-freeze-cycle life-testing of Glauber's salt in a rolling cylinder heat store
p0291 A82-26336
Dynamic analysis and control of a solar power plant. I - Dynamic analysis and operation criteria. II - Control system design and simulation
p0220 A82-26337
The Nanticoke shoreline diffusion experiment, June 1978. IV. A - Oxidation of sulphur dioxide in a power plant plume. B - Ambient concentrations and transport of sulphur dioxide, particulate sulphate and nitrate, and ozone
p0168 A82-26407
Modelling continuous fumigation of Nanticoke generating station plume
p0168 A82-26409
EURELIOS, the world's first thermomechanical helioelectric power plant
p0274 A82-28024
Carbon dioxide power plant for total emission control and enhanced oil recovery
[DE81-030734] p0170 N82-16458
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82736] p0275 N82-16481
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165455] p0275 N82-16483
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] p0253 N82-17601
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] p0181 N82-18442
An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103268] p0183 N82-18736
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] p0183 N82-18740
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] p0282 N82-19672
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] p0258 N82-19674
Potential for increasing the output of existing hydroelectric plants
[AD-A109772] p0283 N82-20678
Assessment of the suitability of agricultural waste water for geothermal power plant cooling in the Imperial Valley. 1: Water quality
[DE82-001869] p0283 N82-20685
Electric utility value analysis methodology for wind energy conversion systems
[DE82-003573] p0283 N82-20688
Economic assessment of battery storage in solar photovoltaic applications
[DE82-004045] p0233 N82-21721
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733
Geothermal probabilistic cost study
[NASA-CR-168757] p0285 N82-21756
Heber geothermal binary demonstration project
[DE82-002462] p0285 N82-21759
Preliminary engineering design and cost of Advanced Compressed-Air Storage (ACAS) A-5 hybrid
[DE82-900339] p0294 N82-21763

ELECTRIC POWER SUPPLIES
Power system design optimization using Lagrange multiplier techniques

Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] p0228 N82-19669
ELECTROCATALYSTS
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] p0277 N82-17615
ELECTROCHEMICAL CELLS
Synthetic battery cycling
p0209 A82-20749
Power sources 8: Research and development in non-mechanical electrical power sources; Proceedings of the Twelfth International Symposium, Brighton, England, September 1980
p0289 A82-24236
Al-air cells - Potential small electric generators for field use
p0272 A82-24249
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] p0277 N82-17615
Development of a solar-energy system
[DE81-030531] p0225 N82-17633
Effects of the mode of storage on the capacity fading of the sintered nickel electrodes
p0293 N82-20431
Comparisons of different plate treatment and designs: An update
p0293 N82-20436
Comparisons of different plate treatments and designs: Analysis
p0293 N82-20437
COMSAT Labs life test data for NiH2 cells
p0293 N82-20440
Life test of 50 AH NiH2 battery
p0293 N82-20441
Cycling characteristics on NiH2 cells in standard and daily energy balance Leo orbits
p0293 N82-20442
Some properties of NiH2 cells
p0293 N82-20443
Evaluation of gasification and gas-cleanup processes for use in molten-carbonate fuel-cell power plants
[DE82-003207] p0285 N82-21723
Development of molten-carbonate fuel-cell power-plant technology
[DE82-002108] p0285 N82-21732
ELECTROCHEMISTRY
COMSAT Labs life test data for NiH2 cells
p0293 N82-20440
ELECTRODEPOSITION
Use of photovoltage for electrodeposition in solar cell processing technology
p0197 A82-21253
High-efficiency electrodeposited cadmium telluride solar cells
p0198 A82-21949
Evaluation of electrodeposited cadmium telluride solar cells
p0210 A82-24205
ELECTRODES
Screenable all-metal solar cell electrodes of nickel and copper
p0207 A82-24171
A comparison of a low pressure and a high pressure Ni-H2 cell
p0290 A82-24244
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] p0291 N82-17635
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] p0281 N82-18706
Comparisons of different plate treatment and designs: An update
p0293 N82-20436
Comparisons of different plate treatments and designs: Analysis
p0293 N82-20437
Chargeability of nickel electrodes studied by optical microscopy
p0293 N82-20438
ELECTROLYSIS
Photoelectrolysis at Fe2O3/TiO2 heterojunction electrode
p0239 A82-23782
Hydrogen by water electrolysis as basis for small scale ammonia production - A comparison with hydrocarbon based technologies
p0240 A82-25779
A study of water electrolysis with photovoltaic solar energy conversion
p0219 A82-25782
ELECTROLYTES
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte
p0219 A82-25738
Study of stabilization and surface recombination on n-GaP photoelectrodes - Mechanisms and interrelation
p0219 A82-25739
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] p0291 N82-16521
Development of a solar-energy system
[DE81-030531] p0225 N82-17633
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] p0280 N82-18704
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000689] p0281 N82-18705
The 1981 Goddard Space Flight Center Battery Workshop
[NASA-CP-2217] p0283 N82-20402
ELECTROLYTIC CELLS
Development of a sealed Ni-Cd cell capable of operating in unprecedented high temperature environments
p0290 A82-24246
High temperature solid electrolyte fuel cell
p0273 A82-24968
Comparisons of different plate treatment and designs: An update
p0293 N82-20436
Comparisons of different plate treatments and designs: Analysis
p0293 N82-20437
COMSAT Labs life test data for NiH2 cells
p0293 N82-20440
Life test of 50 AH NiH2 battery
p0293 N82-20441
Cycling characteristics on NiH2 cells in standard and daily energy balance Leo orbits
p0293 N82-20442

ELECTROMAGNETIC COMPATIBILITY
Electromagnetic compatibility analysis for a satellite power system receiving site in the Mojave Desert
[PB82-100710] p0288 N82-18723
Dynamic electrical response of solar cells
[NASA-TM-76686] p0231 N82-20655
ELECTRON BEAMS
An analysis of EBIC response of ITO/poly-Si solar cells --- Electronic Beam Induced Current
p0191 A82-19870
Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] p0222 N82-16490
ELECTRON CAPTURE
Can recombination via interfacial states in MIS solar cells be of advantage
p0210 A82-24199
ELECTRON DENSITY (CONCENTRATION)
Recent results on measurement of plasma conductivity using Faraday rotation of submillimeter waves
[AIAA PAPER 82-0376] p0269 A82-19800
ELECTRON MICROSCOPY
An EBIC study of the CdS-Cu2S photovoltaic cell --- crystallograph using scanning electron microscope in Electron Beam Induced Current mode
p0209 A82-24186
ELECTRON PLASMA
Recent results on measurement of plasma conductivity using Faraday rotation of submillimeter waves
[AIAA PAPER 82-0376] p0269 A82-19800
ELECTRON RECOMBINATION
The influence of surface conditions on the open circuit voltage of silicon solar cells
p0207 A82-24169
Can recombination via interfacial states in MIS solar cells be of advantage
p0210 A82-24199
Solar cell performance with an inhomogeneous areal distribution but constant number of recombination centers
p0218 A82-25548
Study of stabilization and surface recombination on n-GaP photoelectrodes - Mechanisms and interrelation
p0219 A82-25739
ELECTRON TRANSITIONS
Development of molten-carbonate fuel-cell power-plant technology
[DE82-002108] p0285 N82-21732
ELECTRONIC CONTROL
Energy management in military combat aircraft
p0164 A82-20515
The control of aircraft gas turbines for fuel economy
p0164 A82-20516
The impact of increasing energy costs upon the design philosophy of avionic fuel management systems
p0164 A82-20517
Thrust management - Current achievements and future developments
p0164 A82-20520
A PWM transistor inverter for an ac electric vehicle drive
p0270 A82-20744
Sun tracking controller for multi-kW photovoltaic concentrator system
p0203 A82-24131
ELECTRONIC MODULES
Automated concentrator cell module assembly
p0212 A82-24223
ELECTROSTATIC PRECIPITATORS
Electrocyclone development program
[DE81-025062] p0188 N82-20700
EMISSION
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] p0173 N82-16595
EMITTERS
Photovoltaic investigation of minority carrier lifetime in the heavily-doped emitter layer of silicon junction solar cell
p0196 A82-20457
ENCAPSULATED MICROCIRCUITS
Photovoltaic research and development: Materials research
[DE82-001796] p0235 N82-21748
ENCAPSULATING
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-168671] p0231 N82-20649
ENDOTHERMIC REACTIONS
Thermodynamic analysis of solar thermochemical energy absorption
p0219 A82-26024
ENERGY
The 18th Project Integration Meeting
[NASA-CR-168831] p0225 N82-17614
ENERGY ABSORPTION FILMS
Selective blacks for enhanced photothermal solar energy conversion
p0191 A82-19296
Spray-deposited black nickel selective absorber surfaces for solar thermal conversion
p0199 A82-23575
Investigation of the thermal-engineering characteristics of a solar collector with a selective coating and vacuum heat-insulation
p0217 A82-24870
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] p0227 N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] p0228 N82-18717
ENERGY BANDS
Heterojunction energy band lineups in Cd/1-x/Zn/x/S/Cu2S solar cells
p0209 A82-24191
ENERGY CONSERVATION
Energy management and its impact on avionics; Proceedings of the Symposium, London, England, March 19, 1981
p0164 A82-20513
General aviation fuel conservation in the 1980's
p0165 A82-20757
Management of powerplant maintenance and restoration programs for fuel conservation
[SAE PAPER 811052] p0166 A82-24394
Airline fuel saving through JT9D engine refurbishment
[SAE PAPER 811051] p0166 A82-24395
The Solar Power Satellite - An opportunity for Third World development
p0168 A82-25660
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] p0169 N82-16057
Seminar: Energy conservation. Role of power capacitors: Concepts and Policy Issues
[PB81-247967] p0170 N82-16359
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] p0170 N82-16417
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] p0275 N82-16485
Risk of producing energy, and conserving it
[DE81-030807] p0171 N82-16507
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-900499] p0172 N82-16516
Code workbook for active and passive solar design: Single-family residential construction
[DE82-000637] p0223 N82-16531
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] p0172 N82-16549
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] p0172 N82-16550
Transport and energy
[DE81-030287] p0175 N82-16946
Solarization/conservation technology development for existing housing
[DE82-002175] p0176 N82-17407
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] p0177 N82-17634

Possibility for energy conservation in transporting freight by truck
[DE81-030072] p0179 N82-18071
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] p0182 N82-18708
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] p0182 N82-18724
Performance of the Norris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] p0182 N82-18728
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] p0184 N82-19108
Energy conservation in the production of domestic hot water
[EP-48] p0185 N82-19665
Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] p0185 N82-20025
Residential heating and energy conservation study, Northport, New York. Phase 1: Citizen's handbook
[PB82-100454] p0186 N82-20359
Residential heating and energy conservation study, Northport, New York. Phase 2: Citizen's handbook
[PB82-100462] p0186 N82-20360
Carlisle house: An all-solar-electric residence
[DE82-004376] p0233 N82-21443
Energy building regulations for new residential and nonresidential buildings
[PB82-117813] p0188 N82-21448
Center for Energy Research and Technological Resources for Puerto Rico
[DE81-031987] p0188 N82-21760

ENERGY CONSUMPTION

Air transport in the 21st century

Digital simulation of an MHD power consolidation/D.C. to A.C. inverter system
p0269 A82-19242
Model evaluation and optimum collector slope for a tropical country
p0191 A82-19298
A model for industrial production of fuel grade ethanol from sugar beets
p0281 A82-19299
Photovoltaic Science and Engineering Conference in Japan, 2nd, Tokyo, Japan, December 2-4, 1980, Proceedings
p0191 A82-19876
Characterization of 3-inch solar cells fabricated from granular silicon obtained in a fluidized-bed reactor
p0192 A82-19880
Fabrication and properties of silicon solar cells using squarely shaped crystals
p0192 A82-19881
Junction and bulk region characteristics of the laser annealed Si solar cells
p0192 A82-19883
Parallel- and radial-current stream-line type metal-contacts of solar cell
p0192 A82-19888
Efficiency increase of solar cells operated in dielectric liquid
p0192 A82-19889
High efficiency MOS solar cells by anodic oxidation processes
p0193 A82-19891
A new structure for high efficiency and humidity resistant AlGaAs/GaAs solar cells
p0193 A82-19893
Performance of 1 kWp AlGaAs/GaAs terrestrial concentrator solar cell array
p0193 A82-19894
Growth and evaluation of n-CdS/n-InP/p-InP heteroface solar cell
p0193 A82-19896
InGaAsP/InP wavelength division solar cells
p0193 A82-19897
Design and performances of a triple /GaAs, Si, and Ge/- solar-cell system with multi-layered spectrum splitters
p0193 A82-19898
Interpretation of characteristics in a-Si:H solar cells
p0194 A82-19909
A new integrated type amorphous Si solar cell
p0194 A82-19913
Optimizations of the film deposition parameters for the hydrogenated amorphous silicon solar cell
p0194 A82-19914
Broadening of spectral response width by a-Si/a-SiGe p-i-n type solar cells
p0194 A82-19915
Possibilities and limitations of wind energy utilisation
p0269 A82-20140
SHAC - A nation turns to the sun --- Solar Heating And Cooling
p0195 A82-20165
Wind - Prototypes on the landscape --- wind turbine performance data collection of grasslands of southcentral Washington
p0163 A82-20166
Photovoltaics - A question of efficiency
p0195 A82-20168
Fabrication of thick narrow electrodes on concentrator solar cells
p0196 A82-20205
The rebirth of MHD
p0270 A82-20283
Some properties of dc glow discharge amorphous silicon solar cells
p0196 A82-20463
Improved efficiency of n-CdSe thin-film photoelectrodes by zinc surface treatment
p0196 A82-20464
The silicon solar satellite power system - A net energy analysis
p0196 A82-20574
A high efficiency single-crystal CdSe photoelectrochemical solar cell and an associated loss mechanism
p0196 A82-20722
Comparative analysis of CCMHD power plants --- Closed Cycle MHD
p0270 A82-20747
MHD channel performance for potential early commercial MHD power plants
p0270 A82-20750
Renewable energy - Target for 2050
p0165 A82-21225
Effect of the back-surface field on the open-circuit voltages of p/+/-n-n/+/ and n/+/-p-p/+/ silicon solar cells
p0197 A82-21364
Optimum operating conditions of a solar cell panel and prediction of solar radiation in Sanaa, Yemen
p0197 A82-21365
High-efficiency electrodeposited cadmium telluride solar cells
p0198 A82-21949
Laser processing for high-efficiency Si solar cells
p0198 A82-22191
The effect of length on absorption for a trapezoidal groove collector
p0198 A82-23391
Performance and economics of annual storage solar heating systems
p0199 A82-23395
Simplified method for predicting photovoltaic array output
p0195 A82-23399
Photovoltaics - Down to earth at last
p0200 A82-23700
Second-stage CEC concentrator --- Compound Elliptical Concentrator for solar energy conversion
p0200 A82-23872
High power pulsed oscillators
p0287 A82-23944
Performance assessment and cost effectiveness of wind energy conversion systems

A strategy for cost reduction from the point of view of a French industrialist
p0201 A82-24107
Research on photovoltaic conversion - A guarantee of efficiency for the European solar energy program
p0201 A82-24109
Research options as seen from U.S.A. --- photovoltaic solar cells
p0201 A82-24110
Photovoltaic R&D program overview
p0201 A82-24111
A U.S. view of silicon production processes
p0201 A82-24112
The Wacker approach to low-cost silicon material technology
p0202 A82-24114
Ribbons and sheets as an alternative to ingots in solar cell technology
p0202 A82-24115
Directional solidification of MG silicon by Heat Exchanger Method /HEM/ for photovoltaic applications
p0202 A82-24116
Operational, reliability, and maintenance experience with photovoltaic concentrator arrays
p0203 A82-24130
Advanced concepts for photovoltaic concentration
p0204 A82-24134
Photovoltaics in the context of off-grid small power systems
p0205 A82-24146
Evaluation of silicon-on-ceramic material for low-cost solar cells
p0206 A82-24154
Study of the elaboration of monocrystalline silicon ingots
p0206 A82-24160
Development of large area, low-cost, solar cell processing sequence
p0206 A82-24161
Optimized diffusion parameters for cells made by columnar silicon
p0206 A82-24164
Screenable all-metal solar cell electrodes of nickel and copper
p0207 A82-24171

Status, technology and development of silicon solar cells at INER
p0208 A82-24174
Comparative study of the thermal characteristics of various solar cell module structures
p0208 A82-24178
Terrestrial photovoltaic performance reference conditions
p0208 A82-24179
Optical measurement of cell temperature in a solar array
p0208 A82-24182
Surface properties of Cu/2-x/S and its influence on the performance of frontwall Cu/2-x/S-CdS thin film solar cells
p0209 A82-24185
Heterojunction energy band lineups in Cd/1-x/Zn/x/S/Cu2S solar cells
p0209 A82-24191
Hydrogenated a-Si multi-junction solar cells and interference effects in the spectral response
p0209 A82-24194
Can recombination via interfacial states in MIS solar cells be of advantage
p0210 A82-24199
Theoretical and experimental study of quantum and energy conversion efficiency in CdTe p-n junctions
p0210 A82-24206
Performance of ultra high efficiency thin germanium p-n junction solar cells intended for solar thermophotovoltaic application
p0211 A82-24211
Thermodynamic limitations of direct solar energy conversion
p0211 A82-24212
Thermodynamic limits to photovoltaic solar energy conversion efficiency
p0211 A82-24213
High efficiency large area AlGaAs/GaAs concentrator solar cells
p0211 A82-24221
Optical characteristics of the dispersion concentrator and its influence on photovoltaic systems
p0212 A82-24222
Multibandgap cells in a thermophotovoltaic system
p0212 A82-24225
The 5 kW generator at the Alpine refuge 'Les Evettes' - Operating data
p0212 A82-24229
Optimization of the P.V. array-load energy transfer by means of an electronic adaptator
p0212 A82-24230
Considerations on the feasibility of A 1 MWp central PV plant to be tied to the European electrical network
p0213 A82-24234
Thin-film polycrystalline /CdZn/S/Cu2S solar cells of 10% conversion efficiency
p0213 A82-24235
Molten carbonate fuel cell improvements
p0272 A82-24239
A review of recent developments in thermal batteries
p0289 A82-24242
Frequency response analysis of ocean wave energy converter
[ASME PAPER 81-WA/DSC-10] p0273 A82-24564
On reducing convective losses from cover glazings of solar thermal collectors
[ASME PAPER 81-WA/SOL-3] p0213 A82-24606
Heat transfer characteristics of a back-corrugated absorber surface for solar air collectors
[ASME PAPER 81-WA/SOL-5] p0214 A82-24607
On the weathering of thin plastic films
[ASME PAPER 81-WA/SOL-6] p0214 A82-24608
Design, fabrication, and evaluation of an innovative woven-screen solar collector
[ASME PAPER 81-WA/SOL-13] p0215 A82-24612
Rankine engine solar power generation. I - Performance and economic analysis
[ASME PAPER 81-WA/SOL-22] p0216 A82-24620
Assessment of generic solar thermal systems for large power applications
[ASME PAPER 81-WA/SOL-25] p0216 A82-24623
Methodology to determine cost and performance goals for active solar cooling systems
[ASME PAPER 81-WA/SOL-32] p0217 A82-24627
Fuel cell power plants for utility applications
p0273 A82-24692
Phosphoric acid fuel cell plants for dispersed electric power generation
p0273 A82-24693
Engineering development of molten carbonate fuel cell power plants
p0273 A82-24694
Asymmetric second-stage concentrators
p0218 A82-25110
Optimization of the functional domain of flat plate collectors
p0218 A82-25501
REA, a solar breeder reactor with high energetic enhancement factor Technoeconomic analysis
p0218 A82-25504
High-efficiency millimetre-wave InP TEOs made by liquid phase epitaxy
p0274 A82-25523
Solar cell performance with an inhomogeneous areal distribution but constant number of recombination centers
p0218 A82-25548
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte
p0219 A82-25738
Power generation from the East Australian current by use of arrays of submerged Darrieus vertical axis turbines
p0274 A82-26178
A new look at long term collector performance and utilizability
p0219 A82-26330
Amorphous silicon p-i-n solar cells fabricated by reactive sputtering
p0220 A82-26807
Theoretical study of absorbed solar energy in multi-layer absorber coatings for receivers of solar concentrators. I - Radiation transfer analysis
p0221 A82-28387
Modeling solar-energy systems for economic optimization
[DE81-030030] p0223 N82-16518
Assessment of technical potential: Problems, methods and results
p0177 N82-17619
High concentration in GaAs photovoltaic systems
[CISE-1713] p0225 N82-18529
Thermodynamic limits for solar energy conversion by a quantum-thermal hybrid system
[NASA-TM-83229] p0226 N82-18695
The ultimate efficiency of photosensitive systems
[NASA-TM-83230] p0226 N82-18696
Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] p0226 N82-18697
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] p0281 N82-18720
Potential for increasing the output of existing hydroelectric plants
[AD-A109772] p0283 N82-20678
Electric utility value analysis methodology for wind energy conversion systems
[DE82-003573] p0283 N82-20688
Prototype residential photovoltaic-systems evaluation plans
[DE82-004726] p0232 N82-21441
Thin-film polycrystalline silicon solar cells
[DE82-000633] p0236 N82-21753
SP-C12-301: Thermal performances of solar energy absorbers --- test method
[SP-MET-1979:2] p0236 N82-21767

ENERGY DISSIPATION
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] p0223 N82-16511

ENERGY GAPS (SOLID STATE)
Growth and characterization of cascade solar cells
p0204 A82-24135
Multibandgap cells in a thermophotovoltaic system
p0212 A82-24225

ENERGY METHODS
DOE-2 verification project, phase 1
[LA-8295-MS] p0177 N82-17616
EX in-situ oil-shale project
[DE82-002134] p0264 N82-21693

ENERGY POLICY
Government-industry relationships in technology commercialization The case of photovoltaics p0165 A82-21362
The 1980's - A forest of energy decision trees; Proceedings of the Region Six Conference, San Diego, CA, February 20-22, 1980 p0166 A82-24683
Biomass options for the big island of Hawaii p0167 A82-24690
Seminar: Energy conservation. Role of power capacitors: Concepts and Policy Issues [PB81-247967] p0170 N82-16359
Oil Shale 1982: A technology and policy primer p0170 N82-16449
Preliminary resource assessment of coalbed methane in the United States [DE82-001356] p0247 N82-16462
Enhanced oil recovery by CO2 foam flooding [DE82-000949] p0247 N82-16464
Implications of land, water and energy resource policies on agricultural production [PB81-244063] p0171 N82-16467
Solar heated fluidized bed gasification system [NASA-CASE-NPO-15071-1] p0222 N82-16475

Analysis of state-energy-program capabilities [DE82-001963] p0172 N82-16523
Design, construction, and initial operation of the ANL research [DE82-001961] p0223 N82-16528
Development of hydroconversion of biomass to synthetic fuels. Project 61042 technical report [DE82-000874] p0248 N82-16529
Case studies of retrofit applications of solar energy in the MASEC region [DE82-001712] p0223 N82-16532
Cogeneration potential: Enhanced oil recovery [DE81-904202] p0248 N82-16539
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2 [PB82-103573] p0174 N82-16618
Meteorological aspects of the utilization of solar radiation as an energy source, part 1 [WMO-557-VOL-1] p0225 N82-17644
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation [WMO-557-VOL-2] p0225 N82-17645
Meteorological aspects of the utilization of wind as an energy source [WMO-575] p0279 N82-17646
Aviation and space flight research activities p0180 N82-18174
Electrical generating unit inventory 1976-1986: Illinois, Indiana, Kentucky, Ohio, Pennsylvania and West Virginia [PB82-112194] p0180 N82-18441
Coal mine siting for the Ohio River Basin energy study [PB82-108119] p0181 N82-18680
Energy policies for resilience and national security [AD-A108263] p0182 N82-18700
Ohio River Basin energy study: Social values and energy policy [PB82-101494] p0183 N82-18735
Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8 [PB82-113747] p0183 N82-18749
Social and Environmental Consequences of Natural Resources Policies with Special Emphasis on Biosphere Reserves [PB82-113937] p0185 N82-19660
Review of the UK transport energy outlook: And policy recommendations [EP-47] p0185 N82-19664
Energy conservation in the production of domestic hot water [EP-48] p0185 N82-19665
Energy properties in urban building stock --- in Finland [VTT-BR-1/81] p0185 N82-19696
Proposed 5-year plan oil and gas development in the outer Continental Shelf [PUBL-97-43] p0187 N82-20616
Analytical and experimental analysis of procedures for testing solar domestic hot water systems p0230 N82-20639
Buffer thermal energy storage for an air Brayton solar engine [NASA-CR-168657] p0230 N82-20642
A Module Experimental Process System Development Unit (MEPSDU) --- flat plate solar arrays [NASA-CR-168667] p0231 N82-20646
Hydroelectric development in New England [GPO-84-558] p0187 N82-20659
Ocean Thermal Energy Conversion Research, Development, and Demonstration Act [GPO-56-801] p0187 N82-20660
Heavy-liquid beneficiation of fine coal [DE81-030965] p0261 N82-21279
Small-scale fuel-alcohol plant. Volume 1: Design report [DE82-001038] p0263 N82-21432
Carlisle house: An all-solar-electric residence [DE82-004376] p0233 N82-21443
RPE-10 composite flywheel testing [DE82-001694] p0294 N82-21725
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary [DE82-001663] p0234 N82-21733
Heliostat field layout for solar thermal power plants [MBB-UR-453/80-OE] p0236 N82-21765
Heat storage by means of thermal dissociation reactions. Storage systems and materials [IKE-5-213] p0294 N82-21766
Requirements for the provision of offshore wind data relating to wind energy conversion systems [BMI-B-75] p0264 N82-21847
Urban Consortium [PB82-122789] p0189 N82-22111
ENERGY REQUIREMENTS
Renewable energy - Target for 2050 p0165 A82-21225
Analysis to develop a program for energy-integrated farm systems [DE82-000318] p0172 N82-16514
Modeling solar-energy systems for economic optimization [DE81-030030] p0223 N82-16518
A comparison of energy technologies and their use in urban planning [PB81-239592] p0172 N82-16546
An economic analysis of coal supply in the Ohio River Basin Energy Study Region [PB82-113341] p0255 N82-18414
Energy equivalents for selected pavement materials: Their production and placement [PB82-121187] p0180 N82-18433
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects [PB82-107012] p0228 N82-18729
An economic analysis of the electric utility sector in the Ohio River Basin region [PB82-103268] p0183 N82-18736
US energy for the rest of the century [PB82-115866] p0185 N82-19697
Energy demand forecasting [GPO-83-115] p0187 N82-20666
An energy demand model for light-duty vehicles, with concepts for estimating fuel consumption [PB82-102468] p0187 N82-20690
Economic analysis of solar industrial process heat systems: A methodology to determine annual required revenue and internal rate of return [DE82-001628] p0235 N82-21743
ENERGY SOURCES
Integration problems with large wind energy conversion systems p0267 A82-19054
Biological sources of energy from the sea p0241 A82-20256
Renewable energy - Target for 2050 p0165 A82-21225
The 1980's - A forest of energy decision trees; Proceedings of the Region Six Conference, San Diego, CA, February 20-22, 1980 p0166 A82-24683

Numerical study of wind energy characteristics over heterogeneous terrain - Central Israel case study
p0243 A82-25460
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] p0225 N82-17645
Evaluation of continuous oxydesulfurization processes
[DE82-002127] p0261 N82-20697

ENERGY STORAGE
Storing wind energy as a liquid fuel
p0289 A82-19116
Potential for a Danish power system using wind energy generators, solar cells and storage
p0163 A82-20141
Synthetic battery cycling
p0289 A82-20749
Estimation of storage costs for large hydrogen storage facilities
p0239 A82-21196
Energy storage: A vital element in mankind's quest for survival and progress --- Book
p0289 A82-23206
Deposit formation in liquid fuels. III - The effect of selected nitrogen compounds on diesel fuel
p0241 A82-23238
Comparison of electrochemical and thermal storage for hybrid parabolic dish solar power plants
[ASME PAPER 81-WA/SOL-27] p0216 A82-24624
Materials for flywheel energy storage systems
p0290 A82-25365
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] p0291 N82-16427
Modeling solar-energy systems for economic optimization
[DE81-030030] p0223 N82-16518
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] p0291 N82-16521
Comparison of energy-storage devices for use in future automobiles
[DE81-026530] p0291 N82-16945
Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] p0291 N82-17607
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] p0291 N82-17635
The techniques, magnitudes and opportunities for development of energy storage (UK)

Synthetic fuels development
[GPO-85-050] p0259 N82-20327
The natural gas option: New resources and new technologies
[GPO-85-052] p0186 N82-20329
Heat pump water heater: Midway residential community
[DE82-003548] p0186 N82-20475
Technology and Soviet energy availability
[PB82-133455] p0264 N82-21773
Directory of energy and environment libraries and information centers in the metropolitan Washington D.C. area
[PB82-123993] p0295 N82-22099

ENERGY TRANSFER

Optimization of the P.V. array-load energy transfer by means of an electronic adaptator
p0212 A82-24230
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] p0276 N82-16525

ENGINE AIRFRAME INTEGRATION

Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203

ENGINE CONTROL

Energy management in military combat aircraft
p0164 A82-20515
The control of aircraft gas turbines for fuel economy
p0164 A82-20516

ENGINE DESIGN

The impact of increasing energy costs upon the design philosophy of avionic fuel management systems
p0164 A82-20517
Advanced subsonic transport propulsion
[AIAA PAPER 81-0811] p0165 A82-20870
Lineup of the IR-series aircraft-derivative gas turbines
p0271 A82-22896
Management of powerplant maintenance and restoration programs for fuel conservation
[SAE PAPER 811052] p0166 A82-24394
Airline fuel saving through JT9D engine refurbishment
[SAE PAPER 811051] p0166 A82-24395
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] p0275 N82-16485
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] p0276 N82-16937
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-207553] p0175 N82-16947
Influence of correlations and computational methods on the prediction of overall efficiency
p0276 N82-17180

Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203
Aerodynamic components for small turboshaft engines
p0277 N82-17211
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[ERG-034] p0277 N82-17459
Component design and development for future helicopter engines
p0180 N82-18134
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] p0184 N82-19542
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] p0184 N82-19543
Buffer thermal energy storage for an air Brayton solar engine
[NASA-CR-168657] p0230 N82-20642
Cold-air performance of a 15.41-cm-tip-diameter axial-flow power turbine with variable-area stator designed for a 75-kW automotive gas turbine engine
[NASA-TM-82644] p0284 N82-21193
Energy efficient engine shroudless, hollow fan blade technology report
[NASA-CR-165586] p0284 N82-21196

ENGINE PARTS
Precision casting for gas turbine engines
p0275 A82-28313
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203
Mechanical advances in the design of small turboshaft engines
p0277 N82-17208
Aerodynamic components for small turboshaft engines
p0277 N82-17211

ENGINE TESTS
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] p0170 N82-16417
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] p0184 N82-19542
Preliminary results on performance testing of a turbocharged rotary combustion engine
[NASA-TM-82772] p0284 N82-21194

ENTRAINMENT
The application of mixture theory models and numerical solution techniques to coal gasification reactors
p0241 A82-19254

ENTRAPMENT
Measurement and correlation of conditions for entrapment and mobilization of residual oil
[DE82-001940] p0264 N82-21694

ENVIRONMENT EFFECTS
Environmental effects of the Satellite Power System Microwave Power Transmission System
p0164 A82-20644
Magnetohydrodynamics and its hazard assessment
[ASME PAPER 81-WA/SAP-3] p0166 A82-24604
OTEC power system development and environmental impacts
p0166 A82-24686
Geothermal resource field development
p0167 A82-24687
Geothermal direct use projects
p0167 A82-24688
Assessing the Solar Power Satellite - The OTA experience
p0168 A82-25665
Biomass energy systems and the environment --- Book
p0169 A82-28000
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] p0170 N82-16259
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] p0173 N82-16563
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2
[PB82-103573] p0174 N82-16618
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] p0174 N82-16846
Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] p0176 N82-17584
Increase of atmospheric CO2 and possible climatic changes
p0178 N82-17763
Energy and climate in South-East Asia and the Western Pacific
p0178 N82-17764
Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] p0180 N82-18440
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] p0181 N82-18679
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] p0182 N82-18733
Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8
[PB82-113747] p0183 N82-18749
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] p0183 N82-18751
Life on a warmer Earth: Possible climatic consequences of man made global warming
[ER-3] p0185 N82-19701
Environmental and economic aspects of indirect coal liquefaction processes: A report emphasizing the relationship between product mix and efficiency
[PB82-103581] p0188 N82-20701
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands
[PB82-113218] p0188 N82-20702
Sedimentation plan to assess the impact geothermal activities to the aquatic ecosystem in the Geysers Calistoga KGRA
[DE82-001688] p0189 N82-21701

ENVIRONMENT MANAGEMENT
Directory of energy and environment libraries and information centers in the metropolitan Washington D.C. area
[PB82-123993] p0295 N82-22099

ENVIRONMENT MODELS
Energy and climate in South-East Asia and the Western Pacific
p0178 N82-17764

ENVIRONMENT POLLUTION
Baseline health effects data applicable to anticipated geothermal resource development in Imperial County
[DE82-001669] p0189 N82-21702
Imperial county baseline health survey potential impact of geothermal energy
[DE82-001672] p0189 N82-21703

ENVIRONMENT PROTECTION
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467
Advanced Environmental Control Technology Program
[DE82-000898] p0173 N82-16562
Energy and environmental quality: Case histories of impact management
[DE81-028435] p0173 N82-16565
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] p0183 N82-18740

ENVIRONMENTAL CONTROL
Advanced Environmental Control Technology Program
[DE82-000898] p0173 N82-16562

ENVIRONMENTAL QUALITY
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] p0183 N82-18751

ENVIRONMENTAL SURVEYS
Applications of climate information and the United States National Climate Program
p0178 N82-17765

Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] p0182 N82-18733
NO sub x regulatory changes and the electric utility: A guidance manual for air quality modeling in planning, siting, and emissions control
[DE82-900966] p0189 N82-21786

ENVIRONMENTAL TESTS
Photovoltaic testing in the European communities
p0202 A82-24121
Energy equivalents for selected pavement materials: Their production and placement
[PB82-121187] p0180 N82-18833

ENZYME ACTIVITY
Hydrogen production by immobilized cells. I - Light dependent dissimilation of organic substances by Rhodopseudomonas palustris
p0240 A82-25778

EPITAXY
Multiple EFG silicon ribbon technology as the basis for manufacturing low-cost terrestrial solar cells --- Epitaxial Film Growth
p0206 A82-24151

EQUATIONS OF MOTION
Frequency response analysis of ocean wave energy converter
[ASME PAPER 81-WA/DSC-10] p0273 A82-24564

EQUILIBRIUM FLOW
Equilibrium two-phase heat pipe flows with variable flowrate
p0287 A82-21975

EQUIPMENT SPECIFICATIONS
Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-116229] p0256 N82-18571

EQUIVALENT CIRCUITS
Performance characteristics of open-cycle linearly-diverging diagonal type single- and multiple-load generators
p0269 A82-19297
Effect of shunt resistance and bypass diodes on the shadow tolerance of solar cell modules
p0198 A82-21366
I-V characterization of solar cells
[ISPE-2141-APE/363] p0227 N82-18699

ESTIMATING
Risk: Assessment, acceptability and management
[GPO-87-593] p0189 N82-22082

ESTUARIES
Tidal power from the Severn estuary, volume 1
[EP-46-VOL-1] p0282 N82-19666
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] p0282 N82-19667

ETCHING
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163873] p0222 N82-16491

ETHYL ALCOHOL
A model for industrial production of fuel grade ethanol from sugar beets
p0241 A82-19299
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 1: Executive summary
[DE82-000294] p0170 N82-16265
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 2: Technical analysis
[DE82-000479] p0170 N82-16266
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 1
[DE81-903753] p0245 N82-16273
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 2
[DE81-903754] p0245 N82-16274
Small-scale fuel-alcohol plant. Volume 2: Detailed equipment information
[DE82-001037] p0246 N82-16278
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000039] p0250 N82-17397
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] p0182 N82-18732
Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel extension of data
[PB82-127077] p0262 N82-21296
Evaluation of the effects of alcohol fuels on spark ignition engine wear
[AD-A110021] p0262 N82-21426
Feasibility study of the commercial production of ethanol from wood. Volume 2: Appendices 1-6
[DE82-002410] p0263 N82-21429

EUROPE
Photovoltaic pilot projects in the European community
p0205 A82-24145

EUROPEAN SPACE PROGRAMS
Space in the 1980's and beyond; Proceedings of the Seventeenth European Space Symposium, London, England, June 4-6, 1980
p0295 A82-20876

EVALUATION
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] p0172 N82-16550
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] p0228 N82-18726
Performance of the Morris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] p0182 N82-18728

EVOLUTION (DEVELOPMENT)
Evolution and development of high voltage /270 volt/ dc aircraft electric systems in the United States
p0273 A82-24382
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] p0258 N82-17696

EXHAUST EMISSION
Testing of the low mass flow test train in the DOE Coal Fired Flow Facility
[AIAA PAPER 82-0378] p0165 A82-22097
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] p0176 N82-16959
A method for estimating fuel consumption and vehicle emissions on urban arterials and networks
[PB82-108523] p0179 N82-18078
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] p0183 N82-18753
Inventory of emissions from marine operations within the California coastal waters
[PB82-105099] p0183 N82-18757
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] p0184 N82-19542
Advanced pulverized-coal combustor for control of NO sub x emissions
[DE82-002653] p0260 N82-20695

EXHAUST GASES
Effect of vacuum exhaust pressure on the performance of MHD ducts at high B-field
[AIAA PAPER 82-0396] p0270 A82-20292
Processes for reducing emissions of particulates and oxides of sulfur and nitrogen for various coal utilization alternatives
p0262 A82-23950
Flue-gas desulfurization: Review of selected commercial and advanced technologies
[DE82-001960] p0172 N82-16559
Exhaust emissions from high-mileage catalyst-equipped passenger cars
[PB82-103326] p0173 N82-16586
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] p0249 N82-17317
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] p0177 N82-17669

Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype Fiat 131TC 2.4 liter automobile
[NASA-CR-165535] p0179 N82-18068
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] p0184 N82-19543
Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] p0184 N82-19544

EXHAUST SYSTEMS
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] p0173 N82-16595
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] p0178 N82-17684

EXPERIMENTAL DESIGN
Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] p0229 N82-19683
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] p0229 N82-19685
Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4
[AD-A108385] p0229 N82-19686
Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5
[AD-A108386] p0229 N82-19687
Navy position on lithium safety p0292 N82-20414

EXPERIMENTATION
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] p0250 N82-17399

EXPLOITATION
Proposed 5-year plan oil and gas development in the outer Continental Shelf
[PUBL-97-43] p0187 N82-20616

EXTRACTION
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] p0252 N82-17555

F

FABRICATION
Characterization of plasma-sprayed silicon layers as possible base material for solar cell fabrication p0206 A82-24157
Study of the elaboration of semicrystalline silicon ingots p0206 A82-24160
Hydrogenated a-Si multi-junction solar cells and interference effects in the spectral response p0209 A82-24194
Design, fabrication, and evaluation of an innovative woven-screen solar collector
[ASME PAPER 81-WA/SOL-13] p0215 A82-24612
Amorphous silicon p-i-n solar cells fabricated by reactive sputtering p0220 A82-26807
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] p0222 N82-16491
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] p0251 N82-17508
Energy efficient engine shroudless, hollow fan blade technology report
[NASA-CR-165586] p0284 N82-21196
Cell module and fuel conditioner development
[NASA-CR-165620] p0285 N82-21713
Solar design and installation experience: An overview of results from the National Solar Data Network
[DE82-001657] p0235 N82-21738
Thin-film polycrystalline silicon solar cells
[DE82-000633] p0236 N82-21753

FACILITIES
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-168442] p0224 N82-17610

FAILURE ANALYSIS
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] p0182 N82-18724
Destruct/non-destruct evaluation of cycled NiCd cells p0292 N82-20415
NiCd battery failure analysis p0292 N82-20417
EPE-10 composite flywheel testing
[DE82-001694] p0294 N82-21725

FAILURE MODES
A review of the impact of the environment on aerogenerator materials p0271 A82-23063

FARADAY EFFECT
Recent results on measurement of plasma conductivity using Faraday rotation of submillimeter waves
[AIAA PAPER 82-0376] p0269 A82-19800

FARM CROPS
Temperature effects on the kinetics of the anaerobic digestion of crop residues to methane p0244 A82-28391
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467

FAST FOURIER TRANSFORMATIONS
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy p0249 N82-17286

FATIGUE (MATERIALS)
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] p0279 N82-17643

FATIGUE TESTS
Rotor testing in FY 1981
[DE81-028340] p0291 N82-16536

FEASIBILITY
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] p0250 N82-17397

FEASIBILITY ANALYSIS
Second-generation parabolic trough solar energy systems optimization analysis p0200 A82-24019
Analysis to develop a program for energy-integrated farm systems
[DE82-000316] p0172 N82-16514
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] p0182 N82-18701
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] p0282 N82-19681
Feasibility study on new processes for fuel from biomass
[DE82-002834] p0259 N82-20332

FEEDBACK CONTROL
Development of sensitized pick coal interface detector system
[NASA-CR-161961] p0252 N82-17560

FERMENTATION
A model for industrial production of fuel grade ethanol from sugar beets p0241 A82-19299

FIGHTER AIRCRAFT
Energy management in military combat aircraft p0164 A82-20515

FILTRATION
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] p0177 N82-17669
High concentration in GaAs photovoltaic systems
[CISR-1713] p0225 N82-18529

FIRES
Briquetting of fine coal using a sodium chloride binder
[DE82-000632] p0250 N82-17395

FINITE ELEMENT METHOD
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] p0249 N82-16918
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
p0280 N82-18127
FIRE PREVENTION
An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] p0240 N82-19196
FLAPPING HINGES
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] p0279 N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] p0279 N82-17641
FLASH POINT
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] p0244 N82-16210
FLAT PLATES
Comparison of test results for flat plate, transpired flat plate, corrugated, and transpired corrugated solar air heaters
[ASME PAPER 81-WA/SOL-18] p0215 A82-24617
Rankine engine solar power generation. I - Performance and economic analysis
[ASME PAPER 81-WA/SOL-22] p0216 A82-24620
Optimization of the functional domain of flat plate collectors
p0218 A82-25501
An evaluation of a transverse slatted flat plate collector
p0220 A82-26335
Concentration of solar radiation by white painted transparent plates
p0220 A82-28170
Materials-research recommendations to improve the performance and durability of solar heating and cooling systems
[DE82-000738] p0234 N82-21730
FLAT SURFACES
Solar collectors for flat roofs
[PB82-129834] p0236 N82-21769
FLIGHT CONTROL
The control of aircraft gas turbines for fuel economy
p0164 A82-20516
FLIGHT OPTIMIZATION
General aviation fuel conservation in the 1980's
p0165 A82-20757
Fuel optimal trajectory computation
p0169 A82-26568
FLIGHT PATHS
Fuel optimal trajectory computation
p0169 A82-26568
FLIGHT TESTS
RCA SATCOM in-orbit experience: An update
p0292 N82-20427
FLOW CHARACTERISTICS
Prospecting for wind energy - A field assessment of physical modelling
p0243 A82-26177
FLOW DISTRIBUTION
An extended multiple streamtube theory for vertical axis wind turbines
p0268 A82-19108
Calculation of the flow patterns and performance of wind turbines using streamline curvature methods
p0268 A82-19109
The effect of nonuniform fluid flow distribution on the thermal performance of solar collector
[ASME PAPER 81-WA/SOL-14] p0215 A82-24613
Magmatic gases in well fluids aid the mapping of the flow pattern in a geothermal system
p0243 A82-25373
FLOW GEOMETRY
Effects of gas-flow pattern on cavity shape
[DE82-000347] p0247 N82-16375
FLOW REGULATORS
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] p0251 N82-17508
FLOW THEORY
An extended multiple streamtube theory for vertical axis wind turbines
p0268 A82-19108
FLOW VELOCITY
Equilibrium two-phase heat pipe flows with variable flowrate
p0287 A82-21975
FLOW VISUALIZATION
The application of dynamic cold neutron fluoroscopy for the visualization of fuel and oil system operating characteristics in gas turbine development
p0272 A82-23824
FLOWMETERS
Development and testing of high-temperature acoustic Doppler flowmeter
[DE82-003013] p0260 N82-20492
FLUE GASES
Stack gases desulphurization recovery processes in thermal power plants of the world. III - Processes based on absorption by solid materials
p0166 A82-24075
Trade-offs in NO/x/ control
p0167 A82-25161
FLUES
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] p0174 N82-16614
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] p0249 N82-17317
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Nonox) FGD (Flue Gas Desulfurization) technologies
[PB82-110670] p0178 N82-17684
EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115858] p0184 N82-18766
FLUID INJECTION
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] p0251 N82-17507
Evaluation of alternatives in downhole steam generation
[DE82-001943] p0253 N82-17574
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] p0253 N82-17576
DOE in-situ oil-shale project
[DE82-002134] p0264 N82-21693
FLUID JETS
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] p0252 N82-17555
FLUIDIZED BED PROCESSORS
The application of mixture theory models and numerical solution techniques to coal gasification reactors
p0241 A82-19254
Characterization of 3-inch solar cells fabricated from granular silicon obtained in a fluidized-bed reactor
p0192 A82-19880
A continuous two stage solar coal gasification system
p0221 A82-28389
Development of potential uses for the residue from fluidized-bed-combustion processes
[DE81-030157] p0244 N82-16211
Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] p0222 N82-16475
Development of hydroconversion of biomass to synthetic fuels. Project 61042 technical report
[DE82-000874] p0248 N82-16529
Role of C-CO2 in gasification of coal and char
[DE81-027358] p0259 N82-20334
Parametric performance studies on fluidized-bed heat exchangers
[DE82-002124] p0187 N82-20476
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 3: Preconceptual design
[DE82-001945] p0294 N82-20687

Calcium silicate cements for desulfurization of combustion gases
[DE82-003245] p0260 N82-20696
Electrocyclone development program
[DE81-025062] p0188 N82-20700
Electrocyclone development program
[DE81-030004] p0264 N82-21780

FLUORESCENCE
On the conversion of solar radiation with fluorescent planar concentrators /FPCs/
p0204 A82-24136

FLUORIDES
Properties of amorphous Si:F:H film and its photovoltaic characteristics
p0194 A82-19903

FLUORINATION
Properties of fluorinated amorphous silicon solar cells
p0203 A82-24125

FLUORINE
Effect of fluorine on the photovoltaic properties of amorphous silicon prepared by dc glow discharge
p0193 A82-19902

FLUOROSCOPY
The application of dynamic cold neutron fluoroscopy for the visualisation of fuel and oil system operating characteristics in gas turbine development
p0272 A82-23824

FLY ASH
Advanced research and technology direct utilization: Recovery of minerals from coal fly ash. Fossil energy program
[DE82-003133] p0261 N82-20698
A procedure for determining the resource utilization potential of coal ash
[AD-A109877] p0261 N82-21111

FLYWHEELS
Materials for flywheel energy storage systems
p0290 A82-25365
Rotor testing in FY 1981
[DE81-028340] p0291 N82-16536
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p0292 N82-19689
RPE-10 composite flywheel testing
[DE82-001694] p0294 N82-21725

FOAMS
Enhanced oil recovery by CO2 foam flooding
[DE82-000949] p0247 N82-16464
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] p0251 N82-17507
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] p0253 N82-17575
Evaluation of the effects of a freeze/thaw environment on cellular glass
[NASA-CR-168719] p0232 N82-21345

FOCUSING
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] p0222 N82-16492

FORCED CONVECTION
Forced convection heat transfer for two-phase helical flow in a solar receiver
[ASME PAPER 81-WA/HT-13] p0214 A82-24589

FORECASTING
Energy environment study
[NASA-CR-160458] p0177 N82-17654
Increase of atmospheric CO2 and possible climatic changes
p0178 N82-17763
Energy and climate in South-East Asia and the Western Pacific
p0178 N82-17764
Applications of climate information and the United States National Climate Program
p0178 N82-17765
Review of the UK transport energy outlook: And policy recommendations
[EP-47] p0185 N82-19664
US energy for the rest of the century
[PB82-115866] p0185 N82-19697
Energy demand forecasting
[GPO-83-115] p0187 N82-20666
Consumption trend analysis in the industrial sector: Existing forecasts
[PB82-137829] p0188 N82-21770

FORMING TECHNIQUES
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553

FOSSIL FUELS
Replacement of fossil fuels by hydrogen
p0239 A82-21194
Future fossil fuels - Their utilization and incorporation in modern energy systems
p0243 A82-27399
Briquetting of fine coal using a sodium chloride binder
[DE82-000632] p0250 N82-17395
A project to test for shale gas in Ohio
[DE82-000916] p0252 N82-17572
Evaluation of alternatives in downhole steam generation
[DE82-001943] p0253 N82-17574
Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-116229] p0256 N82-18571
Calcium silicate cements for desulfurization of combustion gases
[DE82-003245] p0260 N82-20696
Evaluation of continuous oxydesulfurization processes
[DE82-002127] p0261 N82-20697

FOULING
Parametric performance studies on fluidized-bed heat exchangers
[DE82-002124] p0187 N82-20476
Mechanisms of fouling, slagging, and corrosion by pulverized-coal combustion
[DE82-001661] p0261 N82-21280

FOURIER ANALYSIS
A new look at the discrete ordinate method for radiative transfer calculations in anisotropically scattering atmospheres. II - Intensity computations
p0217 A82-24940
Investigations of the changes of coal structure occurring during gasification
[DE82-002652] p0258 N82-20279

FRACTURE MECHANICS
LLNL gas-stimulation program
[DE82-000802] p0245 N82-16269

FRACTURING
A project to test for shale gas in Ohio
[DE82-000916] p0252 N82-17572

FREEZING
Evaluation of the effects of a freeze/thaw environment on cellular glass
[NASA-CR-168719] p0232 N82-21345

FREON
Heavy-liquid beneficiation of fine coal
[DE81-030965] p0261 N82-21279

FREQUENCY MODULATION
Industrial burner and process efficiency program
[PB82-115486] p0182 N82-18731

FREQUENCY RESPONSE
Frequency response analysis of ocean wave energy converter
[ASME PAPER 81-WA/DSC-10] p0273 A82-24564

FREQUENCY STABILITY
Advantages of permanent magnet VSCF generating systems on aircraft fuel economy --- Variable Speed Constant Frequency
p0163 A82-20207

FRESNEL REFLECTORS
Active and passive cooling for concentrating photovoltaic arrays
[DE82-003922] p0235 N82-21705

FUEL CELL POWER PLANTS
Phosphoric acid fuel cell technology status
[NASA-TM-82791] p0282 N82-19670
Evaluation of gasification and gas-cleanup processes for use in molten-carbonate fuel-cell power plants
[DE82-003207] p0285 N82-21723
Development of molten-carbonate fuel-cell power-plant technology
[DE82-002108] p0285 N82-21732

FUEL CELLS
Power systems --- significant technological innovations in 1981 including fuel reprocessing and nuclear plant design
p0270 A82-20175

Power sources 8: Research and development in non-mechanical electrical power sources; Proceedings of the Twelfth International Symposium, Brighton, England, September 1980
p0289 A82-24236
Molten carbonate fuel cell improvements
p0272 A82-24239
Fuel cell power plants for utility applications
p0273 A82-24692
Phosphoric acid fuel cell plants for dispersed electric power generation
p0273 A82-24693
Engineering development of molten carbonate fuel cell power plants
p0273 A82-24694
An assessment of alternative fuel cell designs for residential and commercial cogeneration
p0273 A82-24695
High temperature solid electrolyte fuel cell
p0273 A82-24960
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development [NASA-CR-165455]
p0275 N82-16483
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells [NASA-CR-165594]
p0277 N82-17615
Development of a solar-energy system [DE81-030531]
p0225 N82-17633
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-) [DE82-006690]
p0280 N82-18704
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species [DE82-006689]
p0281 N82-18705
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system [DE82-002095]
p0281 N82-18706
Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis [DRFT-FB-T-81-180]
p0282 N82-19691
Cell module and fuel conditioner development [NASA-CR-165620]
p0285 N82-21713
Advanced fuel-cell development [DE82-003007]
p0285 N82-21722

FUEL CONSUMPTION
Fuel economy and exhaust emissions of a methanol-fuel Chevette [PB82-101783]
p0173 N82-16595
Evaluation of the Moleculetor Fuel Energizer under section 511 of the Motor Vehicle Information and Cost Savings Act [PB81-247942]
p0175 N82-16958
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel [PB81-245718]
p0176 N82-16959
Industrial burner and process efficiency program [PB82-115486]
p0182 N82-18731
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1 [PB82-100868]
p0257 N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2 [PB82-100876]
p0257 N82-19385
Synthetic-fuel combustion: Pollutant formation. Soot-initiation mechanisms in buring aromatics [DE82-002566]
p0186 N82-20277
Soot formation in synthetic-fuel droplets [DE82-004257]
p0262 N82-21282

FUEL CONSUMPTION
Advantages of permanent magnet VSCF generating systems on aircraft fuel economy --- Variable Speed Constant Frequency
p0163 A82-20207
Energy management and its impact on avionics; Proceedings of the Symposium, London, England, March 19, 1981
p0164 A82-20513
Design possibilities for improved fuel efficiency of civil transport aircraft
p0164 A82-20514
Energy management in military combat aircraft
p0164 A82-20515
The control of aircraft gas turbines for fuel economy
p0164 A82-20516
The impact of increasing energy costs upon the design philosophy of avionic fuel management systems
p0164 A82-20517
Operational and performance aspects of fuel management in civil aircraft
p0164 A82-20518
Thrust management - Current achievements and future developments
p0164 A82-20520
General aviation fuel conservation in the 1980's
p0165 A82-20757
A study of the suitability of the all fiberglass XV-11A aircraft for fuel efficient general aviation flight research
p0165 A82-20764
Advanced subsonic transport propulsion [AIAA PAPER 81-0811]
p0165 A82-20878
We have just begun to create efficient transport aircraft
p0165 A82-21373
Fuel-efficient windshields for transport, commuter and business aircraft
p0166 A82-24304
Management of powerplant maintenance and restoration programs for fuel conservation [SAE PAPER 811052]
p0166 A82-24394
Airline fuel saving through JT9D engine refurbishment [SAE PAPER 811051]
p0166 A82-24395
Fuel optimal trajectory computation
p0169 A82-26568
Symposium on commercial-aviation energy-conservation strategies [DE81-028406]
p0169 N82-16057
NASA research activities in aeropropulsion [NASA-TM-82788]
p0169 N82-16084
Advanced Gas Turbine (AGT) powertrain system initial development report [NASA-CR-165130]
p0275 N82-16485
Analysis to develop a program for energy-integrated farm systems [DE82-000318]
p0172 N82-16514
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces [DE82-000499]
p0172 N82-16516
Exhaust emissions from high-mileage catalyst-equipped passenger cars [PB82-103326]
p0173 N82-16586
Fuel economy and exhaust emissions of a methanol-fuel Chevette [PB82-101783]
p0173 N82-16595
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities [PB81-247553]
p0175 N82-16947
Consumer behavior towards fuel efficient vehicles, volume 2 [PB81-246654]
p0175 N82-16948
Development of adjustment factors for on road fuel economy [PB81-241986]
p0175 N82-16950
An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits [PB82-100538]
p0175 N82-16957
Consumer orientations toward fuel efficient vehicles: Executive summary [PB81-245359]
p0176 N82-16965
Consumer orientations toward fuel efficient vehicles [PB81-245367]
p0176 N82-16966
CF6 jet engine performance improvement: High pressure turbine roundness [NASA-CR-165555]
p0176 N82-17174
Synfuel modified diesel [DE82-002298]
p0251 N82-17400

Possibility for energy conservation in transporting freight by truck
[DE81-030072] p0179 N82-18071
A method for estimating fuel consumption and vehicle emissions on urban arterials and networks
[PB82-108523] p0179 N82-18078
Developments in rotary wing aircraft aerodynamics p0179 N82-18120
Component design and development for future helicopter engines p0180 N82-18134
Gasoline equivalent fuel economy determination for alternate automotive fuels
[PB82-120072] p0255 N82-18412
Industrial burner and process efficiency program
[PB82-115486] p0182 N82-18731
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] p0184 N82-19542
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] p0184 N82-19543
Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] p0184 N82-19544
Review of the UK transport energy outlook: And policy recommendations
[EP-47] p0185 N82-19664
Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] p0185 N82-20025
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] p0186 N82-20027
An energy demand model for light-duty vehicles, with concepts for estimating fuel consumption
[PB82-102468] p0187 N82-20690
Engines for air transport — aircraft fuel consumption
[PNR-90066] p0188 N82-21208
Testing of 6 engine oils in accordance with the EPA recommended practice for testing, grading and labeling the fuel efficiency of motor vehicle engine oils
[PB81-244980] p0188 N82-21350

FUEL CONTAMINATION

The use of Doppler spectroscopy to study the characteristics of the polydisperse characteristics of emulsion water and solid microimpurities in aviation fuels p0241 A82-22198
Deposit formation in liquid fuels. III - The effect of selected nitrogen compounds on diesel fuel p0241 A82-23238

FUEL INJECTION

Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] p0250 N82-17396

FUEL OILS

Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] p0250 N82-17396
Energy environment study
[NASA-CR-168458] p0177 N82-17654
Soot formation in synthetic-fuel droplets
[DE82-004257] p0262 N82-21282
Testing of 6 engine oils in accordance with the EPA recommended practice for testing, grading and labeling the fuel efficiency of motor vehicle engine oils
[PB81-244980] p0188 N82-21350

FUEL PRODUCTION

A model for industrial production of fuel grade ethanol from sugar beets p0241 A82-19299
Recycling World Congress, 3rd, Basel, Switzerland, September 29-October 1, 1980, Proceedings. Sessions 1-2 /Day 1/, Sessions 3-4 /Day 2/, and Sessions 5-6 /Day 3/ p0241 A82-19975
Synthetic, coal-derived fuels p0242 A82-24684
Solar coal gasification - Plant design and economics p0221 A82-28388
A continuous two stage solar coal gasification system p0221 A82-28389
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, Volume 1
[DE81-903753] p0245 N82-16273
Proceedings of the 4th International Symposium on Alcohol fuels Technology, Volume 2
[DE81-903754] p0245 N82-16274
Energy industries abroad
[DE82-001896] p0171 N82-16510
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] p0172 N82-16514
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402
Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-103904] p0255 N82-18408
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101668] p0255 N82-18410
Synthetic fuels development
[GPO-85-050] p0259 N82-20327
International alcohol fuels
[GPO-78-681] p0186 N82-20328
Feasibility study for the production of low/medium-Btu gas from coal for tri-city regional port district Granite City, Illinois
[DE82-002881] p0260 N82-20336
Environmental and economic aspects of indirect coal liquefaction processes: A report emphasizing the relationship between product mix and efficiency
[PB82-103581] p0188 N82-20701
Distilling alcohol with waste automobile heat
[DE82-000143] p0262 N82-21427
Feasibility study of the commercial production of ethanol from wood. Volume 2: Appendices 1-6
[DE82-002410] p0263 N82-21429
Feasibility study for alternate fuel production from biomass resources
[DE82-002616] p0263 N82-21430

FUEL SPRAYS

Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] p0250 N82-17396

FUEL SYSTEMS

The application of dynamic cold neutron fluoroscopy for the visualisation of fuel and oil system operating characteristics in gas turbine development p0272 A82-23824
Comparison of energy-storage devices for use in future automobiles
[DE81-026530] p0291 N82-16965
Evaluation of gasification and gas-cleanup processes for use in molten-carbonate fuel-cell power plants
[DE82-003207] p0285 N82-21723

FUEL TESTS

Use of hydrogen in dual-fuel engines p0240 A82-25781
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] p0170 N82-16417
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] p0173 N82-16595
Synfuel modified diesel
[DE82-002298] p0251 N82-17400
Fuel economy and exhaust emissions characteristics of diesel vehicles: Test results of a prototype fiat 131TC 2.4 liter automobile
[NASA-CR-165535] p0179 N82-18068
Testing of 6 engine oils in accordance with the EPA recommended practice for testing, grading and labeling the fuel efficiency of motor vehicle engine oils
[PB81-244980] p0188 N82-21350
A review of the compatibility of methanol/gasoline blends with motor vehicle fuel systems
[PB82-117904] p0263 N82-21439

FUEL-AIR RATIO

Trade-offs in NO/x/ control p0167 A82-25161

FUELS
Small-scale fuel-alcohol plant. Volume 2: Detailed equipment information
[DE82-001037] p0246 N82-16278
Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] p0183 N82-18739
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] p0183 N82-18753
Alcohol fuels production, manpower, and education: Where do two-year colleges fit
[DE82-001929] p0263 N82-21436
FULL SCALE TESTS
Wake structure analysis --- in full scale performance prediction for wind turbines
p0269 A82-19123
Experimental simulation of latent heat thermal energy storage and heat pipe thermal transport for dish concentrator solar receiver
[ASME PAPER 81-WA/SOL-34] p0217 A82-24628
FURNACES
Epitaxial growth of silicon by CVD in a hot-wall furnace
p0206 A82-24155
Precision casting for gas turbine engines
p0275 A82-28313
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] p0291 N82-16427
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] p0249 N82-16560
Promotion of utilizing primary energy and reduction of emission with grate-equipped heat generators fired completely automatic with solid fuels
[BMFT-FB-T-81-222] p0250 N82-17391
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] p0251 N82-17455
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] p0281 N82-18706
FUSION REACTORS
Forecasting the technical and economic characteristics of high power thermonuclear Tokamak reactors
[BLL-CTO-1921-(9091.SF)] p0284 N82-21063

G

GALLIUM ARSENIDES
A new structure for high efficiency and humidity resistant AlGaAs/GaAs solar cells
p0193 A82-19893
Performance of 1 kWp AlGaAs/GaAs terrestrial concentrator solar cell array
p0193 A82-19894
InGaAsP/InP wavelength division solar cells
p0193 A82-19897
Design and performances of a triple /GaAs, Si, and Ge/- solar-cell system with multi-layered spectrum splitters
p0193 A82-19898
The effect of the I sub 01/I sub 02 ratio on the open circuit voltage of solar cells
p0198 A82-21838
Growth and characterization of cascade solar cells
p0204 A82-24135
High efficiency large area AlGaAs/GaAs concentrator solar cells
p0211 A82-24221
New possibilities for the development and optimization of cascade-type solar cells
p0217 A82-24868
Efficient GaAs solar cells formed by UV laser chemical doping
p0222 A82-28498
GALLIUM PHOSPHIDES
Study of stabilization and surface recombination on n-GaP photoelectrodes - Mechanisms and interrelation
p0219 A82-25739
GAS ANALYSIS
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] p0252 N82-17552
GAS CHROMATOGRAPHY
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] p0246 N82-16275
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] p0173 N82-16568
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy
p0249 N82-17286
GAS COMPOSITION
Magmatic gases in well fluids aid the mapping of the flow pattern in a geothermal system
p0263 A82-25373
GAS COOLING
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] p0228 N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] p0228 N82-18726
GAS DYNAMICS
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] p0276 N82-16525
GAS EVOLUTION
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] p0252 N82-17552
GAS EXPANSION
Design, fabrication, delivery, operation and maintenance of a geothermal power conversion system
[NASA-CR-168653] p0283 N82-20644
GAS FLOW
Description of the DOE Coal-Fired MHD Flow Facility /CFFF/
p0167 A82-24689
Effects of gas-flow pattern on cavity shape
[DE82-000347] p0247 N82-16375
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] p0276 N82-16525
Analysis of geopressured aquifers
[PB82-103862] p0253 N82-17595
GAS GENERATORS
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] p0174 N82-16614
GAS HEATING
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] p0228 N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] p0228 N82-18726
GAS INJECTION
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] p0280 N82-18694
GAS LASERS
Solar-pumped electronic-to-vibrational energy transfer lasers
p0218 A82-25664
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] p0246 N82-16275
GAS POCKETS
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/
p0244 A82-27661
GAS RECOVERY
Stack gases desulphurization recovery processes in thermal power plants of the world. III - Processes based on absorption by solid materials
p0166 A82-24075
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] p0173 N82-16563
State of the art of landfill gas recovery
[DE82-003261] p0260 N82-20680
GAS STREAMS
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] p0276 N82-16525

GAS TURBINE ENGINES
The control of aircraft gas turbines for fuel economy
p0164 A82-20516
High temperature durable catalyst development
p0270 A82-20739
Lineup of the IS-series aircraft-derivative gas turbines
p0271 A82-22896
The application of dynamic cold neutron fluoroscopy for the visualisation of fuel and oil system operating characteristics in gas turbine development
p0272 A82-23824
Precision casting for gas turbine engines
p0275 A82-28313
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] p0275 N82-16485
Influence of correlations and computational methods on the prediction of overall efficiency
p0276 N82-17180
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203
Helicopter propulsion systems: Past, present and future
p0277 N82-17204
Mechanical advances in the design of small turboshaft engines
p0277 N82-17208
Aerodynamic components for small turboshaft engines
p0277 N82-17211
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[EPG-034] p0277 N82-17459
Component design and development for future helicopter engines
p0280 N82-18134
Cold-air performance of a 15.41-cm-tip-diameter axial-flow power turbine with variable-area stator designed for a 75-kW automotive gas turbine engine
[NASA-TM-82644] p0284 N82-21193
Experimental performance of the regenerator for the Chrysler upgraded automotive gas turbine engine
[NASA-TM-82671] p0284 N82-21712
GAS TURBINES
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] p0276 N82-16937
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] p0256 N82-18690
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] p0280 N82-18694
Methane utilization from coalbeds for power generation at Bethlehem Mines Corporation Marianna Mine no. 58
[DE81-029791] p0259 N82-20333
GASEOUS FUELS
Gas producing process for large quantities of hydrogen
p0239 A82-21649
GASES
Analysis of geopressured aquifers
[PB82-103862] p0253 N82-17595
EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115858] p0184 N82-18766
GASIFICATION
Verification of the foreign synfuels industrialization experience
[DE82-000230] p0245 N82-16272
Industrial steam supply system characteristics program. Phase 2: Low- and medium-Btu gas-fired boilers with associated gasification plants
[DE82-000535] p0248 N82-16517
Development of hydroconversion of biomass to synthetic fuels. Project 61042 technical report
[DE82-000874] p0248 N82-16529
GASOHOL (FUEL)
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000867] p0170 N82-16259
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 1
[DE81-903753] p0245 N82-16273
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 2
[DE81-903754] p0245 N82-16274
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] p0250 N82-17397
South point gasohol project: A water assessment study
[PB82-111485] p0255 N82-18413
Evaluation of the effects of alcohol fuels on spark ignition engine wear
[AD-A110021] p0262 N82-21426
Feasibility study for alternate fuel production from biomass resources
[DE82-002616] p0263 N82-21430
A review of the compatibility of methanol/gasoline blends with motor vehicle fuel systems
[PB82-117904] p0263 N82-21439
GASOLINE
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] p0245 N82-16264
Gasoline equivalent fuel economy determination for alternate automotive fuels
[PB82-120072] p0255 N82-18412
A review of the compatibility of methanol/gasoline blends with motor vehicle fuel systems
[PB82-117904] p0263 N82-21439
GEAR TEETH
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203
GENERAL AVIATION AIRCRAFT
General aviation fuel conservation in the 1980's
p0165 A82-20757
A study of the suitability of the all fiberglass XV-11A aircraft for fuel efficient general aviation flight research
p0165 A82-20764
GEOLOGICAL FAULTS
Fault and joint geometry at Raft River Geothermal Area, Idaho
[DE82-003942] p0264 N82-21810
GEOLOGICAL SURVEYS
Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] p0253 N82-17629
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-109265] p0256 N82-18800
GEOLOGY
LLNL gas-stimulation program
[DE82-000802] p0245 N82-16269
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] p0254 N82-17696
GEOMETRICAL OPTICS
Second-stage CEC concentrator --- Compound Elliptical Concentrator for solar energy conversion
p0200 A82-23872
Optimal geometries of plane mirror solar collectors
p0219 A82-26022
Concentration of solar radiation by white painted transparent plates
p0220 A82-26170
GEOPHYSICS
Studies related to the deep earth gas
[PB82-103821] p0255 N82-18409
GEOPRESSURE
Analysis of geopressured aquifers
[PB82-103862] p0253 N82-17595
GEOSYNCHRONOUS ORBITS
Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations
[NASA-TM-58233] p0224 N82-17609
GEOTHERMAL ENERGY CONVERSION
Geothermal power plant corrosion experience - A global survey
p0242 A82-24297
From steam to kilowatts - Planning, siting and regulatory considerations in geothermal resource development
p0167 A82-24696
Exploratory study of coal-conversion chemistry
[DE82-001104] p0258 N82-20281

Design, fabrication, delivery, operation and maintenance of a geothermal power conversion system
[NASA-CR-168653] p0283 N82-20644
Geothermal probabilistic cost study
[NASA-CR-168757] p0285 N82-21756
Heber geothermal binary demonstration project
[DE82-002462] p0285 N82-21759
Imperial county baseline health survey potential impact of geothermal energy
[DE82-001672] p0189 N82-21783

GEOTHERMAL ENERGY EXTRACTION

Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] p0253 N82-17629
Studies in shock-tube spectroscopy, chemical reaction rates and mechanisms, utilization of low-Btu gases, and geothermal energy. 1: Shock-tube spectroscopy. 2: Shock-tube studies of chemical reaction rates and mechanisms. 3: Utilization of low-Btu gases. 4: Volcanoes as a source of geothermal energy
p0259 N82-20285

GEOTHERMAL ENERGY UTILIZATION

Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030968] p0175 N82-16942
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] p0182 N82-18732
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] p0258 N82-19674
Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel extension of data
[PB82-127077] p0262 N82-21296
Heber geothermal binary demonstration project
[DE82-002462] p0285 N82-21759
Evaluation of geothermal energy in Arizona
[DE82-000127] p0264 N82-21761

GEOTHERMAL RESOURCES

Injection and thermal breakthrough in fractured geothermal reservoirs
p0241 A82-23819
Corrosion of stainless steels in the geothermal environments of the Salton Sea known geothermal resource area
p0242 A82-24296
Geothermal resource field development
p0167 A82-24687
Geothermal direct use projects
p0167 A82-24688
From steam to kilowatts - Planning, siting and regulatory considerations in geothermal resource development
p0167 A82-24696
Magmatic gases in well fluids aid the mapping of the flow pattern in a geothermal system
p0243 A82-25373
Progress on alternative energy resources
p0168 A82-26368
Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources
p0243 A82-27635
Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico
p0244 A82-27693
Case studies of low-to-moderate temperature hydrothermal energy development
[DE82-000883] p0248 N82-16501
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] p0182 N82-18732
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] p0258 N82-19674
Sedimentation plan to assess the impact geothermal activities to the aquatic ecosystem in the Geyers Calistoga KGRA
[DE82-001688] p0189 N82-21781

Baseline health effects data applicable to anticipated geothermal resource development in Imperial County
[DE82-001669] p0189 N82-21782
Fault and joint geometry at Raft River Geothermal Area, Idaho
[DE82-003942] p0264 N82-21810

GEOTHERMAL TECHNOLOGY

Geothermal power plant corrosion experience - A global survey
p0242 A82-24297
From steam to kilowatts - Planning, siting and regulatory considerations in geothermal resource development
p0167 A82-24696
Analysis of geopressured aquifers
[PB82-103862] p0253 N82-17595
Studies in shock-tube spectroscopy, chemical reaction rates and mechanisms, utilization of low-Btu gases, and geothermal energy. 1: Shock-tube spectroscopy. 2: Shock-tube studies of chemical reaction rates and mechanisms. 3: Utilization of low-Btu gases. 4: Volcanoes as a source of geothermal energy
p0259 N82-20285

GERMANIUM

Design and performances of a triple /GaAs, Si, and Ge/- solar-cell system with multi-layered spectrum splitters
p0193 A82-19898
Performance of ultra high efficiency thin germanium p-n junction solar cells intended for solar thermophotovoltaic application
p0211 A82-24211
New possibilities for the development and optimization of cascade-type solar cells
p0217 A82-24868

GERMANIUM ALLOYS

Thermodynamic studies of Li-Ge alloys - Application to negative electrodes for molten salt batteries
p0289 A82-23777
Electrical properties of hydrogenated amorphous Si/1-x/Ge/x/ alloys
p0210 A82-24197
Amorphous Si/1-x/Ge/x/ for high performance solar cell
p0210 A82-24198

GLASS

Evaluation of the effects of a freeze/thaw environment on cellular glass
[NASA-CR-168719] p0232 N82-21345

GLASS FIBER REINFORCED PLASTICS

A study of the suitability of the all fiberglass XV-11A aircraft for fuel efficient general aviation flight research
p0165 A82-20764

GLASS FIBERS

Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] p0280 N82-18693

GLASSES

On reducing convective losses from cover glazings of solar thermal collectors
[ASME PAPER 81-WA/SOL-3] p0214 A82-24606
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] p0223 N82-16511
Materials-research recommendations to improve the performance and durability of solar heating and cooling systems
[DE82-000738] p0234 N82-21730

GLOW DISCHARGES

Some properties of dc glow discharge amorphous silicon solar cells
p0196 A82-20963
Properties of fluorinated amorphous silicon solar cells
p0203 A82-24125
Laser-annealed silicon solar cells - A comparison between ion-beam and glow discharge implantation
p0208 A82-24176

GLUCOSE

Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] p0244 N82-16205

GLYCOLS
The effects of elevated temperature exposure on the compatibility of glycol solutions with metals used in solar absorbers
p0213 A82-24293
The effect of degradation of glycols on corrosion of metals used in non-concentrating solar collectors
p0213 A82-24294
GOVERNMENT/INDUSTRY RELATIONS
Government-industry relationships in technology commercialization The case of photovoltaics
p0165 A82-21362
Energy industries abroad
[DE82-001896] p0171 N82-16510
GRAIN BOUNDARIES
An analysis of EBIC response of ITO/poly-Si solar cells --- Electronic Beam Induced Current
p0191 A82-19878
Silicon-silicon interfaces
p0195 A82-20070
Effects of grain boundaries on the current-voltage characteristics of polycrystalline silicon solar cells
p0198 A82-23356
Effects of special processing on diffusion lengths in polycrystalline silicon solar cells
p0207 A82-24167
Scanning spectral response measurements of large grain polysilicon solar cells for process optimization
p0207 A82-24168
Electrical properties of grain boundaries in nonsingle crystalline silicon solar cells
p0207 A82-24170
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] p0224 N82-16543
GRAINS
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 1: Executive summary
[DE82-000294] p0170 N82-16265
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 2: Technical analysis
[DE82-000479] p0170 N82-16266
GRAINS (FOOD)
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] p0229 N82-19673
GRANULAR MATERIALS
Characterization of 3-inch solar cells fabricated from granular silicon obtained in a fluidized-bed reactor
p0192 A82-19880
GRAPHITE-EPOXY COMPOSITES
Rotor testing in FY 1981
[DE81-028340] p0291 N82-16536
GRAVITATIONAL EFFECTS
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] p0279 N82-17640
GREAT BASIN (US)
Water for non-nuclear energy development in the Great Basin
[PB82-116781] p0176 N82-17581
GREENHOUSE EFFECT
Life on a warmer Earth: Possible climatic consequences of man made global warming
[ER-3] p0195 N82-19701
GREENHOUSES
Community solar demonstration/dissemination center
[DE82-000998] p0225 N82-17632
GROOVES
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] p0223 N82-16511
GROUND STATIONS
Energy consumption for the echo station (DSS 12)
p0170 N82-16139
GROUND WATER
Solar energy storage and thermal use of an unconfined aquifer
p0191 A82-19448
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery
p0243 A82-26015
Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] p0176 N82-17584
GROUND WIND
The wind characteristics program element
[DE82-004876] p0249 N82-16673
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan
p0254 N82-17753
GUIDANCE SENSORS
Longwall Guidance and Control Development
[NASA-TM-82455] p0257 N82-19637

H

HANDBOOKS
AIP 50th anniversary: Physics vade mecum --- Book
p0295 A82-28112
Residential heating and energy conservation study, Northport, New York. Phase 1: Citizen's handbook
[PB82-100450] p0186 N82-20359
Residential heating and energy conservation study, Northport, New York. Phase 2: Citizen's handbook
[PB82-100462] p0186 N82-20360
HAWAII
Biomass options for the big island of Hawaii
p0167 A82-24690
HAZARDS
Navy position on lithium safety
p0292 N82-20414
HEAT BALANCE
Bi-Gas pilot plant operation
[DE82-000223] p0245 N82-16271
HEAT EXCHANGERS
Passive cooling measurements for a concentrating photovoltaic array
[ASME PAPER 81-WA/SOL-10] p0214 A82-24610
OTEC power system development and environmental impacts
p0166 A82-24686
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] p0227 N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] p0228 N82-18717
Parametric performance studies on fluidized-bed heat exchangers
[DE82-002124] p0187 N82-20476
HEAT FLUX
Optimization of the functional domain of flat plate collectors
p0218 A82-25501
HEAT GENERATION
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[BTHD-135] p0182 N82-18708
HEAT OF COMBUSTION
Industrial utilization of waste-derived energy Volume 2: Appendices 1 and 2
[DE82-003287] p0187 N82-20679
HEAT PIPES
Equilibrium two-phase heat pipe flows with variable flowrate
p0287 A82-21975
The rotating heat pipe - Implementation as a uniform-temperature heat source
[ASME PAPER 81-WA/HT-2] p0242 A82-24584
Experimental simulation of latent heat thermal energy storage and heat pipe thermal transport for dish concentrator solar receiver
[ASME PAPER 81-WA/SOL-34] p0217 A82-24628
HEAT PUMPS
Performance of a parallel solar heat pump system
p0199 A82-23656
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[EBG-034] p0277 N82-17459

Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkirchstadt
[BMFT-FB-T-81-175] p0181 N82-18552
Open-cycle vapor compression heat pump
[PB82-110503] p0181 N82-18553
Heat pump water heater: Midway residential community
[DE82-003548] p0186 N82-20475
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating
[DE82-003633] p0236 N82-21755

HEAT SINKS
Tert-butyl alcohol as a heat sink substance for solar thermoelectric generators
p0220 A82-26334

HEAT SOURCES
The rotating heat pipe - Implementation as a uniform-temperature heat source
[ASME PAPER 81-WA/HT-2] p0242 A82-24584
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733

HEAT STORAGE
Performance of collector/storage solar water heaters - Arbitrary demand pattern
p0191 A82-19295
Solar energy storage and thermal use of an unconfined aquifer
p0191 A82-19448
SHAC - A nation turns to the sun --- Solar Heating And Cooling
p0195 A82-20165
Solar-thermal electric - Focal point for the desert sun
p0195 A82-20167
Performance and economics of annual storage solar heating systems
p0199 A82-23395
Performance of a parallel solar heat pump system
p0199 A82-23656
Molten nitrate salt technology development --- for thermal energy storage in solar power systems
p0290 A82-24292
Assessment of generic solar thermal systems for large power applications
[ASME PAPER 81-WA/SOL-25] p0216 A82-24623
Comparison of electrochemical and thermal storage for hybrid parabolic dish solar power plants
[ASME PAPER 81-WA/SOL-27] p0216 A82-24624
Experimental simulation of latent heat thermal energy storage and heat pipe thermal transport for dish concentrator solar receiver
[ASME PAPER 81-WA/SOL-34] p0217 A82-24628
Storage of low temperature heat by thermochemical reactions
p0290 A82-25506
Melt-freeze-cycle life-testing of Glauber's salt in a rolling cylinder heat store
p0291 A82-26336
Decay of thermal stratification in a water body for solar energy storage
p0220 A82-26338
Heat transfer coefficient for constant flow solar collector/storage systems
p0220 A82-26615
Thermal energy storage for solar power generation - State of the art
p0220 A82-26950
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] p0291 N82-16427
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle
[DE82-901186] p0291 N82-16526
Development of a solar-energy system
[DE81-030531] p0225 N82-17633
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] p0177 N82-17634
Railway transport of low temperature heat from large power stations by means of alternative heat carriers and water
[BMFT-FB-T-81-145] p0288 N82-18710
Buffer thermal energy storage for an air Brayton solar engine
[NASA-CR-168657] p0230 N82-20642
Heating/daylighting prototype development, phase 1. Passive and hybrid solar manufactured building project covering research and component design
[DE82-002097] p0234 N82-21729
Preliminary engineering design and cost of Advanced Compressed-Air Storage (ACAS) A-5 hybrid
[DE82-900339] p0294 N82-21763
Heat storage by means of thermal dissociation reactions. Storage systems and materials
[IKE-5-213] p0294 N82-21766

HEAT TRANSFER
MHD Heat and Seed Recovery Technology Project
[DE82-001608] p0276 N82-16900
Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] p0228 N82-18722
A review of the salt-gradient solar pond technology
[NASA-CR-168635] p0229 N82-19675
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Reference turbine subsystem design: Phase 2 report
[DE81-030059] p0264 N82-21591

HEAT TRANSFER COEFFICIENTS
Method of testing solar collectors for determination of heat transfer parameters
[ASME PAPER 81-WA/SOL-2] p0214 A82-24605
Heat transfer characteristics of a back-corrugated absorber surface for solar air collectors
[ASME PAPER 81-WA/SOL-5] p0214 A82-24607
Experimental simulation of latent heat thermal energy storage and heat pipe thermal transport for dish concentrator solar receiver
[ASME PAPER 81-WA/SOL-34] p0217 A82-24628
Convective heat transfer in vee-trough linear concentrators
p0219 A82-26332
Heat transfer coefficient for constant flow solar collector/storage systems
p0220 A82-26615

HEATING EQUIPMENT
Performance of collector/storage solar water heaters - Arbitrary demand pattern
p0191 A82-19295
Heating by wind
p0271 A82-21650
Evaluation of reliability of operational solar-energy systems
p0199 A82-23654
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] p0172 N82-16516
The Class C Passive Performance Evaluation Program
[DE82-000454] p0223 N82-16533
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] p0250 N82-17399
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] p0177 N82-17634
Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] p0225 N82-18437
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] p0227 N82-18703
Energy conservation in the production of domestic hot water
[EP-48] p0185 N82-19665
Solar design and installation experience: An overview of results from the National Solar Data Network
[DE82-001657] p0235 N82-21738

HELICAL FLOW
Forced convection heat transfer for two-phase helical flow in a solar receiver
[ASME PAPER 81-WA/HT-13] p0214 A82-24589

HELICOPTER ENGINES
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203
Helicopter propulsion systems: Past, present and future
p0277 N82-17204

Mechanical advances in the design of small turboshaft engines
p0277 A82-17208
Aerodynamic components for small turboshaft engines
p0277 A82-17211
Component design and development for future helicopter engines
p0180 A82-18134

HELICOPTER PROPELLER DRIVE
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 A82-17203

HELIOSTATS
Sun tracking controller for multi-kW photovoltaic concentrator system
p0203 A82-24131
Automatic control of solar power plants
p0219 A82-25973
Solar energy systems simulation and analysis
[DE81-026975] p0224 N82-16542
State-of-the-art review of low-cost collector technologies
[AD-A109039] p0232 N82-20672
Heliostat field layout for solar thermal power plants
[MBB-UR-453/80-OE] p0236 N82-21765

HELIUM ISOTOPES
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] p0252 N82-17552

HERMETIC SEALS
Development of a sealed Ni-Cd cell capable of operating in unprecedented high temperature environments
p0290 A82-24246
Airtight collector casings --- and roof mounting frame for solar absorber panels
[BMFT-FB-T-81-184] p0227 N82-18716

HETEROJUNCTION DEVICES
Photovoltaic effect in monoclinic ZnP2
p0193 A82-19895
Growth and evaluation of n-CdS/n-InP/p-InP heteroface solar cell
p0193 A82-19896
Effect of absorbed water on an indium oxide-insulator /BeO.SiO2/-p-silicon solar cell
p0198 A82-22190
Evaporated CdS-Cu/x/S solar cells
p0203 A82-24128
Growth and characterization of cascade solar cells
p0204 A82-24135
Cu2S/Zn/x/Cd/1-x/S heterojunction solar cells formed on sprayed Zn/x/Cd/1-x/S films
p0209 A82-24190
Heterojunction energy band lineups in Cd/1-x/Zn/x/S/Cu2S solar cells
p0209 A82-24191
n ITO spray/p InP solar cells
p0211 A82-24208
Characterization of n-CdS/p-Si heterojunction solar cells
p0211 A82-24210
Thin-film polycrystalline /CdZn/S/Cu2S solar cells of 10% conversion efficiency
p0213 A82-24235
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte
p0219 A82-25738

HETEROJUNCTIONS
Photoelectrolysis at Fe2O3/TiO2 heterojunction electrode
p0239 A82-23782

HIGH ALTITUDE BALLOONS
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-166442] p0224 N82-17610

HIGH ENERGY FUELS
Exploratory study of coal-conversion chemistry
[DE82-001104] p0258 N82-20281

HIGH POWER LASERS
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
p0287 N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space
p0226 N82-18581

HIGH PRESSURE
A comparison of a low pressure and a high pressure Ni-H2 cell
p0290 A82-24244
CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165555] p0176 N82-17174
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] p0252 N82-17555
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] p0253 N82-17575

HIGH STRENGTH STEELS
Materials for flywheel energy storage systems
p0290 A82-25365

HIGH TEMPERATURE
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] p0281 N82-18706

HIGH TEMPERATURE ENVIRONMENTS
Development of a sealed Ni-Cd cell capable of operating in unprecedented high temperature environments
p0290 A82-24246

HIGH TEMPERATURE TESTS
The effects of elevated temperature exposure on the compatibility of glycol solutions with metals used in solar absorbers
p0213 A82-24293

HIGH VOLTAGES
Evolution and development of high voltage /270 volt/ dc aircraft electric systems in the United States
p0273 A82-24382

HOLOGRAPHY
Advanced concepts for photovoltaic concentration
p0204 A82-24134

HONEYCOMB STRUCTURES
An evaluation of a transverse slatted flat plate collector
p0220 A82-26335

HORIZONTAL ORIENTATION
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)
[PB81-239568] p0276 N82-16547
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] p0279 N82-17639

HORSEPOWER
Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-160425] p0179 N82-18066

HOT SURFACES
Epitaxial growth of silicon by CVD in a hot-wall furnace
p0206 A82-24155

HUMIDITY
A new structure for high efficiency and humidity resistant AlGaAs/GaAs solar cells
p0193 A82-19893
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] p0229 N82-19685

HYBRID STRUCTURES
Heating/daylighting prototype development, phase 1. Passive and hybrid solar manufactured building project covering research and component design
[DE82-002057] p0234 N82-21729

HYDRAULIC FLUIDS
Hydraulic models of flow in an MHD generator channel, based on the equations of a two-dimensional boundary layer
p0274 A82-25788

HYDROBORIC ACID
Development of a solar-energy system
[DE81-030531] p0225 N82-17633

HYDROCARBON FUEL PRODUCTION
Hydrocracking of coal using molten salts as catalysts
p0243 A82-24969

HYDROCARBON FUELS
Optimization of fuel composition in open-cycle magnetohydrodynamic power generation
p0272 A82-24020
A project to test for shale gas in Ohio
[DE82-900916] p0252 N82-17572
Studies related to the deep earth gas
[PB82-103821] p0255 N82-18409

Hydrocracking of the oils of Botryococcus braunii to transport fuels
[NRL-R-783] p0262 N82-21416
HYDROCARBONS
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[DE82-000274] p0246 N82-16284
Sampling and analysis of hydrocarbons in combustion gases
[DE82-001511] p0249 N82-17317
The effect of fuel composition on groundfall from aircraft fuel jettisoning
[AD-A110305] p0262 N82-21424
HYDROCRACKING
Hydrocracking of coal using molten salts as catalysts
p0243 A82-24969
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Integrated two-stage liquefaction Parametric study
[DE81-028756] p0250 N82-20204
Hydrocracking of the oils of Botryococcus braunii to transport fuels
[NRL-R-783] p0262 N82-21416
HYDRODYNAMICS
The application of mixture theory models and numerical solution techniques to coal gasification reactors
p0241 A82-19254
HYDROELECTRIC POWER STATIONS
Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah
[DE82-000416] p0171 N82-16461
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] p0178 N82-17678
Potential for hydroelectric development in Alaska
[GPO-84-559] p0187 N82-20658
Hydroelectric development in New England
[GPO-84-558] p0187 N82-20659
Potential for increasing the output of existing hydroelectric plants
[AD-A109772] p0283 N82-20678
HYDROELECTRICITY
Use of non-sequential techniques in the analysis of power potential at storage projects
[AD-A109788] p0294 N82-20676
HYDROGEN
Broadening of spectral response width by a-Si/a-SiGe p-i-n type solar cells
p0194 A82-19915
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BRPI-PB-T-81-204] p0257 N82-19319
Role of the hydrogen donor solvent in coal hydroliquefaction
[DE82-002716] p0262 N82-21283
HYDROGEN ENGINES
The Daimler-Benz hydride vehicle project
p0240 A82-25780
Use of hydrogen in dual-fuel engines
p0240 A82-25781
HYDROGEN FUELS
The prospects for liquid hydrogen fueled aircraft
p0239 A82-20137
Comparison of the expenses required for the on-board fuel storage systems of hydrogen powered vehicles
p0239 A82-20138
Estimation of storage costs for large hydrogen storage facilities
p0239 A82-21196
Liquid hydrogen for space flight - The long step from proposal to reality
p0240 A82-24796
Use of hydrogen in dual-fuel engines
p0240 A82-25781
HYDROGEN OXYGEN FUEL CELLS
Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] p0291 N82-17607
HYDROGEN PLASMA
Post-hydrogenation of CVD amorphous silicon - A promising preparation process for solar cells
p0203 A82-24124
HYDROGEN PRODUCTION
The sulfur thermochemical cycle for hydrogen production
p0239 A82-19449
Solar/hydrogen systems for the 1985-2000 time frame - A review and assessment
p0195 A82-20136
Gas producing process for large quantities of hydrogen
p0239 A82-21649
Hydrogen production by immobilized cells. I - Light dependent dissimilation of organic substances by Rhodopseudomonas palustris
p0240 A82-25778
Hydrogen by water electrolysis as basis for small scale ammonia production - A comparison with hydrocarbon based technologies
p0240 A82-25779
The Daimler-Benz hydride vehicle project
p0240 A82-25780
A study of water electrolysis with photovoltaic solar energy conversion
p0219 A82-25782
Hydrogen uses and demands through the year 2025
p0240 A82-26595
Systems analysis of H2/natural gas supplementation and separation
[DE81-030031] p0240 N82-16270
HYDROGEN SULFIDE
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] p0174 N82-16614
HYDROGEN-BASED ENERGY
Replacement of fossil fuels by hydrogen
p0239 A82-21194
Status and near-term development goal - A solar hydrogen economy
p0167 A82-25507
The Daimler-Benz hydride vehicle project
p0240 A82-25780
Systems analysis of H2/natural gas supplementation and separation
[DE81-030031] p0240 N82-16270
HYDROGENATION
Dependence of RF power on the content and configuration of hydrogen in amorphous hydrogenated silicon by reactive sputtering
p0194 A82-19905
Interpretation of characteristics in a-Si:H solar cells
p0194 A82-19909
Schottky barrier solar cells of weakly hydrogenated CVD amorphous silicon
p0194 A82-19911
Optimizations of the film deposition parameters for the hydrogenated amorphous silicon solar cell
p0194 A82-19914
Post-hydrogenation of CVD amorphous silicon - A promising preparation process for solar cells
p0203 A82-24124
Hydrogenated a-Si multi-junction solar cells and interference effects in the spectral response
p0209 A82-24194
Electrical properties of hydrogenated amorphous Si/1-x/Ge/x/ alloys
p0210 A82-24197
Systems analysis of H2/natural gas supplementation and separation
[DE81-030031] p0240 N82-16270
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402
HYDROGEOLOGY
Analysis of geopressured aquifers
[PB82-103862] p0253 N82-17595
HYDROLOGY
Hydrological problems of surface mining --- of coal
[ICTIS-TR-17] p0257 N82-19606
HYDROLYSIS
Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] p0244 N82-16205
HYDROPYROLYSIS
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] p0244 N82-16210

HYDROTHERMAL SYSTEMS
Case studies of low-to-moderate temperature hydrothermal energy development
[DE82-000883] p0248 N82-16501
A review of the salt-gradient solar pond technology
[NASA-CR-168635] p0229 N82-19675

ICE FORMATION
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[PPA-TN-NO-2262-PT-4] p0281 N82-18721
ICE MAPPING
Electromagnetic subsurface measurements
[AD-A108192] p0256 N82-18469
ICE REPORTING
Electromagnetic subsurface measurements
[AD-A108192] p0256 N82-18469
ICEBERGS
European Scientific Notes, volume 35, number 11
[AD-A109387] p0295 N82-20138
IGNITION
Industrial burner and process efficiency program
[PB82-115486] p0182 N82-18731
IMAGE PROCESSING
Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico
p0244 A82-27693
IMPURITIES
The use of Doppler spectroscopy to study the characteristics of the polydisperse characteristics of emulsion water and solid microimpurities in aviation fuels
p0241 A82-22198
Effect of phosphorous and boron impurities on amorphous silicon solar cells
p0220 A82-27010
INCENTIVES
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] p0172 N82-16549
Analysis of federal incentives used to stimulate energy consumption
[DE81-031928] p0174 N82-16935
Convincing the home builder to build solar homes: Evaluation of passive solar workshop for builders
[DE82-001978] p0235 N82-21737
INCINERATORS
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] p0182 N82-18701
Navy position on lithium safety
p0292 N82-20414
INDEXES (DOCUMENTATION)
Directory of energy and environment libraries and information centers in the metropolitan Washington D.C. area
[PB82-123993] p0295 N82-22099
INDIA
Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] p0230 N82-19693
INDIUM ARSENIDES
InGaAsP/InP wavelength division solar cells
p0193 A82-19897
INDIUM COMPOUNDS
Transparent, conductive layers of sprayed indium tin oxide in backwall Cu2S-CdS cells
p0209 A82-24187
Efficient solar cells on polycrystalline and highly defected substrates using ion sputtered indium tin oxide
p0210 A82-24201
n ITO spray/p InP solar cells
p0211 A82-24208
n-CuInSe2/polysulfide photoelectrochemical solar cells
p0222 A82-28499
INDIUM PHOSPHIDES
Growth and evaluation of n-CdS/n-InP/p-InP heteroface solar cell
p0193 A82-19896
InGaAsP/InP wavelength division solar cells
p0193 A82-19897
Solar cells based on indium phosphide
p0210 A82-24207
n ITO spray/p InP solar cells
p0211 A82-24208
High-efficiency millimetre-wave InP TEOs made by liquid phase epitaxy
p0278 A82-25523
INDOLES
Deposit formation in liquid fuels. III - The effect of selected nitrogen compounds on diesel fuel
p0241 A82-23238
INDUCTION MOTORS
Double output induction generator scheme for wind energy conversion
p0267 A82-19105
A PWM transistor inverter for an ac electric vehicle drive
p0270 A82-20744
INDUSTRIAL ENERGY
Geothermal direct use projects
p0167 A82-24688
Fuel cell power plants for utility applications
p0273 A82-24692
Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030968] p0175 N82-16942
National energy research and development program --- bibliography of belgian scientific and technical reports
p0182 N82-18707
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] p0257 N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] p0257 N82-19385
The techniques, magnitudes and opportunities for development of energy storage (UK)
[PBF2-120858] p0292 N82-19698
Feasibility study for the production of low/medium-Btu gas from coal for tri-city regional port district Granite City, Illinois
[DE82-002881] p0260 N82-20336
Economic analysis of solar industrial process heat systems: A methodology to determine annual required revenue and internal rate of return
[DE82-001628] p0235 N82-21743
Solar production of industrial process hot water. Phase 3: Operation and evaluation of the York Building Products Company, Incorporated. Solar Facility
[DE82-003000] p0236 N82-21762
Consumption trend analysis in the industrial sector: Existing forecasts
[PB82-137829] p0188 N82-21770
Energy storage: A short list of interested parties, 1981 and the storage of energy: A wall chart
[PB82-132069] p0294 N82-21772
INDUSTRIAL MANAGEMENT
Room and pillar retreat mining: A manual for the coal industry
[PB82-120601] p0260 N82-20632
INDUSTRIAL PLANTS
Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] p0173 N82-16566
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] p0250 N82-17397
South point gasohol project: A water assessment study
[PB82-111485] p0255 N82-18413
Feasibility study of the commercial production of ethanol from wood. Volume 2: Appendices 1-6
[DE82-002410] p0263 N82-21429
Small-scale fuel-alcohol plant. Volume 1: Design report
[DE82-001038] p0263 N82-21432
Coal-gasification study for Bethlehem Steel Corporation's Sparrows Point facility
[DE82-002570] p0263 N82-21435

INDUSTRIAL WASTES
Recycling World Congress, 3rd, Basel, Switzerland, September 29-October 1, 1980, Proceedings. Sessions 1-2 /Day 1/, Sessions 3-4 /Day 2/, and Sessions 5-6 /Day 3/
p0241 A82-19975
Injection and thermal breakthrough in fractured geothermal reservoirs
p0241 A82-23819
Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000862] p0244 N82-16205
Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] p0173 N82-16566
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2
[PB82-103573] p0174 N82-16618
Industrial utilization of waste-derived energy. Volume 2: Appendices 1 and 2
[DE82-003267] p0187 N82-20679
INDUSTRIES
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103615] p0256 N82-18737
Coal-gasification study for Bethlehem Steel Corporation's Sparrows Point facility
[DE82-002570] p0263 N82-21435
INERTIAL FUSION (REACTOR)
Fusion - From science to engineering
p0270 A82-20170
INFORMATION DISSEMINATION
Verification of the foreign synfuels industrialization experience
[DE82-000230] p0245 N82-16272
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] p0172 N82-16550
Regional needs regarding technical information
[DE82-001772] p0224 N82-16929
Community solar demonstration/dissemination center
[DE82-000994] p0225 N82-17632
Solar energy information user study: Military engineers
[DE82-001606] p0233 N82-21720
Information gathering, data reduction, and information dissemination for residential experiment station operations
[DE82-002157] p0234 N82-21734
INFORMATION RETRIEVAL
Directory of energy and environment libraries and information centers in the metropolitan Washington D.C. area
[PB82-123993] p0295 N82-22099
INFORMATION SYSTEMS
Applications of climate information and the United States National Climate Program
p0178 N82-17765
INFRARED ABSORPTION
Comparative study of the thermal characteristics of various solar cell module structures
p0208 A82-24178
INFRARED IMAGERY
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/
p0244 A82-27661
INFRARED LASERS
Solar power satellites, summary
[OTA-E-145] p0180 N82-18305
INFRARED RADIATION
Synthetic-fuel combustion: Pollutant formation. Soot-initiation mechanisms in buring aromatics
[DE82-002566] p0186 N82-20277
INFRARED SPECTROSCOPY
Coal-gasification instrumentation program (PR 11734)
[DE82-001153] p0247 N82-16381
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy
p0249 N82-17286
INGOTS
Study of the elaboration of semicrystalline silicon ingots
p0206 A82-24160
LSA large area silicon sheet task enhanced ID slicing technology for silicon ingots
[NASA-CR-168668] p0231 N82-20651
INLET FLOW
Effects of gas-flow pattern on cavity shape
[DE82-000347] p0247 N82-16375
INORGANIC COMPOUNDS
European Scientific Notes, volume 35, number 11
[AD-A109387] p0295 N82-20138
INORGANIC SULFIDES
Thin-film polycrystalline /CdZn/S/Cu2S solar cells of 10% conversion efficiency
p0213 A82-24235
INSERTS
Increasing the dielectric strength of interelectrode inserts in an MHD generator channel by air injection
p0274 A82-26769
INSOLATION
Urban air pollution and solar energy
p0195 A82-20139
Optimum operating conditions of a solar cell panel and prediction of solar radiation in Sanaa, Yemen
p0197 A82-21365
Simplified method for predicting photovoltaic array output
p0199 A82-23399
Second-generation parabolic trough solar energy systems optimization analysis
p0200 A82-24019
On the weathering of thin plastic films
[ASME PAPER 81-WA/SOL-6] p0214 A82-24608
INSTRUMENT ERRORS
Systematic rotation and receiver location error effects on parabolic trough annual performance
[ASME PAPER 81-WA/SOL-12] p0215 A82-24611
INSULATORS
Increasing the dielectric strength of interelectrode inserts in an MHD generator channel by air injection
p0274 A82-26769
INTAKE SYSTEMS
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203
INTEGRATED ENERGY SYSTEMS
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165455] p0275 N82-16483
Preliminary engineering design and cost of Advanced Compressed-Air Storage (ACAS) A-5 hybrid
[DE82-900339] p0294 N82-21763
INTEGRATED OPTICS
Integrated Cu/x/S-CdS thin film solar cell panels with higher output voltages
p0209 A82-24192
INTERFEROMETRY
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy
p0249 N82-17286
INTERNAL COMBUSTION ENGINES
Photovoltaics in the context of off-grid small power systems
p0205 A82-24146
Electric cars: Is it still the vehicle of the future
[DE81-030437] p0175 N82-16943
Evaluation of the effects of alcohol fuels on spark ignition engine wear
[AD-A110021] p0262 N82-21426
INTERNAL CONVERSION
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] p0176 N82-16959
INTERNAL FRICTION
Effects of friction and extraction on the stability of solar ponds
[ASME PAPER 81-WA/SOL-16] p0215 A82-24615
INTERNATIONAL COOPERATION
Renewable energy - Target for 2050
p0165 A82-21225
Photovoltaic pilot projects in the European community
p0205 A82-24145
Legal implications of economic activities in outer space
[IAF 81-SL-50] p0169 A82-27828
Ecospace --- policy basis for international global resources including outer space
[IAF 81-SL-40] p0169 A82-27851

International legal basis and organizational framework for space activities - Present state, problems and prospects
[IAF 81-SL-51] p0169 A82-27653
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] p0184 N82-19108
Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] p0230 N82-19693

INTERNATIONAL RELATIONS
Energy industries abroad
[DE82-001896] p0171 N82-16510

INTERNATIONAL TRADE
International market assessment of stand-alone photovoltaic power systems for cottage industry applications
[NASA-CR-165287] p0171 N82-16494
Energy environment study
[NASA-CR-168458] p0177 N82-17654
Technology and Soviet energy availability
[PB82-133455] p0264 N82-21773

INVENTORIES
Electrical generating unit inventory 1976-1986: Illinois, Indiana, Kentucky, Ohio, Pennsylvania and West Virginia
[PB82-112194] p0180 N82-18441

INVERTED CONVERTERS (DC TO AC)
New type of transformerless high efficiency inverter p0213 A82-24233

ION BEAMS
Laser-annealed silicon solar cells - A comparison between ion-beam and glow discharge implantation p0208 A82-24176
Efficient solar cells on polycrystalline and highly defected substrates using ion sputtered indium tin oxide p0210 A82-24201

ION IMPLANTATION
Laser processing for high-efficiency Si solar cells p0198 A82-22191
Laser-annealed silicon solar cells - A comparison between ion-beam and glow discharge implantation p0208 A82-24176
Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] p0222 N82-16490

IONIZING RADIATION
Solar Power Satellites
[PB82-108846] p0225 N82-17647

IRON OXIDES
Photoelectrolysis at Fe2O3/TiO2 heterojunction electrode p0239 A82-23782
Advanced research and technology direct utilization: Recovery of minerals from coal fly ash. Fossil energy program
[DE82-003133] p0261 N82-20698

IRRIGATION
The application of photovoltaics to water pumping and irrigation in Africa p0205 A82-24140

ISOTOPIC LABELING
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] p0257 N82-19319

ISRAEL
Numerical study of wind energy characteristics over heterogeneous terrain - Central Israel case study p0243 A82-25468

IUS
Comparisons of different plate treatment and designs: An update p0293 N82-20436

J

JAPAN
Ten years of the fight against air pollution in Japan - Evaluation of a policy p0168 A82-25669

JET AIRCRAFT
Fuel optimal trajectory computation p0169 A82-26568
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] p0169 N82-16057

JET CONTROL
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] p0180 N82-18207

JET ENGINE FUELS
Airline fuel saving through JT9D engine refurbishment
[SAE PAPER 811051] p0166 A82-24395
Energy environment study
[NASA-CR-168458] p0177 N82-17654
An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] p0240 N82-19196
The effect of fuel composition on groundfall from aircraft fuel jettisoning
[AD-A110305] p0262 N82-21424

JET ENGINES
Airline fuel saving through JT9D engine refurbishment
[SAE PAPER 811051] p0166 A82-24395
CF6 jet engine performance improvement: High pressure turbine roundness
[NASA-CR-165555] p0176 N82-17178

JET PUMPS
Performance evaluation for a jet pump solar cooling system
[ASME PAPER 81-WA/SOL-30] p0216 A82-24626

JETTISON SYSTEMS
The effect of fuel composition on groundfall from aircraft fuel jettisoning
[AD-A110305] p0262 N82-21424

JP-4 JET FUEL
Environmental quality research-fate of toxic jet fuel components in aquatic systems
[AD-A109790] p0187 N82-20693

JP-5 JET FUEL
Crude sources and refining trends and their impact on future jet fuel properties
[SAE PAPER 811056] p0242 A82-24391

JUNCTION DIODES
Photovoltaic effect in monoclinic InP2 p0193 A82-19895

K

KENTUCKY
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] p0264 N82-16210

KEROSENE
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] p0245 N82-16264

L

LABORATORIES
Plan for a photovoltaic applied research laboratory for developing countries
[DE82-003289] p0236 N82-21752

LAGRANGE COORDINATES
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test p0280 N82-18127

LAGRANGE MULTIPLIERS
Power system design optimization using Lagrange multiplier techniques p0270 A82-20743

LAKES
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] p0174 N82-16046

LAMINATES
Stress analysis and test philosophy for wind energy converter blades
[BBB-UD-300-80-0] p0277 N82-17536
Photovoltaic research and development: Materials research
[DE82-001796] p0235 N82-21748

LAND MANAGEMENT
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467

LAND USE
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] p0177 N82-17594
Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] p0180 N82-18440
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] p0181 N82-18679

LANDFILLS
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] p0172 N82-16537
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] p0178 N82-17672
State of the art of landfill gas recovery
[DE82-003261] p0260 N82-20680

LANDFORMS
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] p0254 N82-17696

LANDSAT SATELLITES
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery
p0243 A82-26015
Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico
p0244 A82-27693
Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data
p0244 A82-27694

LANTHANUM COMPOUNDS
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] p0281 N82-18706

LARGE SPACE STRUCTURES
Technological approach towards future large solar arrays
[AAS 80-323] p0196 A82-20881

LASER ANEMOMETERS
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] p0257 N82-18840

LASER ANNEALING
Junction and bulk region characteristics of the laser annealed Si solar cells
p0192 A82-19883
The silicon solar satellite power system - A net energy analysis
p0196 A82-20574
Laser processing for high-efficiency Si solar cells
p0198 A82-22191
Application of laser annealing to solar cell junction formation
p0208 A82-24175
Laser-annealed silicon solar cells - A comparison between ion-beam and glow discharge implantation
p0208 A82-24176

LASER APPLICATIONS
Space Laser Power Transmission System Studies --- conferences
[NASA-CP-2214] p0287 N82-18578
Preliminary study on the use of lasers for the transmission of power
p0287 N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
p0287 N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space
p0226 N82-18581
Laser power conversion system analysis
p0288 N82-18585
Space laser power transmission
p0288 N82-18586

LASER FUSION
Fusion - From science to engineering
p0270 A82-20170

LASER PROPULSION
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
p0287 N82-18580

LASER PUMPING
Investigation of possibilities for solar-powered high-energy lasers in space
p0226 N82-18581
Design investigation of solar-powered lasers for space applications
p0226 N82-18582

LASING
Solar-pumped electronic-to-vibrational energy transfer lasers
p0218 A82-25664

LAYOUTS
Heliostat field layout for solar thermal power plants
[MBB-UR-453/80-OE] p0236 N82-21765

LEACHING
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] p0178 N82-17672

LEAD ACID BATTERIES
Thermal management of batteries
p0289 A82-24241
Upgraded demonstration vehicle task report
[NASA-CR-168424] p0292 N82-18067

LEGAL LIABILITY
Legal implications of economic activities in outer space
[IAF 81-SL-50] p0169 A82-27828
International legal basis and organizational framework for space activities - Present state, problems and prospects
[IAF 81-SL-51] p0169 A82-27853

LIBRARIES
Directory of energy and environment libraries and information centers in the metropolitan Washington D.C. area
[PB82-123993] p0295 N82-22099

LICENSING
Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah
[DE82-000416] p0171 N82-16461
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] p0182 N82-18733
Hydroelectric development in New England
[GPO-84-558] p0187 N82-20659

LIFE (DURABILITY)
Photovoltaic investigation of minority carrier lifetime in the heavily-doped emitter layer of silicon junction solar cell
p0196 A82-20457
RCA SATCOM in-orbit experience: An update
p0292 N82-20427

LIFE CYCLE COSTS
Life test of 50 AH NiH2 battery
p0293 N82-20441

LIGNITE
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402
Analyses of the northern Great Plains province lignites and subbituminous coals and their ash
[DE81-028366] p0258 N82-20280

LINEAR ARRAYS
Use of a photodiode array for the analysis of the solar profile intensity in concentrating collectors
p0218 A82-25503

LINEAR FILTERS
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] p0252 N82-17565

LINEAR SYSTEMS
Sudden loss of rotor blade from wind power turbine - Calculation of maximax response spectra
p0271 A82-23680
Convective heat transfer in vee-trough linear concentrators
p0219 A82-26332

LINEARITY
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553

LINING PROCESSES
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p0292 N82-19689

LIPOIC ACID
A novel chlorophyll solar cell
p0221 A82-28386

LIQUEFACTION
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] p0255 N82-18422

LIQUEFIED GASES
Liquid hydrogen for space flight - The long step from proposal to reality
p0240 A82-24796

LIQUID COOLING
Tert-butyl alcohol as a heat sink substance for solar thermoelectric generators
p0220 A82-26334
Computer simulation of solar cooling
p0221 A82-28392
Assessment of the suitability of agricultural waste water for geothermal power plant cooling in the Imperial Valley. 1: Water quality
[DE82-001869] p0283 N82-20685

LIQUID FUELS
Storing wind energy as a liquid fuel
p0289 A82-19116

LIQUID HYDROGEN
The prospects for liquid hydrogen fueled aircraft
p0239 A82-20137
Liquid hydrogen for space flight - The long step from proposal to reality
p0240 A82-24796
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] p0287 N82-17448
An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] p0240 N82-19196

LIQUID METALS
The rebirth of MHD
p0270 A82-20283

LIQUID PHASE EPITAXY
High-efficiency millimetre-wave InP TEOs made by liquid phase epitaxy
p0274 A82-25523

LIQUID PROPELLANT ROCKET ENGINES
Liquid hydrogen for space flight - The long step from proposal to reality
p0240 A82-24796

LIQUID-SOLID INTERFACES
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle
[DE82-901166] p0291 N82-16526

LIQUIDS
Efficiency increase of solar cells operated in dielectric liquid
p0192 A82-19889
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] p0223 N82-16527

LITHIUM
Recent test results on lithium BCX cells
p0292 N82-20406

LITHIUM ALLOYS
Thermodynamic studies of Li-Ge alloys - Application to negative electrodes for molten salt batteries
p0289 A82-23777

LITHIUM CHLORIDES
Case-positive versus case-negative designs for low-rate lithium thionyl chloride cells
p0292 N82-20407

LITHIUM COMPOUNDS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] p0280 N82-18704

LITHIUM SULFUR BATTERIES
Thermodynamic studies of Li-Ge alloys - Application to negative electrodes for molten salt batteries
p0289 A82-23777
Thermal management of batteries
p0289 A82-24241
The 1981 Goddard Space Flight Center Battery Workshop
[NASA-CP-2217] p0283 N82-20402
Navy position on lithium safety
p0292 N82-20414

LITHOLOGY
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000896] p0247 N82-16465

LIVESTOCK
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] p0172 N82-16514

LOCOMOTIVES
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] p0258 N82-20022

LONG TERM EFFECTS
A new look at long term collector performance and utilizability
p0219 A82-26330
Increase of atmospheric CO2 and possible climatic changes
p0178 N82-17763

LONGITUDINAL CONTROL
A pitch control system for large scale wind turbines
[FPA-TN-EU-2262-PT-6] p0282 N82-19695

LOW COST
Second-generation parabolic trough solar energy systems optimization analysis
p0200 A82-24019
Evaluation of silicon-on-ceramic material for low-cost solar cells
p0206 A82-24154
Development of large area, low-cost, solar cell processing sequence
p0206 A82-24161
Atmospheric corrosion model and monitor for low cost solar arrays
p0214 A82-24299
Design, fabrication, and evaluation of an innovative woven-screen solar collector
[ASME PAPER 81-WA/SOL-13] p0215 A82-24612
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] p0223 N82-16527

LOW PRESSURE
A comparison of a low pressure and a high pressure Ni-H2 cell
p0290 A82-24244

LOW TEMPERATURE
Case studies of low-to-moderate temperature hydrothermal energy development
[DE82-000883] p0248 N82-16501

LOW VOLTAGE
A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168640] p0229 N82-19677

LOW WEIGHT
Solar multiple purpose power plant in modular superlight weight construction
p0218 A82-25505

LUMINOUS INTENSITY
Intensity enhancement in textured optical sheets for solar cells
p0198 A82-23362
Use of a photodiode array for the analysis of the solar profile intensity in concentrating collectors
p0218 A82-25503

M

MAGMA
Magmatic gases in well fluids aid the mapping of the flow pattern in a geothermal system
p0243 A82-25373

MAGNETOHYDRODYNAMIC FLOW
Description of the DOE Coal-Fired MHD Flow Facility /CFFF/ p0167 A82-24689

MAGNETOHYDRODYNAMIC GENERATORS
Real-time simulation of MHD/steam power plants by digital parallel processors p0269 A82-19241
Digital simulation of an MHD power consolidation/D.C. to A.C. inverter system p0269 A82-19242
Performance characteristics of open-cycle linearly-diverging diagonal type single- and multiple-load generators p0269 A82-19297
Three-dimensional flow development in MHD generators at part load [AIAA PAPER 82-0324] p0269 A82-19794
Preliminary investigation of the effect of electrical nonuniformities on frame current distribution of coal-fired MHD generator [AIAA PAPER 82-0326] p0269 A82-19795
Recent results on measurement of plasma conductivity using Faraday rotation of submillimeter waves [AIAA PAPER 82-0376] p0269 A82-19800
Power systems --- significant technological innovations in 1981 including fuel reprocessing and nuclear plant design p0270 A82-20175
The rebirth of MHD p0270 A82-20283
Effect of vacuum exhaust pressure on the performance of MHD ducts at high B-field [AIAA PAPER 82-0396] p0270 A82-20292
Comparative analysis of CCMHD power plants --- Closed Cycle MHD p0270 A82-20747
MHD channel performance for potential early commercial MHD power plants p0270 A82-20750
Testing of the low mass flow test train in the DOE Coal Fired Flow Facility [AIAA PAPER 82-0378] p0165 A82-22097
Analysis of power takeoff in diagonal conducting wall channels p0272 A82-24015
Arc mode molten seed electrodes for MHD power generation p0272 A82-24018
Optimization of fuel composition in open-cycle magnetohydrodynamic power generation p0272 A82-24020
Magnetohydrodynamics and its hazard assessment [ASME PAPER 81-WA/SAF-3] p0166 A82-24604
Description of the DOE Coal-Fired MHD Flow Facility /CFFF/ p0167 A82-24689
Hydraulic models of flow in an MHD generator channel, based on the equations of a two-dimensional boundary layer p0274 A82-25788
Progress on alternative energy resources p0168 A82-26368
Increasing the dielectric strength of interelectrode inserts in an MHD generator channel by air injection p0274 A82-26769
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC) [NASA-TM-82734] p0275 N82-16481
MHD Heat and Seed Recovery Technology Project [DE82-001608] p0276 N82-16900
Technical support for open-cycle MHD program --- combined cycle mhd/steam power system analysis [DE82-001955] p0276 N82-16901
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER) [NASA-CR-165452-VOL-5] p0253 N82-17603
Radiative heat transfer in turbulent MHD channel flow p0281 N82-19487

MAINTENANCE
Operational, reliability, and maintenance experience with photovoltaic concentrator arrays p0203 A82-24130

MALI
The application of photovoltaics to water pumping and irrigation in Africa p0205 A82-24140

MAN ENVIRONMENT INTERACTIONS
Life on a warmer Earth: Possible climatic consequences of man made global warming [ER-3] p0185 N82-19701

MANAGEMENT METHODS
Cumberland River Basin; regional water and land resources plan [PB82-111501] p0176 N82-17585
Increase of atmospheric CO2 and possible climatic changes p0178 N82-17763

MANAGEMENT PLANNING
Effect of climate on the development of natural resources in Asia p0254 N82-17782
Procedures for preparing regional transportation management plans --- oil and gas ppelines from outer continental shelves [PB82-106162] p0287 N82-18075
Room and pillar retreat mining: A manual for the coal industry [PB82-120601] p0260 N82-20632

MANAGEMENT SYSTEMS
Communication and integration within the agricultare water, waste, and energy industries [EEG-033] p0179 N82-18070

MANUALS
NO sub x regulatory changes and the electric utility: A guidance manual for air quality modeling in planning, siting, and emissions control [DE82-900966] p0189 N82-21786

MAPPING
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data [INPE-2229-PRE/021] p0185 N82-19704

MAPS
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation [WMO-557-VOL-2] p0225 N82-17645

MARINE BIOLOGY
Biological sources of energy from the sea p0241 A82-20256

MARINE ENVIRONMENTS
Oceans '80; International Forum on Ocean Engineering in the '80s, Seattle, WA, September 8-10, 1980, Conference Record p0242 A82-24059
Inventory of emissions from marine operations within the California coastal waters [PB82-105099] p0183 N82-18757
Environmental quality research-fate of toxic jet fuel components in aquatic systems [AD-A109790] p0187 N82-20693

MARINE TECHNOLOGY
Coal waste artificial reef program, phase 3. Volume 1: Summary report [DE82-900854] p0187 N82-20699

MARKET RESEARCH
U.S. photovoltaic application experiments and market development p0200 A82-24104
Hydrogen uses and demands through the year 2025 p0240 A82-26595
International market assessment of stand-alone photovoltaic power systems for cottage industry applications [NASA-CR-165287] p0171 N82-16494
Consumer behavior towards fuel efficient vehicles, volume 2 [PB81-246654] p0175 N82-16948
Market assessment of photovoltaic power systems for agricultural applications in Nigeria [NASA-CR-165511] p0226 N82-18698
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel [PB82-123001] p0182 N82-16732
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary [PB82-103300] p0186 N82-20027

MARKETING
QUSER user's guide
[DE81-030681] p0174 N82-16767
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] p0254 N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] p0254 N82-17631
MASS
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
p0280 N82-18127
MASS FLOW
Testing of the low mass flow test train in the DOE Coal Fired Flow Facility
[AIAA PAPER 82-0378] p0165 A82-22097
MASS TRANSFER
Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] p0228 N82-18722
MATERIAL BALANCE
Bi-Gas pilot plant operation
[DE82-000223] p0245 N82-16271
MATERIALS HANDLING
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553
Effects of the mode of storage on the capacity fading of the sintered nickel electrodes
p0293 N82-20431
MATERIALS RECOVERY
Potential economic benefits from process control of coal preparation plants
[DE82-000881] p0245 N82-16263
Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] p0257 N82-19383
Advanced research and technology direct utilization: Recovery of minerals from coal fly ash. Fossil energy program
[DE82-003133] p0261 N82-20698
MATHEMATICAL MODELS
Forms of energy and their transformation
p0267 A82-18840
Wind data requirements for wind turbine generator design
p0268 A82-19122
Model evaluation and optimum collector slope for a tropical country
p0191 A82-19298
Enhanced oil recovery by CO2 foam flooding
[DE82-000949] p0247 N82-16464
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] p0249 N82-16560
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[BR-151-PT-1] p0252 N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[BR-152-VOL-2] p0252 N82-17565
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] p0183 N82-18740
Electrochemical models for the discharge characteristics of the NiCd cell
p0292 N82-20416
MEASURE AND INTEGRATION
Dynamic electrical response of solar cells
[NASA-TM-76686] p0231 N82-20655
MEASURING INSTRUMENTS
Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-116229] p0256 N82-18571
MECHANICAL DEVICES
International market assessment of stand-alone photovoltaic power systems for cottage industry applications
[NASA-CR-165287] p0171 N82-16494
MECHANICAL ENGINEERING
Lineup of the IM-series aircraft-derivative gas turbines
p0271 A82-22896
MELTING
Solar energy storage and thermal use of an unconfined aquifer
p0191 A82-19448
Evaluation of the effects of a freeze/thaw environment on cellular glass
[NASA-CR-168719] p0232 N82-21345
MELTS (CRYSTAL GROWTH)
Study of the elaboration of semicrystalline silicon ingots
p0206 A82-24160
Low cost Czochralski crystal growing technology. Near implementation of the flat plate photovoltaic cost reduction of the low cost solar array project
[NASA-CR-168658] p0231 N82-20662
MEMBRANES
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] p0224 N82-17611
MESOMETEOROLOGY
Numerical study of wind energy characteristics over heterogeneous terrain - Central Israel case study
p0243 A82-25468
METAL AIR BATTERIES
A sealed rechargeable metal-oxygen battery for traction purposes
p0290 A82-24248
Al-air cells - Potential small electric generators for field use
p0272 A82-24249
METAL COATINGS
Selective blacks for enhanced photothermal solar energy conversion
p0191 A82-19296
Black cobalt selective coatings by spray pyrolysis for photothermal conversion of solar energy
p0219 A82-26331
METAL FILMS
Parallel- and radial-current stream-line type metal-contacts of solar cell
p0192 A82-19888
Macroscopic surface roughness in metal-dielectric composite films - Photothermal absorber applications
p0195 A82-20066
Bandpass filters for thermophotovoltaic conversion systems
p0197 A82-21363
Screenable all-metal solar cell electrodes of nickel and copper
p0207 A82-24171
METAL HYDRIDES
Comparison of the expenses required for the on-board fuel storage systems of hydrogen powered vehicles
p0239 A82-20138
Estimation of storage costs for large hydrogen storage facilities
p0239 A82-21196
METAL OXIDE SEMICONDUCTORS
High efficiency MOS solar cells by anodic oxidation processes
p0193 A82-19891
METAL PLATES
Comparisons of different plate treatment and designs: An update
p0293 N82-20436
COMSAT Labs life test data for NiH2 cells
p0293 N82-20440
METAL-WATER REACTIONS
Corrosion of stainless steels in the geothermal environments of the Salton Sea known geothermal resource area
p0242 A82-24296
METALLIZING
Use of photovoltage for electrodeposition in solar cell processing technology
p0197 A82-21253

Reliable screen-printed contacts on silicon solar cells
p0207 A82-24172
Silicon solar cells with nickel/solder metallization
p0207 A82-24173
Development of an all-metal thick-film cost-effective metallization system for solar cells
[NASA-CR-168502] p0232 N82-20684
Photovoltaic research and development: Materials research
[DE82-001796] p0235 N82-21748

METALS
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] p0254 N82-17696

METEOROLOGICAL PARAMETERS
Potential for a Danish power system using wind energy generators, solar cells and storage
p0163 A82-20141
Meteorological aspects of the utilization of solar radiation as an energy source, part 1
[WMO-557-VOL-1] p0225 N82-17644
Meteorological aspects of the utilization of wind as an energy source
[WMO-575] p0279 N82-17646

METEOROLOGY
Considerations on the feasibility of A 1 MWp central PV plant to be tied to the European electrical network
p0213 A82-24234

METHANATION
Studies related to the deep earth gas
[PB82-103821] p0255 N82-18409

METHANE
Temperature effects on the kinetics of the anaerobic digestion of crop residues to methane
p0244 A82-28391
Concepts of fundamental processes related to gasification of coal
[DE82-000763] p0246 N82-16282
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] p0247 N82-16462
Studies related to the deep earth gas
[PB82-103821] p0255 N82-18409
Methane utilization from coalbeds for power generation at Bethlehem Mines Corporation Marianna Mine no. 58
[DE81-029791] p0259 N82-20333

METHYL ALCOHOLS
Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol
[PB81-242562] p0247 N82-16286
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] p0173 N82-16595
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] p0250 N82-17398
Evaluation of the effects of alcohol fuels on spark ignition engine wear
[AD-A110021] p0262 N82-21426
A review of the compatibility of methanol/gasoline blends with motor vehicle fuel systems
[PB82-117904] p0263 N82-21439

MICROORGANISMS
Biological sources of energy from the sea
p0241 A82-20256

MICROPROCESSORS
Energy management in military combat aircraft
p0164 A82-20515
The control of aircraft gas turbines for fuel economy
p0164 A82-20516
Sun tracking controller for multi-kW photovoltaic concentrator system
p0203 A82-24131
Microprocessor control system for 200-kilowatt Mod-0A wind turbines
[NASA-TM-82711] p0284 N82-21710

MICROSTRUCTURE
Microstructural effects in abrasive wear
[DE82-003653] p0250 N82-17339
Preparation and properties of evaporated CdTe films compared with single crystal CdTe
[DE82-000228] p0236 N82-22073

MICROWAVE AMPLIFIERS
Solid-state alternatives for the Solar Power Satellite
p0196 A82-20708

MICROWAVE EQUIPMENT
Direct coupled microwave thermal processing for photovoltaic device fabrication
p0207 A82-24165

MICROWAVE OSCILLATORS
High power pulsed oscillators
p0287 A82-23944
High-efficiency millimetre-wave InP TEOs made by liquid phase epitaxy
p0274 A82-25523

MICROWAVE TRANSMISSION
Microwave power - An energy transmission alternative for the year 2000
p0287 A82-20640
Cost and sizing sensitivities for the solar power satellite
p0196 A82-20642
Environmental effects of the Satellite Power System Microwave Power Transmission System
p0164 A82-20644
Solar power satellites, summary
[OTA-E-145] p0180 N82-18305
Preliminary study on the use of lasers for the transmission of power
p0287 N82-18579

MILITARY TECHNOLOGY
Solar energy information user study: Military engineers
[DE82-001606] p0233 N82-21720

MILLIMETER WAVES
High-efficiency millimetre-wave InP TEOs made by liquid phase epitaxy
p0274 A82-25523

MILLING MACHINES
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] p0229 N82-19673

MINERAL DEPOSITS
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery
p0243 A82-26015
Ore deposits in Africa and their relation to the underlying mantle
p0243 A82-26604
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] p0247 N82-16462
Geological evolution and economic geology of the Burdekin River region, Queensland
[BMR-BULL-208] p0254 N82-17696

MINERAL EXPLORATION
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] p0247 N82-16462
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553

MINERAL OILS
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMPT-FB-T-81-204] p0257 N82-19319

MINES (EXCAVATIONS)
Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data
p0244 A82-27694
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[BR-151-PT-1] p0252 N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[BR-152-VOL-2] p0252 N82-17565
Coal mine siting for the Ohio River Basin energy study
[PB82-108119] p0181 N82-18680
Hydrological problems of surface mining --- of coal
[ICTIS-TR-17] p0257 N82-19606

MINING
Underground coal mining section data [NASA-CR-168393] p0247 N82-16454
Microstructural effects in abrasive wear [DE82-003653] p0250 N82-17339
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick [NASA-CR-161560] p0252 N82-17553
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner [NASA-CR-161962] p0252 N82-17554
The detection of the coal roof interface by use of high pressure water [NASA-CR-161959] p0252 N82-17555
Development of sensitized pick coal interface detector system [NASA-CR-161961] p0252 N82-17560
An economic analysis of coal supply in the Ohio River Basin Energy Study Region [PB82-113341] p0255 N82-18414
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region [PB82-103615] p0256 N82-18737
Longwall Guidance and Control Development [NASA-TM-82455] p0257 N82-19637
Methane utilization from coalbeds for power generation at Bethlehem Mines Corporation Marianna Mine no. 58 [DE81-029791] p0259 N82-20333
Room and pillar retreat mining: A manual for the coal industry [PB82-120601] p0260 N82-20632

MINORITY CARRIERS
Photovoltaic investigation of minority carrier lifetime in the heavily-doped emitter layer of silicon junction solar cell p0196 A82-20457
Effect of the back-surface field on the open-circuit voltages of p/+/-n-n/+/ and n/+/-p-p/+/ silicon solar cells p0197 A82-21364
Charge collection microscopy on p-WSe2 - Recombination sites and minority carrier diffusion length --- solar cell materials p0200 A82-23788

MIRRORS
Optimal geometries of plane mirror solar collectors p0219 A82-26022
Evaluation of the effects of a freeze/thaw environment on cellular glass [NASA-CR-168719] p0232 N82-21345
Optical properties of solids for solar energy conversion [ISSN-0345-0058] p0233 N82-21715

MIS (SEMICONDUCTORS)
Fundamental properties of MIS solar cells using Mg-p Si system p0192 A82-19884
A large active area Be-Si MIS solar cell with textured surface p0192 A82-19885
Broadening of spectral response width by a-Si/a-SiGe p-i-n type solar cells p0194 A82-19915
Can recombination via interfacial states in MIS solar cells be of advantage p0210 A82-24199
Application of amorphous silicon nitride for MIS/inversion layer solar cells p0210 A82-24203
Properties of CdSe-MIS solar cells p0210 A82-24204

MOBILITY
Development of mobility control methods to improve oil recovery by CO2 [DE82-001968] p0253 N82-17575

MODELS
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates [PB82-112111] p0181 N82-18442

MODULES
Materials, processes and testing laboratory residential technical progress report [DE82-002016] p0232 N82-21225

MOLECULAR ABSORPTION
Effect of absorbed water on an indium oxide-insulator /BeO.SiO2/-p-silicon solar cell p0198 A82-22190

MOLECULAR DIFFUSION
Optimized diffusion parameters for cells made by columnar silicon p0206 A82-24164
Effects of special processing on diffusion lengths in polycrystalline silicon solar cells p0207 A82-24167

MOLTEN SALT ELECTROLYTES
Thermodynamic studies of Li-Ge alloys - Application to negative electrodes for molten salt batteries p0289 A82-23777
Molten carbonate fuel cell improvements p0272 A82-24239
A review of recent developments in thermal batteries p0289 A82-24242
Engineering development of molten carbonate fuel cell power plants p0273 A82-24694
Advanced fuel-cell development [DE82-003007] p0285 N82-21722

MOLTEN SALTS
Molten nitrate salt technology development --- for thermal energy storage in solar power systems p0290 A82-24292
Hydrocracking of coal using molten salts as catalysts p0243 A82-24969

MOMENTUM THEORY
An extension of the local momentum theory to the rotors operating in twisted flow field p0280 N82-18123

MONITORS
Atmospheric corrosion model and monitor for low cost solar arrays p0214 A82-24299
Development of a multidetector petroleum oil in water monitor [PB82-105206] p0181 N82-18568

MOTOR VEHICLES
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel [PB81-245714] p0176 N82-16959
Consumer orientations toward fuel efficient vehicles: Executive summary [PB81-245359] p0176 N82-16965
Consumer orientations toward fuel efficient vehicles [PB81-245367] p0176 N82-16966
A method for estimating fuel consumption and vehicle emissions on urban arterials and networks [PB82-108523] p0179 N82-18078
An energy demand model for light-duty vehicles, with concepts for estimating fuel consumption [PB82-102468] p0187 N82-20690
Testing of 6 engine oils in accordance with the EPA recommended practice for testing, grading and labeling the fuel efficiency of motor vehicle engine oils [PB81-244980] p0188 N82-21350
A review of the compatibility of methanol/gasoline blends with motor vehicle fuel systems [PB82-117904] p0263 N82-21439

MULTIPHASE FLOW
Gas/slurry flow in coal liquefaction processes (fluid dynamics in 3-phase flow columns) [DE82-002562] p0260 N82-20474

N

N-N JUNCTIONS
Photoelectrolysis at Fe2O3/TiO2 heterojunction electrode p0239 A82-23782

N-TYPE SEMICONDUCTORS
Photoresponse of n-type semiconductor NiTiO3 --- as stable semiconducting anodes in photoelectrolysis of water p0239 A82-20075
Improved efficiency of n-CdSe thin-film photoelectrodes by zinc surface treatment p0196 A82-20464
Solar cells based on indium phosphide p0210 A82-24207
Study of stabilization and surface recombination on n-GaP photoelectrodes - Mechanisms and interrelation p0219 A82-25739

n-CuInSe2/polysulfide photoelectrochemical solar cells p0222 A82-28499
NATURAL GAS
A comparison of the solar-gas and solar-electric interface p0197 A82-21149
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/ p0244 A82-27661
LLNL gas-stimulation program [DE82-000802] p0245 N82-16269
Systems analysis of H2/natural gas supplementation and separation [DE81-030031] p0240 N82-16270
Preliminary resource assessment of ocalbed methane in the United States [DE82-001356] p0247 N82-16462
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces [DE82-000499] p0172 N82-16516
New York State plan to encourage commercialization of more efficient gas technologies [PB81-249997] p0172 N82-16549
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam [PB82-106998] p0174 N82-16614
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel [PB81-245714] p0176 N82-16959
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump [ERG-034] p0277 N82-17459
Helium production in natural gas reservoirs [INPE-2214-PRE/014] p0252 N82-17552
A project to test for shale gas in Ohio [DE82-000916] p0252 N82-17572
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE [DE82-001348] p0253 N82-17576
Studies related to the deep earth gas [PB82-103821] p0255 N82-18409
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt [BMFT-FB-T-81-175] p0181 N82-18552
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration [BMFT-FB-T-81-204] p0257 N82-19319
The natural gas option: New resources and new technologies [GPO-85-052] p0186 N82-20329
Proposed 5-year plan oil and gas development in the outer Continental Shelf [PUBL-97-43] p0187 N82-20616
Consumption trend analysis in the industrial sector: Existing forecasts [PB82-137829] p0188 N82-21770
NATURAL GAS EXPLORATION
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State [DE82-000913] p0253 N82-17573
Assessment of oil production volatile organic compound sources [PB82-108176] p0177 N82-17664
Proposed 5-year plan oil and gas development in the outer Continental Shelf [PUBL-97-43] p0187 N82-20616
NERNST-ETTINGSHAUSEN EFFECT
Electrochemical models for the discharge characteristics of the NiCd cell p0292 N82-20416
NETHERLANDS
Wind energy planning considerations [PM-80-4] p0171 N82-16496
NETWORK SYNTHESIS
Power system design optimization using Lagrange multiplier techniques p0270 A82-20743
NEUTRON RADIOGRAPHY
The application of dynamic cold neutron fluoroscopy for the visualisation of fuel and oil system operating characteristics in gas turbine development p0272 A82-23824
NEVADA
Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range [DE82-001328] p0253 N82-17629
NEW ENGLAND (US)
Solar consumer assurance: An assessment of mechanisms in the northeast [DE81-030052] p0223 N82-16538
Hydroelectric development in New England [GPO-84-558] p0187 N82-20659
NEW YORK
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State [DE82-000913] p0253 N82-17573
NICKEL
Silicon solar cells with nickel/solder metallization p0207 A82-24173
NICKEL CADMIUM BATTERIES
Recent improvements in aircraft Ni-Cd cells p0290 A82-24245
Development of a sealed Ni-Cd cell capable of operating in unprecedented high temperature environments p0290 A82-24246
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells [NASA-CR-168564] p0292 N82-19678
The 1981 Goddard Space Flight Center Battery Workshop [NASA-CP-2217] p0283 N82-20402
Destruct/non-destruct evaluation of cycled NiCd cells p0292 N82-20415
Electrochemical models for the discharge characteristics of the NiCd cell p0292 N82-20416
NiCd battery failure analysis p0292 N82-20417
Update: Viking Lander NiCd batteries. Year six p0293 N82-20428
Effects of the mode of storage on the capacity fading of the sintered nickel electrodes p0293 N82-20431
NICKEL COATINGS
Spray-deposited black nickel selective absorber surfaces for solar thermal conversion p0199 A82-23575
NICKEL COMPOUNDS
Photoresponse of n-type semiconductor NiTiO3 --- as stable semiconducting anodes in photoelectrolysis of water p0239 A82-20075
NICKEL HYDROGEN BATTERIES
A comparison of a low pressure and a high pressure Ni-H2 cell p0290 A82-24244
The 1981 Goddard Space Flight Center Battery Workshop [NASA-CP-2217] p0283 N82-20402
Chargeability of nickel electrodes studied by optical microscopy p0293 N82-20438
COMSAT Labs life test data for NiH2 cells p0293 N82-20440
Cycling characteristics on NiH2 cells in standard and daily energy balance Leo orbits p0293 N82-20442
Some properties of NiH2 cells p0293 N82-20443
NICKEL OXIDES
A nickel oxide-iron battery developed for traction purposes - Advantages and limitations p0290 A82-24243
NICKEL ZINC BATTERIES
Thermal management of batteries p0289 A82-24241
Upgraded demonstration vehicle task report [NASA-CR-168424] p0292 N82-18067
NICKEL-IRON BATTERIES
A nickel oxide-iron battery developed for traction purposes - Advantages and limitations p0290 A82-24243

NITRATES
Molten nitrate salt technology development --- for thermal energy storage in solar power systems
p0290 A82-24292

NITRIDES
Optical properties of solids for solar energy conversion
[ISSN-0345-0058] p0233 N82-21715

NITROGEN OXIDES
Processes for reducing emissions of particulates and oxides of sulfur and nitrogen for various coal utilization alternatives
p0242 A82-23950

Trade-offs in NO/x/ control
p0167 A82-25161

Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] p0256 N82-18690

Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] p0183 N82-18753

Synthetic-fuel aromaticity and staged combustion
[DE82-002453] p0259 N82-20335

Advanced pulverized-coal combustor for control of NO sub x emissions
[DE82-002653] p0260 N82-20695

NO sub x regulatory changes and the electric utility: A guidance manual for air quality modeling in planning, siting, and emissions control
[DE82-900966] p0189 N82-21786

NOISE REDUCTION
NASA research activities in aeropropulsion
[NASA-TM-82788] p0169 N82-16084

NONDESTRUCTIVE TESTS
Destruct/non-destruct evaluation of cycled NiCd cells
p0292 N82-20415

NONUNIFORM FLOW
The effect of nonuniform fluid flow distribution on the thermal performance of solar collector
[ASME PAPER 81-WA/SOL-14] p0215 A82-24613

NUCLEAR ELECTRIC POWER GENERATION
Risk of producing energy, and conserving it
[DE81-030807] p0171 N82-16507

NUCLEAR ENERGY
Exergetic analysis of complex multimaterial processes using nuclear coal gasification as an example
p0241 A82-23817

NUCLEAR EXPLOSIONS
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] p0254 N82-17722

NUCLEAR FUELS
Power systems --- significant technological innovations in 1981 including fuel reprocessing and nuclear plant design
p0270 A82-20175

NUCLEAR POWER PLANTS
Power systems --- significant technological innovations in 1981 including fuel reprocessing and nuclear plant design
p0270 A82-20175

Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] p0174 N82-16846

Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0185 N82-19704

Geological disposal of high-level radioactive wastes
[CANMET-79-29] p0189 N82-22020

NUMERICAL ANALYSIS
A new look at the discrete ordinate method for radiative transfer calculations in anisotropically scattering atmospheres. II - Intensity computations
p0217 A82-24940

NUSSELT NUMBER
Convective heat transfer in vee-trough linear concentrators
p0219 A82-26332

O

OCEAN BOTTOM
Site investigations and submarine soil mechanics in polar regions
[AD-A108269] p0256 N82-18790

OCEAN CURRENTS
Frequency response analysis of ocean wave energy converter
[ASME PAPER 81-WA/DSC-10] p0273 A82-24564

Power generation from the East Australian current by use of arrays of submerged Darrieus vertical axis turbines
p0274 A82-26178

OCEAN SURFACE
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/
p0244 A82-27661

Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0185 N82-19704

OCEAN TEMPERATURE
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] p0182 N82-18733

Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0185 N82-19704

OCEAN THERMAL ENERGY CONVERSION
Sea, soil, sky - Testing solar's limits
p0195 A82-20169

OTEC gas desorption studies
p0271 A82-23653

OTEC power system development and environmental impacts
p0166 A82-24686

Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] p0182 N82-18733

Ocean Thermal Energy Conversion Research, Development, and Demonstration Act
[GPO-56-801] p0187 N82-20660

OCEANOGRAPHIC PARAMETERS
Oceans '80; International Forum on Ocean Engineering in the '80s, Seattle, WA, September 8-10, 1980, Conference Record
p0242 A82-24059

OCEANOGRAPHY
Oceans '80; International Forum on Ocean Engineering in the '80s, Seattle, WA, September 8-10, 1980, Conference Record
p0242 A82-24059

OFFSHORE ENERGY SOURCES
Offshore siting of wind turbine generators in U.K. waters
p0163 A82-19119

Initial test results on the 5m horizontal axis wind turbine at Swansea
p0269 A82-19124

Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/
p0244 A82-27661

Procedures for preparing regional transportation management plans --- oil and gas ppelines from outer continental shelves
[PB82-106162] p0287 N82-18075

Proposed 5-year plan oil and gas development in the outer Continental Shelf
[PUBL-97-43] p0187 N82-20616

Requirements for the provision of offshore wind data relating to wind energy conversion systems
[NMI-R-75] p0264 N82-21847

OFFSHORE PLATFORMS
Site investigations and submarine soil mechanics in polar regions
[AD-A108269] p0256 N82-18790

OHIO RIVER (US)
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] p0178 N82-17678

Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] p0180 N82-18438

Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] p0180 N82-18440

OIL EXPLORATION
Enhanced oil recovery by CO2 foam flooding
[DE82-000949] p0247 N82-16464
Energy industries abroad
[DE82-001896] p0171 N82-16510
Evalcation of alternatives in downhole steam generation
[DE82-001943] p0253 N82-17574
Assessment of oil production volatile organic compound sources
[PB82-108176] p0177 N82-17664
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] p0254 N82-17722
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] p0257 N82-19319
Proposed 5-year plan oil and gas development in the outer Continental Shelf
[PUBL-97-43] p0187 N82-20616
Technology and Soviet energy availability
[PB82-133455] p0264 N82-21773
OIL FIELDS
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000896] p0247 N82-16465
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] p0252 N82-17552
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] p0253 N82-17576
OIL RECOVERY
Carbon dioxide power plant for total emission control and enhanced oil recovery
[DE81-030734] p0170 N82-16458
Enhanced oil recovery by CO2 foam flooding
[DE82-000949] p0247 N82-16464
Small business innovation research: Oil recovery enhancement by acoustic means
[PB81-243642] p0248 N82-16472
Cogeneration potential: Enhanced oil recovery
[DE81-904202] p0248 N82-16539
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] p0251 N82-17507
Development of mobility control methods to improve oil recovery by CO2
[DE82-001968] p0253 N82-17575
Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] p0176 N82-17584
Measurement and correlation of conditions for entrapment and mobilization of residual oil
[DE82-001940] p0264 N82-21694
OIL SLICKS
Oil slick dispersal mechanics
[PB82-105560] p0174 N82-16610
OILS
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] p0245 N82-16264
Reversibility of coal liquefaction
[DE81-027804] p0246 N82-16277
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] p0251 N82-17455
Hydrocracking of the oils of Botryococcus braunii to transport fuels
[SERI-R-783] p0262 N82-21416
OPEN CIRCUIT VOLTAGE
High efficiency MOS solar cells by anodic oxidation processes
p0193 A82-19891
Silicon solar cells with reduced temperature sensitivity
p0197 A82-21147
Effect of the back-surface field on the open-circuit voltages of p/+/-n-n/+/ and n/+/-p-p/+/ silicon solar cells
p0197 A82-21364
The effect of the I sub 01/I sub 02 ratio on the open circuit voltage of solar cells
p0198 A82-21838
The influence of surface conditions on the open circuit voltage of silicon solar cells
p0207 A82-24169
Cu2S/Zn/x/Cd/1-x/S heterojunction solar cells formed on sprayed Zn/x/Cd/1-x/S films
p0209 A82-24190
Thin-film polycrystalline /CdZn/S/Cu2S solar cells of 10% conversion efficiency
p0213 A82-24235
OPERATING COSTS
We have just begun to create efficient transport aircraft
p0165 A82-21373
Management of powerplant maintenance and restoration programs for fuel conservation
[SAE PAPER 811052] p0166 A82-24394
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] p0180 N82-18207
OPERATING SYSTEMS (COMPUTERS)
Microprocessor control system for 200-kilowatt Mod-0A wind turbines
[NASA-TM-82711] p0284 N82-21710
OPERATING TEMPERATURE
Optical measurement of cell temperature in a solar array
p0208 A82-24182
Development of a sealed Ni-Cd cell capable of operating in unprecedented high temperature environments
p0290 A82-24246
OPERATIONAL HAZARDS
Magnetohydrodynamics and its hazard assessment
[ASME PAPER 81-WA/SAF-3] p0166 A82-24604
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553
OPERATIONAL PROBLEMS
A review of the impact of the environment on aerogenerator materials
p0271 A82-23063
OPERATIONS RESEARCH
European Scientific Notes, volume 35, number 11
[AD-A109387] p0295 N82-20138
OPTICAL FILTERS
Bandpass filters for thermophotovoltaic conversion systems
p0197 A82-21363
OPTICAL MEASUREMENT
Optical measurement of cell temperature in a solar array
p0208 A82-24182
OPTICAL PROPERTIES
Growth and evaluation of n-CdS/n-InP/p-InP heteroface solar cell
p0193 A82-19896
Optical characteristics of the dispersion concentrator and its influence on photovoltaic systems
p0212 A82-24222
Selective optical surfaces for solar energy converters --- Book
p0218 A82-25237
Optical properties of solids for solar energy conversion
[ISSN-0345-0058] p0233 N82-21715
OPTICAL PUMPING
Solar-pumped electronic-to-vibrational energy transfer lasers
p0218 A82-25664
OPTICAL REFLECTION
Asymmetric second-stage concentrators
p0218 A82-25110
OPTIMIZATION
Power system design optimization using Lagrange multiplier techniques
p0270 A82-20743
An approximate theory of a rapidly rotating windmill
p0271 A82-23210
Optimization of fuel composition in open-cycle magnetohydrodynamic power generation
p0272 A82-24020
Modeling solar-energy systems for economic optimization
[DE81-030030] p0223 N82-16518

FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] p0228 N82-18729
Optimization programs for economic energy modelling problems
[NPL-DNACS-51/81] p0189 N82-22106
ORBITAL ASSEMBLY
Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations
[NASA-TM-58233] p0224 N82-17609
ORGANIC COMPOUNDS
Hydrogen production by immobilized cells. I - Light dependent dissimilation of organic substances by Rhodopseudomonas palustris
p0240 A82-25778
Assessment of oil production volatile organic compound sources
[PB82-108176] p0177 N82-17664
ORGANIC MATERIALS
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] p0257 N82-19319
ORGANIC SULFUR COMPOUNDS
Evaluation of continuous oxydesulfurization processes
[DE82-002127] p0261 N82-20697
ORGANIC WASTES (FUEL CONVERSION)
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] p0255 N82-18422
OSCILLATING FLOW
Developments in rotary wing aircraft aerodynamics
p0179 N82-18120
OTTO CYCLE
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] p0184 N82-19542
Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] p0184 N82-19544
OUTPUT
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] p0281 N82-18720
OVENS
A solar high temperature kiln --- for baking ceramic building materials in developing countries
[BMFT-FB-T-81-181] p0230 N82-19692
OXIDATION
The Nanticoke shoreline diffusion experiment, June 1978. IV. A - Oxidation of sulphur dioxide in a power plant plume. B - Ambient concentrations and transport of sulphur dioxide, particulate sulphate and nitrate, and ozone
p0168 A82-26407
OXIDATION RESISTANCE
Inexpensive cross-linked polymeric separators made from water-soluble polymers --- for secondary alkaline nickel-zinc and silver-zinc cells
p0289 A82-23778
The effect of degradation of glycols on corrosion of metals used in non-concentrating solar collectors
p0213 A82-24294
OXIDATION-REDUCTION REACTIONS
A novel chlorophyll solar cell
p0221 A82-28386
OXIDE FILMS
Effect of absorbed water on an indium oxide-insulator /BeO.SiO2/-p-silicon solar cell
p0198 A82-22190
Transparent, conductive layers of sprayed indium tin oxide in backwall Cu2S-CdS cells
p0209 A82-24187
Solar collector based on whisker-shaped oxides grown on metallic substrates
p0220 A82-26333

P

P-I-N JUNCTIONS
Broadening of spectral response width by a-Si/a-SiGe p-i-n type solar cells
p0194 A82-19915
Some properties of dc glow discharge amorphous silicon solar cells
p0196 A82-20463
The development of amorphous silicon solar cells
p0202 A82-24122
Hydrogenated a-Si multi-junction solar cells and interference effects in the spectral response
p0209 A82-24194
Amorphous silicon p-i-n solar cells fabricated by reactive sputtering
p0220 A82-26807
P-N JUNCTIONS
Parallel- and radial-current stream-line type metal-contacts of solar cell
p0192 A82-19888
Efficiency increase of solar cells operated in dielectric liquid
p0192 A82-19889
InGaAsP/InP wavelength division solar cells
p0193 A82-19897
Effect of the back-surface field on the open-circuit voltages of p/+/-n-n/+/ and n/+/-p-p/+/ silicon solar cells
p0197 A82-21364
Effects of grain boundaries on the current-voltage characteristics of polycrystalline silicon solar cells
p0198 A82-23356
Comparison of solar cells from nonsingle and single crystalline silicon in a pilot production line
p0202 A82-24118
Characterization of plasma-sprayed silicon layers as possible base material for solar cell fabrication
p0206 A82-24157
Application of laser annealing to solar cell junction formation
p0208 A82-24175
Theoretical and experimental study of quantum and energy conversion efficiency in CdTe p-n junctions
p0210 A82-24206
n ITO spray/p InP solar cells
p0211 A82-24208
Characterization of n-CdS/p-Si heterojunction solar cells
p0211 A82-24210
Performance of ultra high efficiency thin germanium p-n junction solar cells intended for solar thermophotovoltaic application
p0211 A82-24211
Porous silicon oxide anti-reflection coating for solar cells
p0219 A82-25741
Efficient GaAs solar cells formed by UV laser chemical doping
p0222 A82-28498
P-TYPE SEMICONDUCTORS
A large active area Be-Si HIS solar cell with textured surface
p0192 A82-19885
PACIFIC NORTHWEST (US)
Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4
[AD-A108385] p0229 N82-19686
Heat pump water heater: Midway residential community
[DE82-003548] p0186 N82-20475
PACKAGING
Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] p0226 N82-18689
PAINTS
Concentration of solar radiation by white painted transparent plates
p0220 A82-28170
PAKISTAN
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan
p0254 N82-17753
PAPER (MATERIAL)
Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] p0244 N82-16205
PARABOLIC REFLECTORS
Second-generation parabolic trough solar energy systems optimization analysis
p0200 A82-24019

Systematic rotation and receiver location error effects on parabolic trough annual performance
[ASME PAPER 81-WA/SOL-12] p0215 A82-24611
The potential economic benefit of using parabolic trough collectors to supplement power cycle boilers
[ASME PAPER 81-WA/SOL-17] p0215 A82-24616
Comparison of electrochemical and thermal storage for hybrid parabolic dish solar power plants
[ASME PAPER 81-WA/SOL-27] p0216 A82-24624
Ideal second stages in tandem with parabolic concentrators
p0220 A82-28171
Potential for using parabolic trough collectors to supplement power cycle boilers
[SAND-81-0572C] p0222 N82-16505
Steam Rankine Solar Receiver, phase 2
[NASA-CR-168656] p0230 N82-20643
State-of-the-art review of low-cost collector technologies
[AD-A109039] p0232 N82-20672
Active and passive cooling for concentrating photovoltaic arrays
[DE82-003922] p0235 N82-21745

PARABOLOID MIRRORS
Solar multiple purpose power plant in modular superlight weight construction
p0218 A82-25505

PARALLEL PROCESSING (COMPUTERS)
Real-time simulation of MHD/steam power plants by digital parallel processors
p0269 A82-19241

PARAMETER IDENTIFICATION
Double output induction generator scheme for wind energy conversion
p0267 A82-19105
Choice of design parameters for prism-type solar concentrators
p0217 A82-24869
Heliostat field layout for solar thermal power plants
[MBB-UR-453/80-OE] p0236 N82-21765

PARTICLE EMISSION
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] p0170 N82-16417
Anomalous radon (222) emission and its association with earthquakes and tectonism
p0254 N82-17739

PASSENGER AIRCRAFT
Fuel-efficient windshields for transport, commuter and business aircraft
p0166 A82-24304

PAVEMENTS
Investigation of the use of coal refuse-fly ash compositions as highway base course material
[PB82-101940] p0295 N82-16301
Energy equivalents for selected pavement materials: Their production and placement
[PB82-121187] p0180 N82-18433

PELLETS
Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-103904] p0255 N82-18408
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101668] p0255 N82-18410

PERFORMANCE PREDICTION
The Rutherford six meter variable-geometry vertical axis wind turbine
p0267 A82-19104
Double output induction generator scheme for wind energy conversion
p0267 A82-19105
An extended multiple streamtube theory for vertical axis wind turbines
p0268 A82-19108
Calculation of the flow patterns and performance of wind turbines using streamline curvature methods
p0268 A82-19109
Wind power integration studies - An overview of the Reading University programme
p0268 A82-19117
The predictability of wind turbine output
p0268 A82-19121
Wake structure analysis --- in full scale performance prediction for wind turbines
p0269 A82-19123
Performance of collector/storage solar water heaters - Arbitrary demand pattern
p0191 A82-19295
Performance characteristics of open-cycle linearly-diverging diagonal type single- and multiple-load generators
p0269 A82-19297
Simplified method for predicting photovoltaic array output
p0199 A82-23399
Performance assessment and cost effectiveness of wind energy conversion systems
p0272 A82-24016
Terrestrial photovoltaic performance reference conditions
p0208 A82-24179
Actual versus predicted performance of an active solar heating system - A comparison using FCHART 4.0
[ASME PAPER 81-WA/SOL-7] p0214 A82-24609
Systematic rotation and receiver location error effects on parabolic trough annual performance
[ASME PAPER 81-WA/SOL-12] p0215 A82-24611
Rankine engine solar power generation. I - Performance and economic analysis
[ASME PAPER 81-WA/SOL-22] p0216 A82-24620
Methodology to determine cost and performance goals for active solar cooling systems
[ASME PAPER 81-WA/SOL-32] p0217 A82-24627
A new look at long term collector performance and utilizability
p0219 A82-26330
Comparison of energy-storage devices for use in future automobiles
[DE81-026530] p0291 N82-16945
Influence of correlations and computational methods on the prediction of overall efficiency
p0276 N82-17180
Solarization/conservation technology development for existing housing
[DE82-002175] p0176 N82-17407
Heat pump water heater: Midway residential community
[DE82-003548] p0186 N82-20475
Stagnation temperature test methods for determining solar collector thermal performance degradation
p0230 N82-20638
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating
[DE82-003633] p0236 N82-21755

PERFORMANCE TESTS
Performance measurements on the six meter diameter horizontal axis windmill
p0267 A82-19107
Wind tunnel tests on the 1/30th scale model of the 60m wind turbine generator
A82-19111
Initial test results on the 5m horizontal axis wind turbine at Swansea
p0269 A82-19124
Rapid characterization of solar cell performances
p0192 A82-19879
Wind - Prototypes on the landscape --- wind turbine performance data collection of grasslands of southcentral Washington
p0163 A82-20166
Optimum operating conditions of a solar cell panel and prediction of solar radiation in Sanaa, Yemen
p0197 A82-21365
Testing of the low mass flow test train in the DOE Coal Fired Flow Facility
[AIAA PAPER 82-0378] p0165 A82-22097
Theory and performance of a Wells turbine
p0272 A82-24021
Photovoltaic testing in the European communities
p0202 A82-24121
Measurement of the spectral response of silicon solar cells under highly illuminated conditions
p0204 A82-24137
Status, technology and development of silicon solar cells at INER
p0208 A82-24174

Terrestrial photovoltaic performance reference conditions
p0208 A82-24179
Construction and testing of experimental plants using solar cells and concentrators
p0212 A82-24224
A nickel oxide-iron battery developed for traction purposes - Advantages and limitations
p0290 A82-24243
Method of testing solar collectors for determination of heat transfer parameters
[ASME PAPER 81-WA/SOL-2] p0214 A82-24605
Comparison of test results for flat plate, transpired flat plate, corrugated, and transpired corrugated solar air heaters
[ASME PAPER 81-WA/SOL-18] p0215 A82-24617
Experimental simulation of latent heat thermal energy storage and heat pipe thermal transport for dish concentrator solar receiver
[ASME PAPER 81-WA/SOL-34] p0217 A82-24628
Description of the DOE Coal-Fired MHD Flow Facility /CFFF/
p0167 A82-24689
Phosphoric acid fuel cell plants for dispersed electric power generation
p0273 A82-24693
Investigation of the natural-climatic aging of the reflective films of mirrors by an electrical method
p0217 A82-24871
Porous silicon oxide anti-reflection coating for solar cells
p0219 A82-25741
An evaluation of a transverse slatted flat plate collector
p0220 A82-26335
Duplication of radome aerodynamic heating using the Central Receiver Test Facility solar furnace
p0220 A82-26468
Recent test results on lithium BCX cells
p0292 N82-20406
Preliminary results on performance testing of a turbocharged rotary combustion engine
[NASA-TM-82772] p0284 N82-21194
Materials, processes and testing laboratory residential technical progress report
[DE82-002816] p0232 N82-21225
Prototype residential photovoltaic-systems evaluation plans
[DE82-004726] p0232 N82-21441
Experimental performance of the regenerator for the Chrysler upgraded automotive gas turbine engine
[NASA-TM-82671] p0284 N82-21712
RPE-10 composite flywheel testing
[DE82-001694] p0294 N82-21725
SP-C12-301: Thermal performances of solar energy absorbers --- test method
[SP-HET-1979:2] p0236 N82-21767

PERIODIC VARIATIONS
Effect of climate on the development of natural resources in Asia
p0254 N82-17782

PERSONNEL MANAGEMENT
Underground coal mining section data
[NASA-CR-168393] p0247 N82-16454

PETROLOGY
Studies related to the deep earth gas
[PB82-103821] p0255 N82-18409

PHASE CHANGE MATERIALS
Melt-freeze-cycle life-testing of Glauber's salt in a rolling cylinder heat store
p0291 A82-26336

PHASE DIAGRAMS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] p0280 N82-18704

PHASE TRANSFORMATIONS
Melt-freeze-cycle life-testing of Glauber's salt in a rolling cylinder heat store
p0291 A82-26336
Evaluation of continuous oxydesulfurization processes
[DE82-002127] p0261 N82-20697

PHOSPHIDES
Photovoltaic effect in monoclinic ZnP2
p0193 A82-19895

PHOSPHORIC ACID
Phosphoric acid fuel cell plants for dispersed electric power generation
p0273 A82-24693
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165455] p0275 N82-16483
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] p0277 N82-17515
Cell module and fuel conditioner development
[NASA-CR-165620] p0285 N82-21713

PHOSPHORIC ACID FUEL CELLS
Phosphoric acid fuel cell technology status
[NASA-TM-82791] p0282 N82-19670

PHOSPHORUS
Effect of phosphorous and boron impurities on amorphous silicon solar cells
p0220 A82-27010

PHOTOABSORPTION
Intensity enhancement in textured optical sheets for solar cells
p0198 A82-23362

PHOTOCHEMICAL REACTIONS
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
p0197 A82-20968

PHOTOCONDUCTIVITY
Effect of fluorine on the photovoltaic properties of amorphous silicon prepared by dc glow discharge
p0193 A82-19902
Dependence of RF power on the content and configuration of hydrogen in amorphous hydrogenated silicon by reactive sputtering
p0194 A82-19905
Properties of fluorinated amorphous silicon solar cells
p0203 A82-24125

PHOTODECOMPOSITION
Photoelectrolysis at Fe2O3/TiO2 heterojunction electrode
p0239 A82-23782

PHOTODIODES
Use of a photodiode array for the analysis of the solar profile intensity in concentrating collectors
p0218 A82-25503

PHOTOELECTRIC CELLS
200-W solar photoelectric system based on AlGaAs heterostructure solar cells and mirror concentrators
p0217 A82-24867
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells
[NASA-CR-168564] p0292 N82-19678
The design of semiconductor photoelectrochemical systems for solar energy conversion
[AD-A109477] p0232 N82-20674
Development of an all-metal thick-film cost-effective metallization system for solar cells
[NASA-CR-168502] p0232 N82-20684

PHOTOELECTRIC EMISSION
Rapid characterization of solar cell performances
p0192 A82-19879
Photoresponse of n-type semiconductor NiTiO3 --- as stable semiconducting anodes in photoelectrolysis of water
p0239 A82-20075

PHOTOELECTRIC GENERATORS
The Sophocle program --- photovoltaic generators using solar energy concentration
p0204 A82-24132
Safety procedures for the 100-kW solar photovoltaic system at Natural Bridges National Monument
[DE82-002840] p0234 N82-21731

PHOTOELECTRIC MATERIALS
Photovoltaic R&D program overview
p0201 A82-24111
Ribbons and sheets as an alternative to ingots in solar cell technology
p0202 A82-24115

PHOTOELECTRICITY
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] p0229 N82-19673

PHOTOELECTROCHEMICAL DEVICES
A high efficiency single-crystal CdSe photoelectrochemical solar cell and an associated loss mechanism
p0196 A82-20722

n-CuInSe2/polysulfide photoelectrochemical solar cells
p0222 A82-28499

PHOTOELECTROCHEMISTRY
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte
p0219 A82-25738

Study of stabilization and surface recombination on n-GaP photoelectrodes - Mechanism and interrelation
p0219 A82-25739

PHOTOGRAPHIC PROCESSING
Oil slick dispersal mechanics
[PB82-105560] p0174 N82-16610

PHOTOINTERPRETATION
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery
p0243 A82-26015

PHOTOLITHOGRAPHY
Fabrication of thick narrow electrodes on concentrator solar cells
p0196 A82-20205

PHOTOLUMINESCENCE
Properties of fluorinated amorphous silicon solar cells
p0203 A82-24125

PHOTOLYSIS
Photoresponse of n-type semiconductor NiTiO3 --- as stable semiconducting anodes in photoelectrolysis of water
p0239 A82-20075

Efficient GaAs solar cells formed by UV laser chemical doping
p0222 A82-28498

PHOTOMAPPING
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery
p0244 A82-28130

PHOTOSENSITIVITY
The ultimate efficiency of photosensitive systems
[NASA-TM-83230] p0226 N82-18696

PHOTOSYNTHESIS
Hydrogen production by immobilized cells. I - Light dependent dissimilation of organic substances by Rhodopseudomonas palustris
p0240 A82-25778

A novel chlorophyll solar cell
p0221 A82-28386

PHOTOTHERMAL CONVERSION
Selective blacks for enhanced photothermal solar energy conversion
p0191 A82-19296

Macroscopic surface roughness in metal-dielectric composite films - Photothermal absorber applications
p0195 A82-20066

Solar-thermal electric - Focal point for the desert sun
p0195 A82-20167

Design and construction of a concentrating photovoltaic total energy system in Hawaii
[AIAA PAPER 82-0069] p0198 A82-22040

Spray-deposited black nickel selective absorber surfaces for solar thermal conversion
p0199 A82-23575

Ceramic technology for solar thermal receivers
[ASME PAPER 81-WA/SOL-24] p0216 A82-24622

Optimization of a hybrid solar thermal power system
[ASME PAPER 81-WA/SOL-28] p0216 A82-24625

Black cobalt selective coatings by spray pyrolysis for photothermal conversion of solar energy
p0219 A82-26331

Convincing the home builder to build solar homes: Evaluation of passive solar workshop for builders
[DE82-001978] p0235 N82-21737

PHOTOVOLTAGES
Use of photovoltage for electrodeposition in solar cell processing technology
p0197 A82-21253

Effect of the back-surface field on the open-circuit voltages of p/+/-n-n/+/ and n/+/-p-p/+/ silicon solar cells
p0197 A82-21364

PHOTOVOLTAIC CELLS
Combined photovoltaic/thermal solar array DC electrical model
p0191 A82-18890

Photovoltaic Science and Engineering Conference in Japan, 2nd, Tokyo, Japan, December 2-4, 1980, Proceedings
p0191 A82-19876

Invited - Recent progress in amorphous silicon research and photovoltaic applications in the U.S.A.
p0191 A82-19877

Photovoltaics - A question of efficiency
p0195 A82-20168

Government-industry relationships in technology commercialization The case of photovoltaics
p0165 A82-21362

Simplified method for predicting photovoltaic array output
p0199 A82-23399

Photovoltaics - Down to earth at last
p0200 A82-23700

Photovoltaic Solar Energy Conference; Proceedings of the Third International Conference, Cannes, France, October 27-31, 1980
p0200 A82-24101

Sunshine Project solar photovoltaic program and recent R & D activities in Japan
p0200 A82-24102

A strategy for cost reduction from the point of view of a French industrialist
p0201 A82-24107

Research options as seen from U.S.A. --- photovoltaic solar cells
p0201 A82-24110

Progress toward goals in silicon sheet development
p0201 A82-24113

Directional solidification of SG silicon by Heat Exchanger Method /HEM/ for photovoltaic applications
p0202 A82-24116

The need for photovoltaic unit operations experimentation
p0203 A82-24129

Operational, reliability, and maintenance experience with photovoltaic concentrator arrays
p0203 A82-24130

Sun tracking controller for multi-kW photovoltaic concentrator system
p0203 A82-24131

New concepts for static concentration of direct and diffuse radiation
p0204 A82-24133

Photovoltaics in the context of off-grid small power systems
p0205 A82-24146

Hardware simulation of a scaled down photovoltaic power system
p0205 A82-24148

Direct coupled microwave thermal processing for photovoltaic device fabrication
p0207 A82-24165

Optical measurement of cell temperature in a solar array
p0208 A82-24182

Low resistance solar cells for the first Spanish concentrating photovoltaic array
p0211 A82-24219

Optical characteristics of the dispersion concentrator and its influence on photovoltaic systems
p0212 A82-24222

Automated concentrator cell module assembly
p0212 A82-24223

PHYSICAL PROPERTIES
AIP 50th anniversary: Physics vade mecum --- Book p0295 A82-28112

PHYSICS
AIP 50th anniversary: Physics vade mecum --- Book p0295 A82-28112

PILOT PLANTS
Sprayed cadmium sulphide solar cells p0203 A82-24126
Photovoltaic pilot projects in the European community p0205 A82-24145
Fuel cell power plants for utility applications p0273 A82-24692
Bi-Gas pilot plant operation
[DE82-000223] p0245 N82-16271
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101668] p0255 N82-18410
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt
[BMFT-FB-T-81-175] p0181 N82-18552
Construction and operation of a one ton per hour pilot plant for the VEW coal conversion process
[BMFT-FB-T-81-177] p0256 N82-18712

PIPE FLOW
Equilibrium two-phase heat pipe flows with variable flowrate p0287 A82-21975
Heat transfer coefficient for constant flow solar collector/storage systems p0220 A82-26615

PIPELINES
Procedures for preparing regional transportation management plans --- oil and gas pipelines from outer continental shelves
[PB82-106162] p0287 N82-18075

PITCH (INCLINATION)
Variable gain for a wind turbine pitch control
[NASA-TM-82751] p0275 N82-16478

PLANETARY SURFACES
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization p0197 A82-20968

PLANT DESIGN
Hardware simulation of a scaled down photovoltaic power system p0205 A82-24148
Considerations on the feasibility of a 1 MWp central PV plant to be tied to the European electrical network p0213 A82-24234
Magnetohydrodynamics and its hazard assessment
[ASME PAPER 81-WA/SAF-3] p0166 A82-24604
New connections for new technologies p0274 A82-25160
Solar coal gasification - Plant design and economics p0221 A82-28388
Small-scale fuel-alcohol plant. Volume 2: Detailed equipment information
[DE82-001037] p0246 N82-16278
Carbon dioxide power plant for total emission control and enhanced oil recovery
[DE81-030734] p0170 N82-16458
Industrial steam supply system characteristics program. Phase 2: Low- and medium-Btu gas-fired boilers with associated gasification plants
[DE82-000535] p0248 N82-16517
Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] p0173 N82-16607
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] p0250 N82-17397
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER)
[NASA-CR-165452-VOL-5] p0253 N82-17603
Heber geothermal binary demonstration project
[DE82-002462] p0285 N82-21759

PLANTS (BOTANY)
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands
[PB82-113218] p0188 N82-20702

PLASMA CONDUCTIVITY
Recent results on measurement of plasma conductivity using Faraday rotation of submillimeter waves
[AIAA PAPER 82-0376] p0269 A82-19800

PLASMA ELECTRODES
Arc mode molten seed electrodes for MHD power generation p0272 A82-24018
Increasing the dielectric strength of interelectrode inserts in an MHD generator channel by air injection p0274 A82-26769

PLASMA PHYSICS
Three-dimensional flow development in MHD generators at part load
[AIAA PAPER 82-0324] p0269 A82-19794

PLASMA SPRAYING
Characterization of plasma-sprayed silicon layers as possible base material for solar cell fabrication
p0206 A82-24157
PLATINUM ISOTOPES
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells [NASA-CR-165594] p0277 N82-17615
PLUMES
The Nanticoke shoreline diffusion experiment, June 1978. IV. A - Oxidation of sulphur dioxide in a power plant plume. B - Ambient concentrations and transport of sulphur dioxide, particulate sulphate and nitrate, and ozone
p0168 A82-26407
Modelling continuous fumigation of Nanticoke generating station plume
p0168 A82-26409
The impact of mixing cooling tower and power plant plumes on sulfate aerosol formation
p0169 A82-28523
POLARITY
Case-positive versus case-negative designs for low-rate lithium thionyl chloride cells
p0292 N82-20407
POLLUTION CONTROL
Processes for reducing emissions of particulates and oxides of sulfur and nitrogen for various coal utilization alternatives
p0242 A82-23950
Stack gases desulphurization recovery processes in thermal power plants of the world. III - Processes based on absorption by solid materials
p0166 A82-24075
Trade-offs in NO/x/ control
p0167 A82-25161
Dust removal from small- and medium-sized coal-fired generators
p0168 A82-25666
Ten years of the fight against air pollution in Japan - Evaluation of a policy
p0168 A82-25669
Air pollution control technology - An overview
p0168 A82-26327
Carbon dioxide power plant for total emission control and enhanced oil recovery [DE81-030734] p0170 N82-16458
Flue-gas desulfurization: Review of selected commercial and advanced technologies [DE82-001960] p0172 N82-16559
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion [DE81-028536] p0249 N82-16560
Advanced Environmental Control Technology Program [DE82-000898] p0173 N82-16562
Energy and environmental quality: Case histories of impact management [DE81-028435] p0173 N82-16565
Sulfur gas emissions from stored flue gas desulfurization solids [DE82-900859] p0173 N82-16568
Technical support for open-cycle MHD program --- combined cycle mhd/steam power system analysis [DE82-001955] p0276 N82-16901
Performance evaluation of an industrial spray dryer for SO2 control [PB82-110701] p0177 N82-17669
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technolcgies [PB82-118670] p0178 N82-17684
Solar energy for pollution control [PB82-116658] p0228 N82-18764
EPA utility FGD (Flue Gas Desulfurization) survey [PB82-115858] p0184 N82-18766
Advanced pulverized-coal combustor for control of NO sub x emissions [DE82-002653] p0260 N82-20695
Electrocyclone development program [DE81-025062] p0188 N82-20700
NO sub x regulatory changes and the electric utility: A guidance manual for air quality modeling in planning, siting, and emissions control [DE82-900966] p0189 N82-21786
POLLUTION MONITORING
The Nanticoke shoreline diffusion experiment, June 1978. IV. A - Oxidation of sulphur dioxide in a power plant plume. B - Ambient concentrations and transport of sulphur dioxide, particulate sulphate and nitrate, and ozone
p0168 A82-26407
Monitoring to detect groundwater problems resulting from enhanced oil recovery [PB82-119074] p0176 N82-17584
Development of a multidetector petroleum oil in water monitor [PB82-105206] p0181 N82-18568
POLLUTION TRANSPORT
The Nanticoke shoreline diffusion experiment, June 1978. IV. A - Oxidation of sulphur dioxide in a power plant plume. B - Ambient concentrations and transport of sulphur dioxide, particulate sulphate and nitrate, and ozone
p0168 A82-26407
Modelling continuous fumigation of Nanticoke generating station plume
p0168 A82-26409
Monitoring to detect groundwater problems resulting from enhanced oil recovery [PB82-119074] p0176 N82-17584
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin [PB82-102401] p0178 N82-17678
Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region [PB82-110735] p0180 N82-18438
Inventory of emissions from marine operations within the California coastal waters [PB82-105099] p0183 N82-18757
POLYCRYSTALS
An analysis of EBIC response of ITO/poly-Si solar cells --- Electronic Beam Induced Current
p0191 A82-19878
Effects of grain boundaries on the current-voltage characteristics of polycrystalline silicon solar cells
p0198 A82-23356
Comparison of solar cells from nonsingle and single crystalline silicon in a pilot production line
p0202 A82-24118
Effects of special processing on diffusion lengths in polycrystalline silicon solar cells
p0207 A82-24167
Scanning spectral response measurements of large grain polysilicon solar cells for process optimization
p0207 A82-24168
Electrical properties of grain boundaries in nonsingle crystalline silicon solar cells
p0207 A82-24170
Exploratory development of thin-film polycrystalline photovoltaic devices [DE82-000092] p0235 N82-21746
Thin-film polycrystalline silicon solar cells [DE82-000633] p0236 N82-21753
POLYMERIC FILMS
Inexpensive cross-linked polymeric separators made from water-soluble polymers --- for secondary alkaline nickel-zinc and silver-zinc cells
p0289 A82-23778
On the weathering of thin plastic films [ASME PAPER 81-WA/SOL-6] p0214 A82-24608
POLYMERIZATION
Reversibility of coal liquefaction [DE81-027804] p0246 N82-16277
State-of-the-art review of low-cost collector technologies [AD-A109039] p0232 N82-20672
POLYSULFIDES
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte
p0219 A82-25738
n-CuInSe2/polysulfide photoelectrochemical solar cells
p0222 A82-28499
POLYVINYL ALCOHOL
Inexpensive cross-linked polymeric separators made from water-soluble polymers --- for secondary alkaline nickel-zinc and silver-zinc cells
p0289 A82-23778

POLYVINYL CHLORIDE
The development of PVC-modified tars for use in surface treatments
[CSIR-RR-393] p0295 N82-20315
POPULATIONS
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] p0184 N82-19108
POROSITY
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000896] p0247 N82-16465
POROUS MATERIALS
Durability of porous silica antireflection coatings for solar collector cover plates
p0199 A82-23393
Porous silicon oxide anti-reflection coating for solar cells
p0219 A82-25741
PORTABLE EQUIPMENT
Al-air cells - Potential small electric generators for field use
p0272 A82-24249
POSITIONING DEVICES (MACHINERY)
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] p0252 N82-17554
POTASSIUM COMPOUNDS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] p0280 N82-18704
POTENTIAL ENERGY
Cogeneration potential: Enhanced oil recovery
[DE81-904202] p0248 N82-16539
The techniques, magnitudes and opportunities for development of energy storage (UK)
[PB82-120858] p0292 N82-19698
Electrochemical models for the discharge characteristics of the NiCd cell
p0292 N82-20416
POWDER METALLURGY
Microstructural effects in abrasive wear
[DE82-003653] p0250 N82-17339
POWER CONDITIONING
Power conditioning unit for photovoltaic power systems
p0213 A82-24232
New connections for new technologies
p0274 A82-25160
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] p0177 N82-17634
Dynamic electrical response of solar cells
[NASA-TM-76686] p0231 N82-20655
POWER EFFICIENCY
Analysis of power takeoff in diagonal conducting wall channels
p0272 A82-24015
Second-generation parabolic trough solar energy systems optimization analysis
p0200 A82-24019
Optimization of fuel composition in open-cycle magnetohydrodynamic power generation
p0272 A82-24020
Recent improvements in aircraft Ni-Cd cells
p0290 A82-24245
Design and performance of a small shrouded Cretan windwheel
p0274 A82-26614
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] p0275 N82-16481
Evaluation of the design, construction and operation of a gas fueled engine driven heat pump
[NBG-034] p0277 N82-17459
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] p0281 N82-18719
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-S] p0281 N82-18720
POWER GAIN
Variable gain for a wind turbine pitch control
[NASA-TM-82751] p0275 N82-16478
POWER PLANTS
Stack gases desulphurization recovery processes in thermal power plants of the world. III - Processes based on absorption by solid materials
p0166 A82-24075
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] p0227 N82-18702
POWER SUPPLY CIRCUITS
Power system design optimization using Lagrange multiplier techniques
p0270 A82-20743
POWER TRANSMISSION (LASERS)
Solar Power Satellites
[PB82-108846] p0225 N82-17647
Space Laser Power Transmission System Studies --- conferences
[NASA-CP-2214] p0287 N82-18578
Preliminary study on the use of lasers for the transmission of power
p0287 N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
p0287 N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space
p0226 N82-18581
PRECIPITATION (CHEMISTRY)
MHD Heat and Seed Recovery Technology Project
[DE82-001608] p0276 N82-16900
PRESSURE EFFECTS
Three-dimensional flow development in MHD generators at part load
[AIAA PAPER 82-0324] p0269 A82-19794
Effect of vacuum exhaust pressure on the performance of MHD ducts at high B-field
[AIAA PAPER 82-0396] p0270 A82-20292
A comparison of a low pressure and a high pressure Ni-H2 cell
p0290 A82-24244
PRISMS
Choice of design parameters for prism-type solar concentrators
p0217 A82-24869
PROBABILITY THEORY
Turbulence statistics for design of wind turbine generators
[PB82-112939] p0283 N82-19792
Risk: Assessment, acceptability and management
[GPO-87-593] p0189 N82-22082
PROCESS CONTROL (INDUSTRY)
New technologies for solar energy silicon - Cost analysis of dichlorosilane process
p0199 A82-23397
Scanning spectral response measurements of large grain polysilicon solar cells for process optimization
p0207 A82-24168
Low cost Czochralski crystal growing technology. Near implementation of the flat plate photovoltaic cost reduction of the low cost solar array project
[NASA-CR-168658] p0231 N82-20662
PROCESS HEAT
Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030968] p0175 N82-16942
Open-cycle vapor compression heat pump
[PB82-110503] p0181 N82-18553
Industrial burner and process efficiency program
[PB82-115486] p0182 N82-18731
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733
Robins Air Force Base solar cogeneration facility, volume 1
[DE82-001922] p0234 N82-21735
Robins Air Force Base solar cogeneration facility, volume 2
[DE82-001866] p0234 N82-21736
Solar production of industrial process hot water. Phase 3: Operation and evaluation of the York Building Products Company, Incorporated. Solar Facility
[DE82-003000] p0236 N82-21762

PRODUCT DEVELOPMENT
Industrialization of photovoltaics
p0201 A82-24108
A review of recent developments in thermal batteries
p0289 A82-24242
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] p0223 N82-16527
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] p0172 N82-16549
Consumer behavior towards fuel efficient vehicles, volume 2
[PB81-246654] p0175 N82-16948
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] p0291 N82-17635
Development of simple solar collectors --- for usage in developing countries
[BMFT-FB-T-81-174] p0230 N82-19690
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] p0186 N82-20027
Energy efficient engine shroudless, hollow fan blade technology report
[NASA-CR-165586] p0284 N82-21196
PRODUCTION
The 18th Project Integration Meeting
[NASA-CR-168431] p0225 N82-17614
PRODUCTION COSTS
A review of medium-scale wind turbine generators
p0267 A82-19106
Photovoltaics - Down to earth at last
p0200 A82-23700
Industrialization of photovoltaics
p0201 A82-24108
A U.S. view of silicon production processes
p0201 A82-24112
Ribbons and sheets as an alternative to ingots in solar cell technology
p0202 A82-24115
Silicon solar cells with nickel/solder metallization
p0207 A82-24173
Commercial-scale process design for thin-film solar cells
p0221 A82-28390
PRODUCTION ENGINEERING
Gas producing process for large quantities of hydrogen
p0239 A82-21649
U.S. photovoltaic application experiments and market development
p0200 A82-24104
A U.S. view of silicon production processes
p0201 A82-24112
Advances in silicon solar cell processing
p0202 A82-24117
Sprayed cadmium sulphide solar cells
p0203 A82-24126
Reversibility of coal liquefaction
[DE81-027804] p0246 N82-16277
Oil Shale 1982: A technology and policy primer
p0170 N82-16449
Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis
[BMFT-FB-T-81-180] p0282 N82-19691
A Module Experimental Process System Development Unit (MEPSDU) --- flat plate solar arrays
[NASA-CR-168667] p0231 N82-20646
Small-scale fuel-alcohol plant. Volume 1: Design report
[DE82-001038] p0263 N82-21432
PRODUCTION MANAGEMENT
The natural gas option: New resources and new technologies
[GPO-85-052] p0186 N82-20329
PRODUCTION PLANNING
A review of the impact of the environment on aerogenerator materials
p0271 A82-23063
Assured load carrying capability and capacity credit
p0278 N82-17624
PROFILOMETERS
Electromagnetic subsurface measurements
[AD-A108192] p0256 N82-18469

PROJECT MANAGEMENT
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] p0172 N82-16550
Ocean Thermal Energy Conversion Research, Development, and Demonstration Act
[GPO-56-801] p0187 N82-20660
PROJECT PLANNING
Ocean Thermal Energy Conversion Research, Development, and Demonstration Act
[GPO-56-801] p0187 N82-20660
Plan for a photovoltaic applied research laboratory for developing countries
[DE82-003289] p0236 N82-21752
PROPELLERS
An extension of the local momentum theory to the rotors operating in twisted flow field
p0280 N82-18123
PROPULSION
NASA research activities in aeropropulsion
[NASA-TM-82788] p0169 N82-16084
PROPULSION SYSTEM CONFIGURATIONS
Helicopter propulsion systems: Past, present and future
p0277 N82-17204
PROPULSION SYSTEM PERFORMANCE
Operational and performance aspects of fuel management in civil aircraft
p0164 A82-20518
Advanced subsonic transport propulsion
[AIAA PAPER 81-0811] p0165 A82-20874
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] p0276 N82-16937
Electric car: Is it still the vehicle of the future
[DE81-030437] p0175 N82-16943
Influence of correlations and computational methods on the prediction of overall efficiency
p0276 N82-17180
Helicopter propulsion systems: Past, present and future
p0277 N82-17204
Mechanical advances in the design of small turboshaft engines
p0277 N82-17208
Aerodynamic components for small turboshaft engines
p0277 N82-17211
PROPULSIVE EFFICIENCY
Design possibilities for improved fuel efficiency of civil transport aircraft
p0164 A82-20514
Mechanical advances in the design of small turboshaft engines
p0277 N82-17208
PROTECTIVE COATINGS
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-168671] p0231 N82-20649
PROTOTYPES
Wind - Prototypes on the landscape --- wind turbine performance data collection of grasslands of southcentral Washington
p0163 A82-20166
PSEUDOMONAS
Hydrogen production by immobilized cells. I - Light dependent dissimilation of organic substances by Rhodopseudomonas palustris
p0240 A82-25778
PUBLIC HEALTH
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] p0170 N82-16259
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] p0173 N82-16563
Baseline health effects data applicable to anticipated geothermal resource development in Imperial County
[DE82-001669] p0189 N82-21782
Imperial county baseline health survey potential impact of geothermal energy
[DE82-001672] p0189 N82-21783
PUBLIC RELATIONS
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] p0172 N82-16550

PULSE DURATION MODULATION
A PWM transistor inverter for an ac electric vehicle drive
p0270 A82-20744
PULSED LASERS
Laser processing for high-efficiency Si solar cells
p0198 A82-22191
PULSED RADIATION
High power pulsed oscillators
p0287 A82-23944
PUMPS
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] p0229 N82-19673
PYRIDINES
Synthetic-fuel combustion: Pollutant formation. Soot-initiation mechanisms in buring aromatics
[DE82-002566] p0186 N82-20277
PYROLYSIS
Spray-deposited black nickel selective absorber surfaces for solar thermal conversion
p0199 A82-23575
Pacific Gas and Electric Company - Biomass energy activities
p0242 A82-24691
Black cobalt selective coatings by spray pyrolysis for photothermal conversion of solar energy
p0219 A82-26331
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] p0246 N82-16275
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] p0249 N82-16560
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] p0249 N82-17315
Synthetic-fuel combustion: Pollutant formation. Soot-initiation mechanisms in buring aromatics
[DE82-002566] p0186 N82-20277
PYRROLES
Deposit formation in liquid fuels. III - The effect of selected nitrogen compounds on diesel fuel
p0241 A82-23238

Q

QUALITY CONTROL
Photovoltaic testing in the European communities
p0202 A82-24121
Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] p0281 N82-19550
QUANTITATIVE ANALYSIS
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] p0245 N82-16228
QUANTUM EFFICIENCY
Growth and characterization of cascade solar cells
p0204 A82-24135
Theoretical and experimental study of quantum and energy conversion efficiency in CdTe p-n junctions
p0210 A82-24206
QUINOLINE
Deposit formation in liquid fuels. III - The effect of selected nitrogen compounds on diesel fuel
p0241 A82-23238

R

RADAR EQUIPMENT
Electromagnetic subsurface measurements
[AD-A108192] p0256 N82-18469
RADAR IMAGERY
Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources
p0243 A82-27635
RADIATION TRANSPORT
Theoretical study of absorbed solar energy in multi-layer absorber coatings for receivers of solar concentrators. I - Radiation transfer analysis
p0221 A82-28387
RADSOLVER: A computer program for calculating spectrally-dependent radiative heat transfer in solar cavity receivers
[DE82-000833] p0233 N82-21542
RADIATIVE HEAT TRANSFER
Radiative heat transfer in turbulent MHD channel flow
p0281 N82-19487
RADSOLVER: A computer program for calculating spectrally-dependent radiative heat transfer in solar cavity receivers
[DE82-000833] p0233 N82-21542
RADIATIVE RECOMBINATION
Band tail recombination limit to the output voltage of amorphous silicon solar cells
p0220 A82-27012
RADIATIVE TRANSFER
A new look at the discrete ordinate method for radiative transfer calculations in anisotropically scattering atmospheres. II - Intensity computations
p0217 A82-24940
RADIO COMMUNICATION
A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168640] p0229 N82-19677
RADIO FREQUENCY DISCHARGE
Dependence of RF power on the content and configuration of hydrogen in amorphous hydrogenated silicon by reactive sputtering
p0194 A82-19905
Solar cells based on indium phosphide
p0210 A82-24207
RADIO FREQUENCY HEATING
Direct coupled microwave thermal processing for photovoltaic device fabrication
p0207 A82-24165
RADIOACTIVE WASTES
Nuclear waste management
[DE82-001605] p0174 N82-16845
Geological disposal of high-level radioactive wastes
[CANMET-79-29] p0189 N82-22020
RADOME MATERIALS
Duplication of radome aerodynamic heating using the Central Receiver Test Facility solar furnace
p0220 A82-26468
RADON ISOTOPES
Anomalous radon (222) emission and its association with earthquakes and tectonism
p0254 N82-17739
RAIL TRANSPORTATION
An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100538] p0175 N82-16953
Railway transport of low temperature heat from large power stations by means of alternative heat carriers and water
[BMFT-FB-T-81-145] p0288 N82-18710
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] p0258 N82-20022
RAMAN SPECTROSCOPY
Coal-gasification instrumentation program (PR 11734)
[DE82-001153] p0247 N82-16381
RANDOM ERRORS
Systematic rotation and receiver location error effects on parabolic trough annual performance
[ASME PAPER 81-WA/SOL-12] p0215 A82-24611
RANKINE CYCLE
Solar-thermal electric - Focal point for the desert sun
p0195 A82-20167
The potential economic benefit of using parabolic trough collectors to supplement power cycle boilers
[ASME PAPER 81-WA/SOL-17] p0215 A82-24616
Rankine engine solar power generation. I - Performance and economic analysis
[ASME PAPER 81-WA/SOL-22] p0216 A82-24620
Rankine engine solar power generation. II - The power generation module
[ASME PAPER 81-WA/SOL-23] p0216 A82-24621
Steam Rankine Solar Receiver, phase 2
[NASA-CR-168656] p0230 N82-20643

RAY TRACING
The effect of length on absorption for a trapezoidal groove collector
p0198 A82-23391
Second-stage CEC concentrator --- Compound Elliptical Concentrator for solar energy conversion
p0200 A82-23872

REACTION KINETICS
A comparison of a low pressure and a high pressure Ni-H2 cell
p0290 A82-24244
Temperature effects on the kinetics of the anaerobic digestion of crop residues to methane
p0244 A82-28391
Oil slick dispersal mechanics
[PB82-105560] p0174 N82-16610
Investigations of the changes of coal structure occurring during gasification
[DE82-002652] p0258 N82-20279
Role of C-CO2 in gasification of coal and char
[DE81-027358] p0259 N82-20334
Role of the hydrogen donor solvent in coal hydroliquefaction
[DE82-002716] p0262 N82-21283

REACTOR DESIGN
Fusion - From science to engineering
p0270 A82-20170

REACTOR SAFETY
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] p0254 N82-17722

REAL TIME OPERATION
Real-time simulation of MHD/steam power plants by digital parallel processors
p0269 A82-19241
Hardware simulation of a scaled down photovoltaic power system
p0205 A82-24148

RECEIVERS
Forced convection heat transfer for two-phase helical flow in a solar receiver
[ASME PAPER 81-WA/HT-13] p0214 A82-24589

RECHARGING
A sealed rechargeable metal-oxygen battery for traction purposes
p0290 A82-24248

RECLAMATION
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] p0177 N82-17594
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] p0181 N82-18679

RECREATION
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] p0174 N82-16846

RECYCLING
Recycling World Congress, 3rd, Basel, Switzerland, September 29-October 1, 1980, Proceedings. Sessions 1-2 /Day 1/, Sessions 3-4 /Day 2/, and Sessions 5-6 /Day 3/
p0241 A82-19975
Energy equivalents for selected pavement materials: Their production and placement
[PB82-121187] p0180 N82-18433
NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74686] p0184 N82-19103
Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] p0257 N82-19383

REDOX CELLS
Redox storage systems for solar applications
p0289 A82-24240

REDUCTION (CHEMISTRY)
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] p0178 N82-17684

REFINING
Crude sources and refining trends and their impact on future jet fuel properties
[SAE PAPER 811056] p0242 A82-24391
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402

REFLECTANCE
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] p0222 N82-16492
Heliostat field layout for solar thermal power plants
[MBB-UR-453/80-OE] p0236 N82-21765

REFRACTORY MATERIALS
Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis
[BMFT-FB-T-81-180] p0282 N82-19691

REFUELING
Electric vehicle refuelling infrastructure
[EBG-038] p0179 N82-18073

REGENERATIVE FUEL CELLS
Electrochemical energy storage for an orbiting space station
[NASA-CR-165436] p0291 N82-17607

REGENERATORS
Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] p0228 N82-18722
Experimental performance of the regenerator for the Chrysler upgraded automotive gas turbine engine
[NASA-TM-82671] p0284 N82-21712

REGIONAL PLANNING
Cumberland River Basin; regional water and land resources plan
[PB82-111501] p0176 N82-17585
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] p0254 N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] p0254 N82-17631
Procedures for preparing regional transportation management plans --- oil and gas ppelines from outer continental shelves
[PB82-106162] p0287 N82-18075
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] p0181 N82-18442

REGIONS
Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] p0229 N82-19683
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] p0229 N82-19685

REGRESSION ANALYSIS
Use of non-sequential techniques in the analysis of power potential at storage projects
[AD-A109788] p0294 N82-20676

REGULATIONS
Energy building regulations for new residential and nonresidential buildings
[PB82-117813] p0188 N82-21448
NO sub x regulatory changes and the electric utility: A guidance manual for air quality modeling in planning, siting, and emissions control
[DE82-900966] p0189 N82-21786

RELIABILITY
A review of the impact of the environment on aerogenerator materials
p0271 A82-23063
Solar consumer assurance: An assessment of mechanisms in the northeast
[DE81-030052] p0223 N82-16538

Vehicle test report: Electric Vehicle Associates electric conversion of an AMC Pacer
[NASA-CR-166425] p0179 N82-18066
Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] p0281 N82-19550

RELIABILITY ANALYSIS
Development of an accelerated reliability test schedule for terrestrial solar cells
p0213 A82-24298

RELIABILITY ENGINEERING
Wind energy systems with battery storage and diesel back-up for isolated communities
p0268 A82-19115
Evaluation of reliability of operational solar-energy systems
p0199 A82-23654
Survey of residential and intermediate photovoltaic applications
p0205 A82-24143
Reliable screen-printed contacts on silicon solar cells
p0207 A82-24172
Recent improvements in aircraft Ni-Cd cells
p0290 A82-24245

REMOTE REGIONS
Wind energy systems with battery storage and diesel back-up for isolated communities
p0268 A82-19115

REMOTE SENSING
Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico
p0244 A82-27693
Experience with a variety of studies of earth resources in the Kalayk ASSR using space imagery
p0244 A82-28130
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
p0287 N82-18580
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0185 N82-19704

RESEARCH AND DEVELOPMENT
The silicon solar satellite power system - A net energy analysis
p0196 A82-20574
Government-industry relationships in technology commercialization The case of photovoltaics
p0165 A82-21362
Sunshine Project solar photovoltaic program and recent R & D activities in Japan
p0200 A82-24102
Photovoltaic activities and its applications in China
p0200 A82-24103
Research options as seen from U.S.A. --- photovoltaic solar cells
p0201 A82-24110
Photovoltaic R&D program overview
p0201 A82-24111
Development of amorphous Si solar cells in Japan
p0202 A82-24123
Photovoltaic pilot projects in the European community
p0205 A82-24145
Status of the German terrestrial photovoltaic activities
p0205 A82-24149
Assessing the Solar Power Satellite - The OTA experience
p0168 A82-25665
The Daimler-Benz hydride vehicle project
p0240 A82-25780
Analysis of state-energy-program capabilities
[DE82-001963] p0172 N82-16523
Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-116229] p0256 N82-18571

RESEARCH FACILITIES
Aviation and space flight research activities
p0180 N82-18174
Plan for a photovoltaic applied research laboratory for developing countries
[DE82-003289] p0236 N82-21752

RESEARCH MANAGEMENT
European Scientific Notes, volume 35, number 11
[AD-A109387] p0295 N82-20138

RESEARCH PROJECTS
The Hull wind powered housing project
p0163 A82-19118
Geothermal direct use projects
p0167 A82-24688

RESERVOIRS
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000896] p0247 N82-16465
Target reservoirs for CO2 miscible flooding, task two. Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data. Part 2: ADAIR-San Andres through EUNICE
[DE82-001348] p0253 N82-17576
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-166641] p0258 N82-19674
Use of non-sequential techniques in the analysis of power potential at storage projects
[AD-A109788] p0294 N82-20676

RESIDENTIAL ENERGY
The Hull wind powered housing project
p0163 A82-19118
Experience acquired in the field of low power photovoltaic application to educational television
p0204 A82-24139
Survey of residential and intermediate photovoltaic applications
p0205 A82-24143
Hardware simulation of a scaled down photovoltaic power system
p0205 A82-24148
An assessment of alternative fuel cell designs for residential and commercial cogeneration
p0273 A82-24695
Passive-solar multi-family concepts
[DE82-000456] p0222 N82-16499
Choice and Utilization of Energy-using Durables
[DE81-904228] p0171 N82-16513
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] p0172 N82-16516
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] p0172 N82-16549
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] p0172 N82-16550
Solarization/conservation technology development for existing housing
[DE82-002175] p0176 N82-17407
Climatic influences of residential energy consumption
p0178 N82-17742
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] p0227 N82-18703
National energy research and development program --- bibliography of belgian scientific and technical reports
p0182 N82-18707
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] p0228 N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] p0228 N82-18726
NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74686] p0184 N82-19103
Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] p0229 N82-19683
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] p0229 N82-19685
Residential heating and energy conservation study, Northport, New York. Phase 1: Citizen's handbook
[PB82-100454] p0186 N82-20359

Residential heating and energy conservation study, Northport, New York. Phase 2: Citizen's handbook [PB82-100462] p0186 N82-20360
Heat pump water heater: Midway residential community [DE82-003548] p0186 N82-20475
Materials, processes and testing laboratory residential technical progress report [DE82-002816] p0232 N82-21225
Prototype residential photovoltaic-systems evaluation plans [DE82-004726] p0232 N82-21441
Solar photovoltaic residential project [DE82-000653] p0232 N82-21442
Energy building regulations for new residential and nonresidential buildings [PB82-117813] p0188 N82-21448
Information gathering, data reduction, and information dissemination for residential experiment station operations [DE82-002157] p0234 N82-21734
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating [DE82-003633] p0236 N82-21755

RESIDUES
Development of potential uses for the residue from fluidized-bed-combustion processes [DE81-030157] p0244 N82-16211

RESIN MATRIX COMPOSITES
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines [NASA-CR-165342] p0280 N82-18693

RESOURCE ALLOCATION
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B [DE82-000838] p0254 N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E [DE82-000839] p0254 N82-17631

RESOURCES
US energy for the rest of the century [PB82-115866] p0185 N82-19697

RESOURCES MANAGEMENT
Ecospace --- policy basis for international global resources including outer space [IAF 81-SL-40] p0169 A82-27851
Oil Shale 1982: A technology and policy primer p0170 N82-16449
Energy and environmental quality: Case histories of impact management [DE81-028435] p0173 N82-16565
Water for non-nuclear energy development in the Great Basin [PB82-116781] p0176 N82-17581
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff [PB82-109810] p0254 N82-17690
Effect of climate on the development of natural resources in Asia p0254 N82-17782
Social and Environmental Consequences of Natural Resources Policies with Special Emphasis on Biosphere Reserves [PB82-113937] p0185 N82-19660
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands [PB82-113218] p0188 N82-20702

RETROFITTING
Case studies of retrofit applications of solar energy in the NASEC region [DE82-001712] p0223 N82-16532
Preliminary guidelines for condition assessment of buildings being considered for solar retrofit [PB82-113259] p0225 N82-18437
A passive solar retrofit study for concrete block buildings [AD-A110189] p0233 N82-21718

REVERSING
Reversibility of coal liquefaction [DE81-027804] p0246 N82-16277

REVISIONS
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel [PB81-245714] p0176 N82-16959

RHEOLOGY
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace [BMFT-FB-T-81-221] p0251 N82-17455
Heavy-liquid beneficiation of fine coal [DE81-030965] p0261 N82-21279

RIBBONS
Progress in the growth and performance of RAD silicon sheets --- for solar cell manufacture p0206 A82-24152
Large area silicon sheet by EFG [NASA-CR-168680] p0231 N82-20664

RIGID ROTORS
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling [ISD-270] p0279 N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling [ISD-271] p0279 N82-17641

RISK
Risk of producing energy, and conserving it [DE81-030807] p0171 N82-16507
Risk: Assessment, acceptability and management [GPO-87-593] p0189 N82-22082

RIVER BASINS
Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah [DE82-000416] p0171 N82-16461
Cumberland River Basin; regional water and land resources plan [PB82-111501] p0176 N82-17585
Ohio River Basin energy study: Land use and terrestrial ecology [PB82-110347] p0180 N82-18440
The Ohio River Basin energy facility siting model. Volume 1: Methodology [PB82-102591] p0183 N82-18740

ROCK MECHANICS
Ore deposits in Africa and their relation to the underlying mantle p0243 A82-26604
Small business innovation research: Oil recovery enhancement by acoustic means [PB81-243842] p0248 N82-16472

ROCKET ENGINE DESIGN
Liquid hydrogen for space flight - The long step from proposal to reality p0240 A82-24796

ROLLING CONTACT LOADS
Rolling resistance measurements 106 passenger car tires [PB82-116625] p0176 N82-17512

ROOFS
Solar collectors for flat roofs [PB82-129834] p0236 N82-21769

ROTARY WINGS
Developments in rotary wing aircraft aerodynamics p0179 N82-18120
An extension of the local momentum theory to the rotors operating in twisted flow field p0280 N82-18123

ROTATING CYLINDERS
The rotating heat pipe - Implementation as a uniform-temperature heat source [ASME PAPER 81-WA/HT-2] p0242 A82-24584

ROTATION
An extension of the local momentum theory to the rotors operating in twisted flow field p0280 N82-18123

ROTOR AERODYNAMICS
Wind tunnel tests on slow-running vertical-axis wind-rotors p0274 A82-25997
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling [ISD-271] p0279 N82-17641
Static and dynamic investigations for the model of a wind rotor [ISD-272] p0279 N82-17642
Developments in rotary wing aircraft aerodynamics p0179 N82-18120

An extension of the local momentum theory to the rotors operating in twisted flow field
p0280 N82-18123

ROTOR BLADES
Performance measurements on the six meter diameter horizontal axis windmill
p0267 A82-19107
An extended multiple streamtube theory for vertical axis wind turbines
p0268 A82-19108

ROTOR BLADES (TURBOMACHINERY)
An approximate theory of a rapidly rotating windmill
p0271 A82-23210
Sudden loss of rotor blade from wind power turbine - Calculation of maximax response spectra
p0271 A82-23680
Stress analysis and test philosophy for wind energy converter blades
[NBB-UD-300-80-0] p0277 N82-17536
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] p0279 N82-17639
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] p0279 N82-17643
Developments in rotary wing aircraft aerodynamics
p0179 N82-18120
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
p0280 N82-18127
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] p0280 N82-18693

ROTOR SPEED
Performance measurements on the six meter diameter horizontal axis windmill
p0267 A82-19107
Blade shapes for horizontal axis wind turbines
p0268 A82-19110
Advantages of permanent magnet VSCF generating systems on aircraft fuel economy --- Variable Speed Constant Frequency
p0163 A82-20207
An extension of the local momentum theory to the rotors operating in twisted flow field
p0280 N82-18123

ROTORS
Rotor testing in FY 1981
[DE81-028340] p0291 N82-16536
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] p0279 N82-17643
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p0292 N82-19689
Design, fabrication, delivery, operation and maintenance of a geothermal power conversion system
[NASA-CR-168653] p0283 N82-20644

RURAL AREAS
Experience acquired in the field of low power photovoltaic application to educational television
p0204 A82-24139
Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] p0230 N82-19693

RURAL LAND USE
Wind - Prototypes on the landscape --- wind turbine performance data collection of grasslands of southcentral Washington
p0163 A82-20166
Coal development in rural America: The resources at risk
[PB81-243313] p0248 N82-16545

S

SAFETY
Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] p0281 N82-19550
Navy position on lithium safety
p0292 N82-20414
Safety procedures for the 100-kW solar photovoltaic system at Natural Bridges National Monument
[DE82-002840] p0234 N82-21731
Risk: Assessment, acceptability and management
[GPO-87-593] p0189 N82-22082

SAFETY FACTORS
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] p0173 N82-16563

SAFETY MANAGEMENT
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553

SALINITY
Effects of friction and extraction on the stability of solar ponds
[ASME PAPER 81-WA/SOL-16] p0215 A82-24615
A review of the salt-gradient solar pond technology
[NASA-CR-168635] p0229 N82-19675

SAMPLING
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] p0249 N82-17317

SATELLITE ANTENNAS
Cost and sizing sensitivities for the solar power satellite
p0196 A82-20642

SATELLITE POWER TRANSMISSION (TO EARTH)
Microwave power - An energy transmission alternative for the year 2000
p0287 A82-20640
Environmental effects of the Satellite Power System Microwave Power Transmission System
p0164 A82-20644
Solid-state alternatives for the Solar Power Satellite
p0196 A82-20708
Space Laser Power Transmission System Studies --- conferences
[NASA-CP-2214] p0287 N82-18578
Preliminary study on the use of lasers for the transmission of power
p0287 N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
p0287 N82-18580
Utility and technology for a space central power station
p0287 N82-18583
Laser power conversion system analysis
p0288 N82-18585
Space laser power transmission
p0288 N82-18586
Electromagnetic compatibility analysis for a satellite power system receiving site in the Mojave Desert
[PB82-100710] p0288 N82-18723

SATELLITE SOLAR ENERGY CONVERSION
Sea, soil, sky - Testing solar's limits
p0195 A82-20169

SATELLITE SOLAR POWER STATIONS
Sea, soil, sky - Testing solar's limits
p0195 A82-20169
Environmental effects of the Satellite Power System Microwave Power Transmission System
p0164 A82-20644
Ecospace --- policy basis for international global resources including outer space
[IAF 81-SL-40] p0169 A82-27851
Solar power satellites, summary
[OTA-E-145] p0180 N82-18305

SATELLITE-BORNE PHOTOGRAPHY
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery
p0243 A82-26015
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery
p0244 A82-28130

SAWS
LSA large area silicon sheet task enhanced ID slicing technology for silicon ingots
[NASA-CR-168668] p0231 N82-20651

SCALE EFFECT
Wake structure analysis --- in full scale performance prediction for wind turbines
p0269 A82-19123

SCALE MODELS
Wind tunnel tests on the 1/30th scale model of the 60m wind turbine generator
A82-19111
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] p0281 N82-18720

SCHEDULING
Underground coal mining section data
[NASA-CR-168393] p0247 N82-16454

SCHOTTKY DIODES
Fundamental properties of MIS solar cells using Mg-p Si system
p0192 A82-19884
Schottky barrier solar cells of weakly hydrogenated CVD amorphous silicon
p0194 A82-19911
Characteristics of Schottky barrier diodes in reactively sputtered amorphous Si:H
p0194 A82-19912
High-efficiency electrodeposited cadmium telluride solar cells
p0198 A82-21949
Post-hydrogenation of CVD amorphous silicon - A promising preparation process for solar cells
p0203 A82-24124
Evaluation of electrodeposited cadmium telluride solar cells
p0210 A82-24205

SCREENS
Design, fabrication, and evaluation of an innovative woven-screen solar collector
[ASME PAPER 81-WA/SOL-13] p0215 A82-24612

SEA BREEZE
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan
p0254 N82-17753

SEA WATER
OTEC gas desorption studies
p0271 A82-23653

SEALERS
Novel metal-ceramics-composite sealing coatings in aircraft engines
p0167 A82-24803

SEALING
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p0292 N82-19689

SEASAT SATELLITES
Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources
p0243 A82-27635

SEAWEEDS
Biological sources of energy from the sea
p0241 A82-20256

SECURITY
Energy policies for resilience and national security
[AD-A108263] p0182 N82-18700

SEDIMENT TRANSPORT
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-109265] p0256 N82-18800
Sedimentation plan to assess the impact geothermal activities to the aquatic ecosystem in the Geyers Calistoga KGRA
[DE82-001688] p0189 N82-21781

SEDIMENTARY ROCKS
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State
[DE82-000913] p0253 N82-17573

SEDIMENTS
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] p0178 N82-17672
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-109265] p0256 N82-18800

SEISMIC WAVES
A project to test for shale gas in Ohio
[DE82-000916] p0252 N82-17572

SEISMOLOGY
A project to test for shale gas in Ohio
[DE82-000916] p0252 N82-17572
Seismology 1980, nuclear test ban verification. Earthquake and Earth resource investigation
[FOA-C-20427-T1] p0258 N82-17722
Anomalous radon (222) emission and its association with earthquakes and tectonism
p0254 N82-17739

SELECTIVE DISSEMINATION OF INFORMATION
Solar-cell project
[DE82-901191] p0225 N82-17628

SELECTIVITY
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] p0227 N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] p0228 N82-18717

SELENIDES
Charge collection microscopy on p-WSe2 - Recombination sites and minority carrier diffusion length --- solar cell materials
p0200 A82-23788

SELF ORGANIZING SYSTEMS
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
p0197 A82-20968

SEMICONDUCTING FILMS
Dependence of RF power on the content and configuration of hydrogen in amorphous hydrogenated silicon by reactive sputtering
p0194 A82-19905
Optimizations of the film deposition parameters for the hydrogenated amorphous silicon solar cell
p0194 A82-19914
High-efficiency electrodeposited cadmium telluride solar cells
p0198 A82-21949
Thermoelectric film receivers of radiant energy
p0198 A82-22230
Cu2S-CdS sprayed solar cells
p0203 A82-24127
The need for photovoltaic unit operations experimentation
p0203 A82-24129
Transparent, conductive layers of sprayed indium tin oxide in backwall Cu2S-CdS cells
p0209 A82-24187
Amorphous Si/1-x/Ge/x/ for high performance solar cell
p0210 A82-24198
Selective optical surfaces for solar energy converters --- Book
p0218 A82-25237
Theoretical study of absorbed solar energy in multi-layer absorber coatings for receivers of solar concentrators. I - Radiation transfer analysis
p0221 A82-28387
Commercial-scale process design for thin-film solar cells
p0221 A82-28390

SEMICONDUCTOR JUNCTIONS
Direct coupled microwave thermal processing for photovoltaic device fabrication
p0207 A82-24165
Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] p0222 N82-16490

SEMICONDUCTORS (MATERIALS)
Charge collection microscopy on p-WSe2 - Recombination sites and minority carrier diffusion length --- solar cell materials
p0200 A82-23788
The solar material market - Projections, needs and commitments
p0201 A82-24106
Research on photovoltaic conversion - A guarantee of efficiency for the European solar energy program
p0201 A82-24109
I-V characterization of solar cells
[INPE-2141-RPE/363] p0227 N82-18699
The design of semiconductor photoelectrochemical systems for solar energy conversion
[AD-A109477] p0232 N82-20674

SEPARATORS
Inexpensive cross-linked polymeric separators made from water-soluble polymers --- for secondary alkaline nickel-zinc and silver-zinc cells
p0289 A82-23778
Comparisons of different plate treatments and designs: Analysis
p0293 N82-20437
Development of molten-carbonate fuel-cell power-plant technology
[DE82-002108] p0285 N82-21732
SERVICE LIFE
Natural sunlight accelerated weathering of photovoltaic modules
p0208 A82-24183
Destruct/non-destruct evaluation of cycled NiCd cells
p0292 N82-20415
RCA SATCOM in-orbit experience: An update
p0292 N82-20427
Update: Viking Lander NiCd batteries. Year six
p0293 N82-20428
GPS on-orbit battery performance
p0293 N82-20429
SEWAGE
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] p0177 N82-17594
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] p0254 N82-18406
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] p0255 N82-18422
SEWAGE TREATMENT
Solar energy for pollution control
[PB82-116658] p0228 N82-18764
SHALE OIL
Oil Shale 1982: A technology and policy primer
p0170 N82-16449
Correlation and interferometric data analysis applied to gas chromatography Fourier transform infrared spectroscopy
p0249 N82-17286
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State
[DE82-000913] p0253 N82-17573
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] p0258 N82-20022
BX in-situ oil-shale project
[DE82-002134] p0264 N82-21693
SHALES
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] p0173 N82-16563
A project to test for shale gas in Ohio
[DE82-000916] p0252 N82-17572
Shale gas in the southern central area of New York State: Part 1. How to find and develop shale gas in New York State
[DE82-000913] p0253 N82-17573
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109810] p0254 N82-17690
SHEAR LAYERS
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] p0281 N82-18719
SHEARING
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] p0252 N82-17554
Longwall Guidance and Control Development
[NASA-TM-82455] p0257 N82-19637
SHEARS
The design of a mechanical referencing system for the rear drum of the Longwall Shearer Coal Miner
[NASA-CR-161962] p0252 N82-17554
SHOCK LOADS
Development of sensitized pick coal interface detector system
[NASA-CR-161961] p0252 N82-17560
SHOCK MEASURING INSTRUMENTS
Development of sensitized pick coal interface detector system
[NASA-CR-161961] p0252 N82-17560
SHOCK TUBES
Studies in shock-tube spectroscopy, chemical reaction rates and mechanisms, utilization of low-Btu gases, and geothermal energy. 1: Shock-tube spectroscopy. 2: Shock-tube studies of chemical reaction rates and mechanisms. 3: Utilization of low-Btu gases. 4: Volcanoes as a source of geothermal energy
p0259 N82-20285
SHORELINES
Modelling continuous fumigation of Nanticoke generating station plume
p0168 A82-26409
SHROUDED TURBINES
Diffuser-augmented wind turbine analysis --- for jet stream electrical generation applications
p0274 A82-26216
Design and performance of a small shrouded Cretan windwheel
p0274 A82-26614
SICILY
EURELIOS, the world's first thermomechanical helioelectric power plant
p0274 A82-28024
SILICON
Characterization of 3-inch solar cells fabricated from granular silicon obtained in a fluidized-bed reactor
p0192 A82-19880
Photovoltaics - A question of efficiency
p0195 A82-20168
Intensity enhancement in textured optical sheets for solar cells
p0198 A82-23362
The solar material market - Projections, needs and commitments
p0201 A82-24106
A U.S. view of silicon production processes
p0201 A82-24112
The Wacker approach to low-cost silicon material technology
p0202 A82-24114
Directional solidification of MG silicon by Heat Exchanger Method /HEM/ for photovoltaic applications
p0202 A82-24116
Advances in silicon solar cell processing
p0202 A82-24117
Development of amorphous Si solar cells in Japan
p0202 A82-24123
Current status of solar cell performance of unconventional silicon sheets
p0205 A82-24150
Study of the elaboration of semicrystalline silicon ingots
p0206 A82-24160
Effect of phosphorous and boron impurities on amorphous silicon solar cells
p0220 A82-27010
Band tail recombination limit to the output voltage of amorphous silicon solar cells
p0220 A82-27012
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] p0224 N82-16543
Large area silicon sheet by EFG
[NASA-CR-168680] p0231 N82-20664
SILICON ALLOYS
Electrical properties of hydrogenated amorphous Si/1-x/Ge/x/ alloys
p0210 A82-24197
Amorphous Si/1-x/Ge/x/ for high performance solar cell
p0210 A82-24198
SILICON COMPOUNDS
Solar-cell project
[DE82-901191] p0225 N82-17628

SILICON DIOXIDE
Effect of absorbed water on an indium oxide-insulator /BeO.SiO2/-p-silicon solar cell p0198 A82-22190
Durability of porous silica antireflection coatings for solar collector cover plates p0199 A82-23393

SILICON FILMS
Effect of fluorine on the photovoltaic properties of amorphous silicon prepared by dc glow discharge p0193 A82-19902
Dependence of RF power on the content and configuration of hydrogen in amorphous hydrogenated silicon by reactive sputtering p0194 A82-19905
Interpretation of characteristics in a-Si:H solar cells p0194 A82-19909
Schottky barrier solar cells of weakly hydrogenated CVD amorphous silicon p0194 A82-19911
Characteristics of Schottky barrier diodes in reactively sputtered amorphous Si:H p0194 A82-19912
A new integrated type amorphous Si solar cell p0194 A82-19913
Progress toward goals in silicon sheet development p0201 A82-24113
Post-hydrogenation of CVD amorphous silicon - A promising preparation process for solar cells p0203 A82-24124
Properties of fluorinated amorphous silicon solar cells p0203 A82-24125
Multiple EFG silicon ribbon technology as the basis for manufacturing low-cost terrestrial solar cells --- Epitaxial Film Growth p0206 A82-24151
Progress in the growth and performance of RAD silicon sheets --- for solar cell manufacture p0206 A82-24152
Evaluation of silicon-on-ceramic material for low-cost solar cells p0206 A82-24154
Epitaxial growth of silicon by CVD in a hot-wall furnace p0206 A82-24155
Characterization of plasma-sprayed silicon layers as possible base material for solar cell fabrication p0206 A82-24157
Results of the 1981 NASA/JPL balloon flight solar cell calibration program [NASA-CR-168442] p0224 N82-17610
The 18th Project Integration Meeting [NASA-CR-168431] p0225 N82-17614
Development of thin wraparound junction silicon solar cells [NASA-CR-165570] p0226 N82-18689
Photovoltaic and structural properties of a-Si:H thin films [DE82-002755] p0235 N82-21750
Photovoltaic and structural properties of a-Si:H thin films [DE82-002698] p0235 N82-21751

SILICON JUNCTIONS
Invited - Recent progress in amorphous silicon research and photovoltaic applications in the U.S.A. p0191 A82-19877
An analysis of EBIC response of ITO/poly-Si solar cells --- Electronic Beam Induced Current p0191 A82-19878
Junction and bulk region characteristics of the laser annealed Si solar cells p0192 A82-19883
A large active area Be-Si MIS solar cell with textured surface p0192 A82-19885
Design and performances of a triple /GaAs, Si, and Ge/- solar-cell system with multi-layered spectrum splitters p0193 A82-19898
Properties of amorphous Si:F:H film and its photovoltaic characteristics p0194 A82-19903
Silicon-silicon interfaces p0195 A82-20070
Photovoltaic investigation of minority carrier lifetime in the heavily-doped emitter layer of silicon junction solar cell p0196 A82-20857
Some properties of dc glow discharge amorphous silicon solar cells p0196 A82-20863
Silicon solar cells with reduced temperature sensitivity p0197 A82-21147
Laser processing for high-efficiency Si solar cells p0198 A82-22191
Effects of grain boundaries on the current-voltage characteristics of polycrystalline silicon solar cells p0198 A82-23356
Industrialization of photovoltaics p0201 A82-24108
Research on photovoltaic conversion - A guarantee of efficiency for the European solar energy program p0201 A82-24109
Ribbons and sheets as an alternative to ingots in solar cell technology p0202 A82-24115
Comparison of solar cells from nonsingle and single crystalline silicon in a pilot production line p0202 A82-24118
The development of amorphous silicon solar cells p0202 A82-24122
Measurement of the spectral response of silicon solar cells under highly illuminated conditions p0204 A82-24137
Optimized diffusion parameters for cells made by columnar silicon p0206 A82-24164
Scanning spectral response measurements of large grain polysilicon solar cells for process optimization p0207 A82-24168
The influence of surface conditions on the open circuit voltage of silicon solar cells p0207 A82-24169
Electrical properties of grain boundaries in nonsingle crystalline silicon solar cells p0207 A82-24170
Reliable screen-printed contacts on silicon solar cells p0207 A82-24172
Silicon solar cells with nickel/solder metallization p0207 A82-24173
Characterization of n-CdS/p-Si heterojunction solar cells p0211 A82-24210

SILICON NITRIDES
Application of amorphous silicon nitride for MIS/inversion layer solar cells p0210 A82-24203

SILICON OXIDES
Porous silicon oxide anti-reflection coating for solar cells p0219 A82-25741

SILICONES
Sensitivity analysis of the add-on price estimate for the silicon web growth process [NASA-CR-168422] p0224 N82-17611

SINGLE CRYSTALS
Fabrication and properties of silicon solar cells using squarely shaped crystals p0192 A82-19881
A high efficiency single-crystal CdSe photoelectrochemical solar cell and an associated loss mechanism p0196 A82-20722
Preparation and properties of evaporated CdTe films compared with single crystal CdTe [DE82-000228] p0236 N82-22073

SIS (SEMICONDUCTORS)
Efficient solar cells on polycrystalline and highly defected substrates using ion sputtered indium tin oxide p0210 A82-24201

SITE SELECTION
Wind power integration studies - An overview of the Reading University programme p0268 A82-19117

Offshore siting of wind turbine generators in U.K. waters
p0163 A82-19119
Initial test results on the 5m horizontal axis wind turbine at Swansea
p0269 A82-19124
Possibilities and limitations of wind energy utilisation
p0269 A82-20140
Actual versus predicted performance of an active solar heating system - A comparison using FCHART 4.0
[ASME PAPER 81-WA/SOL-7] p0214 A82-24609
Geothermal resource field development
p0167 A82-24687
The Class C Passive Performance Evaluation Program
[DE82-000454] p0223 N82-16533
The wind characteristics program element
[DE82-004876] p0249 N82-16673
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] p0250 N82-17397
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] p0181 N82-18442
Coal mine siting for the Ohio River Basin energy study
[PB82-108119] p0181 N82-18680
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] p0183 N82-18740
Site investigations and submarine soil mechanics in polar regions
[AD-A108269] p0256 N82-18790
Wind power utilization guide
[AD-A110337] p0285 N82-21719

SIZE (DIMENSIONS)
A new integrated type amorphous Si solar cell
p0194 A82-19913
Cost and sizing sensitivities for the solar power satellite
p0196 A82-20642
Recent test results on lithium BCX cells
p0292 N82-20406

SLAGS
Preliminary investigation of the effect of electrical nonuniformities on frame current distribution of coal-fired MHD generator
[AIAA PAPER 82-0326] p0269 A82-19795
Mechanisms of fouling, slagging, and corrosion by pulverized-coal combustion
[DE82-001661] p0261 N82-21280

SLICING
LSA large area silicon sheet task enhanced ID slicing technology for silicon ingots
[NASA-CR-168668] p0231 N82-20651

SLOPES
Model evaluation and optimum collector slope for a tropical country
p0191 A82-19298

SLUDGE
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] p0173 N82-16568
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] p0177 N82-17594
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] p0254 N82-18406
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] p0255 N82-18422
Coal waste artificial reef program, phase 3. Volume 1: Summary report
[DE82-900854] p0187 N82-20699

SLURRIES
Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] p0244 N82-16213
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] p0251 N82-17455

SLURRY PROPELLANTS
Gas/slurry flow in coal liquefaction processes (fluid dynamics in 3-phase flow columns)
[DE82-002562] p0260 N82-20474

SMOG
Urban air pollution and solar energy
p0195 A82-20139

SOCIAL FACTORS
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] p0174 N82-16846
Study of climate and its applied aspects
p0179 N82-17766
Ohio River Basin energy study: Social values and energy policy
[PB82-101494] p0183 N82-18735
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] p0228 N82-19669

SODIUM CHLORIDES
Briquetting of fine coal using a sodium chloride binder
[DE82-000632] p0250 N82-17395

SODIUM COMPOUNDS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] p0280 N82-18704

SODIUM SULFATES
Melt-freeze-cycle life-testing of Glauber's salt in a rolling cylinder heat store
p0291 A82-26336

SOIL MECHANICS
Site investigations and submarine soil mechanics in polar regions
[AD-A108269] p0256 N82-18790

SOIL SCIENCE
Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] p0253 N82-17629

SOLAR ARRAYS
Combined photovoltaic/thermal solar array DC electrical model
p0191 A82-18890
Performance of 1 kWp AlGaAs/GaAs terrestrial concentrator solar cell array
p0193 A82-19894
Technological approach towards future large solar arrays
[AAS 80-323] p0196 A82-20881
Effect of shunt resistance and bypass diodes on the shadow tolerance of solar cell modules
p0198 A82-21366
Simplified method for predicting photovoltaic array output
p0199 A82-23399
Space platforms - A cost effective evolution of Spacelab operation
p0200 A82-23703
Low-cost solar array project progress and plans
p0202 A82-24120
Operational, reliability, and maintenance experience with photovoltaic concentrator arrays
p0203 A82-24130
Optical measurement of cell temperature in a solar array
p0208 A82-24182
Low resistance solar cells for the first Spanish concentrating photovoltaic array
p0211 A82-24219
The 5 kW generator at the Alpine refuge 'Les Evettes' - Operating data
p0212 A82-24229
Optimization of the P.V. array-load energy transfer by means of an electronic adaptator
p0212 A82-24230
Power conditioning unit for photovoltaic power systems
p0213 A82-24232
New type of transformerless high efficiency inverter
p0213 A82-24233
Redox storage systems for solar applications
p0289 A82-24240

Atmospheric corrosion model and monitor for low cost solar arrays
p0214 A82-24299
Passive cooling measurements for a concentrating photovoltaic array
[ASME PAPER 81-WA/SOL-10] p0214 A82-24610
A Module Experimental Process System Development Unit (MEPSDU) --- flat plate solar arrays
[NASA-CR-168667] p0231 N82-20646
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-168671] p0231 N82-20649
LSA large area silicon sheet task enhanced ID slicing technology for silicon ingots
[NASA-CR-168668] p0231 N82-20651
Low cost Czochralski crystal growing technology. Near implementation of the flat plate photovoltaic cost reduction of the low cost solar array project
[NASA-CR-168658] p0231 N82-20662
Commercial/industrial photovoltaic module and array requirement study. Low-cost solar array project engineering area
[NASA-CR-168664] p0231 N82-20663
Prototype residential photovoltaic-systems evaluation plans
[DE82-004726] p0232 N82-21441
Solar photovoltaic residential project
[DE82-000653] p0232 N82-21442
Safety procedures for the 100-kW solar photovoltaic system at Natural Bridges National Monument
[DE82-002840] p0234 N82-21731
Active and passive cooling for concentrating photovoltaic arrays
[DE82-003922] p0235 N82-21745

SOLAR CELLS
Combined photovoltaic/thermal solar array DC electrical model
p0191 A82-18890
Photovoltaic Science and Engineering Conference in Japan, 2nd, Tokyo, Japan, December 2-4, 1980, Proceedings
p0191 A82-19876
Invited - Recent progress in amorphous silicon research and photovoltaic applications in the U.S.A.
p0191 A82-19877
An analysis of EBIC response of ITO/poly-Si solar cells --- Electronic Beam Induced Current
p0191 A82-19878
Rapid characterization of solar cell performances
p0192 A82-19879
Characterization of 3-inch solar cells fabricated from granular silicon obtained in a fluidized-bed reactor
p0192 A82-19880
Fabrication and properties of silicon solar cells using squarely shaped crystals
p0192 A82-19881
Junction and bulk region characteristics of the laser annealed Si solar cells
p0192 A82-19883
Fundamental properties of MIS solar cells using Mg-p Si system
p0192 A82-19884
A large active area Be-Si MIS solar cell with textured surface
p0192 A82-19885
Parallel- and radial-current stream-line type metal-contacts of solar cell
p0192 A82-19888
Efficiency increase of solar cells operated in dielectric liquid
p0192 A82-19889
High efficiency MOS solar cells by anodic oxidation processes
p0193 A82-19891
A new structure for high efficiency and humidity resistant AlGaAs/GaAs solar cells
p0193 A82-19893
Photovoltaic effect in monoclinic ZnP2
p0193 A82-19895
Growth and evaluation of n-CdS/n-InP/p-InP heteroface solar cell
p0193 A82-19896
InGaAsP/InP wavelength division solar cells
p0193 A82-19897
Design and performances of a triple /GaAs, Si, and Ge/- solar-cell system with multi-layered spectrum splitters
p0193 A82-19898
Effect of fluorine on the photovoltaic properties of amorphous silicon prepared by dc glow discharge
p0193 A82-19902
Properties of amorphous Si:F:H film and its photovoltaic characteristics
p0194 A82-19903
Dependence of RF power on the content and configuration of hydrogen in amorphous hydrogenated silicon by reactive sputtering
p0194 A82-19905
Interpretation of characteristics in a-Si:H solar cells
p0194 A82-19909
Schottky barrier solar cells of weakly hydrogenated CVD amorphous silicon
p0194 A82-19911
Characteristics of Schottky barrier diodes in reactively sputtered amorphous Si:H
p0194 A82-19912
A new integrated type amorphous Si solar cell
p0194 A82-19913
Optimizations of the film deposition parameters for the hydrogenated amorphous silicon solar cell
p0194 A82-19914
Broadening of spectral response width by a-Si/a-SiGe p-i-n type solar cells
p0194 A82-19915
Silicon-silicon interfaces
p0195 A82-20070
Potential for a Danish power system using wind energy generators, solar cells and storage
p0163 A82-20141
Photovoltaics - A question of efficiency
p0195 A82-20168
Fabrication of thick narrow electrodes on concentrator solar cells
p0196 A82-20205
Photovoltaic investigation of minority carrier lifetime in the heavily-doped emitter layer of silicon junction solar cell
p0196 A82-20457
Some properties of dc glow discharge amorphous silicon solar cells
p0196 A82-20463
Improved efficiency of n-CdSe thin-film photoelectrodes by zinc surface treatment
p0196 A82-20464
A high efficiency single-crystal CdSe photoelectrochemical solar cell and an associated loss mechanism
p0196 A82-20722
Silicon solar cells with reduced temperature sensitivity
p0197 A82-21147
Use of photovoltage for electrodeposition in solar cell processing technology
p0197 A82-21253
Effect of the back-surface field on the open-circuit voltages of p/+/-n-n/+/ and n/+/-p-p/+/ silicon solar cells
p0197 A82-21364
Optimum operating conditions of a solar cell panel and prediction of solar radiation in Sanaa, Yemen
p0197 A82-21365
Effect of shunt resistance and bypass diodes on the shadow tolerance of solar cell modules
p0198 A82-21366
The effect of the I sub 01/I sub 02 ratio on the open circuit voltage of solar cells
p0198 A82-21838
High-efficiency electrodeposited cadmium telluride solar cells
p0198 A82-21949
Effect of absorbed water on an indium oxide-insulator /BeO.SiO2/-p-silicon solar cell
p0198 A82-22190
Laser processing for high-efficiency Si solar cells
p0198 A82-22191
Effects of grain boundaries on the current-voltage characteristics of polycrystalline silicon solar cells

Porous silicon oxide anti-reflection coating for solar cells
p0219 A82-25741
Amorphous silicon p-i-n solar cells fabricated by reactive sputtering
p0220 A82-26807
Effect of phosphorous and boron impurities on amorphous silicon solar cells
p0220 A82-27010
Band tail recombination limit to the output voltage of amorphous silicon solar cells
p0220 A82-27012
A novel chlorophyll solar cell
p0221 A82-28386
Commercial-scale process design for thin-film solar cells
p0221 A82-28390
Efficient GaAs solar cells formed by UV laser chemical doping
p0222 A82-28498
n-CuInSe2/polysulfide photoelectrochemical solar cells
p0222 A82-28499
Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] p0222 N82-16490
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] p0222 N82-16491
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] p0224 N82-16943
Results of the 1981 NASA/JPL balloon flight solar cell calibration program
[NASA-CR-168442] p0224 N82-17610
DOE-2 verification project, phase 1
[LA-8295-MS] p0177 N82-17616
Solar-cell project
[DE82-901191] p0225 N82-17628
Development of a solar-energy system
[DE81-030531] p0225 N82-17633
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] p0292 N82-17648
Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] p0226 N82-18689
I-V characterization of solar cells
[INPE-2141-RPE/363] p0227 N82-18699
Construction and testing of a test stand for solar cells and concentrating collectors
[BMFT-FB-T-81-179] p0227 N82-18714
Development and tests of experimental solar generators for concentrating systems
[BMFT-FB-T-81-193] p0228 N82-18718
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-168671] p0231 N82-20649
Dynamic electrical response of solar cells
[NASA-TM-76686] p0231 N82-20655
Large area silicon sheet by EFG
[NASA-CR-168680] p0231 N82-20664
Development of an all-metal thick-film cost-effective metallization system for solar cells
[NASA-CR-168502] p0232 N82-20684
Thin-film polycrystalline silicon solar cells
[DE82-000633] p0236 N82-21753
Preparation and properties of evaporated CdTe films compared with single crystal CdTe
[DE82-000228] p0236 N82-22073

SOLAR COLLECTORS
Performance of collector/storage solar water heaters - Arbitrary demand pattern
p0191 A82-19295
Selective blacks for enhanced photothermal solar energy conversion
p0191 A82-19296
Model evaluation and optimum collector slope for a tropical country
p0191 A82-19298
A model for industrial production of fuel grade ethanol from sugar beets
p0241 A82-19299
Solar-thermal electric - Focal point for the desert sun
p0195 A82-20167
The rebirth of MHD
p0270 A82-20283
Design and construction of a concentrating photovoltaic total energy system in Hawaii
[AIAA PAPER 82-0069] p0198 A82-22040
Thermoelectric film receivers of radiant energy
p0198 A82-22230

The effect of length on absorption for a trapezoidal groove collector
p0198 A82-23391
Durability of porous silica antireflection coatings for solar collector cover plates
p0199 A82-23393
Evaluation of reliability of operational solar-energy systems
p0199 A82-23654
Performance of a parallel solar heat pump system
p0199 A82-23656
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659
Thermodynamics of solar collectors
p0200 A82-23818
Second-stage CEC concentrator --- Compound Elliptical Concentrator for solar energy conversion
p0200 A82-23872
Second-generation parabolic trough solar energy systems optimization analysis
p0200 A82-24019
U.S. Department of Energy collector cost reduction program
p0201 A82-24105
Sun tracking controller for multi-kW photovoltaic concentrator system
p0203 A82-24131
New concepts for static concentration of direct and diffuse radiation
p0204 A82-24133
Status, technology and development of silicon solar cells at INES
p0208 A82-24174
Optical characteristics of the dispersion concentrator and its influence on photovoltaic systems
p0212 A82-24222
Construction and testing of experimental plants using solar cells and concentrators
p0212 A82-24224
Multibandgap cells in a thermophotovoltaic system
p0212 A82-24225
Description of a concentrating photovoltaic energy system for Wilcox Memorial Hospital on Kauai
p0212 A82-24226
The effects of elevated temperature exposure on the compatibility of glycol solutions with metals used in solar absorbers
p0213 A82-24293
The effect of degradation of glycols on corrosion of metals used in non-concentrating solar collectors
p0213 A82-24294
Forced convection heat transfer for two-phase helical flow in a solar receiver
[ASME PAPER 81-WA/HT-13] p0214 A82-24589
Method of testing solar collectors for determination of heat transfer parameters
[ASME PAPER 81-WA/SOL-2] p0214 A82-24605
On reducing convective losses from cover glazings of solar thermal collectors
[ASME PAPER 81-WA/SOL-3] p0214 A82-24606
Heat transfer characteristics of a back-corrugated absorber surface for solar air collectors
[ASME PAPER 81-WA/SOL-5] p0214 A82-24607
On the weathering of thin plastic films
[ASME PAPER 81-WA/SOL-6] p0214 A82-24608
Actual versus predicted performance of an active solar heating system - A comparison using FCHART 4.0
[ASME PAPER 81-WA/SOL-7] p0214 A82-24609
Systematic rotation and receiver location error effects on parabolic trough annual performance
[ASME PAPER 81-WA/SOL-12] p0215 A82-24611
Design, fabrication, and evaluation of an innovative woven-screen solar collector
[ASME PAPER 81-WA/SOL-13] p0215 A82-24612
The effect of nonuniform fluid flow distribution on the thermal performance of solar collector
[ASME PAPER 81-WA/SOL-14] p0215 A82-24613
The potential economic benefit of using parabolic trough collectors to supplement power cycle boilers
[ASME PAPER 81-WA/SOL-17] p0215 A82-24616

Comparison of test results for flat plate, transpired flat plate, corrugated, and transpired corrugated solar air heaters
[ASME PAPER 81-WA/SOL-18] p0215 A82-24617
Rankine engine solar power generation. II - The power generation module
[ASME PAPER 81-WA/SOL-23] p0216 A82-24621
Ceramic technology for solar thermal receivers
[ASME PAPER 81-WA/SOL-24] p0216 A82-24622
Comparison of electrochemical and thermal storage for hybrid parabolic dish solar power plants
[ASME PAPER 81-WA/SOL-27] p0216 A82-24624
Optimization of a hybrid solar thermal power system
[ASME PAPER 81-WA/SOL-28] p0216 A82-24625
Experimental simulation of latent heat thermal energy storage and heat pipe thermal transport for dish concentrator solar receiver
[ASME PAPER 81-WA/SOL-34] p0217 A82-24628
Choice of design parameters for prism-type solar concentrators
p0217 A82-24869
Investigation of the thermal-engineering characteristics of a solar collector with a selective coating and vacuum heat-insulation
p0217 A82-24870
A new look at the discrete ordinate method for radiative transfer calculations in anisotropically scattering atmospheres. II - Intensity computations
p0217 A82-24940
Asymmetric second-stage concentrators
p0218 A82-25110
Optimization of the functional domain of flat plate collectors
p0218 A82-25501
Use of a photodiode array for the analysis of the solar profile intensity in concentrating collectors
p0218 A82-25503
Optimal geometries of plane mirror solar collectors
p0219 A82-26022
A new look at long term collector performance and utilizability
p0219 A82-26330
Convective heat transfer in vee-trough linear concentrators
p0219 A82-26332
Solar collector based on whisker-shaped oxides grown on metallic substrates
p0220 A82-26333
An evaluation of a transverse slatted flat plate collector
p0220 A82-26335
Heat transfer coefficient for constant flow solar collector/storage systems
p0220 A82-26615
Concentration of solar radiation by white painted transparent plates
p0220 A82-28170
Theoretical study of absorbed solar energy in multi-layer absorber coatings for receivers of solar concentrators. I - Radiation transfer analysis
p0221 A82-28387
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] p0222 N82-16492
Potential for using parabolic trough collectors to supplement power cycle boilers
[SAND-81-0572C] p0222 N82-16505
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] p0223 N82-16511
Modeling solar-energy systems for economic optimization
[DE81-030030] p0223 N82-16518
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] p0223 N82-16527
Solar energy systems simulation and analysis
[DE81-026975] p0224 N82-16542
Solar power satellites, summary
[OTA-E-145] p0180 N82-18305
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] p0227 N82-18703

Construction and testing of a test stand for solar cells and concentrating collectors
[BMFT-FB-T-81-179] p0227 N82-18714
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] p0227 N82-18715
Airtight collector casings --- and roof mounting frame for solar absorber panels
[BMFT-FB-T-81-184] p0227 N82-18716
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] p0228 N82-18717
Development and tests of experimental solar generators for concentrating systems
[BMFT-FB-T-81-193] p0228 N82-18718
Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] p0228 N82-18722
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] p0228 N82-18729
Development of simple solar collectors --- for usage in developing countries

Developments in solar-powered air conditioning: State-of-the-art and prospects for South Africa
[PB81-246076] p0224 N82-16544
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] p0228 N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] p0228 N82-18726
Materials-research recommendations to improve the performance and durability of solar heating and cooling systems
[DE82-000738] p0234 N82-21730
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating
[DE82-003633] p0236 N82-21755

SOLAR ELECTRIC PROPULSION

Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] p0292 N82-17648

SOLAR ENERGY

Solar-energy perspectives
p0191 A82-19825
Urban air pollution and solar energy
p0195 A82-20139
Passive-solar multi-family concepts
[DE82-000456] p0222 N82-16499
Simple predictive model for performance of desiccant beds for solar dehumidification
[DE81-023606] p0222 N82-16500
Modeling solar-energy systems for economic optimization
[DE81-030030] p0223 N82-16518
Design, construction, and initial operation of the ANL research
[DE82-001961] p0223 N82-16528
Solar consumer assurance: An assessment of mechanisms in the northeast
[DE81-030052] p0223 N82-16538
Solar energy systems simulation and analysis
[DE81-026975] p0224 N82-16542
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] p0224 N82-17611
The 18th Project Integration Meeting
[NASA-CR-168431] p0225 N82-17614
DOE-2 verification project, phase 1
[LA-8295-MS] p0177 N82-17616
Solar-cell project
[DE82-901191] p0225 N82-17628
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] p0225 N82-17645
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] p0292 N82-17648
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] p0228 N82-18725
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] p0228 N82-18729
Solar energy for pollution control
[PB82-116658] p0228 N82-18764
State-of-the-art review of low-cost collector technologies
[AD-A109039] p0232 N82-20672
Solar energy information user study: Military engineers
[DE82-001606] p0233 N82-21720
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating
[DE82-003633] p0236 N82-21755

SOLAR ENERGY ABSORBERS

Macroscopic surface roughness in metal-dielectric composite films - Photothermal absorber applications
p0195 A82-20066
Spray-deposited black nickel selective absorber surfaces for solar thermal conversion
p0199 A82-23575
Heat transfer characteristics of a back-corrugated absorber surface for solar air collectors
[ASME PAPER 81-WA/SOL-5] p0214 A82-24607
Asymmetric second-stage concentrators
p0218 A82-25110
Thermodynamic analysis of solar thermochemical energy absorption
p0219 A82-26024

Black cobalt selective coatings by spray pyrolysis for photothermal conversion of solar energy
p0219 A82-26331
Solar collector based on whisker-shaped oxides grown on metallic substrates
p0220 A82-26333
Theoretical study of absorbed solar energy in multi-layer absorber coatings for receivers of solar concentrators, I - Radiation transfer analysis
p0221 A82-28387
Computer simulation of solar cooling
p0221 A82-28392
Airtight collector casings --- and roof mounting frame for solar absorber panels
[BMFT-FB-T-81-104] p0227 N82-18716
SP-C12-301: Thermal performances of solar energy absorbers --- test method
[SP-MET-1979:2] p0236 N82-21767

SOLAR ENERGY CONVERSION

Selective blacks for enhanced photothermal solar energy conversion
p0191 A82-19296
Solar energy storage and thermal use of an unconfined aquifer
p0191 A82-19448
Fabrication and properties of silicon solar cells using squarely shaped crystals
p0192 A82-19881
Fundamental properties of MIS solar cells using Mg-p Si system
p0192 A82-19884
Turbomachinery for small solar power plants
p0195 A82-19948
Solar/hydrogen systems for the 1985-2000 time frame - A review and assessment
p0195 A82-20136
Sea, soil, sky - Testing solar's limits
p0195 A82-20169
Biological sources of energy from the sea
p0241 A82-20256
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
p0197 A82-20968
A comparison of the solar-gas and solar-electric interface
p0197 A82-21149
Solar energy/utility interface - The technical issues
p0197 A82-21150
Government-industry relationships in technology commercialization The case of photovoltaics
p0165 A82-21362
New technologies for solar energy silicon - Cost analysis of dichlorosilane process
p0199 A82-23397
Evaluation of reliability of operational solar-energy systems
p0199 A82-23654
Second-generation parabolic trough solar energy systems optimization analysis
p0200 A82-24019
Photovoltaic Solar Energy Conference; Proceedings of the Third International Conference, Cannes, France, October 27-31, 1980
p0200 A82-24101
Sunshine Project solar photovoltaic program and recent R & D activities in Japan
p0200 A82-24102
A strategy for cost reduction from the point of view of a French industrialist
p0201 A82-24107
A U.S. view of silicon production processes
p0201 A82-24112
On the conversion of solar radiation with fluorescent planar concentrators /FPCs/
p0204 A82-24136
Solar energy applications in telecommunications
p0204 A82-24138
Experience acquired in the field of low power photovoltaic application to educational television
p0204 A82-24139
The application of photovoltaics to water pumping and irrigation in Africa
p0205 A82-24140
A 50 kW photovoltaic power plant coupled to the 15000 V electricity grid
p0205 A82-24147

CdZnS-Cu2S thin film solar cells
p0209 A82-24189
Thermodynamic limitations of direct solar energy conversion
p0211 A82-24212
Thermodynamic limits to photovoltaic solar energy conversion efficiency
p0211 A82-24213
Low resistance solar cells for the first Spanish concentrating photovoltaic array
p0211 A82-24219
Construction and testing of experimental plants using solar cells and concentrators
p0212 A82-24224
Description of a concentrating photovoltaic energy system for Wilcox Memorial Hospital on Kauai
p0212 A82-24226
Community television reception centers with solar generator power supplies in Niger - Television retransmitters with alternative energy power supplies in France
p0212 A82-24227
Interconnection of a photovoltaic power generation system with the grid
p0212 A82-24231
Power conditioning unit for photovoltaic power systems
p0213 A82-24232
Assessment of generic solar thermal systems for large power applications
[ASME PAPER 81-WA/SOL-25] p0216 A82-24623
200-W solar photoelectric system based on AlGaAs heterostructure solar cells and mirror concentrators
p0217 A82-24867
New possibilities for the development and optimization of cascade-type solar cells
p0217 A82-24868
Investigation of the natural-climatic aging of the reflective films of mirrors by an electrical method
p0217 A82-24871
Selective optical surfaces for solar energy converters --- Book
p0218 A82-25237
Solar-pumped electronic-to-vibrational energy transfer lasers
p0218 A82-25664
Assessing the Solar Power Satellite - The OTA experience
p0168 A82-25665
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte
p0219 A82-25738
Study of stabilization and surface recombination on n-GaP photoelectrodes - Mechanisms and interrelation
p0219 A82-25739
A study of water electrolysis with photovoltaic solar energy conversion
p0219 A82-25782
Thermodynamic analysis of solar thermochemical energy absorption
p0219 A82-26024
Melt-freeze-cycle life-testing of Glauber's salt in a rolling cylinder heat store
p0291 A82-26336
Decay of thermal stratification in a water body for solar energy storage
p0220 A82-26338
Progress on alternative energy resources
p0168 A82-26368
Thermal energy storage for solar power generation - State of the art
p0220 A82-26950
HELIOS, the world's first thermomechanical helioelectric power plant
p0274 A82-28024
Fundamentals and applications of solar energy. Part 2 --- Book
p0221 A82-28385
Code workbook for active and passive solar design: Single-family residential construction
[DE82-000637] p0223 N82-16531
Passive solar products catalog, 1981
[DE82-000292] p0224 N82-16540
Regional needs regarding technical information
[DE82-001772] p0224 N82-16929

Solarization/conservation technology development for existing housing
[DE82-002175] p0176 N82-17407
Meteorological aspects of the utilization of solar radiation as an energy source, part 1
[WMO-557-VOL-1] p0225 N82-17644
Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] p0225 N82-18437
High concentration in GaAs photovoltaic systems
[CISE-1713] p0225 N82-18529
Solar energy control system --- temperature measurement
[NASA-CASE-NFS-25287-1] p0226 N82-18686
Thermodynamic limits for solar energy conversion by a quantum-thermal hybrid system
[NASA-TM-83229] p0226 N82-18695
The ultimate efficiency of photosensitive systems
[NASA-TM-83230] p0226 N82-18696
Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] p0226 N82-18697
Market assessment of photovoltaic power systems for agricultural applications in Nigeria
[NASA-CR-165511] p0226 N82-18698
A 100 kWe solar thermal power plant in Kuwait, phase 1
[BMFT-FB-T-81-178] p0227 N82-18713
NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74686] p0184 N82-19103
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] p0229 N82-19673
A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168640] p0229 N82-19677
Development of simple solar collectors --- for usage in developing countries
[BMFT-FB-T-81-174] p0230 N82-19690
Steam Rankine Solar Receiver, phase 2
[NASA-CR-168656] p0230 N82-20643
The design of semiconductor photoelectrochemical systems for solar energy conversion
[AD-A109477] p0232 N82-20674
Prototype residential photovoltaic-systems evaluation plans
[DE82-004726] p0232 N82-21441
Solar photovoltaic residential project
[DE82-000653] p0232 N82-21442
Optical properties of solids for solar energy conversion
[ISSN-0345-0058] p0233 N82-21715
Economic assessment of battery storage in solar photovoltaic applications
[DE82-004045] p0233 N82-21721
Information gathering, data reduction, and information dissemination for residential experiment station operations
[DE82-002157] p0234 N82-21734
Economic analysis of solar industrial process heat systems: A methodology to determine annual required revenue and internal rate of return
[DE82-001628] p0235 N82-21743

SOLAR FURNACES
Duplication of radome aerodynamic heating using the Central Receiver Test Facility solar furnace
p0220 A82-26468

SOLAR GENERATORS
Turbomachinery for small solar power plants
p0195 A82-19948
Community television reception centers with solar generator power supplies in Niger - Television retransmitters with alternative energy power supplies in France
p0212 A82-24227
The 5 kW generator at the Alpine refuge 'Les Evettes' - Operating data
p0212 A82-24229
Interconnection of a photovoltaic power generation system with the grid
p0212 A82-24231
Molten nitrate salt technology development --- for thermal energy storage in solar power systems
p0290 A82-24292
Thermal analysis of a solar pond power plant operated with a direct contact boiler
[ASME PAPER 81-WA/SOL-15] p0215 A82-24614
Rankine engine solar power generation. I - Performance and economic analysis
[ASME PAPER 81-WA/SOL-22] p0216 A82-24620
Rankine engine solar power generation. II - The power generation module
[ASME PAPER 81-WA/SOL-23] p0216 A82-24621
REA, a solar breeder reactor with high energetic enhancement factor Technoeconomic analysis
p0218 A82-25504
Solar multiple purpose power plant in modular superlight weight construction
p0218 A82-25505
Storage of low temperature heat by thermochemical reactions
p0290 A82-25506
Status and near-term development goal - A solar hydrogen economy
p0167 A82-25507
Automatic control of solar power plants
p0219 A82-25973
Tert-butyl alcohol as a heat sink substance for solar thermoelectric generators
p0220 A82-26334
Dynamic analysis and control of a solar power plant. I - Dynamic analysis and operation criteria. II - Control system design and simulation
p0220 A82-26337
Thermal energy storage for solar power generation - State of the art
p0220 A82-26950
EURELIOS, the world's first thermomechanical helioelectric power plant
p0274 A82-28024
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] p0292 N82-17648
Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] p0225 N82-18437
Investigation of possibilities for solar-powered high-energy lasers in space
p0226 N82-18581
Design investigation of solar-powered lasers for space applications
p0226 N82-18582
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] p0227 N82-18702
A 100 kWe solar thermal power plant in Kuwait, phase 1
[BMFT-FB-T-81-178] p0227 N82-18713
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] p0228 N82-19669
Design of mobile photovoltaic power systems: 0.5-3kW
[AD-A108889] p0229 N82-19688
Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] p0230 N82-19693
Buffer thermal energy storage for an air Brayton solar engine
[NASA-CR-168657] p0230 N82-20642
Dynamic electrical response of solar cells
[NASA-TM-76686] p0231 N82-20655
Safety procedures for the 100-kW solar photovoltaic system at Natural Bridges National Monument
[DE82-002840] p0234 N82-21731
Robins Air Force Base solar cogeneration facility, volume 1
[DE82-001922] p0234 N82-21735
Robins Air Force Base solar cogeneration facility, volume 2
[DE82-001866] p0234 N82-21736
Heliostat field layout for solar thermal power plants
[MBB-UR-453/80-OE] p0236 N82-21765

SOLAR HEATING
Performance of collector/storage solar water heaters - Arbitrary demand pattern
p0191 A82-19295

SHAC - A nation turns to the sun --- Solar Heating And Cooling p0195 A82-20165
Performance and economics of annual storage solar heating systems p0199 A82-23395
Actual versus predicted performance of an active solar heating system - A comparison using FCHART 4.0 [ASME PAPER 81-WA/SOL-7] p0214 A82-24609
Comparison of test results for flat plate, transpired flat plate, corrugated, and transpired corrugated solar air heaters [ASME PAPER 81-WA/SOL-18] p0215 A82-24617
Solar coal gasification - Plant design and economics p0221 A82-28388
A continuous two stage solar coal gasification system p0221 A82-28389
Solar heated fluidized bed gasification system [NASA-CASE-NPO-15071-1] p0222 N82-16475
Passive-solar multi-family concepts [DE82-000456] p0222 N82-16499
Potential for using parabolic trough collectors to supplement power cycle boilers [SAND-81-0572C] p0222 N82-16505
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle [DE82-901186] p0291 N82-16526
Case studies of retrofit applications of solar energy in the MASEC region [DE82-001712] p0223 N82-16532
The Class C Passive Performance Evaluation Program [DE82-000454] p0223 N82-16533
Passive solar products catalog, 1981 [DE82-000292] p0224 N82-16540
Community solar demonstration/dissemination center [DE82-000994] p0225 N82-17632
Solar energy control system --- temperature measurement [NASA-CASE-MFS-25287-1] p0226 N82-18686
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview [PB82-103847] p0228 N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2 [PB82-103854] p0228 N82-18726
Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1 [AD-A108382] p0229 N82-19683
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3 [AD-A108384] p0229 N82-19685
Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4 [AD-A108385] p0229 N82-19686
Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5 [AD-A108386] p0229 N82-19687
A solar high temperature kiln --- for baking ceramic building materials in developing countries [BMFT-FB-T-81-181] p0230 N82-19692
Analytical and experimental analysis of procedures for testing solar domestic hot water systems p0230 N82-20639
Carlisle house: An all-solar-electric residence [DE82-004376] p0233 N82-21443
A passive solar retrofit study for concrete block buildings [AD-A110189] p0233 N82-21718
Heating/daylighting prototype development, phase 1. Passive and hybrid solar manufactured building project covering research and component design [DE82-002097] p0234 N82-21729
Materials-research recommendations to improve the performance and durability of solar heating and cooling systems [DE82-000738] p0234 N82-21730
Solar design and installation experience: An overview of results from the National Solar Data Network [DE82-001657] p0235 N82-21738
Economic analysis of solar industrial process heat systems: A methodology to determine annual required revenue and internal rate of return [DE82-001628] p0235 N82-21743
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating [DE82-003633] p0236 N82-21755
Solar production of industrial process hot water. Phase 3: Operation and evaluation of the York Building Products Company, Incorporated. Solar Facility [DE82-003000] p0236 N82-21762

SOLAR HOUSES
The Hull wind powered housing project p0163 A82-19118
Performance of a parallel solar heat pump system p0199 A82-23656
Code workbook for active and passive solar design: Single-family residential construction [DE82-000637] p0223 N82-16531
NASA Technology Utilization House technical support package Summary of results and house description [NASA-TM-X-74686] p0184 N82-19103
Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1 [AD-A108382] p0229 N82-19683
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3 [AD-A108384] p0229 N82-19685
Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4 [AD-A108385] p0229 N82-19686
Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5 [AD-A108386] p0229 N82-19687
Solar photovoltaic residential project [DE82-000653] p0232 N82-21442
Carlisle house: An all-solar-electric residence [DE82-004376] p0233 N82-21443
Off-peak power use in passive solar homes: Performance, monitoring, and analysis of periodic heating and cooling in high mass homes [DE82-900874] p0233 N82-21727
Convincing the home builder to build solar homes: Evaluation of passive solar workshop for builders [DE82-001978] p0235 N82-21737
Solar design and installation experience: An overview of results from the National Solar Data Network [DE82-001657] p0235 N82-21738
Center for Energy Research and Technological Resources for Puerto Rico [DE81-031987] p0188 N82-21760

SOLAR PONDS (HEAT STORAGE)
Thermal analysis of a solar pond power plant operated with a direct contact boiler [ASME PAPER 81-WA/SOL-15] p0215 A82-24614
Effects of friction and extraction on the stability of solar ponds [ASME PAPER 81-WA/SOL-16] p0215 A82-24615
Design, construction, and initial operation of the ANL research [DE82-001061] p0223 N82-16528
A review of the salt-gradient solar pond technology [NASA-CR-168635] p0229 N82-19675
State-of-the-art review of solar ponds [AD-A109038] p0232 N82-20671

SOLAR POWER SATELLITES
The silicon solar satellite power system - A net energy analysis p0196 A82-20574
Microwave power - An energy transmission alternative for the year 2000 p0287 A82-20640
Cost and sizing sensitivities for the solar power satellite p0196 A82-20642
Environmental effects of the Satellite Power System Microwave Power Transmission System p0164 A82-20644
Solid-state alternatives for the Solar Power Satellite p0196 A82-20708

The Solar Power Satellite - An opportunity for Third World development p0168 A82-25660
Assessing the Solar Power Satellite - The OTA experience p0168 A82-25665
Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations [NASA-TM-58233] p0224 N82-17609
Solar Power Satellites [PB82-108846] p0225 N82-17647

SOLAR RADIATION
Optimum operating conditions of a solar cell panel and prediction of solar radiation in Sanaa, Yemen p0197 A82-21365
On the conversion of solar radiation with fluorescent planar concentrators /FPCs/ p0204 A82-24136
Optical characteristics of the dispersion concentrator and its influence on photovoltaic systems p0212 A82-24222
RADSOLVER: A computer program for calculating spectrally-dependent radiative heat transfer in solar cavity receivers [DE82-000833] p0233 N82-21542

SOLAR REFLECTORS
Investigation of the natural-climatic aging of the reflective films of mirrors by an electrical method p0217 A82-24871
Ideal second stages in tandem with parabolic concentrators p0220 A82-28171
Active and passive cooling for concentrating photovoltaic arrays [DE82-003922] p0235 N82-21745

SOLAR SENSORS
Sun tracking controller for multi-kW photovoltaic concentrator system p0203 A82-24131

SOLAR TOTAL ENERGY SYSTEMS
Design and construction of a concentrating photovoltaic total energy system in Hawaii [AIAA PAPER 82-0069] p0198 A82-22040
Multibandgap cells in a thermophotovoltaic system p0212 A82-24225
Description of a concentrating photovoltaic energy system for Wilcox Memorial Hospital on Kauai p0212 A82-24226
Power conditioning unit for photovoltaic power systems p0213 A82-24232
Optimization of a hybrid solar thermal power system [ASME PAPER 81-WA/SOL-26] p0216 A82-24625

SOLDERING
Automated concentrator cell module assembly p0212 A82-24223

SOLDERS
Silicon solar cells with nickel/solder metallization p0207 A82-24173

SOLID ELECTRODES
Preliminary investigation of the effect of electrical nonuniformities on frame current distribution of coal-fired MHD generator [AIAA PAPER 82-0326] p0269 A82-19795
Fabrication of thick narrow electrodes on concentrator solar cells p0196 A82-20205
Improved efficiency of n-CdSe thin-film photoelectrodes by zinc surface treatment p0196 A82-20464
Photoelectrolysis at Fe2O3/TiO2 heterojunction electrode p0239 A82-23782
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte p0219 A82-25738
Study of stabilization and surface recombination on n-GaP photoelectrodes - Mechanisms and interrelation p0219 A82-25739

SOLID ELECTROLYTES
High temperature solid electrolyte fuel cell p0273 A82-24968
Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis [BMFT-FB-T-81-180] p0282 N82-19691

SOLID STATE DEVICES
Solid-state alternatives for the Solar Power Satellite p0196 A82-20708
Evaluation of control and protection circuits [PB82-105065] p0251 N82-17450

SOLID WASTES
Pacific Gas and Electric Company - Biomass energy activities p0242 A82-24691
Development of potential uses for the residue from fluidized-bed-combustion processes [DE81-030157] p0244 N82-16211
Solar energy for pollution control [PB82-116658] p0228 N82-18764
Impediments to energy and materials recovery facilities for municipal solid waste [PB82-102302] p0257 N82-19383

SOLID-SOLID INTERFACES
Silicon-silicon interfaces p0195 A82-20070
Can recombination via interfacial states in MIS solar cells be of advantage p0210 A82-24199
The detection of the coal roof interface by use of high pressure water [NASA-CR-161959] p0252 N82-17555
Development of sensitized pick coal interface detector system [NASA-CR-161961] p0252 N82-17560

SOLVENT REFINED COAL
Hydrocracking of coal using molten salts as catalysts p0243 A82-24969
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [DE81-030849] p0251 N82-17402
Synthetic-fuel aromaticity and staged combustion [DE82-002453] p0259 N82-20335
Research on solvent-refined coal [DE82-002530] p0263 N82-21437

SOLVENTS
Role of the hydrogen donor solvent in coal hydroliquefaction [DE82-002716] p0262 N82-21283

SOOT
Synthetic-fuel combustion: Pollutant formation. Soot-initiation mechanisms in buring aromatics [DE82-002566] p0186 N82-20277
Synthetic-fuel aromaticity and staged combustion [DE82-002453] p0259 N82-20335
Soot formation in synthetic-fuel droplets [DE82-004257] p0262 N82-21282

SOUND PROPAGATION
A project to test for shale gas in Ohio [DE82-000916] p0252 N82-17572

SPACE COMMUNICATION
Solar Power Satellites [PB82-108846] p0225 N82-17647

SPACE COOLING (BUILDINGS)
The economics of utilizing wind power in apple cold-storage systems p0271 A82-23652
Performance evaluation for a jet pump solar cooling system [ASME PAPER 81-WA/SOL-30] p0216 A82-24626

SPACE ERECTABLE STRUCTURES
Satellite Power System. Concept development and evaluation program, volume 6: Construction and operations [NASA-TM-58233] p0224 N82-17609

SPACE EXPLORATION
Space in the 1980's and beyond; Proceedings of the Seventeenth European Space Symposium, London, England, June 4-6, 1980 p0295 A82-20876
International legal basis and organizational framework for space activities - Present state, problems and prospects [IAF 81-SL-51] p0169 A82-27853

SPACE FLIGHT
Liquid hydrogen for space flight - The long step from proposal to reality p0240 A82-24796

SPACE HEATING (BUILDINGS)
The Hull wind powered housing project p0163 A82-19118
Heating by wind p0271 A82-21650
Passive-solar multi-family concepts [DE82-000456] p0222 N82-16499
Choice and Utilization of Energy-using Durables [DE81-904228] p0171 N82-16513
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces [DE82-000459] p0172 N82-16516
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle [DE82-901186] p0291 N82-16526
Case studies of retrofit applications of solar energy in the MASEC region [DE82-001712] p0223 N82-16532
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt [BMFT-FB-T-81-175] p0191 N82-18552
Energy properties in urban building stock --- in Finland [VTT-BR-1/81] p0185 N82-19696
Residential heating and energy conservation study, Northport, New York. Phase 1: Citizen's handbook [PB82-100450] p0186 N82-20359
Residential heating and energy conservation study, Northport, New York. Phase 2: Citizen's handbook [PB82-100462] p0186 N82-20360
A passive solar retrofit study for concrete block buildings [AD-A110189] p0233 N82-21718
Off-peak power use in passive solar homes: Performance, monitoring, and analysis of periodic heating and cooling in high mass homes [DE82-900874] p0233 N82-21727
Solar design and installation experience: An overview of results from the National Solar Data Network [DE82-001657] p0235 N82-21738
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating [DE82-003633] p0236 N82-21755

SPACE INDUSTRIALIZATION
Legal implications of economic activities in outer space [IAF 81-SL-50] p0169 A82-27828

SPACE LAB
Legal implications of economic activities in outer space [IAF 81-SL-50] p0169 A82-27828
Ecospace --- policy basis for international global resources including outer space [IAF 81-SL-40] p0169 A82-27851
International legal basis and organizational framework for space activities - Present state, problems and prospects [IAF 81-SL-51] p0169 A82-27853

SPACE PLATFORMS
Space platforms - A cost effective evolution of Spacelab operation p0200 A82-23703
Space Laser Power Transmission System Studies --- conferences [NASA-CP-2214] p0287 N82-18578
Preliminary study on the use of lasers for the transmission of power p0287 N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs p0287 N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space p0226 N82-18581
Design investigation of solar-powered lasers for space applications p0226 N82-18582
Utility and technology for a space central power station p0287 N82-18583
Laser power conversion system analysis p0288 N82-18585
Space laser power transmission p0288 N82-18586

SPACE POWER UNIT REACTORS
Electrochemical energy storage for an orbiting space station [NASA-CR-165436] p0291 N82-17607

SPACE SHUTTLE ORBITERS
Space platforms - A cost effective evolution of Spacelab operation p0200 A82-23703

SPACE STATIONS
Preliminary study on the use of lasers for the transmission of power p0287 N82-18579
Utility and technology for a space central power station p0287 N82-18583

SPACE TRANSPORTATION
Space in the 1980's and beyond; Proceedings of the Seventeenth European Space Symposium, London, England, June 4-6, 1980 p0295 A82-20876

SPACEBORNE EXPERIMENTS
Comparisons of different plate treatment and designs: An update p0293 N82-20436
Comparisons of different plate treatments and designs: Analysis p0293 N82-20437

SPACECRAFT CONFIGURATIONS
Space platforms - A cost effective evolution of Spacelab operation p0200 A82-23703

SPACECRAFT CONTROL
Utility and technology for a space central power station p0287 N82-18583

SPACECRAFT POWER SUPPLIES
Overview study of Space Power Technologies for the advanced energetics program --- spacecraft [NASA-CR-165269] p0277 N82-17606
Results of the 1981 NASA/JPL balloon flight solar cell calibration program [NASA-CR-168442] p0224 N82-17610
Utility and technology for a space central power station p0287 N82-18583
The 1981 Goddard Space Flight Center Battery Workshop [NASA-CP-2217] p0283 N82-20402
RCA SATCOM in-orbit experience: An update p0292 N82-20427
Update: Viking Lander NiCd batteries. Year six p0293 N82-20428
GPS on-orbit battery performance p0293 N82-20429
Effects of the mode of storage on the capacity fading of the sintered nickel electrodes p0293 N82-20431
Comparisons of different plate treatment and designs: An update p0293 N82-20436
Comparisons of different plate treatments and designs: Analysis p0293 N82-20437
Chargeability of nickel electrodes studied by optical microscopy p0293 N82-20438
COMSAT Labs life test data for NiH2 cells p0293 N82-20440
Life test of 50 AH NiH2 battery p0293 N82-20441
Cycling characteristics on NiH2 cells in standard and daily energy balance Leo orbits p0293 N82-20442
Some properties of NiH2 cells p0293 N82-20443

SPACECRAFT PROPULSION
Liquid hydrogen for space flight - The long step from proposal to reality p0240 A82-24796
Results of the 1981 NASA/JPL balloon flight solar cell calibration program [NASA-CR-168442] p0224 N82-17610

SPACELAB PAYLOADS
Space platforms - A cost effective evolution of Spacelab operation
p0200 A82-23703
SPARK IGNITION
Evaluation of the effects of alcohol fuels on spark ignition engine wear
[AD-A110021] p0262 N82-21426
SPATIAL DISTRIBUTION
Solar cell performance with an inhomogeneous areal distribution but constant number of recombination centers
p0218 A82-25548
SPECTRA
High concentration in GaAs photovoltaic systems
[CISE-1713] p0225 N82-18529
SPECTRAL ENERGY DISTRIBUTION
Design and performances of a triple /GaAs, Si, and Ge/- solar-cell system with multi-layered spectrum splitters
p0193 A82-19898
Advanced concepts for photovoltaic concentration
p0204 A82-24134
Terrestrial photovoltaic performance reference conditions
p0208 A82-24179
SPECTRAL LINE WIDTH
Broadening of spectral response width by a-Si/a-SiGe p-i-n type solar cells
p0194 A82-19915
SPECTRAL REFLECTANCE
Bandpass filters for thermophotovoltaic conversion systems
p0197 A82-21363
SPECTRAL SENSITIVITY
Measurement of the spectral response of silicon solar cells under highly illuminated conditions
p0204 A82-24137
Effects of special processing on diffusion lengths in polycrystalline silicon solar cells
p0207 A82-24167
Scanning spectral response measurements of large grain polysilicon solar cells for process optimization
p0207 A82-24168
Optical measurement of cell temperature in a solar array
p0208 A82-24182
Hydrogenated a-Si multi-junction solar cells and interference effects in the spectral response
p0209 A82-24194
Optical characteristics of the dispersion concentrator and its influence on photovoltaic systems
p0212 A82-24222
Selective optical surfaces for solar energy converters --- Book
p0218 A82-25237
Black cobalt selective coatings by spray pyrolysis for photothermal conversion of solar energy
p0219 A82-26331
SPECTROSCOPIC ANALYSIS
The use of Doppler spectroscopy to study the characteristics of the polydisperse characteristics of emulsion water and solid microimpurities in aviation fuels
p0241 A82-22198
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] p0245 N82-16228
Coal-gasification instrumentation program (PR 11734)
[DE82-001153] p0247 N82-16381
Supported metal carbonyls: New catalysts for liquefaction of coal
[DE82-002659] p0258 N82-20283
SPECTROSCOPY
Studies in shock-tube spectroscopy, chemical reaction rates and mechanisms, utilization of low-Btu gases, and geothermal energy. 1: Shock-tube spectroscopy. 2: Shock-tube studies of chemical reaction rates and mechanisms. 3: Utilization of low-Btu gases. 4: Volcanoes as a source of geothermal energy
p0259 N82-20285
SPECULAR REFLECTION
The effect of length on absorption for a trapezoidal groove collector
p0198 A82-23391
SPEED INDICATORS
Rotor testing in FY 1981
[DE81-028340] p0291 N82-16536
SPENT FUELS
Nuclear waste management
[DE82-001605] p0174 N82-16845
SPIRALS (CONCENTRATORS)
Forced convection heat transfer for two-phase helical flow in a solar receiver
[ASME PAPER 81-WA/HT-13] p0214 A82-24589
SPRAYED COATINGS
Spray-deposited black nickel selective absorber surfaces for solar thermal conversion
p0199 A82-23575
Sprayed cadmium sulphide solar cells
p0203 A82-24126
Cu2S-CdS sprayed solar cells
p0203 A82-24127
Black cobalt selective coatings by spray pyrolysis for photothermal conversion of solar energy
p0219 A82-26331
SPRAYERS
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] p0177 N82-17669
SPRAYING
n ITO spray/p InP solar cells
p0211 A82-24208
Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] p0244 N82-16213
SPUTTERING
Dependence of RF power on the content and configuration of hydrogen in amorphous hydrogenated silicon by reactive sputtering
p0194 A82-19905
Efficient solar cells on polycrystalline and highly defected substrates using ion sputtered indium tin oxide
p0210 A82-24201
Solar cells based on indium phosphide
p0210 A82-24207
Amorphous silicon p-i-n solar cells fabricated by reactive sputtering
p0220 A82-26807
STACKS
Advanced fuel-cell development
[DE82-003007] p0285 N82-21722
STAGNATION TEMPERATURE
The effects of elevated temperature exposure on the compatibility of glycol solutions with metals used in solar absorbers
p0213 A82-24293
STAINLESS STEELS
Corrosion of stainless steels in the geothermal environments of the Salton Sea known geothermal resource area
p0242 A82-24296
STANDARDS
Energy building regulations for new residential and nonresidential buildings
[PB82-117813] p0188 N82-21448
STATIC INVERTERS
Digital simulation of an MHD power consolidation/D.C. to A.C. inverter system
p0269 A82-19242
A PWM transistor inverter for an ac electric vehicle drive
p0270 A82-20744
STATIC LOADS
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] p0279 N82-17639
STATIC PRESSURE
Calculation of the flow patterns and performance of wind turbines using streamline curvature methods
p0268 A82-19109
STATIC TESTS
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] p0279 N82-17639
Static and dynamic investigations for the model of a wind rotor
[ISD-272] p0279 N82-17642
STATIONARY ORBITS
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells
[NASA-CR-168564] p0292 N82-19678

STATISTICAL MECHANICS
Intensity enhancement in textured optical sheets for solar cells
p0198 A82-23362
STATORS
Cold-air performance of a 15.41-cm-tip-diameter axial-flow power turbine with variable-area stator designed for a 75-kW automotive gas turbine engine
[NASA-TM-82644] p0284 N82-21193
STEADY STATE
Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] p0246 N82-16283
STEAM
Industrial steam supply system characteristics program. Phase 2: Low- and medium-Btu gas-fired boilers with associated gasification plants
[DE82-000535] p0248 N82-16517
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] p0174 N82-16614
Steam Rankine Solar Receiver, phase 2
[NASA-CR-168656] p0220 N82-20643
BI in-situ oil-shale project
[DE82-002134] p0264 N82-21693
STEAM FLOW
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] p0251 N82-17507
STEAM TURBINES
The predictability of wind turbine output
p0268 A82-19121
Real-time simulation of MHD/steam power plants by digital parallel processors
p0269 A82-19241
Influence of correlations and computational methods on the prediction of overall efficiency
p0276 N82-17180
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] p0280 N82-18694
STEELS
Coal-gasification study for Bethlehem Steel Corporation's Sparrows Point facility
[DE82-002570] p0263 N82-21435
STEERING
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 1: Spatially discrete models
[RR-151-PT-1] p0252 N82-17564
The modelling of semiflexible conveyor structures for coal-face steering investigations. Part 2: Spatially continuous models
[RR-152-VOL-2] p0252 N82-17565
STIFFNESS MATRIX
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
p0280 N82-18127
STIMULATED EMISSION DEVICES
Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] p0226 N82-18697
STIRLING CYCLE
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659
STORAGE BATTERIES
Wind energy systems with battery storage and diesel back-up for isolated communities
p0260 A82-19115
Synthetic battery cycling
p0289 A82-20749
Inexpensive cross-linked polymeric separators made from water-soluble polymers --- for secondary alkaline nickel-zinc and silver-zinc cells
p0289 A82-23778
Solar cell/battery plants for telecommunication systems in Denmark - Development of a test facility
p0212 A82-24228
The 5 kW generator at the Alpine refuge 'Les Evettes' - Operating data
p0212 A82-24229
A nickel oxide-iron battery developed for traction purposes - Advantages and limitations
p0290 A82-24243
A sealed rechargeable metal-oxygen battery for traction purposes
p0290 A82-24248
Comparison of electrochemical and thermal storage for hybrid parabolic dish solar power plants
[ASME PAPER 81-WA/SOL-27] p0216 A82-24624
Optimization of a hybrid solar thermal power system
[ASME PAPER 81-WA/SOL-28] p0216 A82-24625
Design of mobile photovoltaic power systems: 0.5-3kW
[AD-A108889] p0229 N82-19688
Economic assessment of battery storage in solar photovoltaic applications
[DE82-004045] p0233 N82-21721
STORAGE STABILITY
Effects of the mode of storage on the capacity fading of the sintered nickel electrodes
p0293 N82-20431
STORAGE TANKS
Performance and economics of annual storage solar heating systems
p0199 A82-23395
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] p0227 N82-18703
STRATIFICATION
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] p0227 N82-18703
STREAMLINING
Calculation of the flow patterns and performance of wind turbines using streamline curvature methods
p0268 A82-19109
STREAMS
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] p0172 N82-16537
Sedimentation plan to assess the impact geothermal activities to the aquatic ecosystem in the Geysers Calistoga KGRA
[DE82-001688] p0189 N82-21781
STRESS ANALYSIS
Stress analysis and test philosophy for wind energy converter blades
[MBB-UD-300-80-O] p0277 N82-17536
STRESS MEASUREMENT
LLNL gas-stimulation program
[DE82-000802] p0245 N82-16269
STRIP MINING
Coal development in rural America: The resources at risk
[PB81-243313] p0248 N82-16545
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] p0177 N82-17594
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] p0181 N82-18679
Coal mine siting for the Ohio River Basin energy study
[PB82-108119] p0181 N82-18680
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands
[PB82-113218] p0188 N82-20702
STRUCTURAL DESIGN
Wind data requirements for wind turbine generator design
p0268 A82-19122
Optimal geometries of plane mirror solar collectors
p0219 A82-26022
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] p0227 N82-18702
Feasibility study for the production of low/medium-Btu gas from coal for tri-city regional port district Granite City, Illinois
[DE82-002881] p0260 N82-20336
Commercial/industrial photovoltaic module and array requirement study. Low-cost solar array project engineering area
[NASA-CR-168664] p0231 N82-20663

Solar energy information user study: Military engineers
[DE82-001606] p0233 N82-21720
Solar design and installation experience: An overview of results from the National Solar Data Network
[DE82-001657] p0235 N82-21738
Center for Energy Research and Technological Resources for Puerto Rico
[DE81-031987] p0188 N82-21760
STRUCTURAL DESIGN CRITERIA
Evaluation of control and protection circuits
[PB82-105065] p0251 N82-17450
A review of the salt-gradient solar pond technology
[NASA-CR-168635] p0229 N82-19675
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-1R] p0282 N82-19681
Energy building regulations for new residential and nonresidential buildings
[PB82-117813] p0188 N82-21448
STRUCTURAL ENGINEERING
Performance of the Morris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] p0182 N82-18728
STRUCTURAL PROPERTIES (GEOLOGY)
Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources
p0243 A82-27635
Fault and joint geometry at Raft River Geothermal Area, Idaho
[DE82-003942] p0264 N82-21810
STRUCTURAL STABILITY
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] p0279 N82-17640
SUBMERGED BODIES
Power generation from the East Australian current by use of arrays of submerged Darrieus vertical axis turbines
p0274 A82-26178
SUBMILLIMETER WAVES
Recent results on measurement of plasma conductivity using Faraday rotation of submillimeter waves
[AIAA PAPER 82-0376] p0269 A82-19800
SUBSONIC AIRCRAFT
Advanced subsonic transport propulsion
[AIAA PAPER 81-0811] p0165 A82-20874
SUBSTRATES
Progress in the growth and performance of RAD silicon sheets --- for solar cell manufacture
p0206 A82-24152
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-168671] p0231 N82-20649
Evaluation of the effects of a freeze/thaw environment on cellular glass
[NASA-CR-168719] p0232 N82-21345
SUGAR BEETS
A model for industrial production of fuel grade ethanol from sugar beets
p0241 A82-19299
SULFATES
The impact of mixing cooling tower and power plant plumes on sulfate aerosol formation
p0169 A82-28523
Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] p0180 N82-18438
SULFUR
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] p0249 N82-16560
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] p0174 N82-16614
SULFUR COMPOUNDS
The sulfur thermochemical cycle for hydrogen production
p0239 A82-19449
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] p0173 N82-16568
SULFUR DIOXIDES
The Nanticoke shoreline diffusion experiment, June 1978. IV. A - Oxidation of sulphur dioxide in a power plant plume. B - Ambient concentrations and transport of sulphur dioxide, particulate sulphate and nitrate, and ozone
p0168 A82-26407
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] p0249 N82-16557
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] p0177 N82-17669
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] p0183 N82-18753
SULFUR OXIDES
Processes for reducing emissions of particulates and oxides of sulfur and nitrogen for various coal utilization alternatives
p0242 A82-23950
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] p0178 N82-17684
SUNFLOWERS
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] p0245 N82-16264
SUPERCHARGERS
Preliminary results on performance testing of a turbocharged rotary combustion engine
[NASA-TM-82772] p0284 N82-21194
SUPERCONDUCTING POWER TRANSMISSION
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] p0287 N82-17448
SUPERHEATING
BX in-situ oil-shale project
[DE82-002134] p0264 N82-21693
SUPPLYING
Energy environment study
[NASA-CR-168458] p0177 N82-17654
SURFACE FINISHING
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] p0222 N82-16492
The development of PVC-modified tars for use in surface treatments
[CSIR-RR-393] p0295 N82-20315
SURFACE GEOMETRY
The effect of length on absorption for a trapezoidal groove collector
p0198 A82-23391
Second-stage CEC concentrator --- Compound Elliptical Concentrator for solar energy conversion
p0200 A82-23872
Asymmetric second-stage concentrators
p0218 A82-25110
SURFACE PROPERTIES
Model evaluation and optimum collector slope for a tropical country
p0191 A82-19298
Silicon-silicon interfaces
p0195 A82-20070
The influence of surface conditions on the open circuit voltage of silicon solar cells
p0207 A82-24169
Surface properties of Cu/2-x/S and its influence on the performance of frontwall Cu/2-x/S-CdS thin film solar cells
p0209 A82-24185
Selective optical surfaces for solar energy converters --- Book
p0218 A82-25237
SURFACE ROUGHNESS EFFECTS
Macroscopic surface roughness in metal-dielectric composite films - Photothermal absorber applications
p0195 A82-20066
SURFACE TO AIR MISSILES
Duplication of radome aerodynamic heating using the Central Receiver Test Facility solar furnace
p0220 A82-26468

SURFACE VEHICLES
Possibility for energy conservation in transporting freight by truck
[DE81-030072] p0179 N82-18071
An energy demand model for light-duty vehicles, with concepts for estimating fuel consumption
[PB82-102468] p0187 N82-20690
SURFACTANTS
Field demonstration of the conventional steam drive process with ancillary materials
[DE82-003040] p0251 N82-17507
SURVEYS
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] p0176 N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] p0176 N82-16966
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] p0183 N82-18751
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] p0186 N82-20027
SWITCHING CIRCUITS
New type of transformerless high efficiency inverter
p0213 A82-24233
SYNCHRONOUS SATELLITES
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells
[NASA-CR-168564] p0292 N82-19678
SYNCOM SATELLITES
RCA SATCOM in-orbit experience: An update
p0292 N82-20427
SYNOPTIC METEOROLOGY
Meteorological aspects of the utilization of solar radiation as an energy source. Part 2: Annex, world maps of relative global radiation
[WMO-557-VOL-2] p0225 N82-17645
SYNTHESIS (CHEMISTRY)
New catalysts for the indirect liquefaction of coal
[DE82-000892] p0261 N82-21281
SYNTHETIC APERTURE RADAR
Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources
p0243 A82-27635
SYNTHETIC FUELS
Gas producing process for large quantities of hydrogen
p0239 A82-21649
Synthetic, coal-derived fuels
p0242 A82-24684
Pacific Gas and Electric Company - Biomass energy activities
p0242 A82-24691
A continuous two stage solar coal gasification system
p0221 A82-28389
Verification of the foreign synfuels industrialization experience
[DE82-000230] p0245 N82-16272
Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] p0246 N82-16281
Oil Shale 1982: A technology and policy primer
p0170 N82-16449
Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] p0222 N82-16475
Energy in the 1980s: A call for leadership. The Public Awareness Symposium
[DE81-027613] p0171 N82-16504
Development of hydroconversion of biomass to synethetic fuels. Project 61042 technical report
[DE82-000874] p0248 N82-16529
Experimental investigation of synfuel spray characteristics and combustion dynamics
[DE82-000412] p0250 N82-17396
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes
[DE81-030849] p0251 N82-17402
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Test and appendices A & B
[DE82-000838] p0254 N82-17630
Field studies on USBR and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109810] p0254 N82-17690
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] p0255 N82-18407
Gasoline equivalent fuel economy determination for alternate automotive fuels
[PB82-120072] p0255 N82-18412
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] p0258 N82-20022
Synthetic-fuel combustion: Pollutant formation. Soot-initiation mechanisms in buring aromatics
[DE82-002566] p0186 N82-20277
Synthetic fuels development
[GPO-85-050] p0259 N82-20327
International alcohol fuels
[GPO-78-681] p0186 N82-20328
Feasibility study on new processes for fuel from biomass
[DE82-002834] p0259 N82-20332
Synthetic-fuel aromaticity and staged combustion
[DE82-002453] p0259 N82-20335
Soot formation in synthetic-fuel droplets
[DE82-004257] p0262 N82-21282
SYSTEM EFFECTIVENESS
Coal-to-methanol: An engineering evaluation of Texaco gasification and ICI methanol-synthesis route
[DE81-904235] p0250 N82-17398
Synfuel modified diesel
[DE82-002298] p0251 N82-17400
Solarization/conservation technology development for existing housing
[DE82-002175] p0176 N82-17407
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] p0291 N82-17635
Component design and development for future helicopter engines
p0180 N82-18134
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] p0182 N82-18724
SYSTEMS ANALYSIS
Frequency response analysis of ocean wave energy converter
[ASME PAPER 81-WA/DSC-10] p0273 A82-24564
Methodology to determine cost and performance goals for active solar cooling systems
[ASME PAPER 81-WA/SOL-32] p0217 A82-24627
Dynamic analysis and control of a solar power plant. I - Dynamic analysis and operation criteria. II - Control system design and simulation
p0220 A82-26337
Systems analysis of H2/natural gas supplementation and separation
[DE81-030031] p0240 N82-16270
Technical support for open-cycle MHD program --- combined cycle mhd/steam power system analysis
[DE82-001955] p0276 N82-16901
Laser power conversion system analysis
p0288 N82-18585
SYSTEMS ENGINEERING
Special purpose anemometry for wind power studies
p0241 A82-19120
Design and construction of a concentrating photovoltaic total energy system in Hawaii
[AIAA PAPER 82-0069] p0198 A82-22040
The Sophocle program --- photovoltaic generators using solar energy concentration
p0204 A82-24132
The rotating heat pipe - Implementation as a uniform-temperature heat source
[ASME PAPER 81-WA/HT-2] p0242 A82-24584
New possibilities for the development and optimization of cascade-type solar cells
p0217 A82-24868
Solar cells: Operating principles, technology, and system applications --- Book
p0218 A82-25223
An evaluation of a transverse slatted flat plate collector
p0220 A82-26335

Design, construction, and initial operation of the ANL research
[DE82-001961] p0223 N82-16528
Wind power utilization guide
[AD-A110337] p0285 N82-21719
SYSTEMS INTEGRATION
Integration problems with large wind energy conversion systems
p0267 A82-19054
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] p0179 N82-18070
SYSTEMS SIMULATION
Simulation and operations of large wind machines
p0267 A82-19052
An impact assessment of MOD-2 wind generators on the TVA power system
p0163 A82-19053
Double output induction generator scheme for wind energy conversion
p0267 A82-19105
Digital simulation of an MHD power consolidation/D.C. to A.C. inverter system
p0269 A82-19242
Coal gasification combined cycle power generation simulation
p0241 A82-19255
SYSTEMS STABILITY
An impact assessment of MOD-2 wind generators on the TVA power system
p0163 A82-19053

T

TABLES (DATA)
AIP 50th anniversary: Physics vade mecum --- Book
p0295 A82-28112
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] p0181 N82-18442
State energy data report supplement
[DE82-002996] p0188 N82-21728
TARS
The development of PVC-modified tars for use in surface treatments
[CSIR-RR-393] p0295 N82-20315
TECHNOLOGICAL FORECASTING
Technological approach towards future large solar arrays
[AAS 80-323] p0196 A82-20887
Renewable energy - Target for 2050
p0165 A82-21225
We have just begun to create efficient transport aircraft
p0165 A82-21373
Air transport in the 21st century
p0166 A82-24025
U.S. photovoltaic application experiments and market development
p0200 A82-24104
Industrialization of photovoltaics
p0201 A82-24108
Progress on alternative energy resources
p0168 A82-26368
Hydrogen uses and demands through the year 2025
p0240 A82-26595
Future fossil fuels - Their utilization and incorporation in modern energy systems
p0243 A82-27399
Overview study of Space Power Technologies for the advanced energetics program --- spacecraft
[NASA-CR-165269] p0277 N82-17606
Forecasting the technical and economic characteristics of high power thermonuclear Tokamak reactors
[BLL-CTO-1921-(9091.9F)] p0284 N82-21063
TECHNOLOGY ASSESSMENT
A comparison of studies of WECS economics for utility applications --- Wind Energy Conversion System
p0268 A82-19113
Offshore siting of wind turbine generators in U.K. waters
p0163 A82-19119
Solar/hydrogen systems for the 1985-2000 time frame - A review and assessment
p0195 A82-20136
Sea, soil, sky - Testing solar's limits
p0195 A82-20169

Power systems --- significant technological innovations in 1981 including fuel reprocessing and nuclear plant design
p0270 A82-20175
Thrust management - Current achievements and future developments
p0164 A82-20520
Microwave power - An energy transmission alternative for the year 2000
p0287 A82-20640
Comparative analysis of CCMHD power plants --- Closed Cycle MHD
p0270 A82-20747
Arc mode molten seed electrodes for MHD power generation
p0272 A82-24018
Advances in silicon solar cell processing
p0202 A82-24117
Operational, reliability, and maintenance experience with photovoltaic concentrator arrays
p0203 A82-24130
A review of recent developments in thermal batteries
p0289 A82-24242
Ceramic technology for solar thermal receivers
[ASME PAPER 81-WA/SOL-24] p0216 A82-24622
OTEC power system development and environmental impacts
p0166 A82-24686
Biomass options for the big island of Hawaii
p0167 A82-24690
An assessment of alternative fuel cell designs for residential and commercial cogeneration
p0273 A82-24695
BEA, a solar breeder reactor with high energetic enhancement factor Technoeconomic analysis
p0218 A82-25504
Assessing the Solar Power Satellite - The OTA experience
p0168 A82-25665
Air pollution control technology - An overview
p0168 A82-26327
Precision casting for gas turbine engines
p0275 A82-28313
Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] p0246 N82-16281
Concepts of fundamental processes related to gasification of coal
[DE82-000763] p0246 N82-16282
Oil Shale 1982: A technology and policy primer
p0170 N82-16449
Assessment of emerging energy sources
[DE82-900318] p0248 N82-16519
Case studies of retrofit applications of solar energy in the MASEC region
[DE82-001712] p0223 N82-16532
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] p0175 N82-16947
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DE82-000762] p0249 N82-17315
Overview study of Space Power Technologies for the advanced energetics program --- spacecraft
[NASA-CR-165269] p0277 N82-17606
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] p0184 N82-19108
Chemical desulphurisation of coal
[ICTIS-TR-15] p0257 N82-19332
State-of-the-art review of solar ponds
[AD-A109038] p0232 N82-20671
State of the art of landfill gas recovery
[DE82-003261] p0260 N82-20680
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 3: Preconceptual design
[DE82-001945] p0294 N82-20687
Cell module and fuel conditioner development
[NASA-CR-165620] p0285 N82-21713
TECHNOLOGY TRANSFER
Community television reception centers with solar generator power supplies in Niger - Television retransmitters with alternative energy power supplies in France
p0212 A82-24227

TECHNOLOGY UTILIZATION
Solar-energy perspectives p0191 A82-19825
Solar energy applications in telecommunications p0204 A82-24138
New connections for new technologies p0274 A82-25160
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Text and appendices A & B [DE82-000838] p0254 N82-17630
NASA Technology Utilization House technical support package Summary of results and house description [NASA-TM-X-74686] p0184 N82-19103
TECTONICS
Anomalous radon (222) emission and its association with earthquakes and tectonism p0254 N82-17739
TELECOMMUNICATION
Solar energy applications in telecommunications p0204 A82-24138
TELEVISION RECEIVERS
Experience acquired in the field of low power photovoltaic application to educational television p0204 A82-24139
TELEVISION RECEPTION
Community television reception centers with solar generator power supplies in Niger - Television retransmitters with alternative energy power supplies in France p0212 A82-24227
TEMPERATE REGIONS
Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5 [AD-A108386] p0229 N82-19687
TEMPERATURE CONTROL
Thermal management of batteries p0289 A82-24241
TEMPERATURE DEPENDENCE
Silicon solar cells with reduced temperature sensitivity p0197 A82-21147
TEMPERATURE DISTRIBUTION
Injection and thermal breakthrough in fractured geothermal reservoirs p0241 A82-23819
Comparative study of the thermal characteristics of various solar cell module structures p0208 A82-24178
Effects of friction and extraction on the stability of solar ponds [ASME PAPER 81-WA/SOL-16] p0215 A82-24615
Case studies of low-to-moderate temperature hydrothermal energy development [DE82-000883] p0248 N82-16501
Thermodynamic data for flue-gas desulfurization processes [DE81-030545] p0249 N82-16557
TEMPERATURE EFFECTS
Combined photovoltaic/thermal solar array DC electrical model p0191 A82-18890
The effects of elevated temperature exposure on the compatibility of glycol solutions with metals used in solar absorbers p0213 A82-24293
Temperature effects on the kinetics of the anaerobic digestion of crop residues to methane p0244 A82-26391
TEMPERATURE GRADIENTS
Decay of thermal stratification in a water body for solar energy storage p0220 A82-26338
Monitoring of thermal stratification of the storage tank of the Babel Lee Hall Solar-Hot-Water Facility [DE82-002110] p0227 N82-18703
TEMPERATURE MEASUREMENT
Optical measurement of cell temperature in a solar array p0208 A82-24182
Solar energy control system --- temperature measurement [NASA-CASE-NFS-25287-1] p0226 N82-18686
TEMPERATURE PROFILES
A review of the salt-gradient solar pond technology [NASA-CR-166635] p0229 N82-19675
TERRAIN ANALYSIS
Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data p0244 A82-27694
TEST FACILITIES
Photovoltaic testing in the European communities p0202 A82-24121
Solar cell/battery plants for telecommunication systems in Denmark - Development of a test facility p0212 A82-24228
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant Conceptual Design Engineering Report (CDER) [NASA-CR-165452-VOL-5] p0253 N82-17603
TEST STANDS
Construction and testing of a test stand for solar cells and concentrating collectors [BMFT-FB-T-81-179] p0227 N82-18714
THERMAL ABSORPTION
Passive cooling measurements for a concentrating photovoltaic array [ASME PAPER 81-WA/SOL-10] p0214 A82-24610
THERMAL BATTERIES
Power sources 8: Research and development in non-mechanical electrical power sources; Proceedings of the Twelfth International Symposium, Brighton, England, September 1980 p0289 A82-24236
A review of recent developments in thermal batteries p0289 A82-24242
THERMAL BOUNDARY LAYER
Modelling continuous fumigation of Nanticoke generating station plume p0168 A82-26409
THERMAL CONDUCTIVITY
Effect of thermomechanical properties on initial cavity growth [DE81-030839] p0249 N82-16918
THERMAL CONTROL COATINGS
On reducing convective losses from cover glazings of solar thermal collectors [ASME PAPER 81-WA/SOL-3] p0214 A82-24606
THERMAL CYCLING TESTS
High temperature durable catalyst development p0270 A82-20739
Rotor testing in FY 1981 [DE81-028340] p0291 N82-16536
GPS on-orbit battery performance p0293 N82-20429
THERMAL DEGRADATION
Stagnation temperature test methods for determining solar collector thermal performance degradation p0230 N82-20638
THERMAL DISSOCIATION
Heat storage by means of thermal dissociation reactions. Storage systems and materials [IKE-5-213] p0294 N82-21766
THERMAL ENERGY
Thermal management of batteries p0289 A82-24241
Molten nitrate salt technology development --- for thermal energy storage in solar power systems p0290 A82-24292
THERMAL INSULATION
Investigation of the thermal-engineering characteristics of a solar collector with a selective coating and vacuum heat-insulation p0217 A82-24870
Risk of producing energy, and conserving it [DE81-030807] p0171 N82-16507
Community solar demonstration/dissemination center [DE82-000994] p0225 N82-17632
THERMAL MAPPING
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/ p0244 A82-27661
Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico p0244 A82-27693

THERMAL POLLUTION
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] p0182 N82-18733
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[IEPE-2229-PRE/021] p0185 N82-19704
THERMAL RADIATION
Performance of ultra high efficiency thin germanium p-n junction solar cells intended for solar thermophotovoltaic application
p0211 A82-24211
THERMAL REACTORS
Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] p0246 N82-16283
THERMAL RESISTANCE
Development of a sealed Ni-Cd cell capable of operating in unprecedented high temperature environments
p0290 A82-24246
Ceramic technology for solar thermal receivers
[ASME PAPER 81-WA/SOL-24] p0216 A82-24622
THERMAL STABILITY
Silicon solar cells with reduced temperature sensitivity
p0197 A82-21147
THERMAL VACUUM TESTS
NiCd battery failure analysis
p0292 N82-20417
THERMOCHEMICAL PROPERTIES
Storage of low temperature heat by thermochemical reactions
p0290 A82-25506
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] p0250 N82-17399
Evaluation of gasification and gas-cleanup processes for use in molten-carbonate fuel-cell power plants
[DE82-003207] p0285 N82-21723
THERMOCHEMISTRY
The sulfur thermochemical cycle for hydrogen production
p0239 A82-19449
Thermodynamic analysis of solar thermochemical energy absorption
p0219 A82-26024
Concepts of fundamental processes related to gasification of coal
[DE82-000763] p0246 N82-16282
Industrial utilization of waste-derived energy. Volume 2: Appendices 1 and 2
[DE82-003287] p0187 N82-20679
Research on solvent-refined coal
[DE82-002530] p0263 N82-21437
THERMOCOUPLES
Solar energy control system --- temperature measurement
[NASA-CASE-NPS-25287-1] p0226 N82-18686
THERMODYNAMIC COUPLING
Coupling to solar energy: Sensitized photoreactions - The primary source of self-organization
p0197 A82-20968
THERMODYNAMIC CYCLES
The sulfur thermochemical cycle for hydrogen production
p0239 A82-19449
Turbomachinery for small solar power plants
p0195 A82-19948
Aerodynamic components for small turboshaft engines
p0277 N82-17211
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] p0182 N82-18708
THERMODYNAMIC EFFICIENCY
Lineup of the IE-series aircraft-derivative gas turbines
p0271 A82-22896
Thermodynamic limits to photovoltaic solar energy conversion efficiency
p0211 A82-24213
The effect of nonuniform fluid flow distribution on the thermal performance of solar collector
[ASME PAPER 81-WA/SOL-14] p0215 A82-24613
Thermal analysis of a solar pond power plant operated with a direct contact boiler
[ASME PAPER 81-WA/SOL-15] p0215 A82-24614
Use of hydrogen in dual-fuel engines
p0240 A82-25781
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] p0275 N82-16481
Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] p0226 N82-18689
Thermodynamic limits for solar energy conversion by a quantum-thermal hybrid system
[NASA-TM-83229] p0226 N82-18695
SP-C12-301: Thermal performances of solar energy absorbers --- test method
[SP-MET-1979:2] p0236 N82-21767
THERMODYNAMIC PROPERTIES
Thermodynamic studies of Li-Ge alloys - Application to negative electrodes for molten salt batteries
p0289 A82-23777
Thermodynamics of solar collectors
p0200 A82-23810
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] p0249 N82-16557
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] p0249 N82-16918
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000689] p0281 N82-18705
THERMODYNAMICS
Forms of energy and their transformation
p0267 A82-18840
Thermodynamic limitations of direct solar energy conversion
p0211 A82-24212
Thermodynamic analysis of solar thermochemical energy absorption
p0219 A82-26024
Heat transfer coefficient for constant flow solar collector/storage systems
p0220 A82-26615
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] p0246 N82-16275
Concepts of fundamental processes related to gasification of coal
[DE82-000763] p0246 N82-16282
Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] p0246 N82-16283
H-coal process improvement study: Bench-unit baseline run with preheater/reactor
[DE82-002572] p0250 N82-17399
Evaluation of alternatives in downhole steam generation
[DE82-001943] p0253 N82-17574
Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] p0226 N82-18697
DX in-situ oil-shale project
[DE82-002134] p0264 N82-21693
THERMOELECTRIC GENERATORS
A 100 kWe solar thermal power plant in Kuwait, phase 1
[BMFT-FB-T-81-178] p0227 N82-18713
THERMOELECTRIC MATERIALS
Thermoelectric film receivers of radiant energy
p0198 A82-22230
THERMOELECTRIC POWER GENERATION
International Conference on Thermoelectric Energy Conversion, 3rd, University of Texas, Arlington, TX, March 12-14, 1980, Proceedings
p0267 A82-18900
Assessment of generic solar thermal systems for large power applications
[ASME PAPER 81-WA/SOL-25] p0216 A82-24623
EURELIOS, the world's first thermomechanical helioelectric power plant
p0274 A82-28024

THERMONUCLEAR POWER GENERATION
Forecasting the technical and economic characteristics of high power thermonuclear Tokamak reactors
[DLL-CTC-1921-(9091.9F)] p0284 N82-21063
THERMOPHYSICAL PROPERTIES
Comparative study of the thermal characteristics of various solar cell module structures
p0208 A82-24178
Thermal energy storage for solar power generation - State of the art
p0220 A82-26950
THICK FILMS
Screenable all-metal solar cell electrodes of nickel and copper
p0207 A82-24171
Development of an all-metal thick-film cost-effective metallization system for solar cells
[NASA-CR-168502] p0232 N82-20684
Photovoltaic research and development: Materials research
[DE82-001796] p0235 N82-21748
THIN FILMS
Macroscopic surface roughness in metal-dielectric composite films - Photothermal absorber applications
p0195 A82-20066
Improved efficiency of n-CdSe thin-film photoelectrodes by zinc surface treatment
p0196 A82-20464
Photovoltaics - Down to earth at last
p0200 A82-23700
Sprayed cadmium sulphide solar cells
p0203 A82-24126
Evaporated CdS-Cu/x/S solar cells
p0203 A82-24128
The need for photovoltaic unit operations experimentation
p0203 A82-24129
Surface properties of Cu/2-x/S and its influence on the performance of frontwall Cu/2-x/S-CdS thin film solar cells
p0209 A82-24185
CdZnS-Cu2S thin film solar cells
p0209 A82-24189
Cu2S/Zn/x/Cd/1-x/S heterojunction solar cells formed on sprayed Zn/x/Cd/1-x/S films
p0209 A82-24190
Integrated Cu/x/S-CdS thin film solar cell panels with higher output voltages
p0209 A82-24192
Evaluation of electrodeposited cadmium telluride solar cells
p0210 A82-24205
Thin-film polycrystalline /CdZn/S/Cu2S solar cells of 10% conversion efficiency
p0213 A82-24235
On the weathering of thin plastic films
[ASME PAPER 81-WA/SOL-6] p0214 A82-24608
Photoelectrochemical performance of ZnSe/CdSe thin film electrodes in aqueous polysulfide electrolyte
p0219 A82-25738
Commercial-scale process design for thin-film solar cells
p0221 A82-26390
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] p0222 N82-16492
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] p0224 N82-16543
State-of-the-art review of low-cost collector technologies
[AD-A109039] p0232 N82-20672
Exploratory development of thin-film polycrystalline photovoltaic devices
[DE82-000092] p0235 N82-21746
Photovoltaic and structural properties of a-Si:H thin films
[DE82-002755] p0235 N82-21750
Photovoltaic and structural properties of a-Si:H thin films
[DE82-002698] p0235 N82-21751
Thin-film polycrystalline silicon solar cells
[DE82-000633] p0236 N82-21753
THREE DIMENSIONAL FLOW
Three-dimensional flow development in MHD generators at part load
[AIAA PAPER 82-0328] p0269 A82-19794
THRUST CONTROL
Thrust management - Current achievements and future developments
p0164 A82-20520
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] p0180 N82-18207
THRUST MEASUREMENT
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] p0180 N82-18207
THYRISTORS
The 5 kW generator at the Alpine refuge 'Les Evettes' - Operating data
p0212 A82-24229
TIDE POWERED GENERATORS
Tidal power from the Severn estuary, volume 1
[EP-46-VOL-1] p0282 N82-19666
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] p0282 N82-19667
TIME
Underground coal mining section data
[NASA-CR-168393] p0247 N82-16454
TIN OXIDES
Transparent, conductive layers of sprayed indium tin oxide in backwall Cu2S-CdS cells
p0209 A82-24187
Efficient solar cells on polycrystalline and highly defected substrates using ion sputtered indium tin oxide
p0210 A82-24201
n ITO spray/p InP solar cells
p0211 A82-24208
TIRES
Rolling resistance measurements 106 passenger car tires
[PB82-116625] p0176 N82-17512
TITANATES
Photoresponse of n-type semiconductor NiTiO3 --- as stable semiconducting anodes in photoelectrolysis of water
p0239 A82-20075
TITANIUM
Energy efficient engine shroudless, hollow fan blade technology report
[NASA-CR-165586] p0284 N82-21196
TITANIUM OXIDES
Photoelectrolysis at Fe2O3/TiO2 heterojunction electrode
p0239 A82-23782
Advanced research and technology direct utilization: Recovery of minerals from coal fly ash. Fossil energy program
[DE82-003133] p0261 N82-20698
TOKAMAK DEVICES
Fusion - From science to engineering
p0270 A82-20170
Forecasting the technical and economic characteristics of high power thermonuclear Tokamak reactors
[DLL-CTC-1921-(9091.9F)] p0284 N82-21063
TOTAL ENERGY SYSTEMS
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165455] p0275 N82-16483
TOWERS
Static and dynamic investigations of different towers for wind turbines
[ISD-274] p0278 N82-17637
TOXIC HAZARDS
Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE84-001617] p0173 N82-16566
TOXICITY
Environmental quality research-fate of toxic jet fuel components in aquatic systems
[AD-A109790] p0187 N82-20693
TRACKING (POSITION)
The Sophocle program --- photovoltaic generators using solar energy concentration
p0204 A82-24132

TRACTION
A sealed rechargeable metal-oxygen battery for traction purposes
p0290 A82-24248

TRAFFIC CONTROL
Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] p0185 N82-20025

TRAJECTORY OPTIMIZATION
Fuel optimal trajectory computation
p0169 A82-26568

TRANSFER ORBITS
Utility and technology for a space central power station
p0287 N82-18503

TRANSFERRED ELECTRON DEVICES
High-efficiency millimetre-wave InP TEOs made by liquid phase epitaxy
p0274 A82-25523

TRANSIENT LOADS
Sudden loss of rotor blade from wind power turbine - Calculation of maximax response spectra
p0271 A82-23680

TRANSIENT RESPONSE
Simulation and operations of large wind machines
p0267 A82-19052

TRANSISTOR CIRCUITS
A PWM transistor inverter for an ac electric vehicle drive
p0270 A82-20744

TRANSITION FLOW
Evaluation of continuous oxydesulfurization processes
[DE82-002127] p0261 N82-20697

TRANSITION METALS
Optical properties of solids for solar energy conversion
[ISSN-0345-0058] p0233 N82-21715

TRANSMISSION LINES
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] p0287 N82-17448

TRANSMISSIONS (MACHINE ELEMENTS)
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] p0275 N82-16485
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203

TRANSMITTANCE
Bandpass filters for thermophotovoltaic conversion systems
p0197 A82-21363

TRANSPIRATION
Comparison of test results for flat plate, transpired flat plate, corrugated, and transpired corrugated solar air heaters
[ASME PAPER 81-WA/SOL-18] p0215 A82-24617

TRANSPORT AIRCRAFT
The prospects for liquid hydrogen fueled aircraft
p0239 A82-20137
Design possibilities for improved fuel efficiency of civil transport aircraft
p0164 A82-20514
Advanced subsonic transport propulsion
[AIAA PAPER 81-0811] p0165 A82-20874
We have just begun to create efficient transport aircraft
p0165 A82-21373
Fuel-efficient windshields for transport, commuter and business aircraft
p0166 A82-24304
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] p0169 N82-16057

TRANSPORTATION ENERGY
Transport and energy
[DE81-030287] p0175 N82-16946
Possibility for energy conservation in transporting freight by truck
[DE81-030072] p0179 N82-18071
Review of the UK transport energy outlook: And policy recommendations
[EP-47] p0185 N82-19664
Hydrocracking of the oils of Botryococcus braunii to transport fuels
[NRL-R-783] p0262 N82-21416

TRAPATT DEVICES
High power pulsed oscillators
p0287 A82-23944

TRENDS
Consumption trend analysis in the industrial sector: Existing forecasts
[PB82-137829] p0188 N82-21770

TROMBE WALLS
Community solar demonstration/dissemination center
[DE82-000994] p0225 N82-17632

TROPICAL REGIONS
Model evaluation and optimum collector slope for a tropical country
p0191 A82-19298

TRUCKS
An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100538] p0175 N82-16953
Possibility for energy conservation in transporting freight by truck
[DE81-030072] p0179 N82-18071

TUBE HEAT EXCHANGERS
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659

TUNGSTEN COMPOUNDS
Charge collection microscopy on p-WSe2 - Recombination sites and minority carrier diffusion length --- solar cell materials
p0200 A82-23788

TURBINE BLADES
Blade shapes for horizontal axis wind turbines
p0268 A82-19110
Wind data requirements for wind turbine generator design
p0268 A82-19122
Diffuser-augmented wind turbine analysis --- for jet stream electrical generation applications
p0274 A82-26216
Variable gain for a wind turbine pitch control
[NASA-TM-82751] p0275 N82-16478
Dynamic and aeroelastic characteristics of complete windturbine systems
p0280 N82-18128
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] p0281 N82-18721
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] p0282 N82-19681
A pitch control system for large scale wind turbines
[FFA-TN-HU-2262-PT-6] p0282 N82-19695
Theoretical design study of the MSFC wind-wheel turbine
[NASA-CR-3532] p0283 N82-20667
Energy efficient engine shroudless, hollow fan blade technology report
[NASA-CR-165586] p0284 N82-21196

TURBINE ENGINES
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203
Buffer thermal energy storage for an air Brayton solar engine
[NASA-CR-168657] p0230 N82-20642

TURBINE WHEELS
Dynamic and aeroelastic characteristics of complete windturbine systems
p0280 N82-18128
Theoretical design study of the MSFC wind-wheel turbine
[NASA-CR-3532] p0283 N82-20667

TURBINES
Sudden loss of rotor blade from wind power turbine - Calculation of maximax response spectra
p0271 A82-23680
The NASA Lewis large wind turbine program
[NASA-TM-82761] p0275 N82-16495
Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] p0276 N82-16522
Dynamic and aeroelastic characteristics of complete windturbine systems
p0280 N82-18128

TURBOCOMPRESSORS
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] p0276 N82-16525

TURBOFAN ENGINES
Energy management in military combat aircraft p0164 A82-20515
Advanced subsonic transport propulsion [AIAA PAPER 81-0811] p0165 A82-20874
Management of powerplant maintenance and restoration programs for fuel conservation [SAE PAPER 811052] p0166 A82-24394
CF6 jet engine performance improvement: High pressure turbine roundness [NASA-CR-165555] p0176 N82-17174
Energy efficient engine shroudless, hollow fan blade technology report [NASA-CR-165586] p0284 N82-21196
TURBOGENERATORS
The predictability of wind turbine output p0268 A82-19121
Turbomachinery for small solar power plants p0195 A82-19948
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT) [PB81-239568] p0276 N82-16547
Assessment of steam-injected gas turbine systems and their potential application [NASA-TM-82735] p0280 N82-18694
Experience with modified aerospace reliability and quality assurance method for wind turbines [NASA-TM-82803] p0281 N82-19550
TURBOMACHINERY
Turbomachinery for small solar power plants p0195 A82-19948
TURBULENCE EFFECTS
Methods for analysis of wind ripple in wind turbines [SAND-81-7006] p0283 N82-20193
TURBULENT FLOW
Radiative heat transfer in turbulent MHD channel flow p0281 N82-19487
TWO DIMENSIONAL BOUNDARY LAYER
Hydraulic models of flow in an MHD generator channel, based on the equations of a two-dimensional boundary layer p0274 A82-25788
TWO DIMENSIONAL FLOW
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer [FFA-134] p0281 N82-18719
TWO PHASE FLOW
Equilibrium two-phase heat pipe flows with variable flowrate p0287 A82-21975
Forced convection heat transfer for two-phase helical flow in a solar receiver [ASME PAPER 81-WA/HT-13] p0214 A82-24589

U

ULTRAVIOLET LASERS
Efficient GaAs solar cells formed by UV laser chemical doping p0222 A82-28498
UNDERGROUND STORAGE
Nuclear waste management [DE82-001605] p0174 N82-16845
Geological disposal of high-level radioactive wastes [CANMET-79-29] p0189 N82-22020
UNITED KINGDOM
Review of the UK transport energy outlook: And policy recommendations [EP-47] p0185 N82-19664
UNITED NATIONS
International legal basis and organizational framework for space activities - Present state, problems and prospects [IAF 81-SL-51] p0169 A82-27853
UNITED STATES OF AMERICA
Energy policies for resilience and national security [AD-A108263] p0182 N82-18700
UPGRADING
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [DE82-001127] p0251 N82-17401
Refining and upgrading of synfuels from coal and oil shales by advanced catalytic processes [DE81-030849] p0251 N82-17402
URBAN DEVELOPMENT
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water [PB82-125790] p0184 N82-19108
Urban Consortium [PB82-122789] p0189 N82-22111
URBAN PLANNING
A comparison of energy technologies and their use in urban planning [PB81-239592] p0172 N82-16546
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water [PB82-125790] p0184 N82-19108
Urban Consortium [PB82-122789] p0189 N82-22111
URBAN RESEARCH
Urban air pollution and solar energy p0195 A82-20139
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water [PB82-125790] p0184 N82-19108
URBAN TRANSPORTATION
A method for estimating fuel consumption and vehicle emissions on urban arterials and networks [PB82-108523] p0179 N82-18078
Urban Consortium [PB82-122789] p0189 N82-22111
USER MANUALS (COMPUTER PROGRAMS)
QUSER user's guide [DE81-030681] p0174 N82-16767
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E [DE82-000839] p0254 N82-17631
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects [PB82-107012] p0228 N82-18729
RADSOLVER: A computer program for calculating spectrally-dependent radiative heat transfer in solar cavity receivers [DE82-000833] p0233 N82-21502
USER REQUIREMENTS
Regional needs regarding technical information [DE82-001772] p0224 N82-16929
Energy Management and Control Systems (EMCS) user satisfaction study [PB82-103656] p0182 N82-18724
UTAH
Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah [DE82-000416] p0171 N82-16461
UTILITIES
A comparison of studies of WECS economics for utility applications --- Wind Energy Conversion System p0268 A82-19113
Interfacing wind energy conversion equipment with utility systems p0271 A82-21148
Solar energy/utility interface - The technical issues p0197 A82-21150
New connections for new technologies p0274 A82-25160
Development of zinc-bromine batteries for utility energy storage [DE82-002114] p0291 N82-17635
EPA utility FGD (Flue Gas Desulfurization) survey [PB82-115858] p0184 N82-18766
Phosphoric acid fuel cell technology status [NASA-TM-82791] p0282 N82-19670
Economic assessment of battery storage in solar photovoltaic applications [DE82-004045] p0233 N82-21721

V

V GROOVES
Convective heat transfer in vee-trough linear concentrators p0219 A82-26332
VACUUM
Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel extension of data [PB82-127077] p0262 N82-21296

VACUUM APPARATUS
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] p0182 N82-18732
VACUUM DEPOSITION
The need for photovoltaic unit operations experimentation
p0203 A82-24129
Preparation and properties of evaporated CdTe films compared with single crystal CdTe
[DE82-000228] p0236 N82-22073
VACUUM EFFECTS
Effect of vacuum exhaust pressure on the performance of MHD ducts at high B-field
[AIAA PAPER 82-0396] p0270 A82-20292
Investigation of the thermal-engineering characteristics of a solar collector with a selective coating and vacuum heat-insulation
p0217 A82-24870
VALUE
Ohio River Basin energy study: Social values and energy policy
[PB82-101494] p0183 N82-18735
VALUE ENGINEERING
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] p0224 N82-17611
VAPOR DEPOSITION
Schottky barrier solar cells of weakly hydrogenated CVD amorphous silicon
p0194 A82-19911
Post-hydrogenation of CVD amorphous silicon - A promising preparation process for solar cells
p0203 A82-24124
Epitaxial growth of silicon by CVD in a hot-wall furnace
p0206 A82-24155
Application of amorphous silicon nitride for MIS/inversion layer solar cells
p0210 A82-24203
VAPOR PHASE EPITAXY
Epitaxial growth of silicon by CVD in a hot-wall furnace
p0206 A82-24155
VAPORIZERS
Evaluation of alternatives in downhole steam generation
[DE82-001943] p0253 N82-17574
VARIABLE GEOMETRY STRUCTURES
The Rutherford six meter variable-geometry vertical axis wind turbine
p0267 A82-19104
VARIATIONS
Power fluctuations: Technical and statistical aspects
p0278 N82-17622
VEGETATION
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands
[PB82-113218] p0188 N82-20702
VEGETATION GROWTH
Revegetating strip-mined land with municipal sewage sludge
[PB82-102484] p0177 N82-17594
Field studies on USBM and ICSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109810] p0254 N82-17690
VENTILATION
Community solar demonstration/dissemination center
[DE82-000994] p0225 N82-17632
VIBRATION TESTS
Lineup of the IM-series aircraft-derivative gas turbines
p0271 A82-22896
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
p0280 N82-18127
NiCd battery failure analysis
p0292 N82-20417
VIKING LANDER SPACECRAFT
Update: Viking Lander NiCd batteries. Year six
p0293 N82-20428
VOLATILITY
Assessment of oil production volatile organic compound sources
[PB82-108176] p0177 N82-17664
VOLCANOES
Studies in shock-tube spectroscopy, chemical reaction rates and mechanisms, utilization of low-Btu gases, and geothermal energy. 1: Shock-tube spectroscopy. 2: Shock-tube studies of chemical reaction rates and mechanisms. 3: Utilization of low-Btu gases. 4: Volcanoes as a source of geothermal energy
p0259 N82-20285
VOLT-AMPERE CHARACTERISTICS
An analysis of EBIC response of ITO/poly-Si solar cells --- Electronic Beam Induced Current
p0191 A82-19878
Rapid characterization of solar cell performances
p0192 A82-19879
Junction and bulk region characteristics of the laser annealed Si solar cells
p0192 A82-19883
Fundamental properties of MIS solar cells using Mg-p Si system
p0192 A82-19884
A large active area Be-Si MIS solar cell with textured surface
p0192 A82-19885
High efficiency MOS solar cells by anodic oxidation processes
p0193 A82-19891
Interpretation of characteristics in a-Si:H solar cells
p0194 A82-19909
Characteristics of Schottky barrier diodes in reactively sputtered amorphous Si:H
p0194 A82-19912
A high efficiency single-crystal CdSe photoelectrochemical solar cell and an associated loss mechanism
p0196 A82-20722
Optimum operating conditions of a solar cell panel and prediction of solar radiation in Sanaa, Yemen
p0197 A82-21365
Effect of shunt resistance and bypass diodes on the shadow tolerance of solar cell modules
p0198 A82-21366
The effect of the I sub 01/I sub 02 ratio on the open circuit voltage of solar cells
p0198 A82-21838
Effects of grain boundaries on the current-voltage characteristics of polycrystalline silicon solar cells
p0198 A82-23356
Evaporated CdS-Cu/x/S solar cells
p0203 A82-24128
Measurement of the spectral response of silicon solar cells under highly illuminated conditions
p0204 A82-24137
Development of large area, low-cost, solar cell processing sequence
p0206 A82-24161
Optimized diffusion parameters for cells made by columnar silicon
p0206 A82-24164
Electrical properties of grain boundaries in nonsingle crystalline silicon solar cells
p0207 A82-24170
Reliable screen-printed contacts on silicon solar cells
p0207 A82-24172
An EBIC study of the CdS-Cu2S photovoltaic cell --- crystallograph using scanning electron microscope in Electron Beam Induced Current mode
p0209 A82-24186
Integrated Cu/x/S-CdS thin film solar cell panels with higher output voltages
p0209 A82-24192
Amorphous Si/1-x/Ge/x/ for high performance solar cell
p0210 A82-24198
A nickel oxide-iron battery developed for traction purposes - Advantages and limitations
p0290 A82-24243
200-W solar photoelectric system based on AlGaAs heterostructure solar cells and mirror concentrators
p0217 A82-24867

VOLTAGE GENERATORS
Evolution and development of high voltage /270 volt/ dc aircraft electric systems in the United States
p0273 A82-24382
VULNERABILITY
Energy policies for resilience and national security
[AD-A108263] p0182 N82-18700

W

WAFERS
Intensity enhancement in textured optical sheets for solar cells
p0198 A82-23362
Ribbons and sheets as an alternative to ingots in solar cell technology
p0202 A82-24115
Status, technology and development of silicon solar cells at INEH
p0208 A82-24174
Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] p0222 N82-16490
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] p0222 N82-16491
LSA large area silicon sheet task enhanced ID slicing technology for silicon ingots
[NASA-CR-168668] p0231 N82-20651
WAKES
Wake structure analysis --- in full scale performance prediction for wind turbines
p0269 A82-19123
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-AU-2189-PT-5] p0281 N82-18720
WALL PRESSURE
Effects of gas-flow pattern on cavity shape
[DE82-000347] p0247 N82-16375
WASHINGTON
Wind - Prototypes on the landscape --- wind turbine performance data collection of grasslands of southcentral Washington
p0163 A82-20166
WASTE DISPOSAL
Development of potential uses for the residue from fluidized-bed-combustion processes
[DE81-030157] p0244 N82-16211
Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] p0173 N82-16607
Nuclear waste management
[DE82-001605] p0174 N82-16845
Assessment of oil production volatile organic compound sources
[PB82-108176] p0177 N82-17664
Pilot field studies of FGD waste disposal at Louisville Gas and Electric
[PB82-105479] p0178 N82-17672
Field studies on USBM and TOSCO 2 retorted oil shales: Vegetation, moisture, salinity, and runoff
[PB82-109810] p0254 N82-17690
Coal waste artificial reef program, phase 3. Volume 1: Summary report
[DE82-900854] p0187 N82-20699
WASTE ENERGY UTILIZATION
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] p0172 N82-16537
Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-103904] p0255 N82-18408
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101668] p0255 N82-18410
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] p0255 N82-18422
Open-cycle vapor compression heat pump
[PB82-110503] p0181 N82-18553
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] p0182 N82-18701
Methane utilization from coalbeds for power generation at Bethlehem Mines Corporation Marianna Mine no. 58
[DE81-029791] p0259 N82-20333
Industrial utilization of waste-derived energy Volume 2: Appendices 1 and 2
[DE82-003287] p0187 N82-20679
Distilling alcohol with waste automobile heat
[DE82-000143] p0262 N82-21427
WASTE TREATMENT
Recycling World Congress, 3rd, Basel, Switzerland, September 29-October 1, 1980, Proceedings. Sessions 1-2 /Day 1/, Sessions 3-4 /Day 2/, and Sessions 5-6 /Day 3/
p0241 A82-19975
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] p0172 N82-16537
Nuclear waste management
[DE82-001605] p0174 N82-16845
Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030968] p0175 N82-16942
Communication and integration within the agriculture water, waste, and energy industries
[EEG-033] p0179 N82-18070
Industrial utilization of waste-derived energy. Volume 2: Appendices 1 and 2
[DE82-003287] p0187 N82-20679
WASTE UTILIZATION
Recycling World Congress, 3rd, Basel, Switzerland, September 29-October 1, 1980, Proceedings. Sessions 1-2 /Day 1/, Sessions 3-4 /Day 2/, and Sessions 5-6 /Day 3/
p0241 A82-19975
Pacific Gas and Electric Company - Biomass energy activities
p0242 A82-24691
Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] p0244 N82-16205
Development of potential uses for the residue from fluidized-bed-combustion processes
[DE81-030157] p0244 N82-16211
Investigation of the use of coal refuse-fly ash compositions as highway base course material
[PB82-101940] p0295 N82-16301
Development of hydroconversion of biomass to synthetic fuels. Project 61042 technical report
[DE82-000874] p0248 N82-16529
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] p0254 N82-18406
Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] p0257 N82-19383
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] p0257 N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] p0257 N82-19385
Assessment of the suitability of agricultural waste water for geothermal power plant cooling in the Imperial Valley. 1: Water quality
[DE82-001869] p0283 N82-20685
Coal waste artificial reef program, phase 3. Volume 1: Summary report
[DE82-900854] p0187 N82-20699
A procedure for determining the resource utilization potential of coal ash
[AD-A109877] p0261 N82-21111
Feasibility study of the commercial production of ethanol from wood. Volume 2: Appendices 1-6
[DE82-002410] p0263 N82-21429
WASTE WATER
Injection and thermal breakthrough in fractured geothermal reservoirs
p0241 A82-23819
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] p0172 N82-16537

WASTES
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] p0173 N82-16568
WATER
The use of Doppler spectroscopy to study the characteristics of the polydisperse characteristics of emulsion water and solid microimpurities in aviation fuels
p0241 A82-22198
Hydrogen by water electrolysis as basis for small scale ammonia production - A comparison with hydrocarbon based technologies
p0240 A82-25779
The detection of the coal roof interface by use of high pressure water
[NASA-CR-161959] p0252 N82-17555
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] p0227 N82-18703
WATER HEATING
The Hull wind powered housing project
p0163 A82-19118
Performance of collector/storage solar water heaters - Arbitrary demand pattern
p0191 A82-19295
SHAC - A nation turns to the sun --- Solar Heating And Cooling
p0195 A82-20165
Potential for using parabolic trough collectors to supplement power cycle boilers
[SAND-81-0572C] p0222 N82-16505
Choice and Utilization of Energy-using Durables
[DE81-904228] p0171 N82-16513
Case studies of retrofit applications of solar energy in the MASEC region
[DE82-001712] p0223 N82-16532
Energy conservation in the production of domestic hot water
[EP-48] p0185 N82-19665
Heat pump water heater: Midway residential community
[DE82-003548] p0186 N82-20475
Analytical and experimental analysis of procedures for testing solar domestic hot water systems
p0230 N82-20639
Comparison of ground-coupled solar-heat-pump systems to conventional systems for residential heating, cooling and water heating
[DE82-003633] p0236 N82-21755
Solar production of industrial process hot water. Phase 3: Operation and evaluation of the York Building Products Company, Incorporated. Solar Facility
[DE82-003000] p0236 N82-21762
WATER INJECTION
Injection and thermal breakthrough in fractured geothermal reservoirs
p0241 A82-23819
WATER MANAGEMENT
The application of photovoltaics to water pumping and irrigation in Africa
p0205 A82-24140
Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] p0173 N82-16607
Cumberland River Basin; regional water and land resources plan
[PB82-111501] p0176 N82-17585
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] p0179 N82-18070
WATER POLLUTION
Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] p0173 N82-16566
Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] p0173 N82-16607
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] p0178 N82-17678
Development of a multidetector petroleum oil in water monitor
[PB82-105206] p0181 N82-18568
Coal waste artificial reef program, phase 3. Volume 1: Summary report
[DE82-900854] p0187 N82-20699
WATER QUALITY
Cumberland River Basin; regional water and land resources plan
[PB82-111501] p0176 N82-17585
Potential water quantity and water quality impacts of power plant development scenarios on major rivers in the Ohio Basin
[PB82-102401] p0178 N82-17678
South point gasohol project: A water assessment study
[PB82-111485] p0255 N82-18413
Assessment of the suitability of agricultural waste water for geothermal power plant cooling in the Imperial Valley. 1: Water quality
[DE82-001869] p0283 N82-20685
WATER RESOURCES
Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah
[DE82-000416] p0171 N82-16461
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467
Wind energy planning considerations
[PM-80-4] p0171 N82-16496
Coal development in rural America: The resources at risk
[PB81-243313] p0248 N82-16545
Water for non-nuclear energy development in the Great Basin
[PB82-116781] p0176 N82-17581
Cumberland River Basin; regional water and land resources plan
[PB82-111501] p0176 N82-17585
South point gasohol project: A water assessment study
[PB82-111485] p0255 N82-18413
WATER TEMPERATURE
Decay of thermal stratification in a water body for solar energy storage
p0220 A82-26338
WATER TREATMENT
Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] p0173 N82-16607
WATER VAPOR
Evaluation of alternatives in downhole steam generation
[DE82-001943] p0253 N82-17574
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0185 N82-19704
WATERWAVE ENERGY CONVERSION
Frequency response analysis of ocean wave energy converter
[ASME PAPER 81-WA/DSC-10] p0273 A82-24564
WAVE INTERACTION
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] p0281 N82-18720
WEAR
Microstructural effects in abrasive wear
[DE82-003653] p0250 N82-17339
WEAR TESTS
Evaluation of the effects of alcohol fuels on spark ignition engine wear
[AD-A110021] p0262 N82-21426
WEATHER
Study of climate and its applied aspects
p0179 N82-17766
WEATHERING
Durability of porous silica antireflection coatings for solar collector cover plates
p0199 A82-23393
Natural sunlight accelerated weathering of photovoltaic modules
p0208 A82-24183
On the weathering of thin plastic films
[ASME PAPER 81-WA/SOL-6] p0214 A82-24608
WEBS (SHEETS)
Sensitivity analysis of the add-on price estimate for the silicon web growth process
[NASA-CR-168422] p0224 N82-17611

WEIGHT (MASS)
An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100538] p0175 N82-16953
WEIGHT REDUCTION
Power system design optimization using Lagrange multiplier techniques
p0270 A82-20743
Fuel-efficient windshields for transport, commuter and business aircraft
p0166 A82-24304
WEST GERMANY
Status of the German terrestrial photovoltaic activities
p0205 A82-24149
WETLANDS
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands
[PB82-113218] p0188 N82-20702
WHISKERS (CRYSTALS)
Solar collector based on whisker-shaped oxides grown on metallic substrates
p0220 A82-26333
WILDLIFE
Wetland vegetation, environmental factors, and their interaction in strip mine ponds, stockdams, and natural wetlands
[PB82-113218] p0188 N82-20702
WIND (METEOROLOGY)
Wind energy planning considerations
[PB-80-4] p0171 N82-16496
WIND DIRECTION
Meteorological data basis
p0253 N82-17618
WIND EFFECTS
Passive cooling measurements for a concentrating photovoltaic array
[ASME PAPER 81-WA/SOL-10] p0214 A82-24610
WIND MEASUREMENT
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] p0257 N82-18840
Methods for analysis of wind ripple in wind turbines
[SAND-81-7006] p0283 N82-20193
Wind measurements from 50 m high towers in the northern German coastal region
p0261 N82-20779
Requirements for the provision of offshore wind data relating to wind energy conversion systems
[NMI-R-75] p0264 N82-21847
WIND PROFILES
Wind data requirements for wind turbine generator design
p0268 A82-19122
Wind measurements from 50 m high towers in the northern German coastal region
p0261 N82-20779
WIND TUNNEL TESTS
Wind tunnel tests on the 1/30th scale model of the 60m wind turbine generator
A82-19111
Wind tunnel tests on slow-running vertical-axis wind-rotors
p0274 A82-25997
Prospecting for wind energy - A field assessment of physical modelling
p0243 A82-26177
WIND TURBINES
The economics of utilizing wind power in apple cold-storage systems
p0271 A82-23652
Theory and performance of a Wells turbine
p0272 A82-24021
Solar energy applications in telecommunications
p0204 A82-24138
Diffuser-augmented wind turbine analysis --- for jet stream electrical generation applications
p0274 A82-26216
Design and performance of a small shrouded Cretan windwheel
p0274 A82-26614
Harnessing wind power
p0275 A82-28537
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] p0282 N82-19681
Turbulence statistics for design of wind turbine generators
[PB82-112939] p0283 N82-19792
Methods for analysis of wind ripple in wind turbines
[SAND-81-7006] p0283 N82-20193
Theoretical design study of the MSFC wind-wheel turbine
[NASA-CR-3532] p0283 N82-20667
Sound measurements and observations of the MOD-0A wind turbine generator
[NASA-CR-165856] p0283 N82-21030
Microprocessor control system for 200-kilowatt Mod-0A wind turbines
[NASA-TM-82711] p0284 N82-21710
WIND VARIATIONS
Forecasting wind power output
p0278 N82-17623
Climatic influences of residential energy consumption
p0178 N82-17742
Methods for analysis of wind ripple in wind turbines
[SAND-81-7006] p0283 N82-20193
WIND VELOCITY
The predictability of wind turbine output
p0268 A82-19121
Meteorological data basis
p0253 N82-17618
Forecasting wind power output
p0278 N82-17623
Turbulence statistics for design of wind turbine generators
[PB82-112939] p0283 N82-19792
WIND VELOCITY MEASUREMENT
Special purpose anemometry for wind power studies
p0241 A82-19120
Prospecting for wind energy - A field assessment of physical modelling
p0243 A82-26177
WINDMILLS (WINDPOWERED MACHINES)
Simulation and operations of large wind machines
p0267 A82-19052
Wind Energy Workshop, 2nd, Cranfield, Beds., England, April 1980, Proceedings
p0267 A82-19103
The Rutherford six meter variable-geometry vertical axis wind turbine
p0267 A82-19104
A review of medium-scale wind turbine generators
p0267 A82-19106
Performance measurements on the six meter diameter horizontal axis windmill
p0267 A82-19107
An extended multiple streamtube theory for vertical axis wind turbines
p0268 A82-19108
Calculation of the flow patterns and performance of wind turbines using streamline curvature methods
p0268 A82-19109
The expected cost of electricity generated by the U.S. Mod 2 windmill
p0268 A82-19114
Wind power integration studies - An overview of the Reading University programme
p0268 A82-19117
Offshore siting of wind turbine generators in U.K. waters
p0163 A82-19119
Wake structure analysis --- in full scale performance prediction for wind turbines
p0269 A82-19123
Initial test results on the 5m horizontal axis wind turbine at Swansea
p0269 A82-19124
Wind - Prototypes on the landscape --- wind turbine performance data collection of grasslands of southcentral Washington
p0163 A82-20166
An approximate theory of a rapidly rotating windmill
p0271 A82-23210
Wind tunnel tests on slow-running vertical-axis wind-rotors
p0274 A82-25997
Design and performance of a small shrouded Cretan windwheel
p0274 A82-26614
Wind energy planning considerations
[PB-80-4] p0171 N82-16496

Stress analysis and test philosophy for wind energy converter blades
[MBB-UD-300-80-O] p0277 N82-17536
Static and dynamic investigations of different towers for wind turbines
[ISD-274] p0278 N82-17637
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] p0279 N82-17639
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] p0279 N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] p0279 N82-17641
Static and dynamic investigations for the model of a wind rotor
[ISD-272] p0279 N82-17642
An extension of the local momentum theory to the rotors operating in twisted flow field
p0280 N82-18123
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
p0280 N82-18127
Dynamic and aeroelastic characteristics of complete windturbine systems
p0280 N82-18128
Microprocessor control system for 200-kilowatt Mod-OA wind turbines
[NASA-TM-82711] p0284 N82-21710

WINDPOWER UTILIZATION

Wind Energy Workshop, 2nd, Cranfield, Beds., England, April 1980, Proceedings
p0267 A82-19103
A comparison of studies of WECS economics for utility applications --- Wind Energy Conversion System
p0268 A82-19113
Storing wind energy as a liquid fuel
p0289 A82-19116
Possibilities and limitations of wind energy utilisation
p0269 A82-20140
Performance assessment and cost effectiveness of wind energy conversion systems
p0272 A82-24016
A 50 kW photovoltaic power plant coupled to the 15000 V electricity grid
p0205 A82-24147
Numerical study of wind energy characteristics over heterogeneous terrain - Central Israel case study
p0243 A82-25468
Prospecting for wind energy - A field assessment of physical modelling
p0243 A82-26177
Harnessing wind power
p0275 A82-28537
The NASA Lewis large wind turbine program
[NASA-TM-82761] p0275 N82-16495
Wind energy planning considerations
[PM-80-4] p0171 N82-16496
The wind characteristics program element
[DE82-004876] p0249 N82-16673
Implementing agreement for a program of research and development on wind energy conversion systems
[JUEL-SPEZ-108] p0278 N82-17617
Meteorological data basis
p0253 N82-17618
Assessment of technical potential: Problems, methods and results
p0177 N82-17619
Economic evaluation
p0177 N82-17620
Assessment of the potential of LWECS in the Netherlands
p0278 N82-17621
Power fluctuations: Technical and statistical aspects
p0278 N82-17622
Forecasting wind power output
p0278 N82-17623
Assured load carrying capability and capacity credit
p0278 N82-17624
Possibilities for avoiding strong variations of the electrical output power of wind energy systems
p0278 N82-17625
Meteorological aspects of the utilization of wind as an energy source
[WMO-575] p0279 N82-17646
Meteorological evaluation of wind energy potential in the coastal belt of Pakistan
p0254 N82-17753
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] p0257 N82-18840
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] p0282 N82-19681
Wind measurements from 50 m high towers in the northern German coastal region
p0261 N82-20779
Wind power utilization guide
[AD-A110337] p0285 N82-21719

WINDPOWERED GENERATORS

Simulation and operations of large wind machines
p0267 A82-19052
An impact assessment of MOD-2 wind generators on the TVA power system
p0163 A82-19053
Integration problems with large wind energy conversion systems
p0267 A82-19054
Wind Energy Workshop, 2nd, Cranfield, Beds., England, April 1980, Proceedings
p0267 A82-19103
The Rutherford six meter variable-geometry vertical axis wind turbine
p0267 A82-19104
Double output induction generator scheme for wind energy conversion
p0267 A82-19105
A review of medium-scale wind turbine generators
p0267 A82-19106
Blade shapes for horizontal axis wind turbines
p0268 A82-19110
Wind tunnel tests on the 1/30th scale model of the 60m wind turbine generator
A82-19111
System economic theory for WECS --- Wind Energy Conversion Systems
p0163 A82-19112
A comparison of studies of WECS economics for utility applications --- Wind Energy Conversion System
p0268 A82-19113
The expected cost of electricity generated by the U.S. Mod 2 windmill
p0268 A82-19114
Wind energy systems with battery storage and diesel back-up for isolated communities
p0268 A82-19115
Storing wind energy as a liquid fuel
p0289 A82-19116
Wind power integration studies - An overview of the Reading University programme
p0268 A82-19117
The Hull wind powered housing project
p0163 A82-19118
Offshore siting of wind turbine generators in U.K. waters
p0163 A82-19119
Special purpose anemometry for wind power studies
p0241 A82-19120
The predictability of wind turbine output
p0268 A82-19121
Wind data requirements for wind turbine generator design
p0268 A82-19122
Possibilities and limitations of wind energy utilisation
p0269 A82-20140
Potential for a Danish power system using wind energy generators, solar cells and storage
p0163 A82-20141
Wind - Prototypes on the landscape --- wind turbine performance data collection of grasslands of southcentral Washington
p0163 A82-20166
Interfacing wind energy conversion equipment with utility systems
p0271 A82-21148

Nesting by wind
p0271 A82-21650
A review of the impact of the environment on aerogenerator materials
p0271 A82-23063
The economics of utilizing wind power in apple cold-storage systems
p0271 A82-23652
Sudden loss of rotor blade from wind power turbine - Calculation of maximax response spectra
p0271 A82-23680
Performance assessment and cost effectiveness of wind energy conversion systems
p0272 A82-24016
Redox storage systems for solar applications
p0289 A82-24240
Diffuser-augmented wind turbine analysis --- for jet stream electrical generation applications
p0274 A82-26216
Progress on alternative energy resources
p0168 A82-26368
Harnessing wind power
p0275 A82-28537
The NASA Lewis large wind turbine program
[NASA-TM-82761] p0275 N82-16495
Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] p0276 N82-16522
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)
[PB81-239568] p0276 N82-16547
Implementing agreement for a program of research and development on wind energy conversion systems
[JUEL-SPEZ-108] p0278 N82-17617
Assessment of the potential of LWECS in the Netherlands
p0278 N82-17621
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] p0279 N82-17643
Meteorological aspects of the utilization of wind as an energy source
[WMO-575] p0279 N82-17646
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] p0280 N82-18693
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] p0281 N82-18719
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] p0281 N82-18720
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] p0281 N82-18721
Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] p0281 N82-19550
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] p0282 N82-19681
A pitch control system for large scale wind turbines
[FFA-TN-HU-2262-PT-6] p0282 N82-19695
Turbulence statistics for design of wind turbine generators
[PB82-112939] p0283 N82-19792
Methods for analysis of wind ripple in wind turbines
[SAND-81-7006] p0283 N82-20193
Theoretical design study of the MSFC wind-wheel turbine
[NASA-CR-3532] p0283 N82-20667
Electric utility value analysis methodology for wind energy conversion systems
[DE82-003573] p0283 N82-20688
Sound measurements and observations of the MOD-0A wind turbine generator
[NASA-CR-165856] p0283 N82-21030
Requirements for the provision of offshore wind data relating to wind energy conversion systems
[NEI-R-75] p0264 N82-21847

WINDSHIELDS
Fuel-efficient windshields for transport, commuter and business aircraft
p0166 A82-24304

WOOD
Feasibility study of the commercial production of ethanol from wood. Volume 2: Appendices 1-6
[DE82-002410] p0263 N82-21429

WORKING FLUIDS
The rebirth of MHD
p0270 A82-20283

X

XV-11A AIRCRAFT
A study of the suitability of the all fiberglass XV-11A aircraft for fuel efficient general aviation flight research
p0165 A82-20764

Z

ZEOLITES
Supported metal carbonyls: New catalysts for liquefaction of coal
[DE82-002659] p0258 N82-20283

ZINC
Improved efficiency of n-CdSe thin-film photoelectrodes by zinc surface treatment
p0196 A82-20464

ZINC COMPOUNDS
Photovoltaic effect in monoclinic ZnP2
p0193 A82-19895

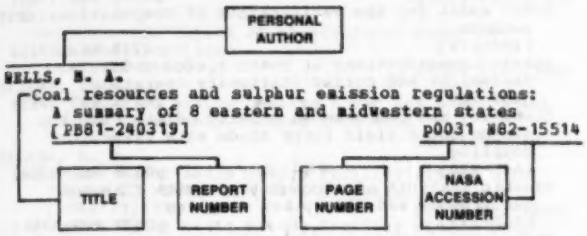
ZINC SULFIDES
CdZnS-Cu2S thin film solar cells
p0209 A82-24189

ZINC-BROMIDE BATTERIES
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] p0291 N82-16521
Development of zinc-bromine batteries for utility energy storage
[DE82-002114] p0291 N82-17635

ZIRCONIUM OXIDES
High temperature solid electrolyte fuel cell
p0273 A82-24968

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ABOBA, B.
Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] p0176 N82-17584

ABOU-SAYED, A. S.
Small business innovation research: Oil recovery enhancement by acoustic means
[PB81-243842] p0248 N82-16472

ABRAMS, M.
RADSOLVER: A computer program for calculating spectrally-dependent radiative heat transfer in solar cavity receivers
[DE82-000833] p0233 N82-21542

ABRIANI, A.
Transport and energy
[DE81-030287] p0175 N82-16946

ABRONAVAGE, M. M.
Environmental effects of the Satellite Power System Microwave Power Transmission System
p0164 A82-20644

ACUNA, M.
New concepts for static concentration of direct and diffuse radiation
p0204 A82-24133

ADAMS, D. F.
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] p0173 N82-16568

ADAMS, J. A. S.
Helium production in natural gas reservoirs
[INPE-2214-PRE/014] p0252 N82-17552

AGARWAL, R. C.
Selective blacks for enhanced photothermal solar energy conversion
p0191 A82-19296

AGNELLO, M.
Bandpass filters for thermophotovoltaic conversion systems
p0197 A82-21363

AGUILAR, J. R.
Heat pump water heater: Midway residential community
[DE82-003548] p0186 N82-20475

AHLERT, R. C.
Oil slick dispersal mechanics
[PB82-105560] p0174 N82-16610

AHLUWALIA, R. K.
Three-dimensional flow development in MHD generators at part load
[AIAA PAPER 82-0324] p0269 A82-19794

AHN, Y. K.
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 1: Text and appendices A & B
[DE82-000838] p0254 N82-17630
Research and evaluation of biomass resources/conversion/utilization systems. Biomass allocation model. Volume 2: Appendices C-E
[DE82-000839] p0254 N82-17631

AICHER, W.
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638

AIHAR, V. R.
Solar coal gasification - Plant design and economics
p0221 A82-28388

AINSLIE, J. F.
Calculation of the flow patterns and performance of wind turbines using streamline curvature methods
p0268 A82-19109

AKESSON, B.
Sudden loss of rotor blade from wind power turbine - Calculation of maximax response spectra
p0271 A82-23680

AKINS, R. E.
Methods for analysis of wind ripple in wind turbines
[SAND-81-7006] p0283 N82-20193

ALARE, M. S.
Characterization of plasma-sprayed silicon layers as possible base material for solar cell fabrication
p0206 A82-24157

ALFEROV, ZH. I.
200-W solar photoelectric system based on AlGaAs heterostructure solar cells and mirror concentrators
p0217 A82-24867

ALFREDSSON, P. H.
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] p0281 N82-18720

ALIPOUR-HAGHIGHI, F.
Radiative heat transfer in turbulent MHD channel flow
p0281 N82-19487

ALLEN, W. E.
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] p0292 N82-17648

ALLGOOD, G. O.
Potential economic benefits from process control of coal preparation plants
[DE82-000881] p0245 N82-16263

ALLISON, J. M.
Airline fuel saving through JT9D engine refurbishment
[SAE PAPER 811051] p0166 A82-24395

ALT, K.
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467

ALVAREZ, R.
Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico
p0244 A82-27693

ALVIN, M. A.
Evaluation of gasification and gas-cleanup processes for use in molten-carbonate fuel-cell power plants
[DE82-003207] p0285 N82-21723

ALYEA, F. E.
Comparative analysis of CCMHD power plants
p0270 A82-20747
AMOS, T.
Geothermal resource field development
p0167 A82-24687
ANDERSON, E. E.
Monitoring of thermal stratification of the storage tank of the Babel Lee Hall Solar-Hot-Water Facility
[DE82-002110] p0227 N82-18703
ANDERSON, G. D.
LLNL gas-stimulation program
[DE82-000802] p0245 N82-16269
ANDERSON, G. H., II
Baseline studies on the feasibility of detecting a coal/shale interface with a self-powered sensitized pick
[NASA-CR-161960] p0252 N82-17553
ANDERSON, H. L.
AIP 50th anniversary: Physics vade mecum
p0295 A82-28112
ANDERSON, K. D.
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] p0178 N82-17684
ANDERSON, M. B.
Blade shapes for horizontal axis wind turbines
p0268 A82-19110
ANDERSON, R. D.
Investigation of the use of coal refuse-fly ash compositions as highway base course material
[PB82-101940] p0295 N82-16301
ANDERSON, T. B.
Natural sunlight accelerated weathering of photovoltaic modules
p0208 A82-24183
ANDERSON, W.
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] p0171 N82-16467
ANDERSSON, B.
A nickel oxide-iron battery developed for traction purposes - Advantages and limitations
p0290 A82-24243
ANDERSSON, H. E. B.
SP-C12-301: Thermal performances of solar energy absorbers
[SP-MET-1979:2] p0236 N82-21767
ANDON, J.
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] p0175 N82-16947
ANDREEV, V. M.
200-W solar photoelectric system based on AlGaAs heterostructure solar cells and mirror concentrators
p0217 A82-24867
ANDREWS, D. C.
Communication and integration within the agriculture water, waste, and energy industries
[ERG-033] p0179 N82-18070
ANGUET, J.
Comparative study of the thermal characteristics of various solar cell module structures
p0208 A82-24178
ANLAUF, K. G.
The Nanticoke shoreline diffusion experiment, June 1978. IV. A - Oxidation of sulphur dioxide in a power plant plume. B - Ambient concentrations and transport of sulphur dioxide, particulate sulphate and nitrate, and ozone
p0168 A82-26407
ANLIKER, D. M.
Geothermal power plant corrosion experience - A global survey
p0242 A82-24297
APLEY, W. J.
Assessment of generic solar thermal systems for large power applications
[ASME PAPER 81-WA/SOL-25] p0216 A82-24623
APPELBAUM, J.
Hardware simulation of a scaled down photovoltaic power system
p0205 A82-24148
ARAUJO, G. L.
Low resistance solar cells for the first Spanish concentrating photovoltaic array
p0211 A82-24219
ARBO, J. C.
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] p0254 N82-18406
ARGYRIS, J. H.
Static and dynamic investigations of different towers for wind turbines
[ISD-274] p0278 N82-17637
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] p0279 N82-17639
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] p0279 N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] p0279 N82-17641
Static and dynamic investigations for the model of a wind rotor
[ISD-272] p0279 N82-17642
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] p0279 N82-17643
ARIENZO, M.
Scanning spectral response measurements of large grain polysilicon solar cells for process optimization
p0207 A82-24168
ARIPOV, KH. K.
200-W solar photoelectric system based on AlGaAs heterostructure solar cells and mirror concentrators
p0217 A82-24867
ARNARSSON, H.
Magmatic gases in well fluids aid the mapping of the flow pattern in a geothermal system
p0243 A82-25373
ARNSTROM, D.
State of the art of landfill gas recovery
[DE82-003261] p0260 N82-20680
ARNDT, G. D.
Cost and sizing sensitivities for the solar power satellite
p0196 A82-20642
Solid-state alternatives for the Solar Power Satellite
p0196 A82-20708
ARNDT, W.
Integrated Cu/x/S-CdS thin film solar cell panels with higher output voltages
p0209 A82-24192
ARNETT, J. C.
Natural sunlight accelerated weathering of photovoltaic modules
p0208 A82-24183
AROES, R. H.
Advanced fuel-cell development
[DE82-003007] p0285 N82-21722
ASHBY, H. A.
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] p0173 N82-16595
ATTEWELL, A.
A review of recent developments in thermal batteries
p0289 A82-24242
AUER, F.
Heating by wind
p0271 A82-21650
AZUMA, A.
An extension of the local momentum theory to the rotors operating in twisted flow field
p0280 N82-18123

B

BABELAY, E. F., JR.
Rotor testing in FY 1981
[DE81-028340] p0291 N82-16536

BACK, L. H.
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659

BACKUS, C. E.
Measurement of the spectral response of silicon solar cells under highly illuminated conditions
p0204 A82-24137

BAER, D.
Comparisons of different plate treatment and designs: An update
p0293 N82-20436

BAER, D.
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] p0228 N82-19669

BAILEY, R. H.
The impact of mixing cooling tower and power plant plumes on sulfate aerosol formation
p0169 A82-28523

BAILEY, R. E.
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] p0181 N82-18442
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] p0183 N82-18740

BAINATOV, T.
Investigation of the thermal-engineering characteristics of a solar collector with a selective coating and vacuum heat-insulation
p0217 A82-24870

BAINUM, P. M.
Space in the 1980's and beyond; Proceedings of the Seventeenth European Space Symposium, London, England, June 4-6, 1980
p0295 A82-20876

BAKER, M.
Electric vehicle refuelling infrastructure
[ERG-038] p0179 N82-18073

BAKER, Q. A.
Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol
[PB81-242562] p0247 N82-16286

BALAKRISHNAN, S.
Porous silicon oxide anti-reflection coating for solar cells
p0219 A82-25741

BALDWIN, D. H.
The NASA Lewis large wind turbine program
[NASA-TM-82761] p0275 N82-16495

BALZ, C. W.
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] p0280 N82-18704
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000689] p0281 N82-18705

BALHOUSE, B. J.
Design, fabrication, and evaluation of a spiral-flow letdown valve
[DE82-900863] p0251 N82-17508

BAMBERT, K.
Turbomachinery for small solar power plants
p0195 A82-19948

BANKSTON, C. P.
Heat transfer from combustion gases to a single row of closely spaced tubes in a swirl crossflow Stirling engine heater
p0199 A82-23659

BANNEROT, R. B.
On the weathering of thin plastic films
[ASME PAPER 81-WA/SOL-6] p0214 A82-24608

BANSAL, N. K.
Heat transfer coefficient for constant flow solar collector/storage systems
p0220 A82-26615

BANSAL, P. K.
Performance of collector/storage solar water heaters - Arbitrary demand pattern
p0191 A82-19295

BANSMER, S.
Stress analysis and test philosophy for wind energy converter blades
[SBB-UD-300-80-0] p0277 N82-17536

BARBE, M.
Theoretical and experimental study of quantum and energy conversion efficiency in CdTe p-n junctions
p0210 A82-24206

BARBER, R. E.
Rankine engine solar power generation. II - The power generation module
[ASME PAPER 81-WA/SOL-23] p0216 A82-24621

BARCHET, W. R.
The wind characteristics program element
[DE82-004876] p0249 N82-16673

BARD, A. J.
The design of semiconductor photoelectrochemical systems for solar energy conversion
[AD-A109477] p0232 N82-20674

BARIS, J.
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] p0277 N82-17615

BARLOW, R. S.
Simple predictive model for performance of desiccant beds for solar dehumidification
[DE81-023606] p0222 N82-16500

BARNERT, H.
Future fossil fuels - Their utilization and incorporation in modern energy systems
p0243 A82-27399

BARON, B. N.
The need for photovoltaic unit operations experimentation
p0203 A82-24129
Commercial-scale process design for thin-film solar cells
p0221 A82-28390

BARR, K. P.
Buffer thermal energy storage for an air Brayton solar engine
[NASA-CR-168657] p0230 N82-20642

BARTHOLOMEW, C. H.
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[DE82-000274] p0246 N82-16284

BARUCH, P.
Optical measurement of cell temperature in a solar array
p0208 A82-24182
Thermodynamic limits to photovoltaic solar energy conversion efficiency
p0211 A82-24213

BASARAN, H.
Directional solidification of MG silicon by Heat Exchanger Method /HEM/ for photovoltaic applications
p0202 A82-24116

BASOL, B. M.
Evaluation of electrodeposited cadmium telluride solar cells
p0210 A82-24205

BATTER, T. R.
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] p0255 N82-18422

BATTON, W. D.
Rankine engine solar power generation. II - The power generation module
[ASME PAPER 81-WA/SOL-23] p0216 A82-24621

BAUDRY, H.
Reliable screen-printed contacts on silicon solar cells
p0207 A82-24172

BAZHEV, K. T.
Increasing the dielectric strength of interelectrode inserts in an MHD generator channel by air injection
p0274 A82-26769

BEAVERS, J. A.
The effect of degradation of glycols on corrosion of metals used in non-concentrating solar collectors
p0213 A82-24294

BECK, R.
Monitoring to detect groundwater problems resulting from enhanced oil recovery
[PB82-119074] p0176 N82-17584

BECK, S. L.
Fault and joint geometry at Raft River Geothermal Area, Idaho
[DE82-003942] p0264 N82-21810

BECKER, F. E.
Open-cycle vapor compression heat pump
[PB82-110503] p0181 N82-18553

BEDAIR, S. M.
Growth and characterization of cascade solar cells
p0204 A82-24135

BEDINGER, A. F. G.
Performance of a parallel solar heat pump system
p0199 A82-23656

BEGRIN, G.
Power conditioning unit for photovoltaic power systems
p0213 A82-24232

BEISHLINE, R. R.
Role of the hydrogen donor solvent in coal hydroliquefaction
[DE82-002716] p0262 N82-21283

Processes for reducing emissions of particulates and oxides of sulfur and nitrogen for various coal utilization alternatives
p0242 A82-23950

ZIMAN, G. M.
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] p0258 N82-19674

Geothermal probabilistic cost study
[NASA-CR-168757] p0285 N82-21756

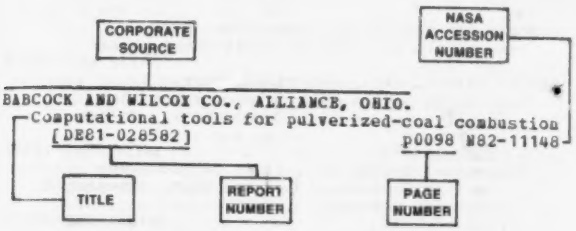
ZIMMERMAN, W. F.
Experimental simulation of latent heat thermal energy storage and heat pipe thermal transport for dish concentrator solar receiver
[ASME PAPER 81-WA/SOL-34] p0217 A82-24628

ZOOK, J. D.
Evaluation of silicon-on-ceramic material for low-cost solar cells
p0206 A82-24154

ZUNDIECK, J. P.
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] p0276 N82-16525

CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing



The title of the document is used to provide a brief description of the subject matter. The page number and NASA or AIAA accession number are included in each entry to assist the user in locating the abstract. If applicable, a report number is also included as a aid in identifying the document.

A

AAI CORP., BALTIMORE, MD.
Solar production of industrial process hot water. Phase 3: Operation and evaluation of the York Building Products Company, Incorporated. Solar Facility
[DE82-003000] p0236 N82-21762

ACUREX CORP., MOUNTAIN VIEW, CALIF.
High temperature durable catalyst development p0270 A82-20739
Solar energy for pollution control
[PB82-116658] p0228 N82-18764
Advanced pulverized-coal combustor for control of NO sub x emissions
[DE82-002653] p0260 N82-20695

ADVANCED ENGINEERING LAB., SALISBURY (AUSTRALIA).
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] p0282 N82-19681

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Influence of correlations and computational methods on the prediction of overall efficiency p0276 N82-17180
Helicopter Propulsion Systems
[AGARD-CP-302] p0277 N82-17203

AEG-TELEFUNKEN, WEDEL (WEST GERMANY).
Development and tests of experimental solar generators for concentrating systems
[BMFT-FB-T-81-193] p0228 N82-18718

AERONAUTICAL RESEARCH INST. OF SWEDEN, STOCKHOLM.
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] p0281 N82-18719
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] p0281 N82-18720
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] p0281 N82-18721
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] p0257 N82-18840
A pitch control system for large scale wind turbines
[FFA-TN-HU-2262-PT-6] p0282 N82-19695

AIR FORCE ENGINEERING AND SERVICES CENTER, GOLDEN, COLO.
State-of-the-art review of solar ponds
[AD-A109038] p0232 N82-20671
State-of-the-art review of low-cost collector technologies
[AD-A109039] p0232 N82-20672

AIR FORCE ENGINEERING AND SERVICES CENTER, TYNDALL AFB, FLA.
The effect of fuel composition on groundfall from aircraft fuel jettisoning
[AD-A110305] p0262 N82-21424

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.
A procedure for determining the resource utilization potential of coal ash
[AD-A109877] p0261 N82-21111

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.
Life test of 50 AH NiH2 battery p0293 N82-20441

AIR PRODUCTS AND CHEMICALS, INC., ALLENTOWN, PA.
Gas/slurry flow in coal liquefaction processes (fluid dynamics in 3-phase flow columns)
[DE82-002562] p0260 N82-20474

AIRESEARCH MFG. CO., PHOENIX, ARIZ.
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] p0275 N82-16485
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] p0276 N82-16937

AIRESEARCH MFG. CO., TORRANCE, CALIF.
Buffer thermal energy storage for an air Brayton solar engine
[NASA-CR-168657] p0230 N82-20642
Steam Rankine Solar Receiver, phase 2
[NASA-CR-168656] p0230 N82-20643

ALABAMA ENERGY MANAGEMENT BOARD, MONTGOMERY.
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] p0172 N82-16537

AMAX EXPLORATION, INC., WHEAT RIDGE, COLO.
Tuscarora area, Nevada: Geothermal reservoir assessment case history, northern basin and range
[DE82-001328] p0253 N82-17629

AMERICAN ASSOCIATION OF COMMUNITY AND JUNIOR COLLEGES, WASHINGTON, D.C.
Alcohol fuels production, manpower, and education: Where do two-year colleges fit
[DE82-001929] p0263 N82-21436

AMERICAN FARMERS' MARKETING COOPERATIVE, MAYFIELD, KY.
Feasibility study for alternative fuels production: Biomass technology. Volume 2: Addendum, economic and financial analysis
[DE82-000030] p0250 N82-17397

AMES LAB., IOWA.
Advanced research and technology direct utilization: Recovery of minerals from coal fly ash. Fossil energy program
[DE82-003133] p0261 N82-20698

AMOCO OIL CO., NAPERVILLE, ILL.
Coal-liquefaction catalyst development
[DE82-000137] p0249 N82-17314

APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.
Design and system level performance of a battery charge regulator for solar photovoltaic powered aids to navigation
[PB82-106824] p0292 N82-17648
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] p0182 N82-18732

APPLIED SOLAR ENERGY CORP., CITY OF INDUSTRY, CALIF.
Current status of solar cell performance of unconventional silicon sheets
p0205 A82-24150
Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] p0226 N82-18689
ARGONNE NATIONAL LAB., ILL.
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] p0170 N82-16259
Analysis of state-energy-program capabilities
[DE82-001963] p0172 N82-16523
Design, construction, and initial operation of the ANL research
[DE82-001961] p0223 N82-16528
Flue-gas desulfurization: Review of selected commercial and advanced technologies
[DE82-001960] p0172 N82-16559
Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] p0173 N82-16566
MHD Heat and Seed Recovery Technology Project
[DE82-001608] p0276 N82-16900
Technical support for open-cycle MHD program
[DE82-001955] p0276 N82-16901
Transport and energy
[DE81-030287] p0175 N82-16946
Sampling and analysis of hydrocarbons in combustion gases
[DE82-002511] p0249 N82-17317
Customer attitudes toward thermal-energy-storage heating
[DE82-003010] p0177 N82-17634
Possibility for energy conservation in transporting freight by truck
[DE81-030072] p0179 N82-18071
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] p0280 N82-18704
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000689] p0281 N82-18705
Development and testing of high-temperature acoustic Doppler flowmeter
[DE82-003013] p0260 N82-20492
State of the art of landfill gas recovery
[DE82-003261] p0260 N82-20680
Economic assessment of battery storage in solar photovoltaic applications
[DE82-004045] p0233 N82-21721
Advanced fuel-cell development
[DE82-003007] p0285 N82-21722
ARIZONA SOLAR ENERGY COMMISSION, PHOENIX.
Evaluation of geothermal energy in Arizona
[DE82-000127] p0264 N82-21761
ARIZONA STATE UNIV., TEMPE.
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] p0228 N82-19669
Evaluation of geothermal energy in Arizona
[DE82-000127] p0264 N82-21761
ARIZONA UNIV., TUCSON.
Choice and Utilization of Energy-using Durables
[DE81-904228] p0171 N82-16513
Off-peak power use in passive solar homes: Performance, monitoring, and analysis of periodic heating and cooling in high mass homes
[DE82-900874] p0233 N82-21727
Evaluation of geothermal energy in Arizona
[DE82-000127] p0264 N82-21761
ARMY COLD REGIONS RESEARCH AND ENGINEERING LAB., HANOVER, N. H.
Electromagnetic subsurface measurements
[AD-A108192] p0256 N82-18469
Site investigations and submarine soil mechanics in polar regions
[AD-A108269] p0256 N82-18790

AUTOMATION INDUSTRIES, INC., SILVER SPRING, MD.
Solar design and installation experience: An overview of results from the National Solar Data Network
[DE82-001657] p0235 N82-21738
AVCO-EVERETT RESEARCH LAB., MASS.
MHD channel performance for potential early commercial MHD power plants
p0270 A82-20750
AVCO LYCOMING DIV., STRATFORD, CONN.
Aerodynamic components for small turboshaft engines
p0277 N82-17211

B

BABCOCK AND WILCOX CO., BARBERTON, OHIO.
Comparative analysis of CCMHD power plants
p0270 A82-20747
BADGER ENERGY, INC., CAMBRIDGE, MASS.
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] p0227 N82-18702
Conceptual design of a solar cogeneration facility industrial process heat, category A. Executive summary
[DE82-001663] p0234 N82-21733
BALL AEROSPACE SYSTEMS DIV., BOULDER, COLO.
Preliminary study on the use of lasers for the transmission of power
p0287 N82-18579
BATTELLE COLUMBUS LABS., OHIO.
Synthetic-fuel aromaticity and staged combustion
[DE82-002453] p0259 N82-20335
BATTELLE PACIFIC NORTHWEST LABS., RICHLAND, WASH.
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] p0223 N82-16527
Nuclear waste management
[DE82-001605] p0174 N82-16845
Analysis of federal incentives used to stimulate energy consumption
[DE81-031928] p0174 N82-16935
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] p0255 N82-18422
BECHTEL NATIONAL, INC., SAN FRANCISCO, CALIF.
Comparative analysis of CCMHD power plants
p0270 A82-20747
BELL TELEPHONE LABS., INC., MURRAY HILL, N. J.
Effects of the mode of storage on the capacity fading of the sintered nickel electrodes
p0293 N82-20431
Chargeability of nickel electrodes studied by optical microscopy
p0293 N82-20438
BETHLEHEM STEEL CO., PA.
Coal-gasification study for Bethlehem Steel Corporation's Sparrows Point facility
[DE82-002570] p0263 N82-21435
BEVILACQUA (O. M.) AND ASSOCIATES, OAKLAND, CALIF.
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] p0170 N82-16259
BHARAT HEAVY ELECTRICALS LTD., BHOPAL (INDIA).
Seminar: Energy conservation. Role of power capacitors: Concepts and Policy Issues
[PB81-247967] p0170 N82-16359
BIONETICS CORP., HAMPTON, VA.
Sound measurements and observations of the MOD-OA wind turbine generator
[NASA-CR-165856] p0283 N82-21030
BOEING AEROSPACE CO., KENT, WASH.
Microwave power - An energy transmission alternative for the year 2000
p0287 A82-20640
BOEING ENGINEERING AND CONSTRUCTION, SEATTLE, WASH.
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] p0222 N82-16492
BONNEVILLE POWER ADMINISTRATION, PORTLAND, OREG.
Heat pump water heater: Midway residential community
[DE82-003548] p0186 N82-20475
BOOZ-ALLEN AND HAMILTON, INC., BETHESDA, MD.
Assessment of emerging energy sources
[DE82-900318] p0248 N82-16519

Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview

Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] p0222 N82-16490

SPRINGBORN LABS., INC., ENFIELD, CONN.
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-160671] p0231 N82-20649
SRI INTERNATIONAL CORP., MENLO PARK, CALIF.
Exploratory study of coal-conversion chemistry
[DE82-001104] p0258 N82-20281
Feasibility study on new processes for fuel from biomass
[DE82-002024] p0259 N82-20332
STANFORD UNIV., CALIF.
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002171] p0287 N82-17448
Preparation and properties of evaporated CdTe films compared with single crystal CdTe
[DE82-000228] p0236 N82-22073
STATE UNIV. OF NEW YORK, STONY BROOK.
Coal waste artificial reef program, phase 3. Volume 1: Summary report
[DE82-900854] p0187 N82-20699
STATENS PROVNINGSANSTALT, BORRAS (SWEDEN).
SP-C12-[illegible]: Thermal performances of solar energy absorbers
[SP-MET-1979:2] p0236 N82-21767
STEARNS-ROGER CORP., DENVER, COLO.
Bi-Gas pilot plant operation
[DE82-000223] p0245 N82-16271
STEWART (COULTER) AND ASSOCIATES, INC., DAVIS, CALIF.
Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030968] p0175 N82-16942
STOCKHOLM UNIV. (SWEDEN).
Increase of atmospheric CO2 and possible climatic changes
p0178 N82-17763
STONEHART ASSOCIATES, INC., MADISON, CONN.
Preparation and evaluation of advanced electrocatalysts for phosphoric acid fuel cells
[NASA-CR-165594] p0277 N82-17615
STRUCTURAL COMPOSITES INDUSTRIES, INC., AZUSA, CALIF.
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] p0280 N82-18693
STUTTGART UNIV. (WEST GERMANY).
Static and dynamic investigations of different towers for wind turbines
[ISD-274] p0278 N82-17637
Rotor model for the verification of computational methods
[ISD-275] p0279 N82-17638
Static investigations of rotor blades under deadweight and during stationary operation
[ISD-269] p0279 N82-17639
Stability and response to gravity of the flap lag motion for a rigid rotor blade with flap-pitch coupling
[ISD-270] p0279 N82-17640
Dynamic analysis of a rotor blade with flap and lag freedom and flap-pitch coupling
[ISD-271] p0279 N82-17641
Static and dynamic investigations for the model of a wind rotor
[ISD-272] p0279 N82-17642
Loading cycles and material data for the layout of a wind turbine of special hub concept
[ISD-273] p0279 N82-17643
Heat storage by means of thermal dissociation reactions. Storage systems and materials
[IKE-5-213] p0294 N82-21766
SYDKRAFT AB (SYDSVENSKA KRAFT- OCH VARME AKTIEBOLAGET), MALMOE (SWEDEN).
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] p0281 N82-18721
SYSTEMS APPLICATIONS, INC., SAN RAFAEL, CALIF.
NO sub x regulatory changes and the electric utility: A guidance manual for air quality modeling in planning, siting, and emissions control
[DE82-900966] p0189 N82-21786
SYSTEMS TECHNOLOGY CORP., XENIA, OHIO.
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] p0257 N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] p0257 N82-19385

TECHNICAL RESEARCH CENTRE OF FINLAND, ESPOO.
Energy properties in urban building stock
[VTT-RR-1/81] p0185 N82-19696
TECHNICAL UNIV. OF DENMARK, COPENHAGEN.
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle
[DE82-901186] p0291 N82-16526
TECHNISCHE HOCHSCHULE, AACHEN (WEST GERMANY).
Railway transport of low temperature heat from large power stations by means of alternative heat carriers and water
[BMFT-FB-T-81-145] p0288 N82-18710
TECHNISCHE HOCHSCHULE, HANOVER (WEST GERMANY).
Wind measurements from 50 m high towers in the northern German coastal region
p0261 N82-20779
TECHNISCHE HOGESCHOOL, DELFT (NETHERLANDS).
Wind energy planning considerations
[PR-80-4] p0171 N82-16496
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] p0182 N82-18708
TECHNISCHE UNIV., AACHEN (WEST GERMANY).
Preliminary investigations on the injection of a coal-oil-slurry into the blast furnace
[BMFT-FB-T-81-221] p0251 N82-17455
TENNESSEE TECHNOLOGICAL UNIV., COOKEVILLE.
Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] p0244 N82-16205
TENNESSEE VALLEY AUTHORITY, MUSCLE SHOALS, ALA.
Definitive SOx control process evaluations: Aqueous carbonate and Wellman-Lord (acid, Allied Chemical, and Resox) FGD (Flue Gas Desulfurization) technologies
[PB82-118670] p0178 N82-17684
TERRA TEK, INC., SALT LAKE CITY, UTAH.
Small business innovation research: Oil recovery enhancement by acoustic means
[PB81-243842] p0248 N82-16472
TEXAS INSTRUMENTS, INC., DALLAS.
Development of a solar-energy system
[DE81-030531] p0225 N82-17633
TEXAS UNIV. AT ARLINGTON.
The design of semiconductor photoelectrochemical systems for solar energy conversion
[AD-A109477] p0232 N82-20674
TEXTRON BELL HELICOPTER, FORT WORTH, TEX.
Helicopter propulsion systems: Past, present and future
p0277 N82-17204
THERMO ELECTRON CORP., WALTHAM, MASS.
Open-cycle vapor compression heat pump
[PB82-110503] p0181 N82-18553
TOKYO UNIV. (JAPAN).
An extension of the local momentum theory to the rotors operating in twisted flow field
p0280 N82-18123
TOUCHE, ROSS AND CO., WASHINGTON, D.C.
Feasibility study for alternate fuel production from biomass resources
[DE82-002616] p0263 N82-21430
TRANSPORTATION SYSTEMS CENTER, CAMBRIDGE, MASS.
An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100538] p0175 N82-16953
TRW, INC., MCLEAN, VA.
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] p0291 N82-16427
TRW, INC., REDONDO BEACH, CALIF.
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] p0183 N82-18753

Cycling characteristics on NiH2 cells in standard and daily energy balance Leo orbits
p0293 N82-20442
Evaluation of continuous oxydesulfurization processes
[DE82-002127] p0261 N82-20697
TRW, INC., RESEARCH TRIANGLE PARK, N.C.
Performance evaluation of an industrial spray dryer for SO2 control
[PB82-110701] p0177 N82-17669

U

UNITED ENGINEERS AND CONSTRUCTORS, INC., PHILADELPHIA, PA.
Preliminary engineering design and cost of Advanced Compressed-Air Storage (ACAS) A-5 hybrid
[DE82-900339] p0294 N82-21763
UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE, GENEVA (SWITZERLAND).
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)

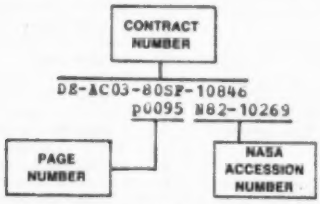
CONTRACT NUMBER INDEX

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the *IAA* or *STAR* section.

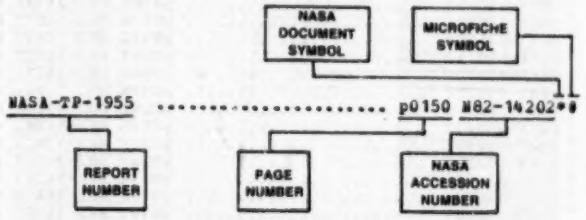
REPORT/ACCESSION NUMBER INDEX

Typical Report / Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the actual page where the citation may be located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley

COLORADO
University of Colorado, Boulder

DISTRICT OF COLUMBIA
Library of Congress

GEORGIA
Georgia Institute of Technology, Atlanta

ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge

MISSOURI
Linda Hall Library, Kansas City

NEW YORK
Columbia University, New York

OKLAHOMA
University of Oklahoma, Bizzell Library

PENNSYLVANIA
Carnegie Library of Pittsburgh

WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library

COLORADO
Denver Public Library

CONNECTICUT
Hartford Public Library

MARYLAND
Enoch Pratt Free Library, Baltimore

MASSACHUSETTS
Boston Public Library

MICHIGAN
Detroit Public Library

MINNESOTA
Minneapolis Public Library and Information Center

NEW JERSEY
Trenton Public Library

Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library

OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library

TEXAS
Dallas Public Library
Fort Worth Public Library

WASHINGTON
Seattle Public Library

WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

ACCESSION NUMBER RANGES

Accession numbers cited in this Supplement fall within the following ranges.

STAR (N-10000 Series)	N82-22141 - N82-28242
IAA (A-10000 Series)	A82-28539 - A82-38102

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

NASA SP-7043(35)

ENERGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

Issue 35

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced between July 1 and September 30, 1982 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

This supplement is available as NTISUB/026/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $15.00 domestic; $30.00 foreign.

INTRODUCTION

This issue of *Energy: A Continuing Bibliography with Indexes* (NASA SP-7043(35)) lists 881 reports, journal articles, and other documents announced between July 1, 1982 and September 30, 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of this continuing bibliography was published in May 1974.

The coverage includes regional, national and international energy systems; research and development on fuels and other sources of energy; energy conversion, transport, transmission, distribution and storage, with special emphasis on use of hydrogen and of solar energy. Also included are methods of locating or using new energy resources. Of special interest is energy for heating, lighting, for powering aircraft, surface vehicles, or other machinery.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The entries are arranged in eight major categories, with *IAA Entries* preceding *STAR Entries* in each category. The citation, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR* including the original accession numbers from the respective announcement journals. This procedure, which saves time and money accounts for the slight variation in citation appearances.

Six indexes -- subject, personal author, corporate source, contract number, report number, and accession number -- are included.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page viii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the category sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

MARKET ASSESSMENT OF PHOTOVOLTAIC POWER SYSTEMS FOR AGRICULTURAL APPLICATIONS IN MEXICO

William Steigelmann and Itil Asmon (ARD, Inc.) Jul. 1981 135 p refs

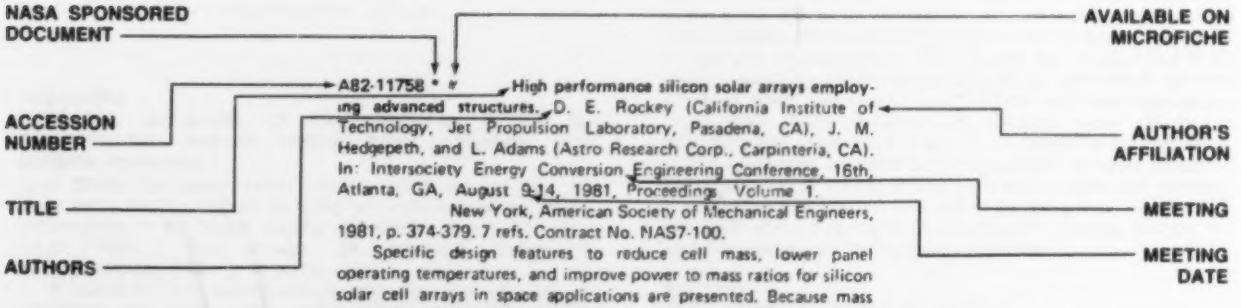
(Contracts DEN3-180; DE-AI01-79ET-20485)

(NASA-CR-165441; DOE/NASA/0180-3) Avail. NTIS HC A07/MF A01 CSCL 10A

The first year of cost-competitiveness, the market potential, and the environment in which PV systems would be marketed and employed were examined. Market elements specific to Mexico addressed include: (1) useful applications and estimates of the potential market for PV systems; (2) power requirements and load profiles for applications compatible with PV usage; (3) operating and cost characteristics of power systems that compete against PV; (4) national development goals in rural electrification and rural services, technology programs and government policies that influence the demand for PV in Mexico; (5) financing mechanisms and capital available for PV acquisition; (6) channels for distribution, installation and maintenance of PV systems; and (7) appropriate methods for conducting business in Mexico.

A.R.H.

TYPICAL CITATION AND ABSTRACT FROM *IAA*



A82-11758 * # **High performance silicon solar arrays employing advanced structures.** D. E. Rockey (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), J. M. Hedgepeth, and L. Adams (Astro Research Corp., Carpinteria, CA). In: Intersociety Energy Conversion Engineering Conference, 16th, Atlanta, GA, August 9-14, 1981, Proceedings. Volume 1. New York, American Society of Mechanical Engineers, 1981, p. 374-379. 7 refs. Contract No. NAS7-100.

Specific design features to reduce cell mass, lower panel operating temperatures, and improve power to mass ratios for silicon solar cell arrays in space applications are presented. Because mass constraints limit payload capacity for launch into GEO, graphite/epoxy structures combined with high performance Si cells are needed to deliver a power/mass ratio of 265 W/kg, notably for Solar Electric Propulsion systems, compared with existing level of 65 W/kg. Shallow diffusion and back surface field cell technology have raised cell efficiencies to 15%, with a back emissivity of 1.64. Structural design requirements comprise Shuttle interface compatibility, full ground test capability, low mass, and high stiffness. Three array alternatives are discussed, and the STACBEAM configuration, which consists of a triangular truss and a piston deployer with folding accomplished on simple hinges, provides 0.2 Hz stiffness and achieves the design power/mass goals.

ENERGY

A Continuing Bibliography (Issue 35)

OCTOBER 1982

01

ENERGY POLICIES AND ENERGY SYSTEMS ANALYSIS

Includes energy requirements, energy conservation, and environmental impacts of energy systems.

A82-29425
THE SIGNIFICANCE OF COAL AND OTHER SOLID FUELS FOR THE REQUIREMENTS OF THE ENERGY ECONOMY. I - THE PRESENT AND FUTURE SIGNIFICANCE OF SOLID AND OTHER FUELS FOR THE WORLD AND PARTICULARLY WESTERN EUROPE [BEDEUTUNG DER STEINKOHLE UND ANDERER FESTBRENNSTOFFE FUER DIE VERSORGUNG DER ENERGIEWIRTSCHAFT. I - BISHERIGE UND ZUKUENFTIGE BEDEUTUNG FESTER UND ANDERER BRENNSTOFFE FUER DIE WELT UND INSBESONDERE WESTEUROPA]
R.-R. JAKISCH and C. HEMPEL (Ruhrkohle International GmbH, Essen, West Germany) Brennstoff-Waerme-Kraft, vol. 34, Mar. 1982, p. 105-116. In German.

The importance of various energy sources during the last few decades is discussed, and predictions are made for their importance in the eighties and nineties. Coal in the West European market is discussed in relation to other energy carriers with emphasis on the probable areas of demand in the years from 1980 to 2000. Effects of the 1973 oil crisis on the structure of the primary energy consumption up to 1980 are presented. It is predicted that by the year 2000, the world energy consumption of coal will climb to at least 4.4 billion tons of bituminous coal per year. D.L.G.

A82-29537#
SPECTRAL SCANNING OF EXPERIMENTAL PLOTS OF SO2-AFFECTED WINTER WHEAT AND SOYBEANS FOR MISSION PLANNING
C. D. SAPP (Tennessee Valley Authority, Chattanooga, TN) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 101-114. refs

A series of TVA experiments is described wherein plots of soybeans and winter wheat plants were grown to the critical seed-filling stage of development, exposed to controlled doses of SO2, observed systematically for foliar effects, then scanned row by row with a spectroradiometer. The spectral curves were statistically analyzed to determine the changes in spectral reflectance that occur after plants are stressed by SO2 emissions. For soybeans, the affected subplots had higher visible reflectance, lower IR reflectance, and a lower IR/red ratio. Variance analysis showed significant differences in IR and IR/red reflectance between chlorotic soybeans and unaffected ones; and in red reflectance, IR reflectance and IR/red ratio between necrotic and unaffected ones. Since the wheat subplots showed no chlorosis, analysis of reflectance data concentrates on necrosis, which showed a significant difference in red, IR, and IR/red reflectance between classes of differentially injured wheat. C.D.

FUEL EFFICIENT AND MACH 0.8, TOO
W. E. ARNDT (Lockheed-Georgia Co., Marietta, GA) Lockheed Horizons, Spring 1982, p. 26-34.

Principles of propfan technology and problems which must be solved for the introduction of propfans to production aircraft are discussed. The Hamilton-Standard concept, introduced in 1975, includes thin profile, swept-back multiple blades (8-10) suitable for cruise speeds of Mach 0.8 with 15-20% less fuel consumption than currently available with turbofans. Studies in loading fatigue are necessary to determine if the cyclic loading caused by high-speed swept back wings will adversely affect the integrity of composite-material propfans. Additional areas of concern are effects on the aerodynamic efficiency of aircraft induced by the presence of multibladed propfans, and the necessity of adding noise-reducing materials to maintain satisfactory cabin noise levels is a potential weight penalty factor. NASA trials on a converted Jetstar are described, along with possible techniques to reduce near- and farfield noise levels. M.S.K.

THE BR/CL RATIO IN ATMOSPHERIC AEROSOLS AS A TRACER OF AUTOMOBILE POLLUTION [LE RAPPORT BR/CL DANS L'AEROSOL ATMOSPHERIQUE COMME TRACEUR DE LA POLLUTION AUTOMOBILE]
C. ELICHEGARAY, R. VIE LE SAGE, B. GRUBIS, and J. L. COLIN (Paris VII, Universite, Paris, France) Pollution Atmospherique, vol. 24, Jan.-Mar. 1982, p. 37-41. In French. refs

The use of antiknock additives in automotive fuels has been found to cause an increase in exhaust emissions of chlorine and bromine as well as lead. The present paper examines the potential of the Br/Cl ratio as an indicator of the contribution of automobiles to atmospheric chlorine levels. Review of the atmospheric chemistry of aerosols of automotive origin reveals the value of the Br/Cl ratio to reflect the relative proportions of the elements in gasoline additives, which range from 0 to 2.25. These values are significantly more than those expected in aerosols from natural or nonautomotive anthropogenic sources. A means for the calculation of the automobile contribution to atmospheric aerosols based on the assumption of the maximum Br/Cl ratio in automotive exhausts is presented and applied to a set of sampling data acquired for Paris, for which it is found that automotive sources account for about 14 percent of the particulate chlorine. A.L.W.

PRINCIPLES OF EFFICIENT ENERGY USE AT INTERFLUG [GRUNDSAETZE DER RATIONELLEN ENERGIEANWENDUNG BEI DER INTERFLUG]
K. HENKES (Ministerium fuer Verkehrswesen; Gesellschaft fuer Internationalen Flugverkehr mbH, Berlin, East Germany) Technisch-oekonomische Information der zivilen Luftfahrt, vol. 17, no. 5-6, 1981, p. 214-220. In German.

Attention is given to the problems of efficient energy use in civil aviation, taking into account conditions in the German Democratic Republic and its Interflug airline. It is pointed out that 98% of the energy requirements of Interflug are met with the aid of energy carriers produced from petroleum. These energy carriers are almost exclusively aircraft fuels, and 50% of the fuel is obtained in refueling operations conducted in foreign countries. Interflug has, therefore, been concerned with the implementation of

approaches for reducing the performance-related fuel consumption for its aircraft. A reduction in performance-related fuel consumption of 10-16% for each aircraft type could be achieved. This reduction is partly the result of organizational steps leading to a more efficient utilization of the aircraft, and partly the result of a number of suitable technical-technological procedures. Plans are discussed for a further reduction of the requirements for fuel and electric power by a variety of different approaches. G.R.

DUST-EMISSION MEASUREMENTS IN TWO POWER PLANTS [STAUB-EMISSIONS-MESSUNGEN IN ZWEI KRAFTWERKEN]
H. SCHNITZLER Staub - Reinhaltung der Luft, vol. 42, Jan. 1982, p. 15-21. In German. Research supported by the Bundesministerium des Innern. refs

Various emission measuring instruments for continuous and quasi-continuous recording of the dust concentration in waste gases were tested in coal-fired and oil-fired power plants. New methods of the acquisition, processing, and evaluation of measured values are described. The average dust concentration in waste gases amounted to 100-135 mg/cu m in the coal-fired plant and about 14 mg/cu m in the oil-fired plant, based on standard conditions. Examples are given of dust emission controls of several days' duration. C.D.

SOLUTIONS TO THE AVIATION FUEL PROBLEM
W. M. HAWKINS (Lockheed Aircraft Corp., Burbank, CA) In: International aerospace review; Proceedings of the First International Aerospace Symposium, Le Bourget, Seine-Saint-Denis, France, June 2, 3, 1981. New York, American Institute of Aeronautics and Astronautics, 1982, p. 165-180.

Projections of the duration of availability of petroleum-derived jet fuels are reviewed and candidates for alternative fuels are discussed. World production of crude oil is expected to begin to irreversibly decline in the 1990s, and the design of new aircraft which could use alternative fuels is noted to depend strongly on the new fuels which have yet to be chosen. Any new fuel supply will be required to have a low producibility cost, be continuously replenishable, be available for multiple uses, be easy to handle and transport, safe to use, cause no major changes in equipment, and be minimally polluting. An additional consideration is that the fuel could be derived where used to avoid the political problems inherent in current fuel supplies. Liquid hydrogen is found to be the best solution because of light weight, water as the source, available everywhere, and costs less than shale or coal-derived fuels. M.S.K.

SPACE AND ENERGY - A GLOBAL VIEWPOINT
D. E. KOELLE (Messerschmitt-Boelkow-Blohm GmbH, Munich, West Germany) In: International aerospace review; Proceedings of the First International Aerospace Symposium, Le Bourget, Seine-Saint-Denis, France, June 2, 3, 1981. New York, American Institute of Aeronautics and Astronautics, 1982, p. 249-260. refs

Possible contributions by organizations involved with space technology to the alleviation of a projected catastrophic world energy crisis which may begin around the year 2000 are discussed. Space disposal of long-lived radionuclides from burnt-out reactor rods is suggested as a viable means to reducing the time required for the remaining fission products which would be geologically imbedded to decay to background levels in 20 yr. An additional cost to consumers of 0.1 cent/kWh is projected using a ballistic missile to remove all the high level wastes from the U.S. and European nuclear power plants. Satellite solar power systems are calculated to depend on a reduction in cost/kWh from 20-50 dollars to 0.50 cents and two orders of magnitude in transportation to attain economic viability. M.S.K.

ENERGY EFFICIENT ENGINE /E3/ TECHNOLOGY STATUS
W. B. GARDNER (United Technologies Corp., Commercial Products Div., East Hartford, CT) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 10 p. refs
(AIAA PAPER 82-1052)

The Energy Efficient Engine (EEE) Technology program has the objective to establish the technology readiness of components and subsystems which could be utilized in turbofan engines in the late 1980's, early 1990's. A description is presented of the results of the supporting technology programs, the status and results of the component verification testing to date, and the possibilities for employing the developed technology in connection with the design of an energy efficient, environmentally acceptable engine for the 1990's. Attention is given to aspects of shroudless fan fabrication, the diffuser/combustor model, a combustor sector rig, an uncooled high-pressure turbine rig, supersonic high-pressure turbine cascades, a high-pressure turbine cooling model, aspects of high-pressure turbine leakage control, and subsonic cascades. TECHNOLOGY ADVANCEMENTS FOR ENERGY EFFICIENT AIRCRAFT ENGINES
R. W. BUCY (General Electric Co., Cincinnati, OH) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 9 p. refs
(AIAA PAPER 82-1051)

The rapid increase in fuel costs since 1973 has been a major influence on the economics of the commercial aircraft fleet. The development of more fuel efficient aircraft engines has, therefore, become an important priority for aircraft engine manufacturers and NASA. Major goals of a program designed to achieve better fuel efficiency include, relative to the CF6-50C reference engine, 12% reduction in installed Specific Fuel Consumption (SFC), 5% reduction in Direct Operating Costs (DOC), and 50% reduction in the SFC deterioration rate in commercial service. A description is presented of the progress made, in connection with the considered program, over the past four and one-half years. Attention is given to component and engine development tests, the fan component test, high pressure compressor component tests, combustor component tests, high and low pressure turbine component tests, and overall systems integration. G.R.

PROPELLERS COME FULL CIRCLE
R. DEMEIS High Technology, vol. 2, July-Aug. 1982, p. 16-18.

The use of the propfan in future aircraft is discussed. With the large external fan generating more thrust per engine revolution than a small internal fan, propfan jets could achieve fuel savings as high as 25 percent in commercial operations and 35 percent for military patrol missions, while retaining the vibration-free operation and mechanical simplicity of turbojet engine cores. The propfan would have as many as 12 stiff composite blades that would be highly swept, thinner, and shorter than conventional blades in order to reduce noise and drag. The gearbox would be reintroduced to permit operation at maximum efficiency with the best blade rotation speed for the airflow conditions. A double-wall insulated fuselage and shaped wing-nacelle interface would deal with internal aircraft noise and propfan-swept wing integration problems. The development of the propfan may depend on continued government funding to NASA's program. C.D.

A REVIEW OF UNITED KINGDOM WINDPOWER
M. N. MILLAR (Napier College of Commerce and Technology, Edinburgh, Scotland) International Journal of Ambient Energy, vol. 3, Jan. 1982, p. 35-46

A historical review and an assessment of current U.K. wind energy installations and plans are presented. A 100 kW wind turbine was erected in 1951 in Scotland and operated into the late 1950's. Another machine, the Enfield-Andreau 100 kW machine was built and tested at St. Albans in 1955. It featured hollow blades with airholes which created a pneumatic force for driving a generator located in the tower base. Finally, a 100 kW unit was established on the Isle of Man in 1960. A 22 kW Danish turbine has recently been installed on South Ronaldson Island and serves to create experience with grid interconnected WECS. The British government is constructing a 250 kW prototype and model for a 3 MW, dual-blade, upwind WECS with a 151 ft hub height. Research is continuing on a 130 kW Musgrove VAWT with variable geometry. A total of 21 experimental machines existed in the U.K. in 1981. M.S.K.

A SIGNIFICANT ROLE FOR COMPOSITES IN ENERGY-EFFICIENT AIRCRAFT
G. A. ALTHER (Composite Aircraft Corp., Midland, TX) In: Reinforced Plastics/Composites Institute, Annual Conference, 36th, Washington, DC, February 16-20, 1981, Preprints. New York, Society of the Plastics Industry, Inc., 1981 (Session 12-D). 4 p. refs

The structural advantages and a 10-year in-service history of the Windecker Eagle all fiberglass/epoxy airframes are discussed. In these airframes, the skins are composed of one or more plies of nonwoven unidirectional fiber cloth, the wing spars and other laminates are also composed of multiple oriented plies of fiber cloth, and a ply of nonwoven 0/90 cloth is used for the outermost plies of the laminates and skins to enhance the finish. Stiffening for the skin laminates is provided by composite laminate stringers varying in thickness from 1/4 to 1 inch spaced with polyurethane foam. The fuselage is molded in one-piece halves complete with vertical tail, wing root, and stabilizer junctures, and bonded together at mating flanges along the top and bottom body lines. It is shown that apart from aerodynamics and energy efficiency, the all fiberglass/epoxy airframe provides greater strength, toughness, and redundancy compared to aluminum for equivalent structural weight. FUEL EFFICIENCY ENGINES FOR LARGE TRANSPORT AIRCRAFT
D. J. PARFITT 27 Mar. 1981 27 p Presented at Aeron. Soc. of India Conf., Bombay, 27 Mar. 1981
(PNR-90082; MISC-555) Avail: NTIS HC A03/MF A01

The next generation of Rolls Royce aircraft engines is discussed, especially their fuel consumption. For the RB211, improvements on the order of 15% in fuel consumption relative to the initial service standard are planned. Large fan engines are expected to remain technology leaders in the long-term. Fuel savings on the order of 10% to 15% are feasible, using low specific thrust designs. Noise and exhaust emission improvements are predicted. Advanced wing designs and the use of lightweight composite materials, linked with full authority digital control systems, enhance engine performance. Liquid hydrogen is suggested as a replacement for kerosene, because of its high heating value. Author (ESA)

HEAT PUMP DEMAND CHARACTERISTICS: A STUDY OF THE IMPACTS OF SINGLE-FAMILY RESIDENTIAL HEAT-PUMP TECHNOLOGIES ON ELECTRIC-UTILITY-SYSTEM LOADS Final Report
A. LANNUS, M. HESSE, and B. APPELBAUM Oct. 1981 145 p refs Sponsored by EPRI
(Contract EPRI PROJ. 1100-1)
(DE82-900861; EPRI-EA-2074) Avail: NTIS HC A07/MF A01

The hourly power demand and heating- and cooling-mode energy use of electric air source heat pumps in single-family residences was analyzed and correlated. Field data from 50 houses in five different geographical locations, representing a range of 1434 to 8310 heating degree days and 2889 to 527 cooling degree days, were selected from a previous field study. A subset of the data was used to test a residential building-heat pump simulation model. Calculated daily heating energy consumption agreed to within 10 to 27% of the measured values; daily cooling energy consumption agreed to within 12 to 23% of the measured values. A Monte Carlo simulation procedure was developed for the prediction of heat pump diversified demand based on a probability sample of residential customers selected on the basis of certain customer-class, equipment, and weather-related characteristics. Due to lack of valid field data, only a crude test of this procedure was possible, but it indicated that this method holds promise in simulations where test metering data are unavailable. DOE

Fabric data for diagnosis of tectonics in a coal mine was studied. The possibility of combining geophysics, well logging, and structural surveys in forefield research was investigated in the Ruhr district. Subterranean outcroppings in mines were studied. Planes of cleavage, systems of cleats, and genesis of cleats were measured photometrically. A data reduction and display program, PLANICOMP, was improved, and electronic data processing was used to find Braun's index. A tectonic deformation index and basic structure are determined. The system provides sufficient information on the tectonic situation in the forefield and is a practicable aid to the miner. Author (ESA)

GREATER ENERGY EFFICIENCY CAN BE ACHIEVED THROUGH LAND USE MANAGEMENT Report to the Congress
21 Dec. 1981 58 p refs
(EMD-82-1; B-198982) Avail: SOD

An analysis of energy conservation methods based on land use management is given and recommendations are made. When planning new growth and redevelopment, communities can significantly reduce energy consumption by incorporating energy efficient land use concepts such as site and building design, locational planning, and higher density development. Decisionmakers, however, are reluctant to use these concepts because of major barriers such as the cost of implementing the concepts and resistance to higher density development. The Federal Government can play a role in promoting energy-efficient land use by providing guidance through its policies, supporting research and comprehensive planning, and providing needed financial incentives. R.J.F.

N82-22648 International Institute for Applied Systems Analysis, Laxenburg (Austria).
THE POSSIBLE SHARE OF SOFT/DECENTRALIZED RENEWABLES IN MEETING THE FUTURE ENERGY DEMANDS OF DEVELOPING REGIONS
A. M. KHAN Sep. 1981 41 p refs
(RR-81-18; ISBN-3-7045-0015-1) Avail: Issuing Activity

The contribution of soft/decentralized renewables to energy supply in market economy developing regions is discussed. Investment requirements and fuel production costs are compared with conventional supply schemes. Difficulties associated with these technologies are analyzed. The most promising soft/decentralized renewables are: windmills and small hydropower units for use in irrigation and for supplying electricity to rural households and small towns; charcoal for meeting thermal energy requirements of industry, households, and the service sector; biogas for use in rural households; and solar heat for supplying hot water/steam to industry, households, and services. UTILITY SITING OF WECS: A PRELIMINARY LEGAL/REGULATORY ASSESSMENT
R. J. NOUN, M. LOTKER (Synectics Group, Inc.), and H. P. FRIESEMAN (Inst. of Ecology) May 1981 103 p refs
(Contract EG-77-C-01-4042)
(SERI/TR-744-778) Avail: NTIS HC A06/MF A01

The early experiences of several utilities in dealing with the legal and regulatory issues that were raised in the process of siting wing energy installations were examined. Recommendations are made as to how utilities can begin to address many of the identified issues. Two issues associated with utility siting of wind machines are cited: (1) land acquisition and use and (2) aesthetic controls. Land use control regulations dealing with incompatible uses, nuisance factors, building scale limitations, and on site environmental impacts many constrain wind machine siting by utilities. The siting issue of greatest concern is how the public will react to the hard reality of wind power development. Little public opposition to wind energy projects is raised to date, yet it is possible that local attitudes will change as the novelty of the early single unit machines wears off. It is concluded that potentially adverse impacts based on local aesthetic concerns can be minimized by careful planning, siting, and design by utility developers and by close coordination with local planning and regulatory officials. SOCIETAL ASSESSMENT OVERVIEW
C. E. BLOOMQUIST *In* NASA, Washington The Final Proc. of the Solar Power Satellite Program Rev. p 54-77 Jul. 1980 refs
Avail: NTIS HC A99/MF A01 CSCL 10A

The decision to proceed with SPS depends on a political determination that commitment of the economic, institutional, and social energies required for its implementation is a worthwhile investment. This determination is national (and international) in scope and is based on knowledge of the environmental and societal impacts of the SPS, its projected economics and technological risks, expressed through the influence of contending segments of society. To assist the decision makers, an assessment of societal issues associated with the SPS was undertaken as part of the Concept Development and Evaluation Program. Results of the assessment are reported. The primary societal assessment objectives are to determine if the societal ramifications of an SPS might significantly impede its development, and to establish an information base regarding these issues. Estimates regarding SPS impacts commensurate with its stage of development and the needs of the decision makers are provided. T.M.

Avail: NTIS HC A99/MF A01 CSCL 10A

A comparative analysis of health and safety risks is presented for the Satellite Power System and five alternative baseload electrical generation systems: a low-Btu coal gasification system with an open-cycle gas turbine combined with a steam topping cycle; a light water fission reactor system without fuel reprocessing; a liquid metal fast breeder fission reactor system; a central station terrestrial photovoltaic system; and a first generation fusion system with magnetic confinement. For comparison, risk from a decentralized roof-top photovoltaic system with battery storage is

also evaluated. Quantified estimates of public and occupational risks within ranges of uncertainty were developed for each phase of the energy system. The potential significance of related major health and safety issues that remain unquantitied are also discussed. M.D.K.

COMPARISON OF LOW EARTH ORBIT AND GEOSYNCHRONOUS EARTH ORBITS
J. E. DRUMMOND *In* NASA, Washington The Final Proc. of the Solar Power Satellite Program Rev. p 234-236 Jul. 1980 refs
Avail: NTIS HC A99/MF A01 CSCL 10A

The technological, environmental, social, and political ramifications of low Earth orbits as compared to geosynchronous Earth orbits for the solar power satellite (SPS) are assessed. The capital cost of the transmitting facilities is dependent on the areas of the antenna and rectenna relative to the requirement of high efficiency power transmission. The salient features of a low orbit Earth orbits are discussed in terms of cost reduction efforts. E.A.K.

RECTENNA RELATED ATMOSPHERIC EFFECTS
J. LEE *In* NASA, Washington The Final Proc. of the Solar Power Satellite Program Rev. p 440-443 Jul. 1980 refs
Avail: NTIS HC A99/MF A01 CSCL 10A

Possible meteorological effects arising from the existence and operations of a solar power satellite (SPS) system rectenna are examined. Analysis and model simulations in some chosen site situations and meteorological conditions indicate that the meteorological effects of the construction and operation of a rectenna are small, particularly outside the boundary of the structure. From weather and climate points of view, installation of an SPS rectenna seems likely to have effects comparable with those due to other nonindustrial land use changes covering the same area. The absorption and scattering of microwave radiation in the troposphere would have negligible atmospheric effects. M.G.

COAL-FIRED POWER PLANT (WESTERN COAL): ENVIRONMENTAL CHARACTERIZATION INFORMATION REPORT
Jan. 1981 67 p refs Prepared in cooperation with Aerospace Corp., Germantown, Md.
(Contract DE-A703-76EV-74010)
(DOE/EP-0019) Avail: NTIS HC A04/MF A01

The latest available environmental and technical information on coal-fired power plants was collected from a number of sources. The typical plant chosen for characterization was a 500/MWe pulverized-coal plant burning western low-sulfur coal. The plant uses an electrostatic precipitator, a lime/limestone scrubber, and a wet, mechanical draft cooling tower. The plant fuel is supplied from offsite mines by unit-train deliveries with surface mined, thick seam coal, which undergoes minimum preparation prior to pulverization. The process, plant operating parameters, resources needed, and environmental residuals and products associated with the power plant are presented. Annual resource usage and pollutant discharges are given, assuming an annual plant capacity factor of 80 percent. Quantities are given in terms of ten to the twelth power Btu's of electric energy produced. Several plants are discussed individually. Environmental regulations are discussed. The overall physical requirements of the plant for land and water are discussed. R.J.F.

ENERGY CONSERVATION IN HOUSES. A TECHNICAL PRESS DAY REPORT ON THE RESULTS OF THE LOW ENERGY EXPERIMENTAL HOUSE PROJECT IN GARSFONTEIN, PRETORIA
7 Jul. 1981 14 p refs
Avail: NTIS HC A02/MF A01

The low energy experimental house project demonstrated that a home constructed from traditional materials, by traditional methods, maintains an acceptable indoor thermal environment with low levels of energy utilization, and evaluated the long term cost benefits of different energy saving options. Both the experimental and the demonstration aspects necessitated the use of full scale houses. Two such houses were built in Pretoria, one of which was to serve as a control. They were both typical well designed middle income homes, but the low energy house embodied a number of energy saving design features as well as an air based space and water heating solar system. The floor plans of both houses were similar and that of the low energy house is presented. S.L.

A NATIONAL INDEX FOR ENERGY PRODUCTIVITY
A. PENZ and D. BAKKE Washington GPO 1981 46 p refs Rept. presented to the Joint Econ. Comm., 97th Congr., 1st Sess., 13 May 1981 Prepared by Mellon Inst., Arlington, Va.
(GPO-75-886) Avail: SOD HC

Possible indices to measure changes in energy productivity are explored. These indices could provide the nation with better information about how it uses energy. It is recommended that certain uses of these indices be adopted and widely disseminated by government. The widespread use of an energy productivity index by the government and in the media could provide many significant benefits: (1) it signals the importance that government attaches to increasing energy efficiency; (2) it focuses and sustains national attention on this critical energy strategy; (3) an energy productivity index motivates and challenges the nation; (4) it serves as an early warning system that current approaches are not working and new approaches are called for: (5) it is a useful tool for public planners and policy makers in predicting future energy productivity trends; and (6) energy productivity indices increase the publics understanding of energy services. It is concluded that the adoption of a systematic dissemination of the indices will enhance public understanding of energy productivity and contribute to maximizing energy efficiency. E.A.K.

UTILIZATION OF WASTE HEAT FROM MAJOR TRANSFORMER SUBSTATIONS. VOLUME 3: APPENDIX Final Report
N. T. CHRISTENSEN, K. W. ARASIM, C. R. ROBERTS, G. V. GIBNEY, and W. PRICE Aug. 1981 152 p refs Sponsored by EPRI Prepared in cooperation with Seattle City Light and Henningson, Durham and Richardson, P.S.
(Contract EPRI PROJ. 1274-1)
(DE82-900357; EPRI-EM-1968-VOL-3) Avail: NTIS HC A08/MF A01

Large substation transformers reject substantial thermal energy. Since these units are usually close-coupled to facilities requiring low-temperature thermal energy for space conditioning, the ability to recover and efficiently utilize this energy is of significant interest. A general system was designed and optimized for the recovery of transformer waste heat. Simplified analytical techniques were developed to assist utilities in both preliminary analysis and detail design analysis of specific systems, including system economics. Critical component performance parameters were identified for the preparation of detailed specifications. Criteria for the specific application of such systems through system economics are presented. ELECTRICITY TOMMORROW Final Report
Jan. 1981 490 p
(PB82-124165; CAEC-81) Avail: NTIS HC A21/MF A01 CSCL 10A

The critical issues for the electricity sector in California were presented. Adopted level of electricity demand and adopted policies and supply criteria are included. These form the basis for planning and certification of electric generation and transmission facilities by the energy commission. Estimates of the potential contributions of conservation and various conventional and alternative supply sources, critiques of utility supply plans, and determinations of how much new capacity is required are also included. Policy recommendations for directing public and private investments into preferred energy options, for spreading the benefits and costs of these options broadly and fairly among California's citizens, and for removing remaining obstacles to the development of all acceptable energy sources are presented. AN ASSESSMENT OF THE INDUSTRIAL ENERGY CONSERVATION PROGRAM. VOLUME 1: SUMMARY Final Report, Nov. 1980 - Jul. 1981
Sep. 1981 50 p refs
(Contract DE-AC01-80CS-40298)
(PB82-122755; NMAB-395-1) Avail: NTIS HC A03/MF A01 CSCL 10A

Findings and recommendations of the industrial energy conservation program are summarized. Industrial operations in the U.S. consume some 37% of the country's total energy. This percentage will increase to 50% by 1980 unless appropriate conservation measures are applied. Conservation measures are difficult to implement. It is concluded that improvements for conservation are needed in the areas of: project selection, project management, and transfer of results to industry. GRA

EFFECT OF HEATED DIESEL FUEL ON PARTICULATE GENERATION AND FUEL CONSUMPTION FOR A DEUTZ F6L 912 ENGINE
E. D. DAINTY and J. P. MOGAN Jun. 1980 10 p
(DE82-900385; ERP/ERL-80-65(TR)) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries

The effects of fuel temperature on fuel consumption and on the concentrations of CO and carbon particulate matter in the exhaust gases generated at near maximum load/speed operating conditions was determined. It is found that for a given engine torque and speed, and fuel temperature increases from 750 F/240 C to 180DF/830 C: there is no significant variation in fuel flow rate; there is no significant overall variation in the generation of particulate matter; and a minor 12% reduction in the generation of CO takes place. It dos not appear that this emissions reduction strategy is useful in underground applications where IDI engines are widely used. DOE

MELTING CHAMBER COMBUSTION WITH REDUCED EMISSION OF NITROGEN OXIDES Final Report
H. STEBEL and U. STRAUSS Bonn Bundesministerium fuer Forschung und Technologie Dec. 1981 32 p refs In GERMAN; ENGLISH summary Sponsored bu Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-228; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7,55

A pilot plant intended to test a stoking concept, incorporating melting chambers with reduced emission of NOx, is described. Comparable liquefied coal combustion schemes show values of NOx emission of 950 to 1150 vpm. Values for the pilot plant of 650 vpm are realized, combining stable stoking of the melting chamber and flame optimization. It is found that it is possible to recirculate up to 14% of total flue gas through the combustion chamber. Under these conditions NOx emissions are reduced to 540 vpm, however, variable accommodation of the recirculated flue gas volume to the boiler load regime is necessary.

STREAMLINING AND ENSURING MINERAL DEVELOPMENT MUST BEGIN AT LOCAL LAND MANAGEMENT LEVELS Report to the Chairman, Committee on Energy and Commerce, House of Representatives
4 Dec. 1981 24 p refs
(EMD-82-10; B-205344) Avail: SOD

A study of the use of Federal lands, particularly military lands, concluded that success in streamling and accelerating mineral development on Federal lands depends on the Bureau of Land Management state offices ultimately responsible for the implementation of Department of Interior minerals policies. It was

found the eastern States Office of the Bureau of Land Management did not effectively deal with potential Federal mineral trespass in the East, and was unable to issue mineral leases and permits on a timely basis. Moreover, it was unable to effectively deal with new areas of mineral interest because of Department actions. Recommendations to improve the mineral trespass program help relieve lease and permit backlogs, maintain dedicated staff, and improve headquarters communications with State offices were made. R.J.F.

THE 1983 NASA AUTHORIZATION, VOLUME 1
Washington GPO 1982 114 p Hearing before the Subcomm. on Transportation, Aviation and Mater. of the Comm. on Sci. and Technol., 97th Congr., 2nd Sess., No. 71, 17 Feb. 1982
(GPO-91-488-VOL-1) Avail: Subcommittee on Transportation, Aviation and Materials

The status of NASA systems technology programs which provide focused technology applications principally to civil aviation is addressed in light of the cost effectiveness of NASA's partnership with the aircraft industry and the economic impact of the reduction of NASA's roll in promoting advanced aeronautical technology. Progress made in research and technology programs encompassing aerodynamics, propulsion, materials and structures as well as controls and guidance, human factors, and low speed and high speed aircraft technology is reported. The six elements of the Aircraft Energy Efficiency program are highlighted. These are: engine component improvement, energy efficient engine, advanced turboprop, energy efficient transport, composite primary aircraft structures, and laminar flow control. The budget request for these programs is presented. N.W.

PRESENT AND FUTURE ENERGY CONSUMPTION FOR PASSENGER TRANSPORTATION IN GERMANY [ENERGIEVERBRAUCH IM PERSONENFERNVERKEHR DER BUNDESREPUBLIK DEUTSCHLAND IN GEGENWART UND ZUKUNFT]
M. KUHNE and U. WOLFFRAM 1981 142 p refs In GERMAN
(ISBN-3-87977-051-4) Avail: NTIS HC A07/MF A01

Passenger transportation in Germany was investigated in order to determine real energy consumption. For typical passengers, energy consumption for overland travel and charter flights was studied. The energy needed for air traffic was compared with that for transportation overland (railway, car, bus), taking into account transportation to the airport or railway station. Transportation makes up about 17% of German primary energy consumption, i.e., road traffic 14%, railway traffic 1.6%, and air traffic 1%. Specific energy consumption (overland travel) of intercity trains, airplanes and cars is in the proportion 1.0 to 3.7 to 4.0 (1980) and is expected to be 1 to 2.4 to 3.1 by the year 2000. For holiday trips, specific energy consumption for bus, train, car and airplane travel is in the proportion 1.0 to 1.4 to 3.6 to 3.4 (1980) and is expected to be 1 to 1.4 to 2.5 to 2.9 by 2000. HIGH TEMPERATURE METALLIC RECUPERATOR Annual Report, May 1980 - Apr. 1981
M. E. WARD, N. G. SOLMON, and C. E. SMELTZER Jun. 1981 130 p refs Sponsored by Gas Research Inst.
(PB82-141102; SR81-R-4861-15; GRI-80/0074) Avail: NTIS HC A07/MF A01 CSCL 13A

An industrial 4.5 MM Btu/hr axial counterflow recuperator, fabricated to deliver 1600 F combustion air, was designed to handle rapid cyclic loading, a long life, acceptable costs, and a low maintenance requirement. A cost benefit anlysis of a high temperature waste heat recovery system utilizing the recurperator and components capable of 1600 F combustion air preheat shows that this system would have a payback period of less than two years. Fifteen companies and industrial associations were interviewed and expressed great interest in recuperation in large energy consuming industries. Determination of long term environmental effects on candidate recuperator tubing alloys was completed. Alloys found to be acceptable in the 2200 F flue gas environment of a steel billet reheat furnace, were identified. GRA

ENERGY CONSERVATION IN BUILDINGS AND GENERAL OPERATIONS Annual Report
Jan. 1981 26 p
(DE82-002723; DOE/MA-0004) Avail: NTIS HC A03/MF A01

An In-house Energy Management program designed to reduce energy consumption and increase energy efficiency in buildings and general operations facilities, is described. The major goals of the program are: retrofit of all buildings to improve energy efficiency and assure minimum life cycle costs by 1990; reduction, in existing DOE buildings by 20% and in new DOE buildings by 45%, of average energy use per gross square foot by FY 1985, as compared to FY 1975 usage; reduction of petroleum-based fuels use by 30% by FY 1985, as compared to FY 1975 usage; and discontinuation of petroleum in major fuel burning installations by FY 2000; discontinuation of the use of natural gas in MFBI by FY 2000; and implementation of cost effective solar and other renewable energy systems. DOE's active program in energy conservation surveys and studies, retrofit and maintenance improvements, procurement of fuel efficient vehicles, driver training, and employee awareness enabled the Department to reduce its energy consumption in FY 1980 by approximately 14%, as compared to the embargo year of 1973. DOE

FEASIBILITY STUDY: CODISPOSAL WITH ENERGY RECOVERY FROM WASTEWATER SLUDGE AND MUNICIPAL REFUSE. PHASE 2, GLOUCESTER COUNTY, NEW JERSEY
Jul. 1981 157 p refs
(Contract DE-AC01-79CS-20212)
(DE82-000882; DOE/CS-20212/1) Avail: NTIS HC A08/MF A01

The feasibility of thermal reduction of dewatered sludge and mixed municipal refuse with steam recovery for generation of electricity is investigated. The Gloucester County Utilities Authority wastewater treatment complex would produce the sludge and benefit from the generated electricity from a waste to energy system located on adjacent property. DOE

N82-23761# General Electric Co., Washington, D. C.
ENERGY USE IN OFFICE BUILDINGS: ANALYSIS OF USE IN A RANDOM SAMPLE OF 1100 BUILDINGS
Jun. 1981 106 p refs
(Contract DE-AC01-79CS-20189)
(DE82-000518; DOE/CS-20189/3) Avail: NTIS HC A06/MF A01

The collection and analysis of an energy use data base obtained from a sample of approximately 1100 randomly selected major office buildings located in 20 US cities are reported. Information on the collection of the data and on the characteristics of the buildings for which data were gathered is given. A tabular analysis of the energy consumption data is performed by census division, fuel type, building age, height, downtown/suburban location, and class of space. The data base (denoted as the 20-city data base) is compared to the data base obtained from the experience exchange report denoted as the EER office building sample. Both data bases were for the year 1977. Tables present the comparison of the two data bases. In general the EER office building sample buildings used more energy than did the buildings in the 20-city data base: i.e., the buildings in the experience exchange report are biased towards higher energy use buildings. Furthermore, the EER office building sample has proportionally more gas and steam buildings than does the random sample. On a national basis the EER office building sample buildings used approximately 10% more energy than did the buildings in the 20-city data base in 1977. DOE

Jul. 1981 216 p refs
(PB82-117821; CAEC-75) Avail: NTIS HC A10/MF A01 CSCL 10A

The California Energy Commission presents its views on the critical energy issues for California in the next twenty years along with its official electricity demand forecast and assessments of other energy demand growth. Demand is compared to estimates of the potential contributions of conservation and various conventional and alternative energy supply projects. California's overdependence on oil is discussed and options for reducing petroleum use, particularly in the transportation sector were examined. The result is a series of policy recommendations for directing public and private investments into a diversity of energy options and for spreading the benefits and costs of these options broadly and fairly among California's citizens. T.M.

STATE ENERGY DATA REPORT: STATISTICAL TABLES AND TECHNICAL DOCUMENTATION 1960 THROUGH 1979
Sep. 1981 530 p
(PB82-119470; DOE/DF-81/037A) Avail: NTIS HC A23/MF A01 CSCL 10A

All the data of the State Energy Data System (SEDS) is given. The data is used to estimate annual energy consumption by principal energy sources (coal, natural gas, petroleum, electricity), by major end-use sectors (residential, commercial, industrial, transportation, and electric utilities), and by state (50 states, the District of Columbia, and the United States). Data is organized alphabetically by energy source (fuel), by end-use sector or energy activity, by type of data and by state. Twenty data values are associated with each fuel-sector-type state grouping representing positionally the years 1960 through 1979. Data values in the file are expressed either as physical units, British thermal units, physical to Btu conversion factors or share factors. GRA

ENVIRONMENTAL REPORT: COMBUSTION ENGINEERING/GULF STATES UTILITIES COMPANY FUEL GAS DEMONSTRATION PLANT, WESTLAKE, LOUISIANA Final Report
Sep. 1981 237 p refs Prepared in cooperation with Radian Corp., Austin, Tex.
(Contract DE-AC02-80CH-10047)
(DE82-004141; DOE/CH-10047/1) Avail: NTIS HC A11/MF A01

The environmental impact of the construction and operation of a coal gasification demonstration plant within the confines of an existing power plant site is predicted. Solid waste disposal is predicted to require less than 60 acres of land within the plant boundary over a 20 year period. Compared to the ongoing activities at the power plant site, the demonstration plant will have a very small impact. Impacts beyond plant boundaries will be very slight. No significant environmental impacts are anticipated to result from the construction, operation, or final disposition of the demonstration plant. DOE

ANALYSIS OF ENVIRONMENTAL ISSUES RELATED TO SMALL-SCALE HYDROELECTRIC DEVELOPMENT. 5: INSTREAM FLOW NEEDS FOR FISHERY RESOURCES
J. M. LOAR and M. J. SALES Oct. 1981 135 p refs
(Contract W-7405-ENG-26)
(DE82-000901; ORNL/TM-7861) Avail: NTIS HC A07/MF A01

The growing recognition nationwide of the importance of protecting instream uses of water has coincided with the recent emphasis on the development of small-scale hydropower resources. The issue of instream flow maintenance in hydropower development is essentially a problem of evaluating the effects of planned modifications in hydrologic patterns. Because hydroelectric projects can alter natural flow regimes on both spatial and temporal scales, downstream water users, the aquatic ecosystem, and primarily fish, can be adversely affected. Numerous methods which differ in their use of hydrologic records, hydraulic simulation techniques, and habitat rating criteria were developed to assess the effects of stream flow regulation on aquatic biota and to provide instream flow recommendations. Consequently, guidance is needed to ensure that the most appropriate methods are selected for instream flow assessments at small-scale hydroelectric sites. DOE

MOBILE SOURCE EMISSIONS OF FORMALDEHYDE AND OTHER ALDEHYDES
P. M. CAREY May 1981 37 p refs
(PB82-118159; EPA/AA/CTAB/PA/81-11) Avail: NTIS HC A03/MF A01 CSCL 07D

The available vehicular aldehyde studies were summarized in an attempt to characterize aldehyde emissions from motor vehicles. Topics covered in these studies include aldehyde emission factors for unmodified and malfunction vehicle engine configurations, effects of fuel, mileage accumulation and temperature variations and aldehyde emissions from Diesel-equipped vehicles equipped with prototype light-duty Diesel oxidation catalysts. Thus, it was possible to obtain aldehyde data for standard conditions and for a variety of operating conditions. The Federal test procedure (FTP) was used for the light-duty vehicles and the 13-mode test procedure for the heavy-duty engines. The 2, 4 dinitrophenylhydrazine (DNPH) procedure was used for the sampling and analysis of the aldehydes. GRA

DEVELOP AND TEST FUEL CELL POWERED ON-SITE INTEGRATED TOTAL ENERGY SYSTEMS: PHASE 3: FULL-SCALE POWER PLANT DEVELOPMENT Quarterly Report, Aug. - Oct. 1981
28 Apr. 1982 59 p refs
(Contract DEN3-241; DE-AI-01-80ET-17088)
(NASA-CR-165568; DOE/NASA/0241-3; NAS 1.26:165568; QR-3)
Avail: NTIS HC A04/MF A01 CSCL 10B

The development of a commercially viable and cost-effective phospheric acid fuel cell powered on-site integrated energy system (OS/IES) is described. The fuel cell offers energy efficients in the range of 35-40% of the higher heating value of available fuels in the form of electrical energy. In addition, by utilizing the thermal energy generated for heating, ventilating and air-conditioning (HVAC), a fuel cell OS/IES could provide total energy efficiencies in the neighborhood of 80%. Also, the Engelhard fuel cell OS/IES offers the important incentive of replacing imported oil with domestically produced methanol, including coal-derived methanol. T.M.

DISTRIBUTED THERMAL ENERGY STORAGE IN THE RESIDENTIAL SECTOR: COMMERCIALIZATION READINESS ASSESSMENT AND IMPLEMENTATION STRATEGY
R. F. GIESE *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 31-32 Mar. 1981
Avail: NTIS HC A16/MF A01

Significant national benefits can result from the use of customer-sides-of-the-meter thermal energy storage (TES). It appears that TES for residential space heating and hot water heating can capture a market large enough to yield annual oil savings of approximately 80 million barrels (0.3 quads) by the year 2000. The readiness of each of three candidate TES systems for near-term commercialization was examined. It was concluded that of these, TES for residential space and hot water heating are technically and economically ready for commercialization. T.M.

A COST-EFFECTIVENESS EVALUATION OF CHEMICAL HEAT PUMPS
W. R. STANDLEY, R. GORMAN, P. S. MORITZ, and T. J. OGORMAN *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 159-162 Mar. 1981
Avail: NTIS HC A16/MF A01

Chemical heat pump technologies are compared with a baseline of existing HVAC technologies and a set of emerging competitive technologies. The basis for comparison is system cost effectiveness in one or more specific applications, with levelized annual cost taken as the measure of cost effectiveness. The specific applications are a residential building and a commercial building, each requiring HVAC services. An industrial process-heat upgrading application is also included. For each system, the net consumption of fossil fuel resources is evaluated, and environmental/safety aspects identified. Author

(DE82-004031; PNL-3944-EX-SUMM) Avail: NTIS HC A02/MF A01

Research opportunities that are important to developing advanced technologies for efficient energy use are presented. A wide array of attractive technical areas from which specific research and development programs could be implemented are described. Research areas are presented for potential application in each of the major energy end-use sectors. The analysis employs a systematic process for both identifying and screening candidate energy conservation research areas. Aggregate energy consumption was reviewed and explicity criteria were employed to evaluate the technology research areas. DOE

BUILDING AND OCCUPANT CHARACTERISTICS AS DETERMINANTS OF RESIDENTIAL ENERGY CONSUMPTION
L. A. NIEVES and A. I. NIEVES Oct. 1981 82 p
(Contract DE-AC06-76RL-01830)
(DE82-002417; PNL-4012) Avail: NTIS HC A05/MF A01

The probable effects of building energy performance standards on energy consumption were studied. Observations of actual residential energy consumption that could affirm or disaffirm consumption estimates of the Department of Energy's 2.0A simulation model were obtained. Home owner's conservation investments and home purchase decisions were investigated. The investigation of determinants of household energy consumption is described. The underlying economic theory and its implications are given as well as a description of the data collection procedures, of the formulation of variables, and then of data analysis and findings. The assumptions and limitations of the energy use projections generated by the DOE 2.0A model are discussed. Actual electricity data for the houses are then compared with results of the simulation. DOE

ENERGY CONSUMED IN 2010 BY AN ENERGY-EFFICIENT BUILDING SECTOR
G. D. PINE Nov. 1981 71 p refs
(Contract W-7405-ENG-26)
(DE82-003520; ORNL-5772) Avail: NTIS HC A04/MF A01

The minimum practical energy consumption in the building sector in the year 2010 if an aggressive program of efficiency improvement were implemented was estimated. For the case of a 2% annual growth rate in real gross national product, an 0.8% annual growth in population, and a quadrupling of real fuel prices relative to the 1975 prices, we concluded that end-use fuel consumption by the building sector could be reduced to 7.7 exajoule (EJ) in 2010 compared to 18.0 EJ in 1977. This could be accomplished by using technologies that are available today or can be predicted with a high level of confidence to be available in 2010. No technological breakthroughs would be required, and no sacrifice in amenities would be necessary. Indeed, the real standard of living would improve. Futhermore, the results were only slightly sensitive to fuel prices; most efficiency improvements were attractive economically at today's fuel prices or at prices only slightly higher. DOE

FLIGHT MANAGEMENT COMPUTER
J. GROSSIN 7 Jan. 1982 26 p In FRENCH Presented at Soc. des Electriciens et des Radioelectriciens (SEE), Nice, 26 Nov. 1981 Submitted for Publication
(SNIAS-821-111-110) Avail: NTIS HC A03/MF A01

Ways in which automatic flight control can reduce fuel consumption were investigated. Three domains were identified:

(1) thrust optimization, (2) optimization of in-flight aerodynamic configuration, and (3) flight plan optimization. The use of flight management computers to achieve these goals is discussed and recently developed equipment is depicted. System design and functions are explained. The choice of performance optimization criteria (cost index) is considered. How a flight management computer deals with horizontal navigation is treated as an example. Author (ESA)

POTENTIAL REDUCTION OF DSN UPLINK ENERGY COST
S. DOLINSKY and N. F. DEGROOT *In its* The Telecommun. and Data Acquisition Rept. p 151-166 15 Apr. 1982 refs
Avail: NTIS HC A09/MF A01 CSCL 09C

DSN Earth stations typically transmit more power than that required to meet minimum specifications for uplink performance. Energy and cost savings that could result from matching the uplink power to the amount required for specified performance are studied. The Galileo mission was selected as a case study. Although substantial reduction in transmitted energy is possible, potential savings in source energy (oil or electricity) savings are much less. This is because of the rising inefficiency in power conversion and radio frequency power generation that accompanies reduced power output. S.L.

THE ENERGY SUPPLY MODEL MESSAGE
L. SCHRATTENHOLZER Dec. 1981 41 p refs
(RR-81-31; ISBN-3-7045-0024-0) Avail: Issuing Activity

A dynamic linear programming model that minimizes the total discounted costs of supplying a given set of energy demands over a given time is introduced. It balances secondary energy demand, disaggregated into sectors and exogenous to the model, with primary energy supply, a set of resource availabilities disaggregated into an optional number of cost categories by choosing from a set of energy conversion technologies. Model constraints reflect the limited speed of build up of technologies, the limited annual availability of resources, and technological relationships. The model defines load regions (e.g., for electricity demand), distinguishes between indigenous and imported resources, and optionally includes environmental impacts in the objective function. It can be applied to global or smaller scale scenarios. Author (ESA)

NATIONAL SOLAR DATA NETWORK SUCCESS STORIES
Sep. 1981 22 p
(Contract DE-AC02-79CS-30150)
(DE82-002281; MASEC-R-81-058) Avail: NTIS HC A02/MF A01

Three of the most successful applications in the MASEC reporting region are described. The three sites are the Scattergood School site in West Branch, Iowa; the South Dakota School of Mines site located at the Mount Rushmore Memorial Visitor's Center in Keystone, South Dakota, and the Telex Communications site in Blue Earth, Minnesota. The first is a school recreation center, the second a park recreation center, and the third a business. All three are active systems and each exhibits a variety of approaches to providing space and domestic water heating. The major success of each is that a substantial portion of the heating load was provided by solar energy. The success of the NSDN program is that it indictes the approaches and parts of the systems that seem to work best, so that conclusions can be made about which applications are appropriate in varying circumstances. A brief report is presented for each system explaining the system, the energy flow through the system, the total cost, and the energy saved per year. DOE

SCREENING METHODOLOGY FOR CALCULATING WORST-CASE CONCENTRATIONS DOWNWIND FROM A LARGE, ISOLATED, AIR-POLLUTANT-EMISSION SOURCE
D. NOCHUMSON Sep. 1981 28 p refs
(Contract W-7405-ENG-36)
(DE82-002286; LA-8871-MS) Avail: NTIS HC A03/MF A01

A screening methodology to indicate whether a proposed source to be sited in a flat or high-terrain situation has the potential to violate ambient air quality standards was developed. The Gaussian plume formulation serves as a basic element of the methodology, which follows the guidelines recommended by the US Environmental Protection Agency for evaluating the air quality impacts of new stationary sources. A step-by-step procedure is given.to calculate maximum ground-level concentration of pollutants under a variety of worst-case conditions that depend upon terrain conditions and the controlling air quality standards. The methodology is applied to a case study that examines the siting of generic coal-fired power plants in the West and the constraints imposed by terrain and sulfur dioxide air quality standards. DOE

PRELIMINARY ANALYSIS OF A DOWNSIZED ADVANCED GAS-TURBINE ENGINE IN A SUBCOMPACT CAR
J. L. KLANN and R. L. JOHNSEN 1982 25 p refs Presented at the 18th Joint Propulsion Conf., Cleveland, 21-23 Jun. 1982
(Contract DE-AI01-77CS-51040)
(NASA-TM-82848; E-1218; NAS 1.15:82848; DOE/NASA/51040-40) Avail: NTIS HC A02/MF A01 CSCL 13F

Relative fuel economy advantages exist for a ceramic turbine engine when it is downsized for a small car were investigated. A 75 kW (100 hp) single shaft engine under development was analytically downsized to 37 kW (50 hp) and analyzed with a metal belt continuously variable transmission in a synthesized car. With gasoline, a 25% advantage was calculated over that of a current spark ignition engine, scaled to the same power, using the same transmission and car. With diesel fuel, a 21% advantage

was calculated over that of a similar diesel engine vehicle.

URBAN TRANSPORTATION ENERGY ACCOUNTS. VOLUME 1: PROCEDURES. VOLUME 2: CASE STUDY OF THE CHICAGO REGION Final Report, Jun. 1978 - May 1981
D. E. BOYCE, M. C. ROMANOS, B. N. JANSON, P. PRASTACOS, M. FERRIS, and R. W. EASH (Chicago Area Transportation Study) Sep. 1981 255 p refs 2 Vol.
(Contract DOT-IL-11-0027)
(PB82-135542; UMTA-IL-11-0027-81-1) Avail: NTIS HC A12/MF A01 CSCL 10A

Procedures for compiling a set of urban transportation energy accounts are described. These procedures deal specifically with ground-mode person travel in an urbanized area but could be generalized to other modes, commodities and regions. There are several significant differences between these procedures and methods used by other studies to estimate the energy consumption of urban person trips. First, these procedures produce estimates of both direct and indirect energy consumption. Second, energy consumption is computed by mode for each origin-destination pair of zones. Third, automobile speeds and transit vehicle occupancies calculated for individual link flows are used to estimate energy consumption per person trip over each zone to zone trip path.

ENERGY AND MATERIALS FLOWS IN THE PRODUCTION OF PRIMARY ALUMINUM
S. Y. SHEN Oct. 1981 52 p refs
(Contract W-31-109-ENG-38)
(DE82-005963; ANL/CNSV-21) Avail: NTIS HC A04/MF A01

The primary aluminum industry is one of the top five industrial energy users in the United States consuming about one quad annually. In 1980, for each ton of aluminum produced, an average smelting operation used about 157 million Btu of direct energy and another 70 million Btu were embodied in purchased materials. Producers employing the best practices used approximately 15% less energy per ton, or 132 million Btu of direct energy and 52 million Btu of embodied energy. These energy and materials flows are described in detail, using availability and input/output analyses and industry estimates. Energy consumption could be reduced further by developing (1) economical processes for using domestic nonbauxitic raw materials; (2) bulk alumina feeding equipment for handling more than one grade of alumina; (3) a reduction cell meter and temperature sensor for automatic control of alumina feeding and cell temperature; (4) a method for quickly and frequently measuring the NaF/AlF3 ratio in a reduction cell for tighter control of electrolyte composition; and (5) a method for recovering waste heat.

SYMPOSIUM ON COMMERCIAL AVIATION ENERGY CONSERVATION STRATEGIES, PAPERS AND PRESENTATIONS
Apr. 1981 354 p refs Symp. held in Washington, D.C., 2-3 Apr. 1981 Sponsored in part by FAA
(AD-A107106) Avail: NTIS HC A16/MF A01 CSCL 21D

The Symposium provided a forum in which representatives from DOE, FAA, National Aeronautics and Space Administration (NASA) and the aviation industry exchanged information and ideas regarding current and future efforts to conserve fuel and to promote energy conservation within the commercial aviation sector. General topics discussed included Federal and industry energy conservation programs such as flight operations, air traffic control, engineering and maintenance, and corporate management strategies. The Symposium, was highlighted by a panel discussion entitled 'Energy Conservation: Where Do We Go From Here?' This report contains the papers and presentations from the Symposium.

CASE STUDY OF THE MASTIN DOUBLE-ENVELOPE HOUSE
R. F. JONES, G. DENNEHY, H. T. GHAFFARI, and G. E. MUNSON May 1981 75 p refs
(Contract DE-AC02-76CH-00016)
(DE82-006833; BNL-51460) Avail: NTIS HC A04/MF A01

An evaluation is made of a double-envelope house of Ekose, a design built by Robert Mastin in Middletown, Rhode Island. The home has two shells with an airspace between through which air can circulate. Performance monitoring of the house in the heating season showed that the requirements for auxiliary heat are very low, about 2.1 Btu per square foot of floor space per degree-day. Design changes are identified which could reduce the heating requirement even further. This ranks the house among the most energy-efficient building designs available today. It is concluded that the low heating needs of the house are due primarily to the excellent insulative value of the double shell.

GREATER ENERGY EFFICIENCY CAN BE ACHIEVED THROUGH LAND USE MANAGEMENT Report to the Congress
21 Dec. 1981 59 p
(AD-A111552; GAO/EMD-82-1) Avail: NTIS HC A04/MF A01 CSCL 13B

When planning new growth and redevelopment, communities can significantly reduce energy consumption by incorporating energy-efficient land use concepts such as site and building design,

locational planning, and higher density development. Decisionmakers, however, are reluctant to use these concepts because of major barriers such as the cost of implementing the concepts and resistance to higher density development. The Federal Government can play a role in promoting energy-efficient land use by providing guidance through its policies, supporting research and comprehensive planning, and providing needed financial incentives. ENERGY-PERFORMANCE TARGETS FOR FEDERAL BUILDINGS: RETROFIT ENERGY-TARGET BANDS FOR EXISTING POSTAL FACILITIES Final Report
Apr. 1981 142 p refs
(Contract W-31-109-ENG-38)
(DE82-000070; ANL/ENG-81-01) Avail: NTIS HC A07/MF A01

A cost-effective energy performance target band was developed for postal facilities. For the retrofit energy target bands for existing postal facilities, buildings were classified into four sizes and two special use categories: namely, less than 5001 ft; 5001 to 25,000 ft; 25,001 to 100,000 ft; larger than 100,000 ft; vehicle maintenance facility (VMF) and bulk mail centers. A random statistical sample of buildings representative of the population was selected from each size category and one each from the VMF and BMC categories. Each building of the sample was then modeled and analyzed for annual energy consumption, using the DOE 2.1A computer program. For energy conservation purposes, the design parameters of existing buildings were modified, and, for each change, a computer simulation analysis was made to determine what impact the change had on the annual energy use. INDUSTRIAL COGENERATION OPTIMIZATION PROGRAM: A SUMMARY OF TWO STUDIES
Aug. 1981 38 p
(Contract W-7405-ENG-26)
(DE82-005587; DOE/TIC-11604) Avail: NTIS HC A03/MF A01

Two industrial cogeneration optimization programs were performed to examine the economic and energy saving impacts of adding cogeneration to site specific plants in the chemical, food, pulp and paper, petroleum refining, and textile industries. Industrial cogeneration is reviewed. The two parallel ICOP studies are described. The five industrial sectors are also described, followed by highlights of each of the site specific case studies. Steam turbine cogeneration systems fired by coal or alternative fuels are generally the most attractive in terms of economic performance and oil/gas savings potential. Of the 15 cogeneration systems selected as optimum in the ICOP studies, 11 were coal or wood fired steam turbines. By contrast, gas turbines, combined cycles, and diesel engines, which are limited to oil or gas firing, are usually less economical. DOE

US ENERGY FLOW, 1980
C. K. BRIGGS and I. Y. BORG 21 Oct. 1981 15 p refs
(Contract W-7405-ENG-48)
(DE82-002647; UCID-19227-80) Avail: NTIS HC A02/MF A01

The energy flow diagram illustrates energy sources and end uses in a single figure. The total energy consumption in 1980 was 75 quads which is 3.6% below 1979. Oil continued to be the largest single source of energy to the US by comprising 34 quads or 45% of the total used. Natural gas and coal make up 28% and 22% of the remainder. Oil imports fall 19.2% below 1979 levels resulting in a 9.2% net decrease in total oil use from 1979. There was a consequent drop in total energy consumption which was not compensated by increased overall use of either natural gas, which actually fell, or coal, which increased slightly. Coal exports increased 41%. Conversion to fuels other than oil for electrical power generation continued; coal and natural gas use for this purpose increased 7.6 and 5.5% respectively over 1979. Nuclear energy produced about the same amount of power in 1980 as in 1979. DOE

THE BIOLOGICAL DEGRADATION OF SPILLED JET FUELS: A LITERATURE REVIEW Final Report, Jun. - Aug. 1981
R. E. CARLSON Oct. 1981 41 p refs
(Contract AF PROJ. 1900)
(AD-A110758; AFESC/ESL-TR-81-50) Avail: NTIS HC A03/MF A01 CSCL 06F

Biodegradation of many of the components of Air Force fuels does occur, although most studies have been done under laboratory conditions, and the extrapolation of the findings to natural rates of biodegradation is premature. Many factors affect biodegradation rates, including the nature and concentration of the specific hydrocarbon compound, the species of bacteria present and their quantity, and environmental factors such as nutrient availability, temperature, and oxygen concentrations. Initial concerns should be first, the determination of the importance of biodegradation relative to other loss factors such as volatilization and sediment sorption, and second, the determination of the ultimate fate of recalcitrant compounds and their metabolites. BASIC COMBUSTION AND POLLUTANT FORMATION PROCESSES FOR PULVERIZED FUELS Quarterly Technical Progress Report, 1 Jul. - 30 Sep. 1981
G. J. GERMANE and L. D. SMOOT 15 Oct. 1981 44 p refs
(Contract DE-FG22-80PC-30306)
(DE82-002238; DOE/PC-30306/T4; QTPR-4) Avail: NTIS HC A03/MF A01

Basic combustion and pollutant formation processes for pulverized solid fossil fuels include coal-water mixtures and chars derived from coal pyrolysis, liquefaction or gasification processes. The factors that affect the physical properties of coal-water mixtures (CWM) were identified and characterization tests initiated to determine how these variables (e.g., solids loading, particle size, particle size distribution, additives) affect the coal slurries. A bench scale apparatus consisting of a pressure vessel and an atomizing nozzle was designed and is being fabricated. This apparatus assists in the development of handling and atomization techniques for the combustion tests. It also aids in comparing viscosities of slurries of different solids loadings and coal types. Chars were obtained for characterization tests. A series of potential tests to characterize the chars was identified. Grading and sizing of the chars was begun as well as elemental analysis. DOE

ENVIRONMENTAL EFFECTS OF SOLAR-THERMAL POWER SYSTEMS. ENVIRONMENTAL EFFECTS OF HEAT TRANSFER AND STORAGE FLUIDS: PLANT TOXICITY AND MOVEMENT IN SOILS
H. NISHITA and R. M. HAUG Jul. 1981 47 p refs
(Contract DE-AC03-76SF-00012)
(DE82-002603; UCLA-12-1301) Avail: NTIS HC A03/MF A01

Field experiments on the movement of several heat transfer and storage oils (Therminol 66, Caloria HT43, and Dow 200) in soil and on the plant toxicity of these materials were conducted. These studies were conducted in an area where the soil is nonsaline and calcareous, and the vegetation is mostly Larrea tridentata with Oryzopsis hymenoides, Ambrosia dumosa, and Lycium andersonii. The abiotic factors (air and soil temperatures, rainfall, and soil moisture tension) were monitored during the experimental period and are discussed. The movement of the oils in the soil was determined in two ways - soil columns in plastic boxes and bare-soil plots. In plastic boxes, Therminol 66 moved downward about 6.3 cm in 281 days. Dow 200 moved about 3.8 cm in 281 days and showed virtually no further downward movement to the end of experimental period (555 days). In the bare-soil plots, the limit of downward movement of the oils during the experimental period was 20.6 cm, 18.7, and 14.9 cm for Therminol 66, Caloria HT43, and Dow 200, respectively. DOE

ENVIRONMENTAL EFFECTS OF SOLAR-THERMAL POWER SYSTEMS. THE POTENTIAL PRODUCTION OF AIR POLLUTANTS NEAR STPS RECEIVER STATIONS
R. L. PERRINE, L. M. LIBBY, and M. SIMPSON Sep. 1981 57 p refs
(Contract DE-AG03-76SF-00012)
(DE82-002413; UCLA-12-1313) Avail: NTIS HC A04/MF A01

Data and analysis addressing the potential production of air pollutants in the high temperature, high solar intensity beam environment adjacent to a solar-thermal power system (STPTS) receiver are presented. Results, (chemical equilibria, chemical kinetics, mass emission rates transport and dispersion), indicate that some air pollutants may be produced as a result of operation of large scale central receiver STPS in quantities sufficient to be of regulatory concern. These will require steps toward management. Primary concern focuses on nitric oxide, and its downstream potential pollutant products. In all likelihood the quantities produced will be small, and fully merit for solar its general recognition as an environmentally benign energy technology. Furthermore, for many solar configurations and modes of operation even this limited concern may not apply. Worst case conditions, however, are capable of leading to significant impacts from large scale high temperature STPS facilities. DOE

STUDY OF ACCUMULATOR PASSENGER CARS BASED ON THE IFIELD HYDROSTATIC PUMP/MOTOR UNIT
N. H. BEACHLEY and D. R. OTIS 24 Aug. 1981 140 p refs
(Contract W-7405-ENG-48)
(DE82-002522; UCRL-15390) Avail: NTIS HC A07/MF A01

A hydrostatic variable displacement pump/motor unit, called the Ifield accumulator, has significantly higher efficiencies than any other known units, and has the potential to make high mileage accumulator vehicles a practical reality. A preliminary study to determine the potential fuel economy improvement of an Ifield accumulator vehicle, and whether or not additional research and development work in this area is justified is presented. Efficiency data in equation form was provided by Ifield. The calculated results are quite promising, indicating mileage on the order of 60 mpg for a 3000 lb vehicle over the federal urban driving cycle (FUDC), and mileage on the order of 85 mpg for the New York City cycle. These figures appear to be feasible not only on a system with two pump/motor units, but on one with a single pump/motor unit. Fuel economy figures compare favorably with those of a comparable flywheel energy storage vehicle. The above figures are based on the use of accumulators with plastic foam as a heat sink to provide nearly isothermal operation with correspondingly low thermodynamic losses. With a conventional accumulator, the fuel mileage calculated for the FUDC drops approximately 9%. The required accumulator weight is calculated to be about 100 lb, using state of the art composite construction. Foam, if used, would add approximately 30% to the weight.

The Sassi Corporation of Indianapolis, Indiana, is investigating the commercial viability of converting refuse (trash and garbage) to synthetic natural gas. This conversion is accomplished by: (1) shredding and preparing the refuse for conversion; (2) producing a gas of low calorific value from the refuse using the Union Carbide Purox Process; and (3) methanating the Purox off-gas to a quality suitable for sale in the existing gas distribution system. Based on the scheme envisioned, a process design has been prepared for a facility which processes 46.87 MMSCFD of Purox off-gas, resulting in 26.4 MMSCFD of SNG. A detailed process description, process flow diagram, and a detailed description of the mechanical aspects of the plant are included in this report. Investment analysis reveals that capital requirements for the facility are approximately $47,320,000, resulting in a payout, not including taxes or interest, of 8.3 years.

(NASA-CR-165398; NAS 1.26:165398; CW-WR-81.021) Avail: NTIS HC A07/MF A01 CSCL 21A

A technology base of new developments which offered potential benefits to a general aviation engine was compiled and ranked. Using design approaches selected from the ranked list, conceptual design studies were performed of an advanced and a highly advanced engine sized to provide 186/250 shaft Kw/HP under cruise conditions at 7620/25,000 m/ft altitude. These are turbocharged, direct-injected stratified charge engines intended for commercial introduction in the early 1990's. The engine descriptive data includes tables, curves, and drawings depicting configuration, performance, weights and sizes, heat rejection, ignition and fuel injection system descriptions, maintenance requirements, and scaling data for varying power. An engine-airframe integration study of the resulting engines in advanced airframes was performed on a comparative basis with current production type engines. The results show airplane performance, costs, noise & installation factors. The rotary-engined airplanes display substantial improvements over the baseline, including 30 to 35% lower fuel usage.

TECHNICAL AND ECONOMIC ASSESSMENT OF FLUIDIZED-BED-AUGMENTED COMPRESSED-AIR ENERGY-STORAGE SYSTEM: SYSTEM LOAD FOLLOWING CAPABILITY
R. D. LESSARD, W. A. BLECHER, and D. MERRICK (Coal Processing Consultants Limited) Sep. 1981 225 p refs Prepared for Pacific Northwest Lab.
(Contract DE-AC06-76RL-01830)
(DE82-000958; PNL-3895) Avail: NTIS HC A10/MF A01

The load-following capability of fluidized bed combustion-augmented compressed air energy storage systems was evaluated. A detailed technical report describing the part-load and load following capability of both the pressurized fluid bed combustor and the entire pressurized fluid bed combustor/-compressed air energy storage systems is presented. The conclusions are encouraging and indicate that the open-bed PFBC/CAES power plant should provide good part-load and transient performance, and should have no major equipment-related constraints, specifically, no major problems associated with the performance or design of either the open-end PFBC or the PFBC/CAES power plant in steady-state, part-load operation are envisioned. The open-bed PFBC/CAES power plant would have a load following capability which would be responsive to electric utility requirements for a peak-load power plant. DOE

TECHNICAL AND ECONOMIC ASSESSMENT OF FLUIDIZED-BED-AUGMENTED COMPRESSED AIR ENERGY-STORAGE SYSTEM. VOLUME 2: INTRODUCTION AND TECHNOLOGY ASSESSMENT
A. J. GIRAMONTI, R. D. LESSARD, D. MERRICK (Coal Processing Consultants Limited), and M. J. HOBSON (Acres American Inc.) Sep. 1981 230 p refs Prepared for Pacific Northwest Lab.
(Contract DE-AC06-77RL-01830)
(DE82-000938; PNL-3686-VOL-2) Avail: NTIS HC A11/MF A01

The results are described of a study subcontracted by PNL to the United Technologies Research Center on the engineering feasibility and economics of a CAES concept which uses a coal fired, fluidized bed combustor (FBC) to heat the air being returned from storage during the power production cycle. By burning coal instead of fuel oil, the CAES/FBC concept can completely eliminate the dependence of compressed air energy storage on petroleum fuels. A discussion of program background and an in-depth coverage of both fluid bed combustion and turbomachinery technology pertinent to their application in a CAES power plant system is presented. The CAES/FBC concept appears technically feasible and economically competitive with conventional CAES. However, significant advancement is required in FBC technology before serious commercial commitment to CAES/FBC can be realized. DOE

DEMONSTRATION OF A NITROGEN-BASED CARBURIZING ATMOSPHERE Final Report
R. J. PEARTREE Sep. 1981 140 p refs
(Contract DE-AC07-78CS-40234)
(DE82-004196; DOE/CS-40234/T2) Avail: NTIS HC A07/MF A01

A comprehensive energy study comparing nitrogen-based atmospheres to endothermic atmospheres was completed. Energy savings of up to 18.8% combined with production increases averaging 10% are possible with nitrogen-methanol carburizing atmospheres. Although the economics will vary depending on application and location, these energy savings and production increases are available to the heat treater at costs comparable to traditional endothermic atmosphere. The nitrogen-methanol atmosphere systems are controllable using all of the currently available methods of carbon control. DOE

(BMFT-FB-T-82-0022; ISSN-0340-7608) Avail: NTIS HC A23/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 70,50

Application of microelectronic sensors, integrated circuits, and actuators in order to control energy consuming processes and reduce energy losses was studied. The energy saving potential of microelectronics was investigated in various sectors of secondary energy consumption, i.e., heating, electrical household equipment, road traffic, business, hot water and steam generation, and use of electrical motors. Findings are based on secondary energy consumption in the Federal Republic of Germany. Results show that potential energy savings can reduce demand for primary energy by 265 to 290 billion kilowatt hours. (8% to 9% of the total demand of the Federal Republic of Germany). Author (ESA)

THE DEBATE OVER ACID PRECIPITATION: OPPOSING VIEWS, STATUS OF RESEARCH
11 Sep. 1981 54 p refs
(AD-A106925; GAO/EMD-81-131) Avail: NTIS HC A04/MF A01 CSCL 04B

The use of coal as a substitute for imported oil is raising concern over the possible impact of acid precipitation on the

environment and human health. Precipitation can become acidified when sulfur and nitrogen oxides emitted by fossil-fueled powerplants, vehicles, and other man-made or natural sources are chemically changed in the atmosphere and return to Earth as acid compounds. Environmental organizations and some agencies and interest groups contend that more stringent emission controls are needed immediately. On the other hand, some agencies and many industries, particularly in the coal and utility sectors, argue that much more research is needed to determine if achievable emissions reductions could significantly diminish the extent of acid precipitation, and if the benefits of such regulations would be worth their potentially high cost.

THREE-DIMENSIONAL, CONSERVATION EQUATION MODEL FOR SIMULATING LNG VAPOR DISPERSION IN THE ATMOSPHERE
S. T. CHAN, P. M. GRESHO, and D. L. ERMAK Sep. 1981 18 p refs
(Contract W-7405-ENG-48)
(DE82-001053; UCID-19210) Avail: NTIS HC A02/MF A01

A numerical model for simulating the vapor spread and dispersion associated with LNG releases in the atmosphere is described. The model is based on solving the set of three dimensional, time dependent, conservation equations governing incompressible flows. Spatial discretization is performed via a modified Galerkin finite element method (GFEM), and time integration is carried out via the forward Euler method (pressure is computed implicitly, however). Cost effective techniques including subcycling, mass lumping, and reduced Gauss-Legendre quadrature are discussed. Numerical results obtained by using this model are presented.

PRELIMINARY ASSESSMENT OF ALTERNATIVE DRY STORAGE METHODS FOR THE STORAGE OF COMMERCIAL SPENT NUCLEAR FUEL
Nov. 1981 230 p refs
(Contract DE-AC09-80ET-47929)
(DE82-002303; DOE/ET-47929/1) Avail: NTIS HC A11/MF A01

The results are presented for an assessment of the (1) state of technology, (2) licensability, (3) implementation schedule, and (4) costs of alternative dry methods for storage of spent fuel at a reactor location when used to supplement reactor pool storage facilities. The methods of storage that was considered included storage in casks, drywells, concrete silos and air-cooled vaults. The impact of disassembly of spent fuel and storage of consolidated fuel rods was also determined. The economic assessments were made based on the current projected storage requirements of Virginia Electric and Power Company's Surry Station for the period 1985 to 2009, which has two operating pressurized water reactors (824 MWe each). It was estimated that the unit cost for storage of spent fuel in casks would amount to $117/kgU and that such costs for storage in drywells would amount to $137/kgU. However, based on the overall assessment it was concluded both storage methods were equal in merit. Modular methods of storage were generally found to be more economic than those requiring all or most of the facilities to be constructed prior to commencement of storage operations.

ENERGY-ECONOMY ANALYSIS AND APPLICATION TO R AND D PLANNING Final Report, Oct. 1980 - Sep. 1981
E. A. HUDSON and P. A. DOROSH Oct. 1981 98 p
(Contract GRI-5080-310-0329)
(PB82-141128; GRI-81/0004) Avail: NTIS HC A05/MF A01
CSCL 05C

Projections of energy and economic conditions and analysis of energy economy interactions are based on a simulation model of the structure and growth of the U.S. economy (the Hudson-Jorgenson model). A reference projection is first constructed; this provides a reasonable estimate of future energy and economic conditions as well as providing information on economic growth, inflation and other variables required in project appraisal and R and D planning. Next, detailed analyses of energy economy interactions are performed; these examine the mechanisms through which energy changes affect economic structure and growth, and also provide a basis for quantitatively estimating the economic effects of specific energy changes.

VARIATION OF MINORITY CARRIER LIFETIME WITH LEVEL OF INJECTION IN P-N-JUNCTION DEVICES
S. K. AGARWAL, S. C. JAIN, and S. HARSH (Solid State Physics Laboratory, Delhi, India) Electronics Letters, vol. 18, Apr. 1, 1982, p. 298, 299. refs

Minority-carrier lifetime as a function of level of injection has been measured for a number of Si and Ge p-n-junction diodes using reverse recovery and forward current-induced voltage decay methods. It is found that the lifetime always increases with injection level if the effect of the finite thickness of the base of the diode is taken into account while interpreting the experimental results. The decrease in the lifetime values reported in the literature appears to be due to erroneous interpretation of the experimental data.

ELECTRODEPOSITION OF SOLAR SILICON
D. ELWELL and R. S. FEIGELSON (Stanford University, Stanford, CA) Solar Energy Materials, vol. 6, Jan.-Feb. 1982, p. 123-145. Research supported by the U.S. Department of Energy. refs

A review is presented of experimental data on the electrodeposition of silicon from molten salt and organic solutions, with emphasis on studies reported in the last three years. The potential of this method for photovoltaic applications is considered. Electrodeposition of silicon at temperatures above its melting point is a promising method of producing inexpensive silicon to be recrystallized by pulling or casting crystals. Deposition of layers onto graphite by electrowinning or electrorefining requires a relatively slow deposition rate but has the advantage of eliminating several processing steps.

TEMPERATURE DEPENDENCE OF SILICON SOLAR CELL CHARACTERISTICS
N. D. ARORA and J. R. HAUSER (North Carolina State University, Raleigh, NC) Solar Energy Materials, vol. 6, Jan.-Feb. 1982, p. 151-158. Research supported by the Solar Energy Research Institute. refs

The effects of temperature on the characteristics of p-n junction solar cells are investigated theoretically. An exact numerical model of the semiconductor transport equations is used to calculate the output parameters of the cell taking into account temperature effect on the material parameters of the cell. These calculations show that the temperature coefficient of solar cell parameters such as

open-circuit voltage, short-circuit current, efficiency, etc., are typically nonlinear over the range of temperature (300-450 K) studied in agreement with the experimental results as against a constant value obtained by simple calculations. (Author)

SOLAR ABSORPTANCE AND THERMAL EMITTANCE OF AL2O3 FILMS ON AL - A THEORETICAL ASSESSMENT
T. S. ERIKSSON, A. HJORTSBERG, and C. G. GRANQVIST (Chalmers Tekniska Hogskola, Goteborg, Sweden) Solar Energy Materials, vol. 6, Jan.-Feb. 1982, p. 191-199. refs

Solar absorptance and thermal emittance for Al2O3 films on Al are computed by use of a previous determination of the dielectric function for evaporated Al2O3. The solar absorptance is about 0.13 for films thicker than 0.4 micron. Low thermal emittance suitable for solar thermal conversion, requires film thicknesses lower than 0.8 micron, whereas rather high emittance can be obtained for films thicker than 3 microns. Theoretical results are consistent with published experimental data. (Author)

PHOTOCHEMICAL ENERGY CONVERSION IN CHLOROPHYLL-CONTAINING LIPID BILAYER VESICLES
J. K. HURLEY and G. TOLLIN (Arizona, University, Tucson, AZ) Solar Energy, vol. 28, no. 3, 1982, p. 187-196. Research supported by the U.S. Department of Energy. refs

Lipid bilayer vesicles containing incorporated chlorophyll molecules are being extensively studied as potential biomimeric solar energy conversion systems based upon green plant photosynthesis. Considerable information is now available concerning the structure and excited state dynamics of these systems. Electron-transfer reactions involving the chlorophyll triplet state and donor and acceptor species have been investigated by both steady-state and transient techniques, and understanding of detailed mechanisms is beginning to emerge. Under appropriate conditions, it has been possible to achieve high degrees of conversion of excited states into energy-rich products, and energy-wasting recombinations have been considerably retarded. Most recently, mechanistic studies of vectorial electron transfer across a lipid bilayer from donor to acceptor via the chlorophyll triplet state have begun, which promise to provide a new level of insight into the factors which control energy storage efficiency in these systems. REDUCTION OF SOLAR CELL EFFICIENCY BY BULK DEFECTS ACROSS THE BACK-SURFACE-FIELD JUNCTION
C. T. SAH (Illinois, University, Urbana, IL), K. A. YAMAKAWA, and R. LUTWACK (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) Journal of Applied Physics, vol. 53, Apr. 1982, p. 3278-3290. Research supported by the U.S. Department of Energy.

The degradation of solar cell performance due to bulk defects distributed across the back-surface field junction is analyzed in terms of a three-region developed-perimeter model. Families of curves are computed and their physical significance is discussed in detail with reference to three parameters used to characterize the defects: defect area, defect density, and defect surface recombination velocity. A reduction in the open-circuit voltage due to the presence of a defect is expressed as a function of the defect area, density, cell thickness, and defect surface recombination velocity. Numerical examples are presented to illustrate the importance of the particular defect parameters. V.L.

A82-29695
BACK SURFACE FIELD AND VERTICAL SOLAR CELL
Y.-T. YANG (National Tsinghua University, Hsinchu, Republic of China) Journal of Applied Physics, vol. 53, Apr. 1982, p. 3333, 3334. refs

A light-spot traverse experiment has been performed on a pnn(+) vertical solar cell initially with a tungsten-halogen lamp and then with a monochromatic He-Ne laser beam as the light sources. It is found that the cell is characterized by relatively high ability of light-to-electric-power conversion near the high back-surface field region. Results indicate that there are two strong source regions of power conversion: one near the pn junction and the other near the nn(+) junction, near which the back-surface field exists. V.L.

A82-29696
TRANSPORT IN HYDROGENATED AMORPHOUS SILICON P-I-N SOLAR CELLS
R. S. CRANDALL (RCA Laboratories, Princeton, NJ) Journal of Applied Physics, vol. 53, Apr. 1982, p. 3350-3352. refs
(Contract XG-0-93721)

A simple model of a p-i-n structure is used to obtain solutions to the continuity equations in terms of elementary functions. In addition, a regional approximation is used to obtain a simple expression for the photocurrent. It is found that for weakly absorbed light, the shape of photocurrent-voltage curve is completely specified by the electron and hole drift lengths. Furthermore, it is the carrier with the longer drift length that determines the current-voltage curve and hence the solar cell fill factor. V.L.

The photoelectrochemical behavior of synthetic crystals of WS2, MoS2 and crystals with mixed metal and chalcogen composition was studied and compared with the behavior of MoSe2 and WSe2. The composition and stoichiometry of the crystals and the composition of the electrolyte are varied and the behavior of the materials in a regenerative liquid junction solar cell is measured and analyzed. The quantum yields as a function of wavelength and photon flux are investigated and sunlight to electricity conversion efficiencies are measured. The formation of iodine layers on the photoelectrode surface under high illumination intensity was observed and discussed with respect to the use of these materials with solar concentrators. ENHANCEMENT OF CONCENTRATION USING SIMPLE MULTI-PLANE MIRRORS
J. K. SHARMA, A. DANG, and H. P. GARG (Indian Institute of Technology, New Delhi, India) Applied Energy, vol. 10, Mar. 1982, p. 233-242. refs

A numerical analysis for the concentration ratio of a tracking/nontracking solar concentrator made of plane mirrors is presented. The mirrors are assumed to be specular and nonabsorbing, and the concentration ratio with different mirror angles is considered, taking into account the acceptance angle. The concentration ratio was found to be maximized with an acceptance angle of 25 deg, and increased with increasing numbers of mirrors. The concentration tends toward that of a compound parabolic reflector. Efficient operation with concentration above 20 is noted to require tracking. M.S.K.

PHOTOVOLTAIC EFFECTS IN CU2O-CU SOLAR CELLS GROWN BY ANODIC OXIDATION
E. FORTIN and D. MASSON (Ottawa, University, Ottawa, Canada) Solid-State Electronics, vol. 25, Apr. 1982, p. 281-283. refs

Thin Cu2O-Cu photovoltaic cells grown by anodic oxidation of Cu in an alkaline solution at T = 86 C give an open-circuit voltage of up to 400 mV and a short-circuit current density of up to 0.6 mA/sq cm under AM1 illumination. The cells display charge storage properties as well; that is, a small fraction of the solar energy can be stored and given back by the cells in the dark. (Author)

PARAMETRIC PHOTOVOLTAIC CELL
G. DE MEY (Gent, Rijksuniversiteit, Ghent, Belgium) Electronics Letters, vol. 18, Apr. 15, 1982, p. 334-336.

A new way of converting light energy into electric power is presented. A capacitor is charged periodically under influence of the chopped light flux. Electric energy stored in the capacitor can be increased by the parametric effect, i.e. the reduction of the capacitance value. The energy conversion process is analysed. The possible applications and limitations of this device are indicated and discussed. (Author)

SPECTRAL SELECTIVITY OF NICKEL AND CHROMIUM ROUGH SURFACES
R. T. KIVAISI and L. STENSLAND (Institute of Optical Research, Stockholm, Sweden) Applied Physics A - Solids and Surfaces, vol. A27, Apr. 1982, p. 233-238. Research supported by the Swedish Institute. refs

The reflectance of metal surfaces with sinusoidal roughness of different periods and depths has been investigated experimentally. The results show clearly that the surface structure can be used to modify the optical properties of metal surfaces at different wavelengths. With a proper choice of groove depth to period ratio, nickel or chromium coatings on gratings have low reflectance in the short wavelength region, but achieve high reflectance in the infrared region. A solar absorptance as high as 93% has been obtained from such a surface. The surfaces are thought to be representative for randomly rough surfaces provided proper correlation length and height variation are chosen. Further, as the absorber is made of a single metal surface, it could be highly temperature resistant. (Author)

USE OF SOLAR FURNACES. II - THERMOPHYSICAL PROPERTIES
D. SURESH, W. W. S. CHARTERS (Melbourne, University, Parkville, Victoria, Australia), and P. K. ROHATGI (Council of Scientific and Industrial Research, Regional Research Laboratory, Bhopal, India) Solar Energy, vol. 28, no. 4, 1982, p. 273-280. refs

The various ways in which solar furnaces have been used to measure the high-temperature thermophysical properties of materials are reviewed, with attention given to the advantages and disadvantages of these furnaces. Thermal expansion experiments are seen as lacking accuracy. By introducing homogeneous heating methods, as well as precision dilatometers, this defect could be overcome. Solar furnaces must be designed so as to give larger focal areas of uniform flux density. Modifying the pulsed method so as to eliminate the requirement for homogeneity of the energy flux is thought desirable. It would also be worthwhile to design a suitable loading device to obviate complications arising out of elongation of the specimen during tests. C.R.

POSSIBLE APPLICATIONS OF LARGE SOLAR ARRAYS IN ASTRONOMY AND ASTROPHYSICS
S. DANAHER, D. J. FEGAN, N. A. PORTER (University College, Dublin, Ireland), T. C. WEEKES (Mount Hopkins Observatory, Amado, AZ), and T. COLE (Ford Motor Co., Dearborn, MI) Solar Energy, vol. 28, no. 4, 1982, p. 335-343. Research supported by the National Board of Science and Technology of Ireland. refs

It is pointed out that the large collection area of solar test facilities may be useful in certain astronomical experiments. Since only nighttime hours would be involved, there would be no conflict with daytime solar research. Although solar concentrators are optically crude by conventional astronomical telescope standards, there are certain applications where angular resolutions of 0.25 deg can be tolerated. These applications are discussed, along with results from the nighttime use of large concentrators. A table comparing the parameters of a typical astronomical telescope with those of a typical solar concentrator is included. Four areas of astronomical research where solar concentrators might be useful are discussed. They are the detection of Cerenkov light from extensive air showers, optical bursts, optical detection of meteors, and stellar photometry. C.R.

SATELLITE THERMAL DESIGN AND ANALYSES FOR TITAN 34D/IUS AND STS/IUS LAUNCH VEHICLE ENVIRONMENTS
H. FACTOR and E. A. STIPANDIC (General Electric Co., Space Div., Valley Forge, PA) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 8 p.
(AIAA PAPER 82-0828)

T34D/IUS launch vehicle studies are considered, taking into account heater power studies for a cold mission and solar array studies. A description of STS/IUS studies is also provided. Solar array high temperature problems were identified by examining in detail the worst case attitudes/timelines for each mission phase. Parametric study results produced limiting vehicle attitudes and timelines. This data was then used to establish launch window constraints. It was found that the spacecraft heater power circuitry design was not adequate for an STS launch because both peak and average heater power requirements were exceeded. A separate heater electrical bus and a method of switching to different circuits was incorporated. For the Titan launch, a tighter launch pad environmental control was found to be necessary to limit prelaunch heater power usage and to satisfy the spacecraft battery state-of-charge requirements. CONVERSION OF BLACKBODY RADIATION INTO LASER ENERGY
R. M. MCINVILLE and H. A. HASSAN (North Carolina State University, Raleigh, NC) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 6 p. refs
(Contract NCC1-54)
(AIAA PAPER 82-0871)

By employing detailed kinetic models, three concepts which utilize a blackbody cavity for the conversion of solar energy into laser energy using a CO2 lasant are analyzed and compared. In the first, the blackbody radiation is used to excite flowing CO2 directly. The second and third employ a mixing laser concept with CO and N2 being the donor gases. The CO is optically pumped while thermal heating excites the N2. Blackbody temperatures ranging from 1500 deg K - 2500 deg K are considered. Based on calculated laser power output per unit flow rate of CO2, it appears that the N2-CO2 mixing laser is the most attractive system. (Author)

SOLAR-POWERED AIRPLANE DESIGN FOR LONG-ENDURANCE, HIGH-ALTITUDE FLIGHT
J. W. YOUNGBLOOD and T. A. TALAY (NASA, Langley Research Center, Space Systems Div., Hampton, VA) American Institute of Aeronautics and Astronautics, International Very Large Vehicles Conference, 2nd, Washington, DC, May 17, 18, 1982, 10 p. refs
(AIAA PAPER 82-0811)

This paper describes the performance analysis and design of a solar-powered airplane for long-endurance, unmanned, high-altitude cruise flight utilizing electric propulsion and solar energy collection/storage devices. For a fixed calendar date and geocentric latitude, the daily energy balance, airplane sizing, and airplane aerodynamics relations combine to determine airplane size and geometry to meet mission requirements. Vehicle component weight loadings, aerodynamic parameters, and current and projected values of power train component characteristics form the basis of the solution. For a specified mission, a candidate airplane design is presented to demonstrate the feasibility of solar-powered long endurance flight. Parametric data are presented to illustrate the airplane's mission flexibility. (Author)

THICK OPTICAL FILMS FOR THE CONDUCTION OF OPTICAL AND INFRARED RADIATION
C. N. BAIN, B. A. GORDON, T. M. KNASEL, and R. L. MALINOWSKI (Science Applications, Inc., McLean, VA) In: Los Alamos Conference on Optics '81, 2nd, Los Alamos, NM, April 7-10, 1981, Proceedings. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 25-32. refs

Experimental results are presented for the characteristics of thick optical films, which can be used to direct and conduct optical and IR radiation, for the case of light concentration onto solar cells. Incident light is trapped within a thin, flat sheet of transparent material by a diffuse selective surface on the back of the transparent layer, and so directed that total internal reflection occurs, with some of the captured light finding its way back to the photovoltaic cells attached to the back of the layer. A Monte Carlo computer model is used to analyze this system, whose

achievable gain depends on layer thickness, trapping material refraction index, and solar cell shape and size. Results indicate that gains of a factor of two in power output are obtainable for the case of sparsely-packed solar cell arrays and lower factors for more densely-packed arrays. O.C.

OPTICAL CHARACTERIZATION METHOD FOR CONCENTRATING SOLAR COLLECTORS USING REVERSE ILLUMINATION
K. MASTERSON (Solar Energy Research Institute, Golden, CO) and H. GAUL (Solar Innovations, Inc., Boulder, CO) In: Los Alamos Conference on Optics '81, 2nd, Los Alamos, NM, April 7-10, 1981, Proceedings. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 498-504. Research supported by the U.S. Department of Energy. refs

The reverse illumination optical method, by means of which solar concentrator overall alignment and aligning elements are checked, areas of extreme distortion are identified, and receiver intercept factors are determined, involves viewing the concentrator on its optical axis and through a telescope located several kilometers away. The method is simpler and less expensive than ray tracing, but does not detail the magnitude and direction of slope errors. Portions of the concentrator aperture not filled by the image of a high visibility target are ineffective in concentrating the sun's energy on a receiver of the same dimensions as the target. Image analysis of these records yields a quantitative measure of reflector alignment and intercept factor for the collector. O.C.

A82-32693
DISTRIBUTED SERIES RESISTANCE EFFECTS IN SOLAR CELLS
L. D. NIELSEN (Danmarks Tekniske Hojskole, Lyngby, Denmark) IEEE Transactions on Electron Devices, vol. ED-29, May 1982, p. 821-827. Commission of the European Communities refs
(Contract CEC-ESC-R-020-DK(G))

A mathematical treatment is presented of the effects of one-dimensional distributed series resistance in solar cells. A general perturbation theory is developed, including consistently the induced spatial variation of diode current density and leading to a first-order equivalent lumped resistance of one third the total sheet resistance. For the case of diode characteristics of exponential type and distributed resistance of arbitrary size, unified numerical results are presented for both illuminated and dark characteristics. At high forward dark currents, the distributed series resistance is shown to cause an effective doubling of the 'diode quality factor'. (Author)

EFFECT OF THICKNESS ON SILICON SOLAR CELL EFFICIENCY
C.-T. SAH (Illinois, University, Urbana, IL), K. A. YAMAKAWA, and R. LUTWACK (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) IEEE Transactions on Electron Devices, vol. ED-29, May 1982, p. 903-908. Research supported by the U.S. Department of Energy and NASA. refs

A computer-aided-design study on the dependence of the efficiency peak of a back-surface field solar cell on the concentrations of the recombination and dopant impurities is presented. The illuminated current-voltage characteristics of more than 100 cell designs are obtained using the transmission line circuit model to numerically solve the Shockley equations. Using an AM 1 efficiency of 17% as a target value, it is shown that the efficiency versus thickness dependence has a broad maximum which varies by less than 1% over more than a three-to-one range of cell thicknesses from 30 to 100 microns. An optically reflecting back surface will give only a slight improvement of AM 1 efficiency, about 0.7%, in this thickness range. Attention is given to the dependence of the efficiency on patchiness across the back-surface field low-high junction in thin cells. C.R.

A82-32691
EFFICIENCY OF HOT-CARRIER SOLAR ENERGY CONVERTERS
R. T. ROSS (Ohio State University, Columbus, OH) and A. J. NOZIK (Solar Energy Research Institute, Golden, CO) Journal of Applied Physics, vol. 53, May 1982, p. 3813-3818. refs
(Contract EG-77-C-01-4042)

A single-threshold quantum-utilizing device with hot electronic bands is reported whose solar energy conversion efficiency exceeds the efficiency of an ideal fully thermalized device. In the proposed hot-carrier flat-plate device, the excited carriers thermally equilibrate among themselves, but not with the environment. When operated under typical terrestrial conditions (AM 1.5 illumination at 300 K), the new device can convert solar energy with an efficiency of 66%, as compared with maximum efficiencies of 33% for a quantum device operating at thermal equilibrium and 52% for an ideal thermal conversion device. This is achieved due to a high Carnot efficiency resulting from a high effective absorber temperature and due to a negative potential difference between the bands leading to a reduction in reradiation from the absorber. V.L.

A82-32692
FREQUENCY DEPENDENT CAPACITANCE STUDIES OF THE CDS/CU2S THIN-FILM SOLAR CELL
L. V. HMURCIK (Clarkson College of Technology, Potsdam, NY) and R. A. SERWAY (James Madison University, Harrisonburg, VA) Journal of Applied Physics, vol. 53, May 1982, p. 3830-3838. refs
(Contract DE-AC01-79ET-23110)

The dark capacitance of CdS cells has been measured as a function of both bias voltage and operating signal frequency. Results indicate a frequency dependence of the dark current capacitance which can be attributed to deep trapping states in the bulk CdS and at the interface; these states can be characterized by a time constant in the simple relaxation model. Photocapacitance measurements indicate that hole trapping takes place in a narrow region of the i layer near the Cu2S/CdS junction. The results are interpreted in terms of a frequency-dependent model proposed by Schibli and Milnes (1968). It is shown that the simple planar junction model commonly used to describe the CdS cell is accurate at high frequencies. V.L.

A82-32893
DEEP TRAP LEVELS IN CDS SOLAR CELLS OBSERVED BY CAPACITANCE MEASUREMENTS
L. HMURCIK (Clarkson College of Technology, Potsdam, NY), L. KETELSEN (Illinois, University, Urbana, IL), and R. A. SERWAY (James Madison University, Harrisonburg, VA) Journal of Applied Physics, vol. 53, May 1982, p. 3839-3847. refs
(Contract DE-AC01-79ET-23110)

Capacitance measurements have been carried out as a function of reverse bias voltage and signal frequency on thin-film and single-crystal CdS solar cells. It is shown that such measurements can reveal abrupt changes in C-V plots which are attributed to the presence of deep trapping states. The anomalous change in capacitance occurs when the bias voltage raises a trapping state above the Fermi level; the strength of the anomalies depends on several factors including temperature, signal frequency, and junction properties. Measurements taken on the CdS cells indicate that at least two deep trapping states are present in the partially formed i layer of CdS, which is consistent with results reported by other workers. V.L.

A82-32894
TEMPERATURE COEFFICIENTS OF THE OPEN-CIRCUIT VOLTAGE OF P-N JUNCTION SOLAR CELLS
C.-Y. WU and J.-F. CHEN (National Chiao Tung University, Hsinchu, Republic of China) Journal of Applied Physics, vol. 53, May 1982, p. 3852-3858. refs

An analytical expression is derived for the temperature coefficient of the open-circuit voltage of p-n junction solar cells with various structures. Simplified expressions for the temperature coefficient, directly applicable to conventional p-n junction and BSF solar cells, are then obtained for two special cases: (1) the saturation dark current is mainly contributed from the base and (2) the saturation dark current is mainly contributed from the emitter. It is shown that the temperature coefficient of the open-circuit voltage is largely determined by the solar cell structure, the value of the open-circuit voltage, and the effective energy-gap narrowing in the heavily doped layer. Based on the temperature coefficient, the effectiveness of a high-low junction in BSF solar cell can be evaluated; the temperature coefficient of the open-circuit voltage of a BSF cell fabricated on a thin epitaxial substrate can be also used to measure the effective energy-gap narrowing in the highly doped emitter. V.L.

A82-32895
AN EFFECT OF BACK-SURFACE BORON IMPLANTATION ON SILICON SOLAR CELLS
M. B. SPITZER, S. J. SOLOMON, and P. R. YOUNGER (Spire Corp., Bedford, MA) Journal of Applied Physics, vol. 53, May 1982, p. 3926. refs

An experimental study has been carried out to investigate mechanisms responsible for the effect of open-circuit voltage enhancement in back-surface ion-implanted silicon solar cells. It is shown that open-circuit voltage enhancement in boron-implanted cells is due to a back-surface field effect, whereas gettering, if present, does not affect cell performance. This result is consistent with the observation that, for equal fluence, the damage produced by boron implantation is less than that produced by heavier ions, and, consequently, boron-implant damage is less effective as a gettering treatment for the implant and anneal conditions reported. V.L.

ENERGY CONVERSION PROCESS OF P-I-N AMORPHOUS SI SOLAR CELLS
Y. KUWANO, S. TSUDA, and M. OHNISHI (Sanyo Electric Co., Ltd., Research Center, Hirakata, Osaka, Japan) Japanese Journal of Applied Physics, Part 1, vol. 21, Feb. 1982, p. 235-241. Research supported by the Agency of Industrial Science and Technology. refs

The photovoltaic conversion process of a p-i-n amorphous silicon (a-Si) solar cell is investigated, and its theoretical limit efficiency is calculated. Under AM-1 illumination, the theoretical limit efficiency of the p-i-n a-Si solar cell is estimated to be 12.5%, while that under fluorescent lamp illumination is estimated to be 25.9%. In the calculation of the charge distribution in a-Si film, the Shifted U distribution is proposed for the distribution function of gap states. Poisson's equation is directly solved as a boundary condition problem, and the output characteristics of the p-i-n a-Si solar cell are calculated by solving the continuity equation for the photo-generated carriers. (Author)

THE SOLAR POWER SATELLITE [SATELLITE DE PUISSANCE SOLAIRE]
P. F. COMBES (Toulouse III, Universite, Toulouse, France) L'Aeronautique et l'Astronautique, no. 93, 1982, p. 62-77. In French. refs
(ONERA, TP NO. 1982-52)

The construction, launch, components, and operations of satellite solar power systems (SSPS) for direct beaming of solar energy converted to electricity to earth stations are outlined. The reference designs of either Si or concentrator GaAs solar cell assemblies large enough to project 5 GW of power are described. The beam will be furnished by klystrons or amplitrons for reception by rectennas on earth. Conforming to the law of amplitude and the equiphase law will permit high efficiencies, pointing accuracy, and low power deposition/sq cm, thus avoiding environmental problems, although some telecommunications systems may suffer interference. The construction of the dipole rectenna grid is sketched, noting that one receiver would be an ellipse sized at 10 x 13 km. Various forms of pollution which could result from the construction of an SSPS are examined. M.S.K.

A82-33683
EFFICIENT CDSE/P/+/N SI TUNNEL JUNCTION PHOTOANODE FOR SOLAR CELL
W. E. PINSON (Infrared Photo, Ltd., Ottawa, Canada) Applied Physics Letters, vol. 40, June 1, 1982, p. 970-972. refs

The 1.03-V solar photoemf generated by this CdSe/p/+/n Si photoanode lends itself to solar storage applications. Evidence is presented that the 21-mA/sq cm short circuit solar photocurrent results from a low resistance tunnel path between the CdSe conduction band and the p/+/ Si valence band. The dark electron current is used to calculate that the hole quasi-Fermi level at the CdSe surface of the solar illuminated open circuited photoanode lies 0.16 V below the CdSe corrosion potential. Hence, even on open circuit the CdSe surface of the illuminated photoanode will corrode. (Author)

SOLAR BACTERIAL BIOMASS FARM FOR SPACE VEHICLES
H. TRIBUTSCH (Berlin, Freie Universitaet, Berlin, West Germany) Astronautics and Aeronautics, vol. 20, June 1982, p. 66-68. refs

The use of the bacterium Thiobacillus ferrooxidans to produce biomass ten times as efficiently as the best agricultural land is discussed. A solution of Fe(2+), carbon dioxide from the air, and oxygen is all that the bacterium needs to grow and multiply and produce biomass at 35 percent efficiency. Depending on what process is used to manufacture the Fe(2+), the final efficiency would range from 6 to 17.7 percent, compared to the 1 percent efficiency of photosynthesis. A solar farm in space producing biomass by means of a continuous-flow apparatus is described. The bacterium has characteristics suitable for living in outer space: ability to grow in the dark, toleration of harsh living conditions, and resistance to radiation. C.D.

A82-33925#
SOLAR HEAT COLLECTOR-GENERATOR FOR COOLING PURPOSES
K. ABDULLAH (Bogor Agricultural University, Bogor, Indonesia) Regional Journal of Energy Heat and Mass Transfer, vol. 4, Jan. 1982, p. 19-26; Discussion, p. 26, 27.

The performance of an experimental LiBr-H2O solar collector powered absorption cooling system is described. A numerical model was developed of the energy, mass, and momentum balances across the heat-exchange loop to obtain the refrigerant vapor generation rate. The mechanism works by the thermosiphon principle, which eliminates mechanical devices from the loop. All leaks were fixed before measurements began with a test apparatus comprising a pyrex tube 1.87 m long with a 2.7 i.d. The refrigerant flow rate was monitored, along with temperature changes in the fluid and across the tube. Bubble initiation was observed from the free surface extending downward in the tube. Reynolds numbers varied from 6-43 in the liquid phase and 81-204 in the vapor phase. A formulation was made for the low-velocity two-phase flow and good agreement was demonstrated with the simulation. M.S.K.

SYMPOSIUM ON MATERIALS AND NEW PROCESSING TECHNOLOGIES FOR PHOTOVOLTAICS, HOLLYWOOD, FL, OCTOBER 1980, PROCEEDINGS
J. A. AMICK, (ED.) (Exxon Research and Engineering Co., Linden, NJ), E. SIRTL (Heliotronic GmbH, Burghausen, West Germany), P. RAI-CHOUDHURY (Westinghouse Research and Development Center, Pittsburgh, PA), and J. P. DISMUKES (Exxon Research and Engineering Co., Linden, NJ) Symposium sponsored by the Electrochemical Society Pennington, NJ, Electrochemical Society, Inc. (ECS, Proceedings. Volume 81-3), 1981. 355 p $14

The progress towards establishment of commercially viable, mass production solar cells is examined. Photovoltaic programs carried on by U.S., Japan, and European governments are reviewed, along with candidate methods for producing low cost Si cells. Candidate materials and processes include rice hulls, dendritic web formation, silane pyrolysis and deposition in a fixed bed reactor, and purification during crystal pulling. Attention is given to crystalline solar cells, particularly back surface field and interdigitated back contact Si cells, thin film formation techniques and modeling parameters, and materials for modular array construction. Encapsulant investigations are detailed, as are research programs in CdS, Cu2S/CdS, and Be-doped (GaAl)As/GaAs solar cell fabrication. Finally, prototype industrial processes being developed by government-industry cooperation are described. M.S.K.

A82-34077
SOLAR PHOTOVOLTAIC PROGRAMS IN THE SUNSHINE PROJECT AND PRESENT STATUS OF R&D IN JAPAN
Y. HAMAKAWA (Osaka University, Toyonaka, Japan) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 18-36. refs

Solar photovoltaic activities in the national technological development program, the 'Sunshine Project' in Japan are introduced. The philosophy, program milestones, technological development plans and their structures are viewed. Present status of solar photovoltaic R&D projects and some recent remarkable results are described. Current trends in the photovoltaic industry and some application systems scheduled for market stimulation are also demonstrated and discussed. (Author)

CURRENT ASPECTS IN LOW-COST SILICON TECHNOLOGY
J. DIETL (Heliotronic GmbH, Burghausen, West Germany) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 48-59. Bundesministerium fuer Forschung and Technologie refs
(Contract BMFT-NT-0845/0846)

The target of worldwide efforts in manufacturing low-cost Si is to provide an impurity-optimized material suitable for large-scale solar cell fabrication. Different new technologies have been developed but apparently obsolete methods have seen their renaissance likewise. The processes use either quartz, metallurgical-grade silicon or volatile halides as the silicon source material. A survey of high-potential processes is given in terms of abundance of resources and low-cost processing. Low energy consumption, high yield, and high through-put are further criteria of the currently most discussed ways to produce terrestrial solar-grade silicon. (Author)

RELATIVELY LOW-TEMPERATURE PYROLYSIS OF SILANE IN FREE SPACE
H. LEVIN (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 68-79. refs

The continuous flow pyrolyzer is a free space reactor that is used to study the effects of concentration, flow rate and temperature in making solar-grade silicon by pyrolysis of silane gas. Work with the continuous flow pyrolyzer is within the DOE-sponsored Low-Cost Solar Array Project. The work has led to a new theoretical treatment of silane pyrolysis in free space at relatively low temperatures (550 C to 750 C). It involves a sequential, three-step mechanism of particle growth: first, silicon atom generation by homogeneous reaction; second, coagulation to a 0.1 micron particle due to Brownian motion and van der Waals forces; and finally, chemical vapor deposition by heterogeneous reaction to final particle size. SILICON SHEET - A KEY TO LOW COST SOLAR CELLS
R. H. HOPKINS (Westinghouse Research and Development Center, Pittsburgh, PA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 92-107. refs

The levels of advancement of various methods of mass-producing silicon sheets for solar cells are assessed. Indirect methods involve initial formation of the crystal and then sawing to shape. Growth is produced by either the Czochralski method or by directional freezing. Direct methods involve forming the finished cell in a one-step process, and include capillary shaping, dendritic web, ribbon to ribbon, Si on ceramic, horizontal ribbon growth, roller quenching, and filament guided ribbon growth. The production of commercially producible cells by indirect methods is not regarded as possible. The Si on ceramic process called SCIM is mentioned to avoid impurities buildup by passing graphitized mullite substrates through molten Si up to a rate of 30 cm/min. An efficiency of 10.5% was reported in 1980. Automation is noted to be the production snag, especially for Si web and edge-defined growth methods. The latter has yielded 14.5% efficient cells. M.S.K.

A82-34083
HIGH EFFICIENCY AND RADIATION HARD SOLAR CELLS FROM DENDRITIC WEB SILICON RIBBON
A. ROHATGI, J. R. DAVIS, P. RAI-CHOUDHURY, R. G. SEIDENSTICKER, and R. B. CAMPBELL (Westinghouse Research and Development Center, Pittsburgh, PA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 108-118. refs

Features and performance of dendritic web Si solar cells are examined and compared with float zone Si cells. The web is grown between two dendrites withdrawn from molten Si through a freezing slot. Present web-grown wafers contain three (111) twin planes parallel to the surface. Sample npp cells were produced with boron-doping and a resistance of 1-10 ohm-cm, and float zone cells were grown at 850 C for the front junction and 950 C for the back surface field. Current-voltage characteristics of both kinds of cells were studied at 91.6 mW/sq cm illumination under AM1 conditions. The cells were also examined for radiation resistance by exposure to a 1 MeV electron beam and subsequent observations by spectroscopy. Both cells featured a maximum efficiency of 15%, a figure which was slightly higher after oxide passivation treatment. The web and float zone cells tolerated radiation equally. M.S.K.

A82-34084
METALLURGICAL GRADE SILICON SUBSTRATES FOR SOLAR CELL APPLICATION
F. SECCO DARAGONA, H. M. LIAW, and D. M. HEMINGER (Motorola, Inc., Phoenix, AZ) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 119-131. refs
(Contract XS-9-8119-3)

Sequential steps of purification have been applied to metallurgical grade silicon for the production of low cost Si substrates. The sequential purification includes acid leaching, phase separation, reactive gas treatment, liquid-liquid extraction and impurity redistribution using ingot pulling. The effectiveness of each purification step has been identified. The silicon ingots produced by the sequential purification contain impurity levels at the vicinity of the detection limit of SSMS with the exception of Al, Ti, Ge, P, and B. 7.4% conversion efficiency was obtained for epitaxial solar cells using the purified MG-Si substrates. (Author)

A82-34085
PHOTOVOLTAIC POWER SYSTEMS - STATE OF THE ART - 1980
V. K. KAPUR, J. E. AVERY, and C. F. GAY (ARCO Solar, Inc., Chatsworth, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 140-146.

A mass-production process which yields low-cost Si solar cell modules is discussed. Czochralski ingots are grown from semiconductor grade Si and boron is used as the dopant. A resistivity in the range 1-10 ohm-cm in the p-type crystals results and the ingots are sawn to a thickness of 0.015 in. Etching in NaHO eliminates the sawing damage and reduces the reflective losses from 35 to 12%. Phosphorus oxychloride is employed to deposit an n-layer on the wafer. Automated printers deposit silver paste ohmic contacts on the front and aluminum paste on the back surface. Typical I-V curves show a 12.5% efficiency. Polyvinyl butyral sandwiches provide the assembly module of series-connected cells and the entire sheet is imbedded in low-iron glass. Scaling up the process is expected to lower the manufacturing cost to $3-4/kW. M.S.K.

DIAGNOSTIC STUDY OF BSF SILICON SOLAR CELLS
H. YOO, P. ILES, F. HO (Applied Solar Energy Corp., City of Industry, CA), G. POLLOCK, and K. KOLIWAD (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 147-158. NASA-supported research. refs

Solar cells equipped with back surface fields (BSF) were fabricated by means of an aluminum alloy, boron diffusion, and boron ion implantation. The importance of initial thickness, resistivity, orientation, and the crystal growth method were examined. Aluminum in paste form was screen printed on the cell, followed by alloy formation at 800 C for a minute. Application of the BSFs resulted in open circuit voltage improvements dependent on the substrate resistivity, ranging from 10 mV at 0.3 ohm-cm to 50 mV at 15 ohm-cm. The gains in performance were attributed to a longer penetration depth, a heightened concentration profile at the interface, and higher concentrations in the p+ layer. M.S.K.

A82-34087
PROCESSING FOR HIGH PHOTOCURRENT IN IBC SOLAR CELLS
F. W. SEXTON, C. M. GARNER, and J. L. RODRIQUEZ (Sandia National Laboratory, Albuquerque, NM) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 159-170. Research supported by the U.S. Department of Energy. refs

The fabrication process and performance characteristics and features of long bulk lifetime, low front and back surface recombination velocities, 10 ohm-cm FZ-grown single crystal Si solar cells are discussed. The cells are interdigitated back contact designs fabricated on 300 microns thick Si wafers, with phosphorus and boron dopants. Quantum efficiency data indicated a minority-carrier lifetime of 350 microsec and a maximum recombination velocity of 30 cm/sec. Laser scans, however, revealed a minimum minority carrier lifetime of 190 microsec. The difference is suggested to be due to front surface recombination reducing the short-circuit current during the laser scans. Back surface passivation is indicated for reducing back surface recombination losses, and a process using 500 A thick wet thermal oxides is recommended. M.S.K.

ANALYTICAL CALCULATION OF THICKNESS VERSUS DIAMETER REQUIREMENTS OF SILICON SOLAR CELLS
C. P. CHEN (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 187-195. refs

It may be more cost-effective to produce larger diameter silicon Cz solar cells. However, greater thickness is anticipated to be necessary for larger diameter wafers to withstand wafering, cell processing and handling. No material standard for these dimensional requirements is practical or cost-effective for cell manufacturers. The equations relating wafer thickness and diameter were derived by using fracture mechanics analysis. An analytical model was used as a guideline to estimate thickness versus diameter requirements of silicon solar cells in terms of fracture mechanics parameters. (Author)

A82-34090
PRACTICAL LIMITING EFFICIENCIES FOR CRYSTALLINE SILICON SOLAR CELLS
J. A. AMICK and A. K. GHOSH (Exxon Research and Engineering Co., Linden, NJ) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 196-211. refs

A review is given of the factors governing the conversion efficiency for crystalline silicon solar cells at air-mass-1, and of the practical limits on cell efficiencies. Included are losses due to reflection, shadowing, carrier diffusion length, and I-squared(R) dissipation. The influence of polycrystalline grain size on conversion efficiency is also discussed. For conventional cells having a planar junction, a practical limiting efficiency in production appears to be about 17-18% in the absence of sunlight concentration. (Author)

A82-34091
LOW-COST PROCESSES FOR THIN-FILM SOLAR CELLS
R. M. MOORE (Solar Energy Research Institute, Golden, CO) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 212-214. refs

The orientation and goals of a solar cell Exploratory Development program at the Solar Energy Research Institute are described. Thin film photovoltaic manufacturing processes which have shown initial promise for low-cost production of efficient cells will be examined as candidates for entering technology development. Polycrystalline Si was examined initially and succeeding trials will be run with amorphous Si, II-VI, and III-V materials to further define the choice of materials for the process tests. Performance goals are targetted at cells with over 20 sq cm area exceeding an 11% AM1 efficiency and thin film modules with an AM1 output of 8 W. M.S.K.

ION IMPLANTATION OF SOLAR CELL JUNCTIONS WITHOUT MASS ANALYSIS
D. FITZGERALD (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) and D. G. TONN (California Institute of Technology, Pasadena, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 215-222. Research sponsored by the U.S. Department of Energy and NASA.

This paper is a summary of an investigation to determine the feasibility of producing solar cells by means of ion implantation without the use of mass analysis. Ion implants were performed using molecular and atomic phosphorus produced by the vaporization of solid red phosphorus and ionized in an electron bombardment source. Solar cell junctions were ion implanted by mass analysis of individual molecular species and by direct unanalyzed implants from the ion source. The implant dose ranged from 10 to the 14th to 10 to the 16th atoms/sq cm and the energy per implanted atom ranged from 5 KeV to 40 KeV in this study. (Author)

PHOTOVOLTAIC ENCAPSULATION MATERIALS
B. BAUM, P. W. WILLIS (Springborn Laboratories, Inc., Enfield, CT), and E. C. CUDDIHY (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 223-260.

Candidate materials for the construction of cost-effective solar cell flat array modules are reviewed. Fabrication goals include electricity production at $.70/W with a lifetime of 20 yr. Research is currently directed toward low cost encapsulants and substrates for the cells, and outer covers which resist weathering. Ethylene/vinyl acetate copolymer (EVA) at $.09/sq ft has displayed the most promising results as the encapsulant laminate when subjected to peroxide cross-linking to prevent melting. EVA accepts the addition of antioxidants, quenchers, absorbers, and stabilizers. Wood is favored as the rigid substrate due to cost, while top covers in substrate modules comprise candidate acrylic and polyvinyl fluoride films and a copolymer. Finally, fiberglass mat is placed between the substrate and the EVA pottant as a mechanical support and for electrical insulation. M.S.K.

A82-34095
TERRESTRIAL SOLAR MODULES
W. SAMPSON and S. OLAH (Applied Solar Energy Corp., City of Industry, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 266-270.

Processing methods and materials for the fabrication of solar cell modules are reviewed. It is noted that current production favors copper, particularly in mesh form, as the cell interconnect material due to suitability for stress relief configurations to offset the effects of thermal expansion and deficiencies in the bond between copper and Si. Ethylene vinyl/acetate is preferred to polyvinyl butyral as an encapsulant because it is also a dry film and adheres at low temperature without requiring a pressure bond. The thermal cycling parameters have been set at -40 to 90 C, and tempered low iron, high transmission, water white glass is used as the superstrate. A conceptual design for an automated production of the encapsulated cells is outlined, including the ability to make front and back interconnects and achieve accurate soldering due to the precise location of the solar cells in the process. M.S.K.

A82-34096
THE ROLE OF BE IN /GAAL/AS/GAAS SOLAR CELLS
K. MASU, S. NAKATSUKA, M. KONAGAI, and K. TAKAHASHI (Tokyo Institute of Technology, Tokyo, Japan) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 295-303. refs

The fundamental effects of Be diffused into (GaAl)As/GaAs solar cells and also the electrical properties of Be doped layers were examined. The diffusion coefficient in a p-type cell was found to vary with temperature and concentration during formation at 700-900 C in a liquid phase epitaxial process. The thickness of the Be-doped region was also found to vary with the growth temperature, in proportion to the square root of the diffusion time. The van der Pauw method was employed to examine the electrical properties by determining the average resistivity, hole mobility, and free-carrier concentration. The resistivity matched previous results for Zn-doped layers while the acceptor energy level was 47 meV, implying the suitability of the use of Be as a means to reduce the sheet resistance of (GaAl)As/GaAs cells. An electron diffusion length of 4.2 microns was observed for a free-carrier concentration of 10 to the 18th/cu cm. M.S.K.

A82-34097
THE CLEFT PROCESS - A TECHNIQUE FOR PRODUCING EPITAXIAL FILMS ON REUSABLE SUBSTRATES
J. C. C. FAN, C. O. BOZLER, and R. W. MCCLELLAND (MIT, Lexington, MA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 304-311. USAF-supported research. refs

The peeled-film technique called CLEFT is discussed as a means to achieve cost reductions in semiconductor materials for GaAs solar cells. Using vapor-phase epitaxial growth permits cleavage of the epitaxial film from a substrate by first placing a suitable mask, e.g., carbonized photoresist, on the substrate. Photolithographic processes etch strip openings in the carbonized layer. After solidification the epitaxial layer can be cleaved off the weak, carbonized mask. A GaAs single crystal substrate has been used repeatedly and electrical measurements have shown no performance degradation in the deposited film. GaAs films with a thickness of 8 microns formed by the technique have displayed AM1 efficiencies of 15%. Possible fabrication of films 0.1 micron thick are indicated. M.S.K.

A82-34099* Jet Propulsion Lab., California Inst. of Tech., Pasadena.
TECHNOLOGY TRANSFER - LSA PROJECT TO INDUSTRY
B. D. GALLAGHER (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings. Pennington, NJ, Electrochemical Society, Inc., 1981, p. 320-325. Research sponsored by the U.S. Department of Energy and NASA.

Program goals, procedural steps, and examples of different situations encountered in the Low-cost Solar Array (LSA) project managed at the Jet Propulsion Laboratory in conjunction with industrial contractors are outlined. The project is intended to result in the production-ready status of photovoltaic panels which produce power at $.70/peak W by 1986. The first phase of the program identified materials and processes which were promising for further development. Phase II served to correct steps and materials which did not work and were important to the array processing. The third phase will bring the processes to technical readiness by demonstration of successful fabrication of modules at a scale which can be increased to commercial production. An information exchange is ongoing between manufacturers and the JPL to alter specific steps which yield results which vary from those found in the laboratory when transferred to the factory. M.S.K.

A82-34489
PROPERTIES OF SPRAY-DEPOSITED COBALT OXIDE SELECTIVE COATINGS ON ALUMINIUM AND GALVANISED IRON SUBSTRATES
C. CHOUDHURY and H. K. SEHGAL (Indian Institute of Technology, New Delhi, India) Applied Energy, vol. 10, Apr. 1982, p. 313-324. refs

A low cost, single step process using spray pyrolysis for the growth of highly adherent and stable cobalt oxide films on commercially available aluminum and galvanized iron to form a flat plate collector selective surface is described. Acetone-degreased substrates were heated into the 150-230 C range and sprayed with Co(NO3)2,6H2O to deposit the films. Photothermal, electron diffraction, scanning electron microscope, spectrophotometric, and thermal emittance tests were performed on prepared samples. Adhesion was examined by 50 tape-pulling tests for each surface, then twenty more after thermal cycling to 600 and 400 C with aluminum and galvanized iron substrates, respectively. Both coatings were found superior to black paint. The best performance was with substrates kept at 180 C during deposition, with film layers of 0.30 micron on aluminum and 0.32 micron on galvanized iron. M.S.K.

A82-34540
PREPARATION AND ANALYSIS OF CDS-CU2S SOLAR CELLS
L. MAHDJOUBI, M. DERDOURI, and M. BENMALEK (Organisme National de la Recherche Scientifique, Centre des Sciences et de la Technologie Nucleaires, Algiers, Algeria) (Thin Film Solar Cells Meeting, Newcastle-upon-Tyne Polytechnic, Newcastle-upon-Tyne, England, Apr. 1981.) Solar Cells, vol. 5, Mar. 1982, p. 205-212. refs

The fabrication steps and performance characteristics of CdS-layers for CdS-Cu2S solar cells are detailed. CdS was evaporated on a graphite source at source and substrate temperatures of 1050 and 200 C, respectively. An Au-CdS Schottky diode was also formed by thermally depositing a 1000 A thick layer of gold onto the CdS layer. Samples were prepared with the Au coating directly from vacuum, after etching in HCl, and by performing the whole process in a vacuum. The cells were then dipped in a CuCl solution at 90 C for 5 sec to form a p-type Cu2S layer. The CdS cell layer has an absorption spectrum in the range 2.36-2.44 eV with a c-axis in perpendicular orientation to the substrate. An additional heat treatment of 200 C for 3 min was found to enhance the cell efficiency by changing the Cu(x)S phases to Cu2S at the interface. Further work is indicated on the growth of the Cu2S growth step. M.S.M.

A82-34541
PHOTOVOLTAIC PERFORMANCES OF CU2S/CDS SPRAYED SOLAR CELLS
M. SAVELLI, J. BOUGNOT, H. LUQUET, M. PEROTIN, O. MARIS, and C. GRIL (Montpellier II, Universite, Montpellier, France) (Thin Film Solar Cells Meeting, Newcastle-upon-Tyne Polytechnic, Newcastle-upon-Tyne, England, Apr. 1981.) Solar Cells, vol. 5, Mar. 1982, p. 213-229. refs

The fabrication and results of optimization tests on sandwich Cu2S/CdS solar cells with an indium-tin-oxide (ITO) layer are reported. The cells were formed in a chemical spray deposition process, producing suceeding layers of Cu, Cu2S, CdS, CdS doped Al, ITO, and pyrex. The ITO displayed a constant transmission efficiency as a transparent electrode, with transparency being optimized around 90 percent with a sheet resistance of 7 ohms. The ITO layer thickness was optimized by examining the current-voltage curves, leading to a 0.4 micron edge causing a minimized 8 percent loss to the cell efficiency. The best growth rate of the CdS film was determined to be 2 microns/h with a substrate temperature of 400 C. The cell displayed a maximum efficiency of 7.4 percent and a maximum response with a 0.55 micron thick front layer. Further work to optimize the CdS transparency, reduce the interface states, and improve the performance after encapsulation is indicated. M.S.K.

A82-34542
SINGLE-CRYSTAL ZN/X/CD/1-X/S/CU2S PHOTOVOLTAIC CELLS
S. OKTIK, G. J. RUSSELL, and J. WOODS (Durham, University, Durham, England) (Thin Film Solar Cells Meeting, Newcastle-upon-Tyne Polytechnic, Newcastle-upon-Tyne, England, Apr. 1981.) Solar Cells, vol. 5, Mar. 1982, p. 231-241. refs

Results of an investigation of the performance characteristics of ZnCdS/Cu2S solar cells are reported. Single crystal cells were grown with a Zn contribution between 0-0.4 and resistivities ranging from 0.5-2.0 ohm-cm. An In ohmic contact was placed on the Cd base plane and the CuS layer was formed on the sulfur layer by means of the wet-plating method. I-V characterization under 100 mW/sq cm illumination revealed that the open-circuit voltage increased with the Zn content while the short-circuit current and the fill factor decreased. Cell baking in air at 200 C had a less beneficial effect with the increasing Zn content. Spectral response examinations revealed that the major response occurred at peaks of 0.7 and 0.96 microns regardless of the composition of the substrate, and electron diffraction studies linked the responses to the formation of chalcocite and djurleite. Finally, it is noted that baking at 200 C for 4 min shifted the response peaks toward lower wavelengths. M.S.K.

A82-34543
TRENDS AND PROBLEMS IN CDS/CU/X/S THIN FILM SOLAR CELLS - A REVIEW
S. MARTINUZZI (Aix-Marseille III, Universite, Marseille, France) (Thin Film Solar Cells Meeting, Newcastle-upon-Tyne Polytechnic, Newcastle-upon-Tyne, England, Apr. 1981.) Solar Cells, vol. 5, Mar. 1982, p. 243-268. refs

The methods currently used to fabricate CdS/CuS solar cells are reviewed, along with comparisons of the effects on performance of the various preparation techniques. Attention is given to thermal evaporation, sputter, and chemical spray formation of the CdS layers, noting that most experience is presently with the evaporative and spray processes. CuS layers are formed in dip or wet process chemiplating, electroplating, vacuum deposition in flash and sputter modes, solid state reaction, or spray deposition. Any of the CuS film techniques can be used with any of the CdS layer processes, while spraying and sputtering are noted to offer the best alternatives for industrial production. Band profiles, I-V characteristics, photocurrent levels, and capacitance-voltage characteristics are outlined for the differently formed cells, and CdS/CuS and CdZnS/CuS cells are concluded to exhibit the highest performance features. Areas of improvement necessary to bring the cells to commercial status are discussed. M.S.K.

A82-34544
SIMULATION OF THE BEHAVIOUR OF A SET OF CU2S-CDS UNIT PHOTOCELLS
J. L. JACQUEMIN and G. BORDURE (Montpellier II, Universite, Montpellier, France) Solar Cells, vol. 5, Mar. 1982, p. 269-274.

A computer model was employed to simulate the performance of a panel of 30 solar cells in order to determine the contribution expected from the individual cells. The cells array was modeled on the bases of series and parallel resistance, saturation current density, short-circuit current, and the number of cells. I-V curves were calculated for the mean performance of a batch of thirty cells and the performance of the best cell produced in the batch. Substituting low efficiency cells in a normal parallel array was found to potentially seriously degrade the performance of the whole array. The most important parameters determining the array performance were determined to be the efficiency, open-circuit voltage, short-circuit current, and the saturation current, while the number of cells, resistances, and the fill factors did not significantly impinge on the array output. M.S.K.

A82-34545
INEFFECTIVENESS OF LOW-HIGH JUNCTIONS IN OPTIMIZED SOLAR CELL DESIGNS
H. T. WEAVER (Sandia National Laboratory, Albuquerque, NM) Solar Cells, vol. 5, Mar. 1982, p. 275-292. Research supported by the U.S. Department of Energy. refs

An attempt to prove that conventional Si solar cells (CV) are as promising as the developmental goals for back-surface field (BSF) and low substrate resistivity high-low emitter (HLE) cells is presented. The work is focused on 300 microns thick pnn and ppn cells, the generic type of CV cells currently available. Governing differential equations are presented to model cell performance in terms of numerical solutions to the transport equations. It is noted that the only difference between CV cells and BSF cells is that CV cells do not have rear surface diffusion. Configuring the cells to take full advantages of the BSF feature results in a cell with much the same efficiency of a CV cell, except under either concentration modes or with 50 microns thick thin cells. Finally, an HLE cell with a 10-25 microns thick layer doped to 10 to the 16th/cu cm can offer only a minor efficiency increase over the best available CV cells. M.S.K.

A82-34546
THE EFFECTS OF NON-UNIFORM ILLUMINATION OF SOLAR CELLS WITH CONCENTRATED LIGHT
H. PFEIFFER and M. BIHLER (Maschinenfabrik Augsburg-Nuernberg AG, Munich, West Germany) Solar Cells, vol. 5, Mar. 1982, p. 293-299. Research supported by the Commission of the European Communities and Bundesministerium fuer Forschung und Technologie. refs

Experimental results for trials to determine the effects of nonuniform illumination and varying the intensity of illumination on solar cells connected in series in a concentrator configuration are presented. A simulator with 9000 W/sq m was used to test 5 x 5 cm Si cells in factor of 10 concentrator configurations. Cells were subjected to uniform lighting with filters to control and outer 1 cm edge illumination and in another trial where whole cells were deprived of light by a filter. The filters were calibrated to have transmission factors of 89, 56, 44, and 21%. Losses due to uneven illumination were a maximum of 3%, even with a 50% variance in concentration. Totally blocking light to a cell in a series stopped the whole generator's output, while a 10% difference in light to two cells resulted in only a 2% power loss. Neither site nor geometry exhibited any effect on the output. It is concluded that shape standards for concentrators can be relaxed. M.S.K.

A82-34551
THEMIS - A SOLAR POWER STATION [THEMIS - LA CENTRALE SOLAIRE]
J. HILLAIRET (Electricite de France, Marseille, France) Entropie, vol. 18, no. 103, 1982, p. 6-10. In French.

The organization, goals, equipment, costs, and performance of the French Themis (Thermo-helio-electric-MW) project are outlined.

The program was begun for both the domestic energy market and for export. The installation comprises a molten eutectic salt loop which receives heat from radiators situated in a central tower. The salt transfers the heat to water for steam generation of electricity. A storage tank holds enough molten salt to supply one day's reserve of power, 40 MWh. A field of heliostats directs the suns rays for an estimated 2400 hr/yr onto the central receiver aperture, while 11 additional parabolic concentrators provide sufficient heat to keep the salt reservoir at temperatures exceeding 200 C. In a test run of several months during the spring of 1982 the heliostats directed the sun's rays with an average efficiency of 75 percent, yielding 2.3 MW of power at a system efficiency of 20.5 percent in completely automatic operation. M.S.K.

A82-34552
THE THEMIS HELIOSTAT FIELD [LE CHAMP D'HELIOSTATS DE THEMIS]
A. COLLON (Electricite de France, Marseille, France) and A. LECLERC (CETHEL, Neuilly-sur-Seine, Hauts-de-Seine, France) Entropie, vol. 18, no. 103, 1982, p. 10-20. In French.

The 201-heliostat field which supplies solar rays to the central receiver as part of the Themis project is detailed. Each heliostat has 54 sq m of surface and is connected with all others in a central control circuit. The energy is directed to a square aperture 4 m on a side. The control logic is written in three levels, with microprocessors located in each heliostat drive to follow commands of a central computer. The reflector field is subsequently divided into zones in order to maximize control efficiency and power deposition on the receiver as the day progresses. A maximum of 9.7 MWth is shone on the power tower at an operational efficiency of 77 percent. A cylindrical shape was chosen for the array, which turns face downward to survive in strong winds. Emergency procedures which would also cause the plant to shut down due to an accident in the primary loop are explored, along with hazards to human eyesight from seeing the reflected flux. M.S.K.

A82-34553
THE THEMIS SOLAR RECEIVER [LE RECEPTEUR SOLAIRE THEMIS]
J. M. GRAVRAND (Constructions Navales et Industrielles de la Mediterrannee, La Seyne-sur-Mer, Var, France) and X. POUGET-ABADIE (Electricite de France, Marseille, France) Entropie, vol. 18, no. 103, 1982, p. 20-29. In French. refs

The theoretical modeling, materials, and design of the central receiver heat exchanger on the tower of the Themis solar power plant are presented. The receiver was conceived based on the incident solar flux at different times of the day and year and the efficiency of transferring the heat to molten salts. The square aperture admits energy at a peak rate of 3.402 MWth at some points, with heat transfer to the power loop resulting in a maximum efficiency of 25 percent. Optimization studies indicated a receiver inclined 30 deg from the horizontal to face the heliostat field, and the flux incident on the walls was mapped. Tubes filled with the salts at 250 C form the walls behind radiator fins and elevate the salt to temperatures up to a limit of 490 C. Measures taken to allow for the expansion of the cavity walls and to mount the heat exchange tubes for easy replacement are described, along with the instrumentation to measure performance, flux, and detect malfunctions due to perturbations in the fluid flow or failure of any of the components. M.S.K.

A82-34554
THE THERMODYNAMIC CONVERSION OF SOLAR ENERGY - TECHNICAL AND ECONOMIC COMPARISON OF DIFFERENT POWER PLANTS [CONVERSION THERMODYNAMIQUE DE L'ENERGIE SOLAIRE - COMPARAISON TECHNIQUE ET ECONOMIQUE DE DIFFERENTES FILIERES]
C. ETIEVANT (CNRS, GESER, Chatenay-Malabry, Hauts-de-Seine, France) and M. ROCHE (Electricite de France, Direction des Etudes et Recherches, Chatou, Yvelines, France) Entropie, vol. 18, no. 103, 1982, p. 30-47. In French. refs

An examination of the costs, materials, and construction of various solar-thermal power plants is made, starting from data derived from fabrication and operation of the Themis power plant. The cycles considered include steam generation, eutectic or draw salts, molten sodium and air, and air, powered by flux from a central receiver or by multiple parabolic concentrators. All designs involve a scaling up of the 1 MW Themis plant to at least 10 MWe, and gas generator systems, using, e.g., helium, are regarded as feasible only with a few tens of MWe output. The systems are discussed in terms of the components and performance of the primary circuit, heat storage, and the efficiency of the thermodynamic cycle. Optimizing the heliostats is shown to be necessary in order to reduce costs and required units. It is concluded that higher temperatures are necessary for economical application, and that heat storage must be included. M.S.K.

A82-34555
POWER PLANT I - FUSED SALT [FILIERE I - SEL FONDU]
M. ROCHE (Electricite de France, Direction des Etudes et Recherches, Chatou, Yvelines, France) Entropie, vol. 18, no. 103, 1982, p. 48-52. In French.

A solar thermal power plant using fused salt as the heat transfer fluid for steam power generation is analyzed for the feasibility of economic operation. The salt is also stored in a tank reservoir for maintaining the primary heat loop at temperatures high enough for the salts to remain liquid, and also to provide reserve power for the steam generator. Initial studies were with eutectic (hitec) salt comprising Na, KOH, and nitrites melting at 146 C, and further studies were performed employing draw salt, which has no nitrite, is more stable at high temperature, and melts at 225 C. The use of draw salt was found to allow a 5 percent reduction in storage capacity. Further examinations of the effects of the hitec salts on corrosion and composition degradation at high temperatures are indicated. The molten salt system is projected to offer an efficiency of 26 percent. M.S.K.

A82-34556
POWER PLANT II - SODIUM-WATER [FILIERE II - SODIUM-EAU]
M. ROCHE (Electricite de France, Direction des Etudes et Recherches, Chatou, Yvelines, France) Entropie, vol. 18, no. 103, 1982, p. 53-57. In French.

The implementation of a sodium based heat exchange loop is presented as a means of reducing the required size of a solar thermal power plant heat exchanger. Sodium as a heat transfer fluid allows operations near 535 C with electromagnetic pumps. It is noted that sodium must be completely sealed in and surrounded with a neutral gas such as nitrogen or argon. The higher temperatures pave the way for a more efficient thermodynamic cycle, although the Themis receiver would necessarily need a faster loop in addition to more absorbent surfaces to adequately handle the sodium liquid. The steam lines would be helically wound in a chamber through which the sodium flows linearly downward. Storage is concluded to not be feasible under current technology due to the violent reactions possible between sodium and water or hitec salts. An auxiliary heat source would be required. M.S.K.

A82-34557
POWER PLANT III - STEAM [FILIERE III - EAU-VAPEUR]
M. ROCHE (Electricite de France, Direction des Etudes et Recherches, Chatou, Yvelines, France) Entropie, vol. 18, no. 103, 1982, p. 58-62. In French.

The projected principal components, performance, and costs associated with a direct cycle steam generating solar thermal power plant producing over 10 MWe are examined. Calculations are given for a location in south France, using heliostat and heat exchanger technology developed for Themis. The heat exchanger would have vertical tubes on the side walls for natural circulation, with superheater channels at the top composed of austenitic steels. Temperature of the superheated steam could be regulated by injections of liquid water. Maintaining the pressure during the passage of clouds is taken to require the presence of an auxiliary boiler burning fossil fuels, since no method is presently known of storing latent heat at over 300 C. Approaching clouds would have

to be detected in order to stop the heliostats and ignite the back-up systems. M.S.K.

A82-34558
POWER PLANT IV - THEM-THEK [FILIERE IV - THEM-THEK]
M. PONS (CNRS, GESER, Chatenay-Malabry, Hauts-de-Seine, France) Entropie, vol. 18, no. 103, 1982, p. 63-70. In French.

A 10 MWe solar thermal hybrid central receiver-parabolic concentrator power plant is described. The THEK field of parabolic concentrators is employed to preheat and vaporize the water for heating the primary loop, while the THEM central receiver receives solar flux input from a field of heliostats to superheat fused salt, hitec, for the steam-powered generation of electricity. The preheat system also serves to maintain latent heat in the fused salt reservoir. An extra bypass with separation allows the vaporized portion of salt to return to the superheater as condensed salt descends to the reservoir to gain heat, thereby increasing the system efficiency by 8 percent to 33.8 percent. The power unit is coupled to turbines spinning at 9000 rpm. The central aperture closes during cloudy conditions to avoid heat losses in the primary loop. M.S.K.

A82-34559
POWER PLANT V - THEK GENERATING STATION [FILIERE V - CENTRALE THEK]
M. PONS (CNRS, GESER, Chatenay-Malabry, Hauts-de-Seine, France) Entropie, vol. 18, no. 103, 1982, p. 71-75. In French.

The design and operating features of a 10 MWe parabolic dish concentrator steam-cycle generating plant are described. The dishes which have 75 sq m area with a concentration factor of 265, were proved in the Themis project. The total field for the 10 MWe would cover 63,100 sq m and require 842 units. Using a water-steam cycle at 50 bars, temperature would never surpass 264 C, with an after-generator condition of 33 bars at 204 C. Preheating the water is intended with a fused salt reservoir containing 570 tons in 350 cu m container, around which condensed water would flow. Maintaining the primary loop at mildly elevated temperatures would permit uninterrupted operation during cloudy periods. A total shutdown would occur if cloudy conditions last more than one hour, and start-up would involve reheating the primary loop, recharging the storage, and then respinning the turbine. M.S.K.

A82-34560
POWER PLANT VI - SODIUM-AIR [FILIERE VI - SODIUM-AIR]
R. GENIER (Electricite de France, Direction des Etudes et Recherches, Chatou, Yvelines, France) Entropie, vol. 18, no. 103, 1982, p. 76-80. In French.

A sodium-air cycle central receiver solar electric generating plant is described. The system is designed for liquid sodium to be heated to 750 C in the central receiver heat exchangers, pumped down to the tower base to transfer heat to an air loop, then be returned to the receiver aperture. The air loop would heat to 730 C, insufficient for efficient operation of turbines, and would require a further heating by a supplementary burner to temperatures of 950 C. An efficiency of 35.4 percent is projected for a total output of 10,620 kW. The flux is furnished by a field of 743 heliostats with a total surface area of 36,425 sq m, and received by a tower 120 m tall outfitted with a receiver inclined 45 deg from the horizontal. The sodium-air heat exchange is envisioned to take place in a tank of air interpenetrated by continuous, closed, boustrophedonic loops filled with superheated sodium. M.S.K.

A82-34561
POWER PLANT VI REVISITED - SODIUM-AIR /A GRID-BOILER/ [FILIERE VI BIS - SODIUM-AIR /CHAUDIERE A GRILLE/]
M. ROCHE (Electricite de France, Direction des Etudes et Recherches, Chatou, Yvelines, France) Entropie, vol. 18, no. 103, 1982, p. 81-85. In French.

A configuration which allows operation of a sodium-air dual-loop central receiver at elevated cycle temperatures is presented. The heliostat field covers an area of 43,000 sq m for directing a flux of 23,260 kWth to the power tower aperture. The front of the receiver contains part of a closed sodium loop, which is also directed into a heat exchanger chamber where energy is transferred to a rising column of air used to turn the generators. The air enters the chamber at 292 C, is heated to 700 C, flows on to the back of the receiver enclosure where the temperature is raised to 850 C, and then on to a turbine generator. Supplemental fossil fueled heat may be necessary to maintain the higher temperatures in unfavorable conditions. A plant with a total output of 7720 kW operating at 33.75 percent efficiency is considered feasible. M.S.K.

A82-34562
POWER PLANT VII - AIR-AIR /TUBE BOILER/ [FILIERE VII - AIR-AIR /CHAUDIERE A TUBES/]
M. ROCHE (Electricite de France, Direction des Etudes et Recherches, Chatou, Yvelines, France) Entropie, vol. 18, no. 103, 1982, p. 86-90. In French.

An attempt to design a solar thermal electric central receiver power plant in the multi-MW size with acceptable efficiencies using air in the power loop is described. The turbine and generator are placed in the tower to reduce heat losses in the superheated gas, and the depleted gas loop is coupled to a low temperature generator powered by boiling water. The receiver cavity is configured to retain a maximum amount of flux and has brick walls. Nickel alloys are indicated for the air tubes in the receiver, with Inconel 601, Incoloy 800, and Inconel 600 considered acceptable. The gas leaving the chamber will be at 950 C to power a high pressure turbine, followed by entrance into a heat exchanger to boil the water for the low-pressure turbine, and is then discharged. Thermodynamic efficiencies between 13.9-20.3 percent for a 4700 kW plant are considered feasible with the design. M.S.K.

A82-34563
POWER PLANT VII REVISITED - AIR-AIR /SCIROCCO/ [FILIERE VII BIS AIR-AIR /SIROCCO/]
C. ETIEVANT (CNRS, GESER, Chateney-Malabry, Hauts-de-Seine, France) and D. ROYER (Commissariat a l'Energie Atomique, Centre d'Etudes Nucleaires de Saclay Gif-sur-Yvette, Essonne, France) Entropie, vol. 18, no. 103, 1982, p. 91-97. In French.

A hybrid fossil fuel-solar central receiver power plant is described, noting principally a 'Scirocco' configuration for the receiver. The primary loop contains air which enters passages in the alveolar-configured walls of the boiler, which is semi-spherically shaped. The alveoles are located in the back of the cavity while the upper and lower surfaces are reflective. A heat flux of 24.4 MWth is delivered to the aperture by 668 heliostats, each having a 53 sq m surface. Air is heated to 660 C and then flows past flame tubes to attain temperatures near 900 C through use of a combustor before impinging on the turbine blades. It is noted that although only 1000 hr of functioning are currently available for the Scirocco configuration, it offers the chance to reduce the size of the boiler. Further studies to optimize the materials for the boiler are indicated. M.S.K.

A82-34564
ANNUAL PRODUCTIVITY OF A SOLAR THERMOELECTRIC POWER PLANT [BILAN ANNUEL DE CENTRALES HELIOTHERMOELECTRIQUES A CONCENTRATION]
B. RIVOIRE (CNRS, GESER, Chatenay-Malabry, Hauts-de-Seine, France) Entropie, vol. 18, no. 103, 1982, p. 98-103. In French.

A82-34565
STATE OF THE ART IN SOLAR THERMOELECTRIC POWER PLANT RESEARCH [ETAT DES RECHERCHES SUR LES CENTRALES SOLAIRES DE PUISSANCE DANS LE MONDE]
C. ETIEVANT (CNRS, GESER, Chatenay-Malabry, Hauts-de-Seine, France) Entropie, vol. 18, no. 103, 1982, p. 104-115. In French. refs

World wide research efforts to develop multi-MW solar central receiver thermoelectric power plants are outlined, noting that only this form of solar energy, coupled with storage, permits adjusting output to meet loads. Among the systems described, which are

all heliostat-tower configurations, are the 500 MWe SSPS-CRS of the IEA located in southern Spain, the Eurelios station producing 1 MWe on Sicily, and the 1 MWe CESA-1 plant at Tabernas, Spain. Descriptions are also given of the 1 MWe installation at Nio, Japan, the Themis project in France with an output of 2000-2500 MWe, the Soviet CES-5 5 MWe power plant in Lenino on the shore of the Sea of Azov, and the 10 MWe Solar-1 project in Barstow, CA. The systems employ hot air, steam, sodium, or fused salt as heat exchanger fluids, and are being tested for use in producing grid-quality electricity, industrial heat, combustible liquids, and to repower fossil-fuel fed generator cycles. M.S.K.

A82-35246
RF SPUTTERED GOLD-AMORPHOUS SILICON SCHOTTKY-BARRIER DIODES
L. XU, D. K. REINHARD (Michigan State University, East Lansing, MI), and M. G. THOMPSON (Michigan Technological University, Houghton, MI) IEEE Transactions on Electron Devices, vol. ED-29, June 1982, p. 1004-1006. refs
(Contract NSF ENG-79-10896)

Gold Schottky-barrier diodes formed on reactively sputtered amorphous silicon thin films have been investigated. Device forward I-V characteristics are well modeled as a Schottky diode in series with a temperature activiated series resistor. At 300 K, the forward current indicates a diode correction factor of 1.4 and a saturation current of 5.8 x 10 to the -10th A/sq cm. The metal-semiconductor barrier height is 0.93 eV. Capacitance versus frecuency measurements indicate a depletion region thickness of 3000 A. In the depletion region, the mobility-lifetime products are estimated to be of the order of 5 x 10 to the -11th sq cm/V which is substantially less than the value of 10 to the -7th sq cm/V in the quasi-neutral region. It is suggested that deep gap states are responsible for this difference. Carrier recombination in the depletion region limits the photovoltaic performance. (Author)

A82-35247
NEW EXPERIMENTAL EVIDENCE FOR MINORITY-CARRIER REFLECTION AT NEGATIVE-BARRIER MIS CONTACTS
N. G. TARR, D. L. PULFREY (British Columbia, University, Vancouver, Canada), P. A. ILES (Applied Solar Energy Corp., City of Industry, CA), and A. NEUGROSCHEL (Florida, University, Gainesville, FL) IEEE Transactions on Electron Devices, vol. ED-29, June 1982, p. 1016-1021. refs

Recently, measurements of the open-circuit voltage of solar cells with negative-barrier metal-insulator-semiconductor (MIS) back contacts have been used to demonstrate that such contacts can function as the electrical analogues of metallurgical high-low junctions. In this brief, further experimental evidence for the minority-carrier reflecting properties of the negative-barrier MIS junction is presented. First, it is shown that a negative-barrier Mg-SiO(x)nSi back contact can be used to enhance the long-wavelength photoresponse of p(+)n solar cells in the same manner as a diffused n(+) back-surface field. Secondly, measurements of the effective surface-recombination velocity for an Mg-SiO(x)-nSi contact and for a diffused n-n(+) high-low junction formed on an identical substrate are reported. Both junctions gave very low values of recombination velocity, on the order of 50 cm/sec. (Author)

GRAIN BOUNDARY RECOMBINATION ANALYSIS OF GAAS SCHOTTKY BARRIER SOLAR CELLS
R. J. SOUKUP and G. P. BARTUNEK (Nebraska, University, Lincoln, NE) Journal of Applied Physics, vol. 53, June 1982, p. 4428-4434. refs

A cylindrical grain is used to model the short circuit current density of a thin film polycrystalline GaAs Schottky barrier solar cell. Both backwall and frontwall solar cells are considered and it is found that the optimum thickness for either cell is less than 2.5 microns if reflection of solar energy from the back metallic contact is considered. The grain size and grain boundary recombination velocity affects each cell in the same way. However, the ohmic contact recombination velocity has a greater influence on the backwall solar cell. The conclusion of this study is that although the backwall cell is potentially more efficient, the frontwall cell is less influenced by semiconductor and contact parameter variation and thus, for production quantities, the frontwall cell will yield more consistent results. (Author)

A82-35500
MODIFICATION OF OPEN-CIRCUIT VOLTAGE OF METAL-INSULATOR-SEMICONDUCTOR SOLAR CELLS DUE TO A NONUNIFORM INSULATING LAYER
H. L. CHAU and Y. C. CHENG (University of Hong Kong, Hong Kong) Journal of Applied Physics, vol. 53 June 1982, p. 4544, 4545.

The effect of nonuniformity of the insulating layer on metal-insulator-semiconductor, open-circuit voltage is examined. It is based on a simplified model in which insulator limits the dark current via different effects. The enhancement in open-circuit voltage could be greatly degraded by surface roughness. (Author)

A82-35501
BASIC RESEARCH NEEDS AND OPPORTUNITIES ON INTERFACES IN SOLAR MATERIALS; PROCEEDINGS OF THE WORKSHOP, DENVER, CO, JUNE 30-JULY 3, 1980
A. W. CZANDERNA, (ED.) (Solar Energy Research Institute, Golden, CO) and R. J. GOTTSCHALL (U.S. Department of Energy, Office of Basic Energy Sciences, Washington, DC) Workshop sponsored by the U.S. Department of Energy. Materials Science and Engineering, vol. 53, Apr. 1982, 178 p.

Research areas, instrumentation, and existing theoretical models for solid-solid, solid-liquid, and solid-gas interfaces which exist as part of solar energy conversion devices (SECS) are examined. The devices require a thirty-year operative lifetime in order to acquire economic viability. Degradation processes can occur during manufacturing and/or operation of SECS, and performance improvements are available only through increasing mechanical, chemical, atomic, and electronic characterization of microscopic properties and topologies of converters. Attention is given to instrumentation which extends the ability to model the atomic behaviors of interfacial layers of solar devices such as heliostats, solar cells, wind turbine blades, absorbers, and concentrator mirrors, including Auger electron microscopy, reflection absorption IR, electron energy loss spectroscopy, etc. Specific attention is given to vapor-deposition manufacturing processes. M.S.K.

A82-35502
OVERVIEW OF SOLAR ENERGY CONVERSION TECHNOLOGIES - QUANTUM PROCESSES AND THERMAL PROCESSES
P. J. CALL (Solar Energy Research Institute, Golden, CO) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 7-16. refs

A82-35503
DESIGN REQUIREMENTS FOR INTERFACES IN SOLAR ENERGY CONVERSION TECHNOLOGIES
B. L. BUTLER (Solar Energy Research Institute, Golden, CO) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 17-24. refs

Candidate materials for improving the durability and economics of solar energy conversion systems (SECS) are reviewed. A 30-yr lifetime is regarded as necessary for solar collector and concentrator materials in order to offset the high initial costs of SECS in parabolic dish, heliostat, parabolic trough, flat plate collector, OTEC, solar cell, and wind turbine configurations. The materials are required to transfer a maximum amount of intercepted energy without degrading from exposure to UV radiation, wind, water, dust, and temperature cycling. Glass and mirrored surfaces

for reflecting or refracting optical subsystems are currently made from soda-lime, boro- and aluminosilicate, and must resist chemicals, abrasion, and permeability, and have good strength, flexibility, coefficient of expansion, and Young's modulus. Additional concerns are present in photochemical, solar cell, and in substrata components and systems. M.S.K.

A82-35505
OVERVIEW OF THE CURRENT STATUS OF SOLID-LIQUID INTERFACE SCIENCE
J. O'M. BOCKRIS (Texas A & M University, College Station, TX) (U.S. Department of Energy, Workshop on Basic Research Needs and Opporutnities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 47-64. refs

The effectiveness of present techniques for examining the solid-liquid (S-L) interface in photoelectrochemical devices is reviewed. The S-L interface is presently modeled using the Guoy layer theory, although statistical deficiencies are present due to the large number of species to be modeled. The development of ellipsometric spectroscopy for studies in the visible and UV is recommended, along with electrocapillary thermodynamics, the zero charge potential as a parameter, spectroscopy, and the formation of a quantum electrochemical framework. Experimental methods are needed for measuring individual ionic concentrations 10-100 mm from the solid surface, and to determine the structure of H2O at the doublelayer Adsorption at the S-L interface is examined by sweep methods which expose the effects of varying the current and the potential. Present methods for studying the diffuse layer are limited to concentrations of 0.001 M or below. Monte Carlo techniques are needed at higher particle numbers. M.S.K.

A82-35506
OVERVIEW OF THE CURRENT STATUS OF SOLID-GAS INTERFACE SCIENCE
R. S. HANSEN (U.S. Department of Energy. Ames Laboratory, Ames, IA) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 65-71. refs

The state-of-the-art in techniques for evaluating solid-gas interfaces is assessed, with an emphasis on processes relevant to solar technology. Electron and ion spectroscopy have aided in determining the interface chemical composition, although limitations due to vacuum requirements and surface effects, such as a variation of chemical composition with depth. Uncertainties can then result in a chemical analysis based on the kinetic energy of an emitted electron, which must pass through the inhomogeneously composed layers. The S-G interface techniques are applied to solar cell formation by modeling the optimum thicknesses and compositions of layers of built-up cells. Further use could be made in determining the changes in surface elements with time. M.S.K.

A82-35507
LIMITATION OF EXPERIMENTAL CAPABILITIES FOR INTERFACIAL STUDIES
D. LICHTMAN (Wisconsin, University, Milwaukee, WI) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 73-79. refs

Surface analysis techniques for evaluating the interfacial areas in solar cells, mirrors, flat plates, etc. are reviewed. Auger electron spectroscopy is employed for solid-gas and solid-solid interface studies but can cause changes in the surface composition. Ion probes similarly can cause destruction of the substrate. Surface morphology is investigated with scanning electron microscopy up to a resolution of 10 nm. In all cases additional techniques are necessary to measure the exact location of beam traverse. The identification of neighboring components and lateral distributions depends on the use of low energy excitation diffraction, extended X ray fine structure spectroscopy, and electron energy loss spectroscopy. The development of techniques for exploring the distributions of individual atoms is indicated. M.S.K.

A82-35509
BASIC RESEARCH NEEDS AND OPPORTUNITIES AT THE SOLID-SOLID INTERFACE - DIFFUSION
P. W. BALLUFFI (MIT, Cambridge, MA), C. B. DUKE (Xerox Corp., Webster, NY), L. L. KAZMERSKI, K. W. MITCHELL (Solar Energy Research Institute, Golden, CO), R. REIFENBERGER (Purdue University, West Lafayette, IN), and R. F. WOOD (Oak Ridge National Laboratory, Oak Ridge, TN) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 93-102. refs

The generic problems associated with solar materials solid-solid (S-S) interfaces are reviewed, and goals and techniques for ameliorating the deficiencies are outlined. Photovoltaic, photothermal, and photochemical devices considered are flat plate collectors, thin film Si cells, concentrator systems and compound cells, and polycrystalline systems. Exposure to thermal stresses, electric and radiation fields, chemicals and abrasives during the lifetime of solar cells is expected to create electric, optical, and thermal property changes in the material. Diffusion may also occur in S-S interfacial areas, and determination of the effects on the cells can presently be done using electron microscopy for examining the fine structure, diffraction pattern analysis for the interface structure, and scanning transmission electron microscopy to trace the chemical composition. Additional studies are needed to define the atomic and chemical exchange rates to establish the economic feasibility of low cost cells. M.S.K.

BASIC RESEARCH NEEDS AND OPPORTUNITIES AT THE SOLID-LIQUID INTERFACE
F. A. CAFASSO (Argonne National Laboratory, Argonne, IL), J. O. BOCKRIS (Texas A & M University, College Station, TX), S. G. DAVISON (Texas, University, Richardson, TX), T. E. FURTAK (Rensselaer Polytechnic Institute, Troy, NY), L. A. HELDT (Michigan Technological University, Houghton, MI), M. L. KNOTEK (Sandia National Laboratory, Albuquerque, NM), J. J. TRUHAN (California, University, Livermore, CA), J. R. WEEKS (Brookhaven National Laboratory, Upton, NY), and L. J. WITTENBERG (Monsanto Research Corp., Miamisburg, OH) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 103-112. refs

Solid-liquid (S-L) interactions in photoelectrochemical and photoelectrosynthetic devices, the causes and forces of degradation, and the means to study the phenomena are reviewed. Improvements are asserted to be necessary in theoretical modeling, particularly in the fields of double layer theory and kinetic electrochemistry. It is suggested that the electrolyte be treated as a lattice gas, and that the theory of liquid mixtures be employed to find a pair correlation function on which an electronic theory of the electrolyte can be based. Research is recommended to concentrate on modified electrode materials and surfaces, thin film electrodes, and photo-assisted synthesis and electrocatalysis. Specific phenomena to be examined are discussed. M.S.K.

A82-35511
BASIC RESEARCH NEEDS AND OPPORTUNITIES AT THE SOLID-GAS INTERFACE
M. B. BRODSKY (Argonne National Laboratory, Argonne, IL), J. V. CATHCART (Oak Ridge National Laboratory, Oak Ridge, TN), R. S. HANSEN, K. L. KLIEWER (U.S. Department of Energy, Ames Laboratory, Ames, IA), U. LANDMAN (Georgia Institute of Technology, Atlanta, GA), R. L. PARK (Maryland, University, College Park, MD), and S. R. SHATYNSKI (Rensselaer Polytechnic Institute, Troy, NY) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 113-124. refs

Solar energy conversion technologies which involve a solid-gas (S-G) interface in formation or operation and the means to study the related phenomena are reviewed, including thermoelectric and thermionic conversion. The analyses are considered as necessary for characterizing glasses, mirrors, heat mirrors, and transmitters using thermo- and photochromic modeling. Research is indicated on the glass-air interface, the air-solid interface encountered by antireflective coatings, the kinetics, and mechanisms of polymer degradation, and the development of new reflective materials. Absorber materials are explored, along with alternatives such as textured surfaces. Processes of formation, protection, and degradation of solar cells, particularly low cost thin-film devices, are explored, along with junction reaction and decomposition studies of thermoelectric devices and reactions of alkali metal vapors with thermionic devices. M.S.K.

BASIC RESEARCH NEEDS AND OPPORTUNITIES IN THIN FILMS AND COATINGS
J. R. ARTHUR (Perkin-Elmer Corp., Physical Electronics Div., Eden Prairie, MN), R. F. BUNSHAH (California, University, Los Angeles, CA), P. J. CALL (Solar Energy Research Institute, Golden, CO), J. E. GREENE (Illinois, University, Urbana, IL), M. G. LAGALLY (Wisconsin, University, Madison, WI), D. M. MATTOX, P. S. PEERCY (Sandia National Laboratory, Albuquerque, NM), J. OGALLAGHER (Chicago, University, Chicago, IL), W. T. PAWLEWICZ (Battelle Pacific Northwest Laboratories, Richland, WA), B. O. SERAPHIN (Arizona, University, Tucson, AZ) et al. (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 137-148.

The effects of basic research into the processing techniques for thin film solar cells on the costs and operating life of the finished product are considered. The use of reflection high energy electron diffraction, low energy electron diffraction, extended X ray fine structure diffraction, and field ion microscopy, along with IR or Raman scattering to examine the structural, chemical, and optical or electronic properties of single crystal and polycrystalline solar cells are explored. Research on vapor deposition rates and molecular beam epitaxy is recommended to be directed toward improving process control. Additional attention is given to physical vapor and chemical vapor deposition processes and the role of in situ measurements. Finally, studies in mechanical, atomic, chemical, and thermal degradation mechanisms are indicated. M.S.K.

BASIC RESEARCH NEEDS AND OPPORTUNITIES FOR CHARACTERIZING THE MICROSTRUCTURE AND MICROCHEMISTRY OF INTERFACES
J. SILCOX (Cornell University, Ithaca, NY), P. H. HOLLOWAY (Florida, University, Gainesville, FL), K. R. LAWLESS (Virginia, University, Charlottesville, VA), D. LICHTMAN (Wisconsin, University, Milwaukee, WI), R. G. MEISENHEIMER (California, University, Livermore, CA), L. E. MURR (Oregon Graduate Center, Beaverton, OR), and C. J. POWELL (National Bureau of Standards, Surface Science Div., Washington, DC) (U.S. Department of Energy, Workshop on Basic Research Needs and Opportunities on Interfaces in Solar Materials, Denver, CO, June 30-July 3, 1980.) Materials Science and Engineering, vol. 53, Apr. 1982, p. 149-162. refs

Research areas for modeling the microcharacteristics of the solid-solid (S-S), solid-liquid (S-L), and solid-gas (S-G) interfaces formed in the fabrication and operation of solar energy conversion devices are identified, along with appropriate methods and instrumentation. Analytical electron microscopy offers the possibility of adequately defining surface topography at materials interfaces. Other techniques for characterizing the behavior of solar materials under changing environmental conditions and over longer periods of time are outlined, noting the necessity of in situ studies to enhance the ability to predict device stability over a thirty-year lifetime. Analyses are described for solar mirrors, absorbers, and photovoltaics, with distinction being made between degradation mechanisms inherent in fabricating the systems and during operation. M.S.K.

MILITARY IMPLICATIONS OF A SATELLITE POWER SYSTEM
J. P. VAJK (Science Applications, Inc., Pleasanton, CA), R. D. STUTZKE (Science Applications, Inc., Colorado Springs, CO), R. SALKELD, G. W. DRIGGERS, and G. H. STINE In: Space manufacturing 4; Proceedings of the Fifth Conference, Princeton, NJ, May 18-21, 1981. New York, American Institute of Aeronautics and Astronautics, 1981, p. 77-87. Research supported by the U.S. Department of Energy. refs

If a satellite power system (SPS), such as is described in the NASA Reference Design Report, were to be undertaken to provide significant quantities of power to the United States and perhaps to other countries as well, significant military implications would ensue. These would arise, first, from the possible uses of such satellites and supporting systems as weapons or as supportive elements of other military systems, and, second, from the necessity of ensuring the security of such important economic assets in space. This paper summarizes some of the highlights of an extensive assessment of the military threats posed by SPS, the vulnerabilities of the Reference Design SPS, and potential safeguards against these threats and vulnerabilities. It is found that no threat issues have been revealed which cannot be mitigated by a judicious combination of safeguards. B.J.

POWDER METALLURGY IN SPACE MANUFACTURING
D. R. CRISWELL In: Space manufacturing 4; Proceedings of the Fifth Conference, Princeton, NJ, May 18-21, 1981. New York, American Institute of Aeronautics and Astronautics, 1981, p. 389-398. refs

Manufacturing processes adaptable for use in space and processes suggested specifically for space production are reviewed with emphasis on the use of powder metallurgy techniques. The key physical processes of powder metallurgy, i.e., powder atomization, hot sintering, and cold welding, are discussed, and a minimum set of production tools (starting kit) which utilizes powdered materials technology is proposed. The starting kit uses solar energy and common lunar materials to produce a wide range of higher order tools of production and products. Two approaches to the production of parts from the powder are examined: the impact molder concept and metal and ceramic clay approach with the use of recoverable binder. V.L.

A82-35716
EVIDENCE FOR HOT-ELECTRON INJECTION ACROSS P-GAP/ELECTROLYTE JUNCTIONS
J. A. TURNER and A. J. NOZIK (Solar Energy Research Institute, Golden, CO) Applied Physics Letters, vol. 41, July 1, 1982, p. 101-103. refs
(Contract EG-77-C-01-4042)

Evidence has been obtained for hot-electron injection from illuminated p-GaP photocathodes into nonaqueous electrolyte containing anthracene as the electron acceptor. The position of the conduction-band edge at the electrolyte interface has been unequivocally established from Mott-Schottky plots in the dark and under illumination; no band-edge movement occurs during the experiment. The observed supraband-edge reduction of anthracene occurs with a hot-electron energy of 0.9 eV. (Author)

THEORY OF PHOTOCURRENT IN SEMICONDUCTOR-ELECTROLYTE JUNCTION SOLAR CELLS
F. EL GUIBALY and K. COLBOW (Simon Fraser University, Vancouver, Canada) Journal of Applied Physics, vol. 53, Mar. 1982, p. 1737-1740. refs

Expressions are derived for the current-voltage characteristics of semiconductor-electrolyte junctions. Charge transfer kinetics, surface recombination, recombination in the quasi-neutral region and in the depletion region as well as the effect of the incident illumination on the minority carrier distribution in the semiconductor are included in the model. It is shown that surface transfer velocity for minority carriers is a very important parameter that determines the photocurrent of the cell. The dependence of the photoresponse on the light intensity is shown to be a diagnostic tool in determining the efficiency of charge transfer at the surface. (Author)

HOLOGRAPHY CREATES NEW BREED OF OPTICAL COMPONENTS
H. BRODY High Technology, vol. 2, July-Aug. 1982, p. 68-73.

Applications of holographic optical elements are discussed. The construction and reconstruction of surface relief and volume holograms is explained along with the advantages and drawbacks of each. The most important military use of holograms is for improved head-up displays that would not obstruct the pilot's view of the real world and would have a larger field of view than present displays. Another promising field for holograms is scanning lasers, where a rotating disk covered with holograms efficiently substitutes for a spinning multifaceted mirror. Such scanning systems are being used in point-of-sale checkout systems and in text printers. Other promising hologram uses include efficient solar trackers for solar energy production, holographic 'window shades' for energy conservation, and the carrying of light beams of different wavelength on a single optical fiber. CALCULATING THE SOLAR CONTRIBUTION TO SOLAR ASSISTED SYSTEMS
J. P. GEROFI, E. MANNIK, and G. G. FENTON (Sydney, University, Sydney, Australia) Solar Energy, vol. 28, no. 5, 1982, p. 377-383. refs

After summarizing the methods for calculating the solar contribution for systems without thermal storage, this paper extends a previously proposed method which is based on using a frequency distribution of insolation data. This extension allows rapid hand calculation of solar contribution for most collector types and for any specified collector inlet and outlet temperatures. Typical results are shown to be accurate to within 1 per cent relative to dynamic computer simulation methods. The effect on the method of collector orientation and tilt is discussed, and a simple method of determining the maximum possible (i.e., infinite collector area) solar contribution for a given collector system is described. (Author)

SOLAR ENERGY CONVERSION AND STORAGE THROUGH SYNTHETIC LIGHT-DRIVEN PROTON PUMPS
G. W. MURPHY, M. F. LEMONS, and M. M. SPRINGER (Oklahoma, University, Norman, OK) Solar Energy, vol. 28, no. 5, 1982, p. 403-406. NSF-supported research.

Two approaches to the conversion and storage of solar energy through synthetic light-driven proton pumps are discussed and experimental data on model systems are presented. The more promising of these is photoelectrodialytic acid-base production from salt in the charge half cycle and reversible recombination of acid and base to yield electric power in the discharge half cycle. The second method continues previous studies on photochemically induced pH changes in thionine-metal ion systems with improved, though not yet practical, results. (Author)

PERFORMANCE TEST OF SOLAR COLLECTOR WITH INTERMITTENT OUTPUT
B. J. HUANG and J. H. LU (National Taiwan University, Taipei, Republic of China) Solar Energy, vol. 28, no. 5, 1982, p. 413-420. National Science Council of the Republic of China refs
(Contract NSC-69E-0401-02(04))

A solar flat plate collector system which employs a solenoidal valve installed at the exit of the collector to control the hot-water flow is described. A sensor in the solenoid detects a sufficient temperature in the water and orders the valve opened. Inflowing colder water causes the valve to reshut, thus maintaining hot water in the system loop. The energy balance of the system was modeled numerically and a collector outfitted with the solenoid switch was tested in conjunction within a storage tank application. Measurements were made with varying collector tilts, the outflow mass for each cycle, the average efficiency, and the intermittent period output. Good qualitative correlations were observed between the predicted and measured performance of the system. M.S.K.

A82-35922
THE RATES OF SOLAR ENERGY STORAGE AND RETRIEVAL IN A ZEOLITE-WATER SYSTEM
R. GOPAL, B. R. HOLLEBONE, C. H. LANGFORD, and R. A. SHIGEISHI (Carleton University, Ottawa, Canada) Solar Energy, vol. 28, no. 5, 1982, p. 421-424. Department of Supply and Services
(Contract DSS-07SU-3115-9-2682)

The salient features that determine the possible use of a water vapour-zeolite 13X system as a method of energy storage were investigated. Cycling studies over two months revealed no decrease in water capacity nor any structural deterioration. The rate at which water could be desorbed in a static situation was determined at various temperatures from 110 to 250 C. The adsorption isotherm and the heats of adsorption as a function of amount of adsorbed water were determined. The saturation capacity was 0.33 g H2O/g zeolite while the heat of adsorption declined from 90 to 50 kJ kJ/mol. The rate of heat development was found to be very high so that heat extraction from the store would not be a problem in any practical utilization of this system. (Author)

TWO-ELEMENT CASCADE AL-GA-AS SOLAR CELL
ZH. I. ALFEROV, V. M. ANDREEV, N. S. ZIMOGOROVA, O. O. IVENTEVA, and V. I. MYRZIN (Pis'ma v Zhurnal Tekhnicheskoi Fiziki, vol. 7, July 26, 1981, p. 833-836.) Soviet Technical Physics Letters, vol. 7, July 1981, p. 357, 358. Translation. refs

Monolithic cascade solar cells in which each cell is used as an independent power supply have been fabricated by liquid-phase epitaxy on GaAs substrates in the (100) orientation. The monolithic cascade solar cells consist of two photocells: (1) the upper cell with a p-n junction in Al(y)Ga(1-y)As and a protective window of Al(x)Ga(1-x)As, where x is 0.9 or more and (2) the lower cell with a p-n junction in gallium arsenide, for which an Al(y)Ga(1-y)As solid solution serves as a window. The efficiency of a monolithic cascade structure with a gap width of 1.65 eV, fabricated in a

single technological process, is 18%, i.e. twice the efficiency reported previously for a GaAs-AlAs cascade cell. V.L.

A82-36163
GERMANIUM SELECTIVE SOLAR ABSORBER SURFACES
P. P. THOGERSEN, F. H. COCKS, P. L. JONES (Duke University, Durham, NC), and J. T. A. POLLOCK Journal of Materials Science, vol. 17, May 1982, p. 1377-1380. refs

Thin Ge films, produced by evaporation through 0.3, 1 and 3 torr pressures of argon onto polished aluminum substrates were found to exhibit selective absorption behavior. Maximum absorptance to emittance ratios of 13:1 were measured, with values of 8:1 for films having solar absorptances of 0.9. Film structures were significant in determining collection efficiency. Films deposited at 0.3 torr showed better overall properties due to a larger particle size of about 1 micron compared with an approximate 0.1 micron size measured with films deposited at 1 and 3 torr. HEAT LOSS FACTOR FOR LINEAR SOLAR CONCENTRATORS
S. C. MULLICK and S. K. NANDA (Indian Institute of Technology, New Delhi, India) Applied Energy, vol. 11, May 1982, p. 1-13. refs

Numerical techniques are developed for calculating the heat loss factor through the glass cover of a cylindrical solar concentrator. The configuration considered was a steel tube suspended in the central space of a concentric glass tube. Heat transfer coefficients were determined for both the radiative heat between the tube and the glass and the convective heat transfer within the medium between the steel and the glass. The sum of the two coefficients is treated as the total heat transferred to the outside air by forced or mixed convection. Correlations of the outside to inside heat transfer resistances ratio to the wind velocity, the absorber temperature, the emittance of black paint, etc. were formulated. The results are noted to be applicable to flat plate collectors and useful for manufacturers of solar equipment.

CHEMICALLY SPRAYED PBS COATINGS FOR PHOTOTHERMAL SOLAR ENERGY CONVERSION. R. C. AGARWAL AND P. K. C. PILLAI [INDIAN INSTITUTE OF TECHNOLOGY, NEW DELHI, INDIA]
Applied Energy, vol. 11, May 1982, p. 61-68. refs

This paper reports on an investigation into the optical and physical properties of PbS coatings prepared by spray pyrolysis onto chemically brightened aluminum substrates. The advantages are low cost, reasonably good selectivity and the coatings' ability to be scaled onto collectors of any desired size. The coatings exhibit a high absorptivity in the solar range and a low emissivity in the thermal range. Finally, the photothermal conversion efficiencies of black paint-coated and PbS-coated solar collectors are compared. (Author)

ZAP - INTRODUCING THE ZERO-BIAS AVALANCHE PHOTODIODE
T. P. PEARSALL (Bell Telephone Laboratories, Inc., Murray Hill, NJ) Electronics Letters, vol. 18, June 10, 1982, p. 512-514. refs

A novel heterostructure p-n junction diode is described which provides a photocurrent gain of 2 under zero external bias conditions. The necessary energy required to produce the additional electron-hole pair would be supplied by the internal electric field associated with the heterojunction energy gap difference. The ZAP diode structure has energy conversion applications as a photovoltaic detector whose efficiency may be enhanced by as much as 25% over that obtainable using homojunction solar cells. The device has, however, yet to be built. (Author)

SPRAY-DEPOSITED SNO2/N-SI/POLYCRYSTALLINE/ SOLAR CELLS
A. BHARDWAJ, K. S. KALONIA, A. RAZA, A. K. SHARMA, B. K. GUPTA, and O. P. AGNIHOTRI (Indian Institute of Technology, New Delhi, India) Solar Cells, vol. 5, Apr. 1982, p. 305-311. Research supported by the Ministry of Industrial Development of India. refs

In response to recent interest in the development of semiconductor-insulator-semiconductor solar cells, which obviate high temperature processing, SnO2/n-Si solar cells were fabricated by the spray deposition of SnO2 onto n-type polycrystaline silicon of 0.1-1 ohm cm resistivity. The thickness of the chemically grown interface layer is estimated to be 18 A, and capacitance-voltage measurements indicate a barrier height of 0.68 V. The performance parameters of this heterojunction solar cell include: (1) an 0.452 V open circuit voltage; (2) a 19.7 mA/sq cm current density; (3) an 0.634 fill factor; and (4) a conversion efficiency of 7.06% at an illumination of 80 mW/sq cm. O.C.

A82-36864
CZOCHRALSKI SILICON SOLAR CELL MODULES - PRESENT COST AND FUTURE PROSPECTS
R. M. MOORE (Solar Energy Research Institute, Golden, CO; Chevron Research Corp., Solar Div., Richmond, CA) Solar Cells, vol. 5, Apr. 1982, p. 313-329. refs

A multipath learning curve model of the development of the Czochralski process silicon solar cell industry is first tested through application of historical data for the 1974-1979 period, and upon

confirmation of its ability to predict price dynamics is used to forecast production costs in 1980-1985. The 1985 forecasts, in 1979 U.S. dollars, are $2.2/peak W at 10% estimated confidence level, $3.1-3.2/peak W at 50% estimated confidence level and $4.8/peak W at 90% estimated confidence level. It is concluded in light of these estimates that the 1985 state of development of the Czochralski silicon solar cell industry does not represent an attractive investment for major companies presently involved in related work, while a very attractive market is presented for small companies which are already participating in production. The resource base of small companies, however, is insufficient to support the investment levels required in 1980-1985. A primary consequence of this research is that the choice of the wafer or ribbon form of silicon crystal material chosen for intensive development is less important than the research and development emphasis which must be placed on the reduction of high purity polycrystalline silicon feedstock costs. O.C.

A82-36865
CONDUCTOR-INSULATOR-SEMICONDUCTOR ORGANIC SOLAR CELLS
R. O. LOUTFY, Y.-H. SHING, and D. K. MURTI (Xerox Research Centre of Canada, Mississauga, Ontario, Canada) Solar Cells, vol. 5, Apr. 1982, p. 331-341. refs

A new class of conductor-insulator-semiconductor (CIS) organic solar cells has been developed, whose novel features include the application of a transparent, conductive front electrode and a thin insulating layer. The selection of the front electrode divides CIS organic cells into three configurations: (1) a metal-insulator-semiconductor cell having a metal front electrode; (2) a semiconductor-insulator-semiconductor cell having a degenerate semiconductor electrode; and (3) an electrolyte-insulator-semiconductor cell using electrolytic contact. The barrier formation in the base organic semiconductor is determined by the work function of the transparent conductive electrode. The material used in the present study for the base semiconducting layer is an X-phase, metal-free phthalocyanine-polymer binder combination which can be deposited onto a substrate by solution casting. O.C.

A COMMENT ON THE GENERALIZATION OF THE THEORETICAL BASIS OF PHOTOVOLTAIC CONCENTRATORS FOR EXTENDED LIGHT SOURCES
A. LUQUE (Escuela Tecnica Superior de Ingenieros de Telecommunicacion, Madrid, Spain) Solar Cells, vol. 5, Apr. 1982, p. 387-389.

Maximum optical concentration is achieved by a solar cell collector when it is illuminated isotropically, with the concentrator oriented in such a way that solar source area, A(s)-prime, equals the area of highest energy collection, A(s). It is shown that the A(s)-prime/A(s) orientation factor permits the application of the theory proposed by Luque (1981) to concentrators which are not optimally oriented, such as asymmetric concentrators, with emphasis on errors that could arise from not using the orientation factor. O.C.

DEVELOPMENT EFFORT OF SHEET MOLDING COMPOUND /SMC/ PARABOLIC TROUGH PANELS
P. A. KIRSCH (Budd Co., Ft. Washington, PA) and R. L. CHAMPION (Sandia National Laboratory, Albuquerque, NM) In: Reinforced Plastics/Composites Institute, Annual Conference, 36th, Washington, DC, February 16-20, 1981, Preprints. New York, Society of the Plastics Industry, Inc., 1981 (Session 26-C). 4 p. Research supported by Sandia National Laboratory.

Technical considerations at efforts to develop parabolic solar reflectors using sheet molding compounds with glass reflectors molded into the troughs are described. Strengthening of mirrored glass sheets followed by application of an adhesive was found to provide good protection for both the silvered back of the mirror and the sheet molding compound after the two were joined in a single press stroke of a compression molding process. Details of the prototype one meter wide troughs with a 19.01 in. focal length are provided, including design solutions such as three external ribs joined to two external coaming ribs to provide the required stiffness. Changes in the size of the sheet molding after curing and in cooling to room temperature were accounted for by modeling with an appropriate standard deviation, and fabricating the trough panel mold to a smaller focal length, 18.95 in. Prospects for transferring the techniques to mass production are considered favorable. M.S.K.

A82-37438
DESIGN OF A SYSTEM FOR SOLAR ENERGY STORAGE VIA WATER ELECTROLYSIS
A. KOUKOUVINOS, V. LYGEROU, and N. KOUMOUTSOS (Athens, National Technical University, Athens, Greece) International Journal of Hydrogen Energy, vol. 7, no. 8, 1982, p. 645-650. refs

The design and economic evaluation of a system that provides electricity for an average one-family dwelling by utilizing solar energy are detailed. Solar energy is converted by photovoltaic arrays to electricity which is then used for the electrolysis of water. The hydrogen produced is stored in the form of hydride and can be used either for direct burning, to meet the thermal energy requirements, or in a fuel cell to supply the electric energy needed. Particular emphasis was given to designing a control system that could guarantee a smooth intermittent operation of the electrolytic unit and the utilization of the maximum output of the photovoltaic cells. The system selected can operate with minimum attendance and very little maintenance. The cost of the electricity produced is as high as $3.30/kWh. (Author)

DETERMINATION OF THE STAGNATION TEMPERATURE OF FLAT PLATE SOLAR COLLECTORS [BESTIMMUNG DER STILLSTANDTEMPERATUR VON FLACHKOLLEKTOREN]
K. MASSMEYER (Kernforschungsanlage Juelich GmbH, Institut fuer Kernphysik, Juelich; Koeln, Universitaet, Cologne, West Germany), J. W. GRUETER, H. D. TALAREK (Kernforschungsanlage Juelich GmbH, Institut fuer Kernphysik, Juelich, West Germany), and E. RASCHKE (Koeln, Universitaet, Cologne, West Germany) Meteorologische Rundschau, vol. 35, June 1982, p. 67-75. In German. refs

For the safe operation of collector systems, it is necessary to determine the highest temperature which can occur in the collector for conditions under which no energy is withdrawn from the collector. A description is presented of a method which makes it possible to determine this temperature. The considered method does not depend on the meteorological conditions, and provides also values regarding the temperature dependence of the heat transmission coefficient of flat plate collectors. Global insolation is found to have the greatest effect on the stagnation temperature. Fluctuations in wind velocity between 0 and 5 m/s produce approximately the same variations in stagnation temperature as changes of the environmental temperature from -10 C to +40 C. The contribution provided by diffuse insolation is nearly one order of magnitude less. G.R.

A82-37629
TERNARY CHALCOGENIDE-BASED PHOTOELECTROCHEMICAL CELLS. II - THE N-CDIN2SE4/AQUEOUS POLYSULFIDE SYSTEM
R. TENNE, Y. MIROVSKY, Y. GREENSTEIN, and D. CAHEN (Weizmann Institute of Science, Rehovot, Israel) Electrochemical Society, Journal, vol. 129, July 1982, p. 1506-1512. Research supported by the U.S.-Israel Binational Science Foundation. refs

The behavior of CdIn2Se4, a ternary analog of CdSe, as a photoanode in an aqueous polysulfide photoelectrochemical cell is investigated. Measurements of I-V curves in the dark and under illumination show that potentiostatic photoetching under large reverse bias leads to a dramatic increase in cell photocurrent (up to about 15 mA/sq cm under reverse bias of 400 mV) and a decrease in the dark currents under reverse bias as well as an improvement in output stability. Spectral response measurements reveal a considerable subbandgap photocurrent for the etched electrode, most of which disappears after photoetching, accompanied by an order of magnitude increase in the response to supra-bandgap excitation. Analysis of the shape of the spectral response reveals two distinct transition modes: an indirect transition at 1.55 eV and a direct transition at 1.72 eV. Finally, preliminary tests on thin film polycrystalline electrodes demonstrate an encouraging performance for polycrystalline material. A.L.W.

A82-37633
THE ROLE OF BE IN /GAAL/AS/GAAS SOLAR CELLS
K. MASU, S.-I. NAKATSUKA, M. KONAGAI, and K. TAKAHASHI (Tokyo Institute of Technology, Tokyo, Japan) Electrochemical Society, Journal, vol. 129, July 1982, p. 1623-1627. refs

The diffusion and doping behavior of Be in (GaAl)As/GaAs solar cells are investigated. Be diffusion into n-GaAs was followed during the LPE growth of Be-doped Ga(0.2)Al(0.8)As layers on the n-GaAs substrate at initial growth temperatures of 700 to 900 C, cooling rates from 0 to 0.5 C/min, growth durations of 10 to 120 min, and dopant concentrations from 0.01 to 0.3 at. %. The thickness of the Be-diffused p-GaAs region is found to increase with increasing growth temperature, leading to an exponential form for the dependence of the diffusion coefficient on temperature. The diffusion coefficient is also found to be proportional to the beryllium concentration in the growth melt. Measurements demonstrate the resistivity of Be-doped p-Ga(0.2) Al(0.8)As to be about 10 times higher than that of Be-diffused p-GaAs, with an acceptor energy level for Be in Ga(0.2)Al(0.8)As of 47 meV. An electron diffusion length of 4.3 microns was measured in p-GaAs at an average free-carrier concentration of about 10 to the 18th/cu cm. Finally, measurements of the photovoltaic characteristics of beryllium-doped (GaAl)As/GaAs p-p-n solar cells reveal a conversion efficiency in excess of 20% (AM1) and a peak output power of about 5 W/sq cm at 400 suns. A.L.W.

A82-37634
P-TYPE AMORPHOUS SILICON/LIQUID JUNCTION SOLAR CELL
W. M. AYERS (Exxon Research and Engineering Co., Linden, NJ) Electrochemical Society, Journal, vol. 129, July 1982, p. 1644-1646.

The characteristics of p-type amorphous silicon, a low-cost material under consideration for use for the photoelectrodes of a liquid junction solar cell, and of such a cell based on this material, are investigated. Measurements of the decrease in cell photovoltage as the aqueous vanadium electrolyte drifts to more oxidizing potentials indicate that although surface states are present, they do not act to pin the Fermi level of p-type amorphous silicon. Experiments demonstrate an open circuit voltage of 0.41 V, short circuit current of 0.18 mA/sq cm and fill factor of 0.3 when the electrolyte potential is driven to -0.51 V (vs SCE). An efficiency of 0.06% is obtained at 40 mW/sq cm illumination. The cell was also able to sustain a 1.3 microamp/sq cm current density for over an hour with no indication of failure, demonstrating the stability of the electrode. p-type amorphous silicon is thus concluded to be a promising material for thin-film photocathodes, with its major limitation the low short-circuit current. PHYSICAL BASIS OF POWER CONVERSION OF ENERGY FLUCTUATIONS
J. C. YATER Physical Review A - General Physics, 3rd Series, vol. 26, July 1982, p. 522-538. refs

The power conversion of energy fluctuations is an alternate energy source with the potential, in principle, to achieve the maximum efficiency of the Carnot cycle. An analysis is conducted concerning the physical basis for the design of circuits to implement the considered approach. The reversible-energy-fluctuations (REF) converter first absorbs and converts thermal energy incoming by conduction, convection, or radiation into electric energy fluctuations in a first layer. The energy-transducing first layer and a thermal-barrier second layer provide a physical basis to achieve various goals for the power conversion of the energy fluctuations transferred to the diodes in a third layer. The goals include an efficiency approaching the Carnot limit for reversible operations, a much larger power output than provided in concentrated solar energy, less exacting material requirements, and a very wide temperature range of operation. CURRENT-VOLTAGE RESPONSE OF TANDEM JUNCTION SOLAR CELLS
R. R. POTTER, J. R. SITES (Colorado State University, Fort Collins, CO), and S. WAGNER (Princeton University, Princeton, NJ) Journal of Applied Physics, vol. 53, July 1982, p. 5269-5272. refs
(Contract XF-1-1237-1)

A tandem cell is modeled and tested against experimental results. A planar structure is considered in which high energy photons are absorbed by an outer semiconductor material. The salient features of a straightforward model in which series resistance and leakage current are considered individually for the constituent cells are shown. The current superposition principle is used by taking the total current of a diode as the algebraic sum of dark and photocurrents, while charge trapping in bulk or interface states is neglected. The model is compared with experimental results from the 'monolithic' n-Si/SnO2/n-CdSe/electrolyte cell and with the two individual cells that constitute the tandem structure. Results show that much optimization may be carried out using each diode separately, where thin films are supported on glass substrates. By using the individual J-V curves, obtained when the junctions are stacked in the light beam, one can predict the maximum tandem output. C.D.

PROPERTIES AND STRUCTURE OF A-SIC:H FOR HIGH-EFFICIENCY A-SI SOLAR CELL
Y. TAWADA, M. KONDO, H. OKAMOTO, Y. HAMAKAWA (Osaka University, Toyonaka, Japan), and K. TSUGE Journal of Applied Physics, vol. 53, July 1982, p. 5273-5281. Research supported by the Ministry of Education, Science, and Culture and Agency of Industrial Science and Technology. refs

A series of experimental investigations on optical and optoelectronic properties of methane and ethylene-based a-SiC:H films has been made. The chemical bonding structure of such films has also been explored with IR absorption structural analysis. An experimental verification for the wide gap window material in the amorphous silicon solar cell is shown for methane and ethylene-based a-SiC:H. The methane-based film shows a one or two orders of magnitude larger photoconductivity recovery effect resulting from doping than the ethylene-based one. IR absorption analysis shows that the methane-based a-SiC:H film is recognized as a rather ideal amorphous SiC alloy as compared with the ethylene-based one. It is found that the methane-based film is almost constructed with tetrahedrally coordinated carbons or carbons attached to a hydrogen, and is superior to the ethylene-based one for a window material in a p-i-n solar cell. IONIZED IMPURITY INDUCED PHOTOCARRIER GENERATION IN ORGANIC ENERGY CONVERSION SYSTEMS
Z. D. POPOVIC (Xerox Research Centre of Canada, Mississauga, Ontario, Canada) Journal of Chemical Physics, vol. 77, July 1, 1982, p. 498-506. refs

The present study has the objective to investigate the influence of the discrete nature of ionized impurities in a Schottky barrier on the field dependent carrier generation of an organic photovoltaic cell. Attention is given to the influence of the local ionized impurity field on the carrier generation, compared to the influence of the average field in the barrier. It is assumed that exciton dissociation into electron-hole pairs can be adequately described as a function of the local electric field. The proposal is made that thermal regeneration of ionized impurities can lead to continuous charge production based on the proposed mechanism. The study has been motivated by a significant discrepancy observed between the measured and calculated carrier generation efficiencies in x-metal-free phthalocyanine photovoltaic cells. The proposed mechanism of ionized impurity-assisted carrier generation offers an explanation for the observed enhancement in x-metal-free phthalocyanine photovoltaic cells. G.R.

CENTRAL SOLAR RECEIVERS - APPLICATIONS FOR UTILITIES AND INDUSTRY
P. A. CURTO (Gibbs and Hill, Inc., Washington, DC) and G. STERN Mechanical Engineering, vol. 104, July 1982, p. 54-57.

Two fundamentally different types of central solar receiver systems - molten salt and forced air systems - have been developed to the point of commercial demonstration. In the molten salt system, molten salt is heated to about 600 C and used to produce steam for power generation. The overall peak efficiency (sunlight to electricity) is approximately 23.2% using the molten salt concept, compared to 8-12% with photovoltaics. In the forced-air system, ambient air is inducted into speed-controlled gas turbines, forced through a metal tube receiver, heated to 600-816 C, and then expanded into several different turbines. The exhaust air can be utilized in various ways, depending on the downstream process conditions. A table of the combined cycle system performances for the forced-air system shows that the overall cycle efficiencies range from 35.6 to 37.4% (from heat to electricity), while when coupled with an annual average (sunlight-to-heat) collection efficiency of 54% in the air receiver, overall annual system efficiency ranges from 19.2 to 20.2%, with peak efficiency as high as 23.2%. Detailed diagrams of each of the two systems are given. The new generation of these plants have broad applications in new and retrofit utility and industrial facilities. The projected costs are competitive, even for first-generation plants. N.B.

SOLAR POND POWER PLANT FEASIBILITY STUDY FOR DAVIS, CALIFORNIA
Y. C. WU, M. J. SINGER, H. E. MARSH, J. HARRIS, and A. L. WALTON 15 Feb. 1982 73 p refs Prepared for the City of Davis, Calif.
(Contract NAS7-100)
(NASA-CR-168819; JPL-PUB-82-16; JPL-5107-4; NAS 1.26:168819) Avail: NTIS HC A04/MF A01 CSCL 10A

The feasibility of constructing a solar pond power plant at Davis, California was studied. Site visits, weather data compilation, soil and water analyses, conceptual system design and analyses, a material and equipment market survey, conceptual site layout, and a preliminary cost estimate were studied. It was concluded that a solar pond power plant is technically feasible, but economically unattractive. The relatively small scale of the proposed plant and the high cost of importing salt resulted in a disproportionately high capital investment with respect to the annual energy production capacity of the plant. Cycle optimization and increased plant size would increase the economical attractiveness of the proposed concept. R.J.F.

SALTON SEA PROJECT, PHASE 1 Final Report
M. L. PEELGREN 15 Jan. 1982 129 p refs
(Contract NAS7-100; DE-AI01-79ET-20307)
(NASA-CR-168804; JPL-PUB-81-108; JPL-1060-54; JPL-5107-2; NAS 1.26:168804) Avail: NTIS HC A07/MF A01 CSCL 10A

A feasibility study was made for a salt gradient solar pond power plant in or near the Salton Sea of California. The conclusions support continuance 5-MWe proof-of-concept experiment, and ultimate construction by an electric utility company of a 600-MWe plant. The Solar Pond concept would be an environmental benefit to the Salton Sea by reversing the increasing salinity trend. The greatest cost drivers are the lake dike construction and pond sealing. Problems to be resolved include method of brine production from Salton Sea water for the first unit (which requires evaporation pond area and time), the high turbidity and color content of the Salton Sea water (which requires pretreatment), and other questions related to pond permeability, bio-activity and soil/brine chemical reactions. All technical and environmental problems appear solvable and/or manageable if care is taken in mitigating impacts. Author

PHOTOVOLTAICS AS A TERRESTRIAL ENERGY SOURCE. VOLUME 2: SYSTEM VALUE
J. L. SMITH Oct. 1980 41 p refs 3 Vol.
(Contract NAS7-100; DE-A101-79CS-30315)
(NASA-CR-168809; JPL-PUB-81-103-VOL-2; JPL-5220-15; NAS 1.26:168809; DOE/ET-20356/6-VOL-2) Avail: NTIS HC A03/MF A01 CSCL 10A

Assumptions and techniques employed by the electric utility industry and other electricity planners to make estimates of the future value of photovoltaic (PV) systems interconnected with U.S. electric utilities were examined. Existing estimates of PV value and their interpretation and limitations are discussed. PV value is defined as the marginal private savings accruing to potential PV owners. For utility-owned PV systems, these values are shown to be the after-tax savings in conventional fuel and capacity displaced by the PV output. For non-utility-owned (distributed) systems, the utility's savings in fuel and capacity must first be translated through the electric rate structure (prices) to the potential PV system owner. Base-case estimates of the average value of PV systems to U.S. utilities are presented. The relationship of these results to the PV Program price goals and current energy policy is discussed; the usefulness of PV output quantity goals is also reviewed. M.D.K.

REGIONAL APPLICABILITY AND POTENTIAL OF SALT-GRADIENT SOLAR PONDS IN THE UNITED STATES. VOLUME 2: DETAILED REPORT
E. I. H. LINet al. 15 Mar. 1982 500 p refs 2 Vol.
(Contract NAS7-100; DE-AT04-80AL-13135)
(NASA-CR-168806; JPL-PUB-82-10-VOL-2; JPL-5107-1-VOL-2; DOE/JPL-1060-50-VOL-2; NAS 1.26:168806) Avail: NTIS HC A21/MF A01 CSCL 10A

A comprehensive assessment of the regional applicability and potential of salt-gradient solar ponds in the United States is provided. The assessment is focused on the general characteristics of twelve defined geographic regions. Natural resources essential to solar ponds are surveyed. Meteorological and hydrogeological conditions affecting pond performance are examined. Potentially favorable pond sites are identified. Regional thermal and electrical energy output from solar ponds is calculated. Selected pond design cases are studied. Five major potential market sectors are evaluated in terms of technical and energy-consumption characteristics, and solar-pond applicability and potential. Relevant pond system data and financial factors are analyzed. Solar-pond energy costs are compared with conventional energy costs. The assessment concludes that, excepting Alaska, ponds are applicable in all regions for at least two market sectors. Total solar pond energy supply potential in the five market sectors examined is estimated to be 8.94 quads/yr by the year 2000, approximately 7.2% of the projected total national energy demand. THE TRADE-OFF BETWEEN COLLECTOR AREA, STORAGE VOLUME, AND BUILDING CONSERVATION IN ANNUAL STORAGE SOLAR HEATING SYSTEMS
S. SILLMAN Mar. 1981 123 p refs
(Contract EG-77-C-01-4042)
(SERI/TR-721-907) Avail: NTIS HC A06/MF A01

A comprehensive study based on computer simulation of the performance of active solar heating systems with large storage tanks was made. The investigation focused on systems used to supply backup heat to passive solar and energy-conserving buildings as well as systems designed to meet standard heating loads. Results show that system performance increases linearly as storage volume is increased, up to the point where the storage tank is large enough to store all heat collected in summer. The optimal design for annual storage systems is discussed and a contrast with diurnal storage systems is made. It is suggested that the annual storage systems may be economically preferable to the diurnal systems. M.D.K.

THE TRADE-OFF BETWEEN COLLECTOR AREA, STORAGE VOLUME AND BUILDING CONSERVATION IN ANNUAL STORAGE SOLAR HEATING SYSTEMS
S. SILLMAN Apr. 1981 6 p refs Presented at AS/ISES Conf. and Exposition, Philadelphia, 26-30 May 1981
(Contract EG-77-C-01-4042)
(SERI/TR-721-907) Avail: NTIS HC A02/MF A01

A comprehensive computer simulation of the performance of active solar heating systems with long term hot water storage. Systems used to supply backup heat to passive solar and energy conserving buildings, as well as to meet standard heating and hot water loads were investigated. It is shown that system output increases linearly as storage volume increases, up to the point where the storage tank is large enough to store all heat collected in summer. This point, the point of unconstrained operation, is the likely economic optimum. Unlike diurnal storage systems, annual storage systems show only slightly diminished efficiency as system size increases. In contrast to diurnal systems, annual storage systems perform efficiently in meeting the load of a passive or energy efficient building. E.A.K.

The solar power satellite (SPS) concept defined as 'placing gigantic satellites in geosynchronous orbit to capture sunlight, changing the energy into an appropriate form for transmission to Earth, and introducing the energy into the electric power grid' is evaluated in terms of costs and benefits. The concept development and evaluation program is reviewed in four general areas: systems definition; environmental; societal; and comparative assessments. Specific factors addressed include: transportation, construction in space, methods of conversion of sunlight into energy, transmission to Earth, maintenance in orbit and decommissioning of satellites; environmental, political, and economic effects; and comparison of

SPS to other forms of power generation, both terrestrial and in space.

INTEGRATION OF SPS WITH UTILITY SYSTEM NETWORKS
B. M. KAUPANG *In* NASA, Washington The Final Proc. of the Solar Power Satellite Program Rev. p 99-102 Jul. 1980
Avail: NTIS HC A99/MF A01 CSCL 10A

The integration of Satellite Power System (SPS) power in electric utility power systems is discussed. Specifically, the nature of the power output variations from the spacecraft to the rectenna, the operational characteristics of the rectenna power, and the impacts on the electric utility system from utilizing SPS power to serve part of the system load are treated. It is concluded that if RF beam control is an acceptable method for power control, and that the site distribution of SPS rectennas do not cause a very high local penetration (40 to 50%), SPS may be integrated into electric utility system with a few negative impacts. Increased regulating duty on the conventional generation, and a potential impact on system reliability for SPS penetration in excess of about 25% appear to be two areas of concern. M.G.

Avail: NTIS HC A99/MF A01 CSCL 10A

The development of conceptual designs of solar array support structures and their foundations including considerations of the use of concrete, steel, aluminum, or timber are reported. Some cost trends were examined by varying selected parameters to determine optimum configurations. Detailed civil/structural design criteria were developed. Using these criteria, eight detailed designs for support structures and foundations were developed and cost estimates were made. As a result of the study wind was identified as the major loading experienced by these low height structures, whose arrays are likely to extend over large tracts of land. Proper wind load estimating is considered essential to developing realistic structural designs and achieving minimum cost support structures. Wind tunnel testing of a conceptual array field was undertaken and some of the resulting wind design criteria are presented. The SPS rectenna system designs may be less sensitive to wind load estimates, but consistent design criteria remain important. M.D.K.

Avail: NTIS HC A99/MF A01 CSCL 10A

A projection of the electrical energy demands over the next 30 to 50 years, coupled with reasonable assessments of known or developable energy sources, indicates that a shortage of electrical energy will occur about the turn of the century. Recognizing the criticality of such a shortage, the Department of Energy is currently evaluating alternative power generation concepts. One of these candidate concepts is the Satellite Power System. The power levels considered during the evaluation of the various satellite systems have ranged from 5 to 10 GW. It is apparent that, with this power level, both the satellite and the rectenna must be very large and encompass a large number of complex operational system activities. Major elements of the Satellite Power System (SPS) consist of a power satellite placed in a geosynchronous equatorial orbit, and a dedicated ground receiving station (GRS) located at a selected site within the continental United States. The nominal power output of the SPS is established at 5 gigawatts (5 million kilowatts) although, because of various system constraints or losses, it may actually produce between 4 and 5 gigawatts. N.W.

SECOND-GENERATION HELIOSTAT DEVELOPMENT FOR SOLAR-CENTRAL RECEIVERS: VOLUME 1, DETAIL DESIGN REPORT. APPENDIX 2 Final Report, 24 Jul. - 24 Oct. 1980
WINSMITH (Ford Aerospace and Communications Corp.) et al. 31 Mar. 1981 392 p Prepared for Sandia National Labs., Livermore, Calif.
(Contract DE-AC04-76DP-00789)
(DE82-001843; SAND-81-8175-VOL-1-APP-2) Avail: NTIS HC A17/MF A01

Three different types of rotary drive and bearing assemblies are investigated. These drives are designed and sized to meet load and life requirements for an azimuth actuation system for a second generation heliostat program. A structural analysis of the actuator is included. Two other actuator types are briefly examined although they are sized to meet applicable load life specifications. The actuator design considered the most suitable for the applications consists of a small worm gear drive as the first reduction stage and of a differential planetary as the final reduction. DOE

SPACE AND ENERGY: GLOBAL VIEWPOINT
D. E. KOELLE 1981 13 p refs Presented at 1st Intern. Aerospace Symp., Le Bourget, 2-3 Jun. 1981; sponsored by AIAA/Aerosalon
(MBB-UR-489-81-O) Avail: NTIS HC A02/MF A01

The potential contributions from space technology to solving the future world energy problem are addressed. The basic problem is created by the depletion of the fossile fuels in the next century. The replacement of oil, gas and coal is only feasible by nuclear power and solar energy. In the first case space technology can contribute to making the terrestrial storage of radioactive waste much less dangerous and more acceptable by expediting the highly radioactive components (only 3%) into space. In the case of solar energy space technology can contribute large solar power stations in space, providing energy via microwaves to special rectenna sites. J.M.S.

DEVELOPMENT OF CONTROL SYSTEMS FOR SOLAR WATER AND SOLAR SPACE HEATING EQUIPMENT. CHOICE OF HEAT CONDUCTING FLUID. TESTING Final Report, Apr. 1980
H. MEYER Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 81 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-185; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17,20

Flat plate collector systems suitable for hot water supply, swimming pool heating, and auxiliary space heating were developed. A control and ready made packaged pipe assembly, adapted to synthetic fluid, was developed. A heat transfer fluid was selected, pumps, safety devices, armatures and seals were tested for their long term performance. External heat exchangers for simple and cascade arrangement of the hot water tanks were tested. It is found that the channel design of a roll bonded absorber has only limited effect on collector performance if the channel width approximates the space between the plates. Systems already installed work satisfactorily. Author (ESA)

A POINT FOCUSING COLLECTOR FOR AN INTEGRATED WATER/POWER COMPLEX
H. ZEWEN, G. SCHMIDT, and S. MOUSTAFA *In its* Res. and Develop. at MBB. Tech. and Sci. Publ., 1981 17 p 1981 refs Presented at 20th Intern. Conf. on Cooperation Mediterraneenne pour l'Energie Solaire, Rabat, Morocco, 23-27 Nov. 1981
(MBB-UR-579-81-OE) Avail: NTIS HC A09/MF A01

A point focusing parabolic dish was developed in order to deliver process heat and as a solar collector for small solar thermal power stations. The utilization potential of the point focusing parabolic dish was identified and its main design parameters are summarized. The utilization of the collector as primary energy source in a food/water/power complex was tested. In its present configuration, the system is capable of delivering process heat for the temperature range from 150 to 500 C. This point focusing parabolic dish is identified as the most promising solar collector for small solar thermal power stations. Fifty-six dishes were assembled in a 100 kW (electric)/500 kW (thermal) food/water/power complex, which is in operation in the Kuwait desert. The dominating factors for cost reduction are discussed.

DESIGN ASPECTS OF A SOLAR ARRAY DRIVE FOR SPOT, WITH A HIGH PLATFORM STABILITY OBJECTIVE
J. CABILLIC, J. P. FOURNIER, P. ANSTETT, M. SOULIAC, and G. THOMIN (CNES) *In* NASA. Kennedy Space Center The 16th Aerospace Mech. Symp. p 143-157 May 1981 Prepared in cooperation with MATRA
Avail: NTIS HC A15/MF A01 CSCL 13I

A solar array drive mechanism (MEGS) for the SPOT platform, which is a prototype of a multimission platform, is described. High-resolution cameras and other optical instruments are carried by the platform, requiring excellent platform stability in order to obtain high-quality pictures. Therefore, a severe requirement for the MEGS is the low level of disturbing torques it may generate considering the 0.6 times 10 to the minus 3 power deg/sec stability required. The mechanical design aspects aiming at reducing the mean friction torque, and therefore its fluctuations, are described as well as the method of compensation of the motor imperfections. It was concluded, however, that this is not sufficient to reach the stability requirement. M.D.K.

FIELD EXPERIENCE WITH VARIOUS SLICING METHODS
H. I. YOO *In* JPL Proc. of the Low-Cost Solar Array Wafering Workshop p 179-185 1 Feb. 1982 Sponsored in part by DOE
Avail: NTIS HC A13/MF A01 CSCL 10A

Wafer slicing using internal diameter (ID) saw, multiblade slurry (MBS) saw and multiwire slurry (MWS) saw techniques were evaluated. Wafer parameters such as bow, taper, and roughness which may not be important factors for solar cell fabrication, were considerably better for ID saw than those of the MBS and MWS saw. Analysis of add-on slicing cost indicated that machine productivity seems to be a major limiting factor for ID saw, while expendible material costs are a major factor for both MBS and MWS saw. Slicing experience indicated that the most important factors controling final wafer cost are: (1) silicon cost (wafer thickness + kerf loss); (2) add-on slicing cost, and (3) mechanical yield. There is a very strong interaction between these parameters, suggesting a necessity of optimization of these parameters. A.R.H.

N82-23666*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
SOME TRADEOFFS IN INGOT SHAPING AND PRICE OF SOLAR PHOTOVOLTAIC MODULES
T. DAUD *In its* Proc. of the Low-Cost Solar Array Wafering Workshop p 187-196 1 Feb. 1982 refs
Avail: NTIS HC A13/MF A01 CSCL 10A

Growth of round ingots is cost-effective for sheets but leaves unused space when round cells are packed into a module. This reduces the packing efficiency, which approaches 95% for square cells, to about 78% and reduces the conversion efficiency of the module by the same ratio. Shaping these ingots into squares with regrowth of cut silicon improves the packing factor, but increases growth cost. The cost impact on solar cell modules was determined by considering shaping ingots in stages from full round to complete square. The sequence of module production with relevant price allocation guidelines is outlined. The severe penalties in add-on price due to increasing slice thickness and kerf are presented. Trade-offs between advantages of recycling silicon and shaping costs are developed for different slicing scenarios. It is shown that shaping results in cost saving of up to 21% for a 15 cm dia. ingot. A.R.H.

N82-23667*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
SENSITIVITY ANALYSIS OF ADD-ON PRICE ESTIMATE FOR SELECT SILICON WAFERING TECHNOLOGIES
A. R. MOKASHI *In its* Proc. of the Low-Cost Solar Array Wafering Workshop p 197-209 1 Feb. 1982 refs
Avail: NTIS HC A13/MF A01 CSCL 10A

The cost of producing wafers from silicon ingots is a major component of the add-on price of silicon sheet. Economic analyses of the add-on price estimates and their sensitivity internal-diameter (ID) sawing, multiblade slurry (MBS) sawing and fixed-abrasive slicing technique (FAST) are presented. Interim price estimation guidelines (IPEG) are used for estimating a process add-on price. Sensitivity analysis of price is performed with respect to cost parameters such as equipment, space, direct labor, materials (blade life) and utilities, and the production parameters such as slicing rate, slices per centimeter and process yield, using a computer program specifically developed to do sensitivity analysis with IPEG. The results aid in identifying the important cost parameters and assist in deciding the direction of technology development efforts. A.R.H.

OVERVIEW OF A NEW SLICING METHOD: FIXED ABRASIVE SLICING TECHNIQUE (FAST)
F. SCHMID, M. B. SMITH, and C. P. KHATTAK *In* JPL Proc. of the Low-Cost Solar Array Wafering Workshop p 233-241 1 Feb. 1982 refs Sponsored in part by DOE
Avail: NTIS HC A13/MF A01 CSCL 10A

The fixed abrasive slicing technique (FAST) was developed to slice silicon ingots more effectively. It was demonstrated that 25 wafers/cm can be sliced from 10 cm diameter and 19 wafers/cm from 15 cm diameter ingots. This was achieved with a combination of machine development and wire-blade development programs. Correlation was established between cutting effectiveness and high surface speeds. A high speed slicer was designed and fabricated for FAST slicing. Wirepack life of slicing three 10 cm diameter ingots was established. Electroforming techniques were developed to control widths and prolong life of wire-blades. Economic analysis indicates that the projected add-on price of FAST slicing is compatible with the DOE price allocation to meet the 1986 cost goals. M.G.

ID SLICING AND THE AUTOMATED FACTORY
T. LEWANDOWSKI *In* JPL Proc. of the Low-Cost Solar Array Wafering Workshop p 253-258 1 Feb. 1982
Avail: NTIS HC A13/MF A01 CSCL 10A

The automation of the slicing system utilizing internal-diameter saws for the production of the silicon wafers used in solar arrays is discussed. It is argued that saw productivity can be increased by reducing silicon waste, decreasing usage of consumables, keeping the saw slicing, and increasing the cutting speed. Several machine enhancements utilizing automatic control are discussed. The need for record keeping to anticipate maintenance operations is noted, and a digital serial communication interface with the microprocessor-based saws is recommended. Distributed control

of the manufacturing process is discussed in detail, and is recommended as a method for increasing productivity. R.J.F.

A site-specific conceptual design and evaluation of a solar central receiver system integrated with an existing cogeneration facility are described. The system generates electricity and delivers a portion of that electricity and process steam to a natural gas processing plant. Early in the project, tradeoff studies were performed to establish key system characteristics. As a result of these studies the use of energy storage was eliminated, the size of the solar facility was established at 37.13 MW (sub t), and other site-specific features were selected. The conceptual design addressed critical components and system interfaces. The result is a hybrid solar/fossil central receiver facility which utilizes a collector system of Department of Energy second generation heliostats. DOE

An analytic model for a solar receiver boiler panel was developed, using the RELAP4 nuclear plant systems thermal hydraulic computer code. Results are compared to other computer calculations and experimental data. The test panels were prototypes of panels to be used in the Barstow 10 MWe solar electric pilot power plant central receiver. Steady state operating conditions for a given incident heat flux were calculated from a zero power cold water startup. The effects of incident flux axial profile shape and of lateral flux gradients were studied, as was the dynamic response of the model to flux and flow transients. The nodalization detail required for accurate simulation was also determined. DOE

FORT HOOD SOLAR COGENERATION FACILITY CONCEPTUAL DESIGN STUDY. VOLUME 1: TECHNICAL REPORT Final Technical Report
Aug. 1981 397 p 2 Vol.
(Contract DE-AC03-81SF-11495)
(DE82-000836; DOE/SF-11495/T1-VOL-1; MDC-G-9716-VOL-1)
Avail: NTIS HC A17/MF A01

A solar heated heat transfer salt provides heat to a steam generation and provides space heating and air conditioning and hot water for the complex. The site and its climate are described briefly. Candidate site specific system configurations, technology assessments, system sizing, and the results of numerous trade studies leading toward the selection of the preferred system configuration are presented. A system level conceptual design of the cogeneration facility is presented, and the cconceptual design of the subsystems (heliostats, receiver, tower, energy transport and storage, fossil energy subsystem, electric power generation subsystem, control, space conditioning and domestic hot water subsystem) are described. Results of the economic analysis of the cogeneration facility are presented, including a description of analysis methods used, assumptions and rationale, simulation models used, a brief summary of capital and operations and maintenance costs, fuel savings, results of the economic evaluations and an economic scenario for future applications. T.M.

FORT HOOD SOLAR COGENERATION FACILITY CONCEPTUAL DESIGN STUDY. VOLUME 2: SYSTEM SPECIFICATION Final Technical Report
Aug. 1981 324 p refs 2 Vol.
(Contract DE-AC03-81SF-11495)
(DE82-001579; DOE/SF-11495/T1-VOL-2; MDC-G-9716-VOL-2)
Avail: NTIS HC A14/MF A01

The characteristics and design and the environmental requirements for a solar cogeneration facility at a Texas military facility are specified. In addition, the conceptual design and performance characteristics, cost and economic data and other information for the cogeneration facility designed to meet the requirements are summarized. DOE

N82-23767# General Electric Co., Philadelphia, Pa. Advanced Energy Programs Dept.
TEXASGULF SOLAR COGENERATION PROGRAM, VOLUME 1 Final Report, 1 Sep. 1980 - 1 Jun. 1981
D. J. BISANTZ, K. D. BISHOP (Texasgulf Chemicals Co.), W. HERRINGTON (Texasgulf Chemicals Co.), H. E. JONES, P. KARNOSKI (Brown and Root Development, Inc.), and S. I. SCHAFITZ Jun. 1981 158 p 2 Vol.
(Contract DE-AC03-80SF-11437)
(DE82-001900; DOE/SF-11437/T4-VOL-1) Avail: NTIS HC A05/MF A01

A site specific conceptual design was generated for a near term Solar Cogeneration Facility based upon solar central receiver technology. Various system trade studies were conducted to select an optimum system configuration for the selected industrial site, as well as a configuration with the potential for wide industrial applicability. System performance and cost estimates were prepared and utilized to assess the economics of the near term facility, as well as a similar commercial size facility. A development plan was then generated with the objective of efficiency achieving facility operation by 1985. The selected industrial site is Texasgulf's Comanche Creek Sulfur Mine near Fort Stockton, Texas. The Solar Cogeneration Facility will operate 24 hours per day, 365 day per year in the hybrid (solar and fossil) or fossil only modes of operation. High reliability, a definite requirement for Frasch process sulfur mining as well as other industrial process heat operations, is incorporated into the design. DOE

(Contract DE-AC04-76DP-00789)
(DE82-003088; SAND-81-7100/3-VOL-3) Avail: NTIS HC A02/MF A01

For the month of August 1981, the daily and monthly insolation, daily and monthly energy production, and monthly array efficiency are given for a 20 kW photovoltaic flat panel power system. The panel system is for an uninterruptable power supply load at a Texas utility. (LEW) DOE

N82-23800# Sandia Labs., Livermore, Calif.
CHARACTERIZATION OF THE CORROSION ENVIRONMENT OF THE DESERT NEAR BARTSTOW, CALIFORNIA
D. A. HUGHES Sep. 1981 30 p refs
(Contract DE-AC04-76DP-00789)
(DE82-003876; SAND-81-8252) Avail: NTIS HC A03/MF A01

The corrosion characteristics of the desert atmosphere environment near Barstow, CA were evaluated for the solar pilot plant receiver panel. Potential degradation mechanisms considered were not corrosion from molten salts and stress corrosion cracking in aqueous environments. The possibility of degradation from these mechanisms depends on the chemical composition of airborne particulates, aerosols, and gases. These particulates and aerosol were collected near the pilot plant site and analyzed for water and acid soluble Na(+), Mg(++), Li(+), S(--), SO4(--), and Cl(-). Comparison and evaluation of the quantities of these ions present with those necessary for corrosion indicate that external corrosion of the receiver due to the desert atmosphere environment is unlikely. DOE

N82-24394# National Bureau of Standards, Washington, D.C. National Engineering Lab.
SOLAR INDUSTRIAL PROCESS HEAT SYSTEMS: AN ASSESSMENT OF STANDARDS FOR MATERIALS AND COMPONENTS
W. J. ROSSITER and W. E. SHIPP Sep. 1981 98 p refs Sponsored in part by DOE
(PB82-133703; NBSIR-81-2381) Avail: NTIS HC A05/MF A01 CSCL 13A

A study was conducted to obtain information on the performance of materials and components in operational solar industrial process heat (PH) systems, and to provide recommendations for the development of standards including evaluative test procedures for materials and components. An assessment of the needs for standards for evaluating the long-term performance of materials and components of IPH systems was made. The assessment was based on the availability of existing standards, and information obtained from a field survey of operational systems, the literature, and discussions with individuals in the industry. Field inspections of 10 operational IPH systems were performed. Author (GRA)

SOLAR ENGINE Patent
R. N. JENSEN, inventor (to NASA) 27 Apr. 1981 6 p Filed 22 Jun. 1979 Supersedes N79-29608 (17 - 20, p 2692)
(NASA-CASE-LAR-12148-1; US-PATENT-4,326,381; US-PATENT-APPL-SN-051275; US-PATENT-CLASS-60-641.14; US-PATENT-CLASS-60-516) Avail: US Patent and Trademark Office CSCL 10B

A solar engine is disclosed in which a fluid, which is first heated and then cooled, forces a piston outward as the fluid is heated, and then draws the piston inward as the fluid is cooled. The piston is connected to a shaft and produces work as it moves outward and inward. A displacer plate moves between an absorber plate and a cooling plate to form an air space between the displacer and one or the other of these two plates for heating and cooling the fluid. The displacer plate is moved from one plate to the other by the displacer push ring as the piston nears the midpoint of its travel on the outward stroke and again on the inward stroke. COST AND PERFORMANCE OF THERMAL STORAGE CONCEPTS IN SOLAR THERMAL SYSTEMS
A. W. MCKENZIE *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 58-59 Mar. 1981
Avail: NTIS HC A16/MF A01

Studies to provide consistently calculated cost data, develop realistic performance data, and to project data for several thermal storage concepts integrated into several solar thermal systems are summarized. Available thermal storage concepts were reviewed through a literature search, contacts, and contractors. A screening criteria was developed and schematics were made for these systems. Rough-order-of-magnitude costs were determined and candidate systems were further reduced. The remaining twenty systems were more fully developed.

A CHEMICAL HEAT PUMP BASED ON THE REACTION OF CALCIUM CHLORIDE AND METHANOL FOR SOLAR HEATING, COOLING AND STORAGE
P. O. OFFENHARTZ *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 154-158 Mar. 1981 Sponsored by DOE. Prepared in cooperation with Sandia Lab., Livermore, Calif. and Brookhaven National Lab., Upton, N.Y.
Avail: NTIS HC A16/MF A01

An engineering development test prototype of the CaCl2-CheOH chemical heat pump was tested. The unit, which has storage capacity in excess of 100,000 BTU, completed over 100 full charge-discharge cycles. Cycling data show that the rate of heat pumping depends strongly on the absorber-evaporator temperature difference. These rates are more than adequate for solar heating or for solar cooling using dry ambient air heat rejection. Performance degradation after 100 cycles, expressed as a contact resistance, was less than 2 C. The heat exchangers showed some warpage due to plastic flow of the salt, producing the contact resistance. The experimental COP for cooling was 0.52, close to the theoretically predicted value.

A CONCEPTUAL DESIGN STUDY OF A HIGH TEMPERATURE SOLAR THERMAL RECEIVER Final Report
C. S. ROBERTSON, C. L. EHDE, L. E. STACY, S. S. ABUJAWDEH, R. NARAYANAN, L. R. MCCREIGHT, A. GATTI, and H. W. RAUCH, SR. 4 Jan. 1980 160 p refs Prepared for JPL
(Contract JPL-955455)
(NASA-CR-168925; JPL-9950-483; NAS 1.26:168925; GEEP-66)
Avail: NTIS HC A08/MF A01 CSCL 10A

A conceptual design was made for a solar thermal receiver capable of operation in the 1095 to 1650 C (2000 to 3000 F) temperature range. This receiver is designed for use with a two-axis paraboloidal concentrator in the 25 to 150 kW sub t power range, and is intended for industrial process heat, Brayton engines, or chemical/fuels reactions. Three concepts were analyzed parametrically. One was selected for conceptual design. Its key feature is a helical coiled tube of sintered silicon nitride which serves as the heat exchanger between the incident solar radiation

and the working fluid. A mechanical design of this concept was prepared, and both thermal and stress analysis performed. The analysis showed good performance, low potential cost in mass production, and adaptability to both Brayton cycle engines and chemical/fuels production. B.W.

OPTICAL CHARACTERIZATION OF SOLAR CONCENTRATOR MIRRORS USING THE SOLAR BEAM OF THE JPL 25-FOOT SPACE SIMULATOR
M. J. ARGOUD and E. W. DENNISON *In* NASA. Goddard Space Flight Center 12th Space Simulation Conf. 19 p 1982
Avail: NTIS HC A15/MF A01 CSCL 22B

The Jet Propulsion Laboratory 25-foot space simulator with its 5.8-m (19-ft) diameter simulated solar beam provides an excellent facility for measuring the optical characteristics of parabolic solar concentrator panels and gores. The virtual source position and size were determined by using a single lamp of the 37 xenon 30-kW source array with only the center lens in the 19-channel optical mixer. This data was used to define the optical test geometry, and it allowed accurate measurement of focal length and surface deviations of the mirror under test. A flux distribution of a typical solar concentrator placed directly on the solar beam gives measurements of performance at the focal point of the parabolic surface. Author

The performance of so-called sun-tempered buildings is under investigation. The thermal effects of water transpiration in the greenhouse of the Balcomb house are reported. The convective loop experiment shows that collector efficiency is nearly independent of the depth of the flow channels in the collector. Corrosion in liquid-cooled systems is being studied. Numerical modeling to investigate various methods for solar drying of sewage sludge, the existence of a boundary layer at the interface between the convecting and nonconvecting regions of a solar pond are discussed. Numerical analysis indicates that the convecting region will encroach upon the nonconvecting region when the temperature difference across the nonconvecting region exceeds a critical value. DOE

PILOT SOLAR POWER PLANT [PILOT-SOLARKRAFTANLAGE]
D. WOLF 1981 4 p Repr. from Erdoel u. Kohle - Erdgas - Petrochem. vereinigt mit Brennstoff-chem., v. 33, no. 8, Aug. 1980 p 343-344 In GERMAN
(MBB-UR-533-81-O) Avail: Issuing Activity

A fully functionally efficient solar-thermal power plant (10 kW electric) was built. The operating principle of thermomechanical conversion of solar energy into mechanical or electrical energy is presented. The equipment is completely automatic. Flat plate collectors absorb solar energy and convert it into heat which is transmitted by water to a heat exchanger. A closed cycle machine uses the heat to boil a working fluid (C2C12F4). A screw, powered by gas expansion in the working fluid, converts mechanical energy into electrical energy. Author (ESA)

INVESTIGATION OF CONTINUOUS DEPOSITION OF AMA-TYPE COATINGS ONTO STRIP AND SHEET BY SPUTTERING Semiannual Technical Progress Report, 5 Sep. 1980 - 30 Nov. 1981
J. A. THORNTON and J. L. LAMB 1 Dec. 1981 62 p refs
(Contract DE-AC04-80AL-13116)
(DE82-004266; DOE/AL-13116/T1; TELIC-81-3) Avail: NTIS HC A04/MF A01

The continuous deposition of multilayer selective absorber coatings onto strip by planar magnetron sputtering was investigated.

Metal-layer materials other than Mo that might provide improved thermal stability in air were also examined. Cr, Mo, Ni, Ta, and a Pt/Al2O3 cermet were considered for use as the intermediate metal layer. In each case the same metal was also used for the low emittance base layer. The substrates were glass and stainless steel plates. Good spectral selectivity and emittance at 200 C of 0.10, was achieved on glass substrates for all of the materials. The thermal stabilities of the coatings confirm the earlier work and underscore the importance of the Al2O3 layer. Coatings on glass substrates with rf sputtered Al2O3 layers were stable in air to 500 to 6000 C and in vacuum to at least 650 to 7000 C; they appear attractive for medium and high temperature collectors. The Mo and Ni-based coatings with reactive sputtering Al2O3 were stable during 1000 hr-long tests in air at 3500 C and show promise as low cost coatings for low temperature flat plate collector applications. QUALITY ASSURANCE AND STANDARDS PLAN FOR SOLAR THERMAL TECHNOLOGIES
H. R. W. COBB Jul. 1981 34 p refs
(Contract DE-AC02-77CH-00178)
(DE81-030831; SERI/RR-742-846) Avail: NTIS HC A03/MF A01

The development of a quality assurance and standards (QA and S) plan for the photovoltaic (PV) and domestic solar heating (SHAC) technologies preceded that for solar thermal technologies, permitting a review and lessons-learned approach to developing a solar thermal QA and S plan. It is noted that the state of the art for solar thermal technology is not as complicated or novel as PV and is better suited to engineering dialogues for input and implementation than SHAC. It is important to recognize the differences in legislative directives that influence the US Department of Energy's approach to the process of developing a QA and S plan. Specific legislative directives to develop criteria for PV and SHAC are replaced for solar thermal with directives to develop standards using a commercial approach. Accordingly, a series of standards matrices are proposed as the keystone to the plan which will identify the functions of components, subsystems and systems. DOE

In combination with the ground vehicles powered by a waste heat generating electric motor, a cooling system including a generator for driving off refrigerant vapor from a strong refrigerant absorbant solution is described. A solar collector, an air-cooled condenser connected with the generator for converting the refrigerant vapor to its liquid state, an air cooled evaporator connected with the condenser for returning the liquid refrigerant to its vapor state, and an absorber is connected to the generator and to the evaporator for dissolving the refrigant vapor in the weak refrigerant absorbant solution, for providing a strong refrigerant solution. A pump is used to establish a pressurized flow of strong refrigerant absorbant solution from the absorber through the electric motor, and to the collector.

Efficiency of silicon solar cells containing about one quadrillion atoms cu cm of chromium is improved about 26% by thermal annealing of the silicon wafer at a temperature of 200 C to form chromium precippitates having a diameter of less than 1 Angstrom. Further improvement in efficiency is achieved by scribing laser lines onto the back surface of the wafer at a spacing of at least 0.5 mm and at a depth of less than 13 micrometers to preferentially precipitate chromium near the back surface and away from the junction region of the device. This provides an economical way to improve the deleterious effects of chromium, one of the impurities present in metallurgical grade silicon mateial.

AN OVERVIEW OF THE VALUE OF PARABOLIC DISH SOLAR THERMAL SYSTEMS IN INDUSTRIAL COGENERATION APPLICATIONS
Mar. 1982 152 p Prepared for JPL, Pasadena, Calif.
(Contract JPL-955908)
(NASA-CR-169063; NAS 1.26:169063) Avail: NTIS HC A08/MF A01 CSCL 10A

The essential elements of the cogeneration system configuration to be captured were the displacement of thermal energy by collection and use of the Brayton exhaust stream, and the sale back to the utility of any electricity production in excess of on-site requirements. In contrast to simply dumping these energy flows, their use or sale obviously serves, by itself, to increase gross value of the solar thermal energy system. Net allowable cost of the parabolic dish modules may or may not be increased, however. A consideration is that the waste heat capture and delivery subsystems are not free. This study does not address the incremental cost of adding waste heat capture, transport, and conversion (to steam, if necessary). It does compute a value for the thermal energy thereby displaced. This value can serve as a first-round input to any detailed economic evaluation of waste heat recovery. T.M.

INTEGRATED RESIDENTIAL PHOTOVOLTAIC ARRAY DEVELOPMENT Final Report
N. F. SHEPARD, JR. 11 Dec. 1981 155 p Sponsored in part by DOE
(Contract JPL-955894)
(NASA-CR-169042; DOE/JPL-955894-5; JPL-9950-660; NAS 1.26:169042) Avail: NTIS HC A08/MF A01 CSCL 10A

An advanced, universally-mountable, integrated residential photovoltaic array concept was defined based upon an in-depth formulation and evaluation of three candidate approaches which

were synthesized from existing or proposed residential array concepts. The impact of module circuitry and process sequence is considered and technology gaps and performance drivers associated with residential photovoltaic array concepts are identified. The actual learning experience gained from the comparison of the problem areas of the hexagonal shingle design with the rectangular module design led to what is considered an advanced array concept. Building the laboratory mockup provided actual experience and the opportunity to uncover additional technology gaps. Author

The development of a low cost and reliable contact system for solar cells and the fabrication of several solar cell modules using ultrasonic bonding for the interconnection of cells and ethylene vinyl acetate as the potting material for module encapulation are examined. The cells in the modules were made from dendritic web silicon. To reduce cost, the electroplated layer of silver was replaced with an electroplated layer of copper. The modules that were fabricated used the evaporated Ti, Pd, Ag and electroplated Cu (TiPdAg/Cu) system. Adherence of Ni to Si is improved if a nickel silicide can be formed by heat treatment. The effectiveness of Ni as a diffusion barrier to Cu and the ease with which nickel silicide is formed is discussed. The fabrication of three modules using dendritic web silicon and employing ultrasonic bonding for interconnecting cells and ethylene vinyl acetate as the potting material is examined. E.A.K.

Avail: NTIS HC A05/MF A01 CSCL 10A

Thermal models were developed that accurately predict the thermally generated stresses in the web crystal which, if too high, cause the crystal to degenerate. The application of the modeling results to the design of low-stress experimental growth configurations will allow the growth of wider web crystals at higher growth velocities. A new experimental web growth machine was constructed. This facility includes all the features necessary for carrying out growth experiments under steady thermal conditions. Programmed growth initiation was developed to give reproducible crystal starts. Width control permits the growth of long ribbons at constant width. Melt level is controlled to 0.1 mm or better. Thus, the capability exists to grow long web crystals of constant width and thickness with little operator intervention, and web growth experiments can now be performed with growth variables controlled to a degree not previously possible. T.M.

Printed nickel overplated with copper and applied on top of a predeposited silicon nitride antireflective coating system for metallizing solar cells was analyzed. The ESL D and E paste formulations, and the new formulations F, G, H, and D-1 were evaluated. The nickel thick films were tested after firing for stability in the cleaning and plating solutions used in the Vanguard-Pacific brush plating process. It was found that the films are very sensitive to the leaning and alkaline copper solutions. Less sensitivity was displayed to the neutral copper solution. Microscopic and SEM observations show segregation of frit at the silicon nitride thick film interface with loose frit residues after lifting off plated grid lines. E.A.K.

To achieve the program goals, 28 minimodules were fabricated and tested, using 600 cells made from three-inch-diameter wafers processed by the sequence chosen for this purpose. Of these 600 cells, half were made from epitaxially grown layers on potentially low-cost substrates. The other half were made from commercial semiconductor-grade (SG), single-crystal silicon wafers that served as controls. Cell processing was normally performed on mixed lots containing significant numbers of each of these two types of wafers. After evaluation of the performance of all cells, they were separated by types for incorporation into modules that were to be tested for electrical performance and response to environmental stress. A simplified flow chart displaying this scheme, for quantities representing half of the planned total to be processed, is presented. T.M.

The silicon web process takes advantage of natural crystallographic stabilizing forces to grow long, thin single crystal ribbons directly from liquid silicon. The ribbon, or web, is formed by the solidification of a liquid film supported by surface tension between two silicon filaments, called dendrites, which border the edges of the growing strip. The ribbon can be propagated indefinitely by replenishing the liquid silicon as it is transformed to crystal. The dendritic web process has several advantages for achieving low cost, high efficiency solar cells. These advantages are discussed. T.M.

(NASA-CR-169051; DOE/JPL-954331-82/13; JPL-9950-655; NAS 1.26:169051) Avail: NTIS HC A11/MF A01 CSCL 10A

The effects of impurities and processing on the characteristics of silicon and terrestrial silicon solar cells were defined in order to develop cost benefit relationships for the use of cheaper, less pure solar grades of silicon. The amount of concentrations of commonly encountered impurities that can be tolerated in typical p or n base solar cells was established, then a preliminary analytical model from which the cell performance could be projected depending on the kinds and amounts of contaminants in the silicon base material was developed. The impurity data base was expanded to include construction materials, and the impurity performace model was refined to account for additional effects such as base resistivity, grain boundary interactions, thermal processing, synergic behavior, and nonuniform impurity distributions. A preliminary assessment of long term (aging) behavior of impurities was also undertaken. S.L.

Avail: NTIS HC A05/MF A01 CSCL 20B

This report describes the results of a 3-year effort to develop GaAs dendritic web for high-efficiency solar cells. A unique GaAs ribbon growth system was developed by applying dentritic-web growth techniques to a liquid-encapsulated GaAs system. Computerized thermal modelling and experimental modification produced a thermal geometry from which 48 GaAs webs were grown. These crystals had a multidendrite and/or faceted morphology rather than typical web morphology. Crystal quality improved as thermal geometry, growth techniques, dendrite seeds, and melt chemistry were optimized during the course of the program; however, conventional web morphology was not achieved. Analyses of chemical modification, crystal-growth characteristics, and orientation relationships suggest that inherent materials properties of GaAs produce a typical web morphology under conventional web-growth conditions. Consequently, a simple

transfer of Si web growth technology to our GaAs system was inadequate for the growth of high quality GaAs web. GRA

LEAD-ACID BATTERIES IN SOLAR PHOTOVOLTAIC POWER SYSTEMS FOR MARINE AIDS TO NAVIGATION Final Report
S. E. TRENCHARD Oct. 1981 32 p refs
(AD-A112151; CGR/DC-29/81; USCG-D-04-82) Avail: NTIS HC A03/MF A01 CSCL 10C

Since 1974, the U.S. Coast Guard has been testing lead-acid batteries in solar photovoltaic-powered systems for aids to navigation. Three types of lead-acid batteries, distinguished by the composition of their grid material, have been tested: lead-antimony grid, lead-calcium grid, and pure-lead grid. This report contains a comparison of the charging characteristics and the charge-discharge cycling behavior of each grid type. All types were remarkably similar qualitatively in their daily as well as annual cycling behavior but the significance of the quantitative differences offer distinctive tradeoffs. This report presents models for water usage, depth-of-discharge, and post-cycle capacity for various levels of voltage regulation. Based on the post-cycle capacity tests, the effect of grid strength, grid thickness, and operating conditions on life expectancy are presented. A final discussion presents the results of a field deployment of solar photovoltaic-powered aids to navigation in the Miami, Florida area. Potential solutions to the battery terminal corrosion and bird guano problems observed are discussed. Author (GRA)

CALCULATED EFFECTS OF TEMPERATURE, INTENSITY AND ATMOSPHERIC CONDITIONS ON THE THERMODYNAMIC LIMITS FOR CONVERSION OF SOLAR ENERGY TO WORK ON STORED ENERGY
M. L. BUHL, JR., R. E. BIRD, R. V. BILCHAK, J. S. CONNOLLY, and J. R. BOLTON Aug. 1981 11 p refs
(Contract DE-AC02-77CH-00178)
(DE81-030876; SERI/TP-233-1382) Avail: NTIS HC A02/MF A01

AM1.15 spectra are used to determine thermodynamic limits on photochemical or photovoltaic conversion with emphasis primarily on the effects of variation of atmospheric conditions on the efficiencies. The conditions examined are: absorber temperature, total solar intensity, air mass, ozone and water-zone content of the atmosphere, and the turbidity and visibility of the atmosphere. In addition efficiencies are computed for the diffuse component of global radiation as an approximation to cloudy conditions. The results are displayed as plots of solar conversion efficiency vs. bandgap wavelength for each set of conditions. Conclusions are then drawn as to the important variants which can serve to guide the design of photochemical and/or photovoltaic systems for a given environment. DOE

IMPROVED SLICING METHOD FOR SILICON Final Report
S. I. SOCLOF and P. A. ILES Sep. 1981 43 p refs
(Contract DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE82-003517; SERI/TR-9010-1-T1) Avail: NTIS HC A03/MF A01

Orientation dependent etching as an improved slicing method to provide thin silicon slices with increased yields and suitable for processing into high efficiency solar cells was investigated. Slicing of silicon by chemically etching narrow slots through silicon slabs was unsuccessful in that many slots did not etch completely through the slabs. The etch slicing method presented severe requirements on the materials used to mask against the etchants, on precise angular alignment for opening up lines in the masks, and on the crystallographic perfection of the silicon. The extremely small aspect ratio of the slots caused problems in the etching of the slots. A matrix processing sequence for processing strips formed by the etching process into solar cells is developed. DOE

LOYOLA UNIVERSITY, NEW ORLEANS, LOUISIANA SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION, FEBRUARY 1981 - JUNE 1981
K. M. WELCH 1981 86 p refs
(Contract DE-AC01-79CS-30027)
(DE82-003357; SOLAR/1055-81/14) Avail: NTIS HC A05/MF A01

The Loyola University site is a student dormitory in New Orleans, Louisiana whose active solar energy system is designed to supply 52% of the hot water demand. The system is equipped with 4590 square feet of flat-plate collectors, a 5000-gallon water tank, auxiliary water supplied at high temperature and pressure from a central heating plant with a gas-fired boiler, and a differential controller that selects from 5 operating modes. System performance data are given, including the solar fraction, solar savings ratio, conventional fuel savings, system performance factor, and system coefficient of performance. The solar fraction is well below the design goal; this is attributed to great fluctuations in demand. Insolation, temperature, operation and solar energy utilization data are also presented. The performance of the collector, storage, and domestic hot water subsystems, the system operating energy, energy savings, and weather conditions are also evaluated. Appended are a system description, performance evaluation techniques and equations, site history, sensor technology, and typical monthly data. DOE

SUMMERWOOD ASSOCIATES, HOUSE M, OLD SAYBROOK, CONNECTICUT: SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION, JUNE 1980 - MAY 1981
M. RAYMOND 1981 105 p refs
(Contract DE-AC01-79CS-30027)
(DE82-002240; SOLAR/1102-81/14) Avail: NTIS HC A06/MF A01

The active solar energy system is designed to supply 78% of the space heating and 100% of the hot water loads. It is equipped with 378 square feet of flat plate collectors, a 600-gallon concrete storage tank, and for auxiliary heating, a heat pump and electrical resistance heater. The system and subsystem performance are measured, including the solar fraction, solar savings ratio, conventional fuel savings, system performance factor, and solar system coefficient of performance. Also given are the system operating energy, energy savings, and weather conditions. DOE

SOLAR-ENERGY-SYS[illegible] PERFORMANCE EVALUATION, RYMARK I AND RYMARK II, FREDERICK, MARYLAND, JANUARY 1981 - APRIL 1981
J. W. SPEARS 1981 90 p refs
(Contract DE-AC01-79CS-30027)
(DE82-001591; SOLAR/1106-81/14) Avail: NTIS HC A05/MF A01

The Rymark I and Rymark II sites are single family residences in Maryland with a passive solar heating system in Rymark II. The Rymark I system is equipped with 92 square feet of south-facing double-glazed windows and is designed to supply 16% of the heating load. The Rymark II system is equipped with 150 square feet of south-facing triple-pane windows and is designed to supply 28% of the heating load. Both houses are equipped with a 24,000 Btu heat pump. For each house, the equipment solar fraction and conventional fuel savings are given. Overall system performance data are presented as well as data on collector, storage, and space heating performance, energy savings, and weather conditions. DOE

SOLAR-ENERGY-SYSTEM PERFORMANCE EVALUATION, GENERAL ELECTRIC DALLAS OPERATIONAL TEST SITE, DALLAS, TEXAS, OCTOBER 1980 - MARCH 1981
P. E. WETZEL 1981 86 p refs
(Contract DE-AC01-79CS-30026)
(DE82-001350; SOLAR/2094-81/14) Avail: NTIS HC A05/MF A01

The General Electric-Dallas site is a single family residence in Texas. The active solar energy system is a retrofit designed to supply 60% of the heating load, 75% of the hot water load, and 50% of the cooling load. The system is equipped with 365 square feet of evacuated tube collectors, 400 gallons of solar hot water storage, a three-ton heat pump for auxiliary heating and cooling, and a gas-fired, 40-gallon, domestic hot water heater. The solar fraction, solar savings ratio, conventional fuel savings, system performance factor, and solar system coefficient of performance are given, as well as performance data for the collector, storage, domestic hot water, space heating and space cooling subsystems, solar operating energy, energy savings, and weather conditions. Predicted performance data are given for comparison with the measured values. DOE

CONCEPTUAL DESIGN OF THE TRUSCOTT BRINE LAKE SOLAR-POND SYSTEM, VOLUME 1: UTILITY-INDEPENDENT SCENARIO
Jun. 1981 116 p refs Prepared for Army Corps of Engineers, Tulsa District
(Contract DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE82-003024; SERI/TR-731-1202) Avail: NTIS HC A02/MF A01

A conceptual design was performed for a series of solar pond systems to provide pumping power for chloride control in the Red River Basin. In the chloride control project, briny waters are diverted so as not to pollute portable water. The diverted brine is stored in a dammed natural basin where, with the aid of natural evaporation, the brine is concentrated to the salinities required for the solar ponds. The brine is transferred to the ponds and injected at the proper levels to establish the gradients and storage layers. The solar ponds are to be located within the Truscott, Texas brine impoundment lake. Heat will be extracted from the ponds and used to drive organic Rankine-cycle turbine generators. The electricity produced will serve the pumping needs of the chloride control project, pump brine from the natural source to the evaporation ponds, pump concentrated brine from the evaporation ponds to the solar ponds, maintain the solar ponds, and supply all system parasitic loads. It was found that five solar ponds with eight organic Rankine-cycle turbine-generators would serve both the average and peaking power requirements of the pumping stations in the Truscott area as they come on-line. DOE

DEVELOPMENT AND TESTING OF A HIGH-EFFICIENCY/HIGH-CONCENTRATION, PHOTOVOLTAIC MODULE EMPLOYING ALGAAS/GAAS SOLAR CELLS
R. J. OWEN, N. KAMINAR, P. G. BORDEN, P. E. GREGORY, and O. E. MOORE Oct. 1981 204 p refs Prepared in cooperation with Varian Associates, Inc., Palo Alto, Calif.
(Contract DE-AC04-76DP-00789)
(DE82-002683; SAND-81-7018) Avail: NTIS HC A10/MF A01

An advanced photovoltaic module employing high-concentration (400 suns) Fresnel lenses, high efficiency AlGaAs/GaAs solar cells, and jet-impingement cell cooling was designed. The prototype module produced approximately 100 W of dc power using 12 organometallic-vapor phase epitaxial (OM-VPE) cells (21 to 23% efficiency at 400 suns, 500 C) and 12 acrylic lenses and as designed for thermal energy recovery. The maximum module efficiency measured in Palo Alto, CA, was 17.1% compared to the 14% design goal. This performance was at 500 C coolant inlet temperature and reflected deduction of coolant pumping power. The module efficiency is 17.5% when corrected to NOCT conditions (200 C coolant inlet temperature). Approximately 40 to 50% of the direct normal incident energy was determined to be available for recovery from the module coolant. The design and performance of a 3.2 kW/sub p/ photovoltaic array employing a further improved version of the module is also presented. DOE

ELECTROCHEMICAL PHOTOVOLTAIC CELLS 2-6 COMPOUND THIN FILM ELECTRODES Annual Report, Jun. 1980 - Jun. 1981
M. A. RUSSAK, J. REICHMAN, J. DECARLO, and C. CRETER Jul. 1981 47 p refs Prepared for Midwest Research Inst., Golden, Colo.
(Contract DE-AC02-77CH-00178)
(DE82-000394; GAC-RM-728; SERI/PR-8002-8-T) Avail: NTIS HC A03/MF A01

The program focused on developing stable, thin film II-VI compound electrodes with sunlight efficiencies of 10%, for use with aqueous polysulfide electrolyte in frontwall and backwall illuminated electrochemical photovoltaic cells. The main effort was directed towards establishing the relationships among processing of the thin films, resultant electronic properties, and I-V performance in order to produce electrodes with maximum power conversion efficiency. The efficiency of n-CdSe electrodes deposited on titanium substrates was improved from between 3 to 5% to 5.5% to 6.5% by refinement of the thin film processing parameters as well as electrode surface treatment with ZnCl2 solution. The efficiency of n-CdSe electrodes deposited on tin oxide coated glass improved was from between 3 to 4% to the range of 6 to 6.5% due to modifications of the electrode geometry dictated by a photon loss minimization, and to electrode etching treatment. T.M.

RESULTS OF ROOF POND HEATING EXPERIMENTS USING THE PASSIVE TEST FACILITY FOR WARM, HUMID CLIMATES
F. M. LOXSOM, P. OLIVARES, B. KELLY, E. CLARK, E. DODERER, and P. HAYES Sep. 1981 348 p refs
(Contract DE-AC03-79CS-30201)
(DE82-003226; DOE/CS-30201/T4) Avail: NTIS HC A15/MF A01

Passive cooling and heating methods in warm, humid climates were tested. During the winter of 1980-1981, heating experiments were carried out for roof pond systems. These experiments included: roof pond heating with glazed and unglazed water bags, heating roof ponds from below by using reflective blinds in south facing windows, and direct gain heating with the roof pond used as storage. The data for these experiments are in the form of 5 minute data for 160 sensors. Most of the sensors are thermocouples or heat flux meters. The data are stored on computer type in the form of 28 different data files for 28 different experiment periods. DOE

SOLAR CENTRAL RECEIVERS: THE TECHNOLOGY, INDUSTRY, MARKETS, AND ECONOMICS
1 Sep. 1981 155 p
(Contract DE-AC03-81SF-11436)
(DE82-005267; DOE/SF-11436/2) Avail: NTIS HC A08/MF A01

Major solar central receiver (SCR) technology development occurring in the public and private sectors is assessed. The economic characteristics of SCR systems are discussed and their ability to compete with conventional system costs is evaluated. The effects of various federal assistance options on the market prospects for SCR are quantified. The forms of possible federal assistance, impacts of such assistance on SCR costs, and the preference of potential SCR suppliers and purchasers towards these assistance options are identified. An overview is presented of private sector developers from which a viable supply industry can evolve and their capabilities to commercialize SCR techniques. DOE

(Contract DE-AC03-76CS-31217)
(DE82-003526; DOE/CS-31217/T8) Avail: NTIS HC A05/MF A01

A solar heating system to provide hot water for curing concrete blocks is discussed. The objective is to operate, collect data, and evaluate the solar system for a 3 year period. The solar facility utilizes 35 collectors. The system is designed to deliver a water/ethylene glycol solution at 2000 F to a heat exchanger, which, in turn, supplies water at 1800 F to a rotorclave (underground tank) for the concrete block curing process. A fossil fuel boiler system also supplies the rotorclave with processed hot water to supplement the solar system. The program demonstrates the technical feasibility of generating industrial process hot water with solar energy. DOE

USER'S MANUAL FOR DELSOL2: A COMPUTER CODE FOR CALCULATING THE OPTICAL PERFORMANCE AND OPTIMAL SYSTEM DESIGN FOR SOLAR-THERMAL CENTRAL-RECEIVER PLANTS
T. A. DELLIN, M. J. FISH, and C. L. YANG Aug. 1981 76 p refs Prepared in cooperation with Sandia National Labs., Livermore
(Contract DE-AC04-76DP-00789)
(DE82-003875; SAND-81-8237) Avail: NTIS HC A05/MF A01

DELSOL2 is a revised and substantially extended version of the DELSOL computer program for calculating collector field performance and layout, and optimal system design for solar thermal central receiver plants. The code consists of a detailed model of the optical performance, a simpler model of the non-optical performance, an algorithm for field layout, and a searching algorithm to find the best system design. The latter two features are coupled to a cost model of central receiver components and an economic model for calculating energy costs. The code can handle flat, focused and/or canted heliostats, and external cylindrical, multi-aperture cavity, and flat plate receivers. The program optimizes the tower height, receiver size, field layout, heliostat spacings, and tower position at user specified power levels subject to flux limits on the receiver and land constraints for field layout. The advantages of speed and accuracy characteristic of Version I are maintained in DELSOL2. DOE

SOLAR EQUIPMENT SYSTEM PACKAGES FOR OLD AND NEW BUILDINGS TO PROVIDE DOMESTIC WATER AND PARTIAL HEATING Final Report
G. BERG and F. J. MUELLER Bonn Bundesministerium fuer Forschung und Technologie Mar. 1982 87 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-82-029; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 18,30

Technically optimized and economically marketable system packages were investigated. Commercially available flat roof collectors failed long term (2 yr) tests. Architecturally, it is difficult to integrate the collectors into roof or wall surfaces due to their box design. Satisfactory integration is only achieved by including collectors in new building plans. Alternatively, a highly efficient plastic collector with long service life was developed. Although initial expenditure with conventional building construction is high, an improved cost-benefit relation is obtained, incorporating the flexible mat-shaped plastic absorber with fully wetted surface which is operated at pressure below atmospheric. Pilot plant results with a bivalent heat pump system prove collector capability. Design data for the absorber circuit and heat pump system are given.

An optimum integrated residential photovoltaic array/module is addressed. Nineteen existing or proposed systems intended for residential applications are described. Each of these systems is rated against a comprehensive set of evaluation criteria in an effort to formulate three module design concepts for further study and analysis. This evaluation led to a number of observations which are enumerated and should be considered in future module and array designs. Three module concepts are presented as baseline design approaches to be further analyzed and optimized. These options include: (1) a rectangular, direct mounted, shingle type module; (2) an integrally mounted module with nonconductive exposed elements; and (3) an aluminum framed, stand off module. Preliminary design drawings are presented for each of these module configurations.

The generation of electricity by photovoltaic means was examined. Projections of near future developments are made, together with estimates of their impact on the cost and availability of photovoltaic systems for various markets. This concluded that photovoltaic systems should be able to deliver electricity at a cost of between 5 to 10 cents per kilowatt hour by 1986. DOE

The Toes State Office Building is a single-story office building in New Mexico which incorporates passive collection and storage of solar energy along with natural lighting for general illumination. The building is oriented to take advantage of early morning sunlight and is designed to supply 70% of the heating load by solar heat. The site is equipped with clerestory windows, totaling 2695 square feet, 296 square feet of south facing windows, and east and west window scoops totaling 218 square feet. The collected solar energy is stored in 14,080 gallons of water contained in drums located in the clerestory area, as well as in the masonry construction mass. Auxiliary heat is provided via electric strips in the supply ducts. Movable, insulated shutters are provided to reduce the loss from the clerestory window area at night. The project is described with pictures and diagrams of the final installation provided. An updated performance data report is included, and functional problems, general comments, maintenance and refurbishment recommendations are discussed. DOE

ELECTRIC POWER FROM ORBIT: A CRITIQUE OF A SATELLITE POWER SYSTEM
R. KASPER 1981 350 p refs
(Contract NSF PRM-79-19687)
(PB82-133083; NSF/PRM-81004) Avail: NTIS HC A15/MF A01 CSCL 10B

As a basis for assessing feasibility and projecting costs, this study focuses on the elements of a reference system which includes conceptual designs of various space vehicles and construction bases. The system uses photovoltaic devices for energy conversion in space and microwave devices for energy transmission to Earth. In addition to the major conclusions of the study, a number of detailed findings and recommendations are presented. These cover important technological aspects of a satellite power system--economic analyses; environmental concerns; sociopolitical aspects of development; and a comparison of a satellite power system with potentially competing technologies that have prospects for meeting very long-term needs for electricity. TERRESTRIAL SOLAR SPECTRA, SOLAR SIMULATION AND SOLAR CELL EFFICIENCY MEASUREMENT
R. MATSON, R. BIRD, and K. EMERY Sep. 1981 121 p refs
(Contract EG-77-C-01-4042; DE-AC02-77CH-00178)
(DE82-002082; SERI/TR-612-964) Avail: NTIS HC A06/MF A01

Fundamentals of light transmittance and, both measured and modeled atmospheric effects (i.e., air mass, molecular and aerosal scattering, and absorption) on terrestrial solar spectra are discussed. Geometric effects, such as global rather than direct beam measurements, and detector orientation are also reviewed. The SERI proposed ASTM global and direct beam terrestrial solar spectra are also presented. A detailed review/evaluation of the spectral characteristics of a number of solar simulators is given. Methods of calibrating the short circuit current of a solar cell with respect to a given irradiance spectrum are discussed. In conclusion, the need for a sophisticated solar simulator is proportional to the spectral mismatch betwen the spectral response of the reference cell used to set the solar simulator and that of the test cell. The ASTM terrestrial solar irradiance spectrum is recommended as a reference, spectrum and, the used either filtered xenon arc or dichroic filtered tungsten halogen lamps for solar simulation is also recommended. VERY LARGE AIRCRAFT WITH ALTERNATE FUELS - LH2 MOST PROMISING
J. C. MUEHLBAUER (Lockheed-Georgia Co., Marietta, GA) American Institute of Aeronautics and Astronautics, International Very Large Vehicles Conference, 2nd, Washington, DC, May 17, 18, 1982, 10 p. refs
(AIAA PAPER 82-0813)

Optimum designs of cargo aircraft using alternate fuels and carrying large payloads roundtrip over transoceanic distances without refueling are developed and compared. Synthetic jet propulsion (JP) fuel, liquid hydrogen (LH2) fuel, and nuclear power are considered. In relation to the JP aircraft, the LH2 aircraft is found to have lower ramp weights (by 25%) and lower trip costs (15%). The ramp weights and trip costs of the nuclear aircraft are, respectively, approximately 5 and 20% higher than those for the JP aircraft. With JP aircraft trip costs the most sensitive to fuel price, it is believed that rising prices in the future will make LH2 and nuclear power increasingly attractive. C.R.

A82-31987#
THE POTENTIAL FOR LONG-RANGE HIGH-PAYLOAD AIRCRAFT WITH ALTERNATE FUELS
W. M. HAWKINS (Lockheed Corp., Burbank, CA) American Institute of Aeronautics and Astronautics, International Very Large Vehicles Conference, 2nd, Washington, DC, May 17, 18, 1982, 7 p. refs
(AIAA PAPER 82-0814)

It is assumed that these aircraft will not be produced until the year 2005 and that they will use liquid hydrogen, which can be produced using coal, natural gas, or any other source of energy and water. With regard to propulsion, the present size of modern

high-by-pass engines will be employed; between 6 and 12 such units will be used on each aircraft. Control systems in use today to relieve structural loads will figure in the design, as will controls to avoid flutter, which at present are under development. Also considered possible is the use of precision rendezvous. It is pointed out that the cooling capacity of the liquid hydrogen fuel may be able to maintain laminar flow over a substantial portion of the aircraft by surface cooling. C.R.

HYDROGEN ECONOMY ASSESSMENT FOR LONG-TERM ENERGY SYSTEMS IN JAPAN
T. OHTSUKA (Tohoku University, Sendai, Japan), M. AKIYAMA, T. SAITO, Y. ISHIZAKI, A. SUZUKI (Tokyo, University, Tokyo, Japan), N. NEGISHI, J. MORIYA, K. HOASHI, and T. HOSHINO (Industrial Research Institute, Tokyo, Japan) International Journal of Hydrogen Energy, vol. 7, no. 6, 1982, p. 455-462.

An assessment is made of hydrogen technology development; in particular, economy as an energy carrier, applicability for end-uses and the potential of the market in the future. Specifically, rough static cost comparisons are made on several modes of electricity transmission and hydrogen transport, and on several ways of off-peak electricity saving; including energy storage in the form of hydrogen. Then, the quantity of oil that could be saved from some representative end-use sectors if hydrogen fuel were to be introduced is discussed. Finally, a potential market is assessed, by projecting overall future energy supply/demand dynamics in Japan. (Author)

COOPERATIVE INTERNATIONAL LIQUID HYDROGEN AUTOMOTIVE PROGRESS REPORT
W. J. D. ESCHER (Escher-Foster Technology Associates, Inc., St. Johns, MI) International Journal of Hydrogen Energy, vol. 7, no. 6, 1982, p. 519-521.

The current status of cooperative projects undertaken in West Germany, the United States and Japan for the road testing of liquid-hydrogen-fuelled passenger automobiles is indicated. The German vehicle uses a 1.8-l displacement, four-stroke cycle, four-cylinder normally aspirated engine using hydrogen injection at the individual intake valve ports and electronically controlled water induction to suppress backfiring and NO(x) emissions. A semiautomatic liquid hydrogen refueling system has been developed which prechecks, fills and automatically terminates filling of the onboard tank system. The U.S. project makes use of a 3.8-l displacement four-stroke, six-cylinder turbocharged engine which has accumulated over 3000 km of driving with no instances of unsafe operation. The Japanese car is based on a 1.1-l displacement, two-stroke, three cylinder direct injected engine supplied with liquid hydrogen at about 10 atm pressure and -30 to -50 C, and offers superior fuel economy, acceleration and top speed performance compared to the standard gasoline-fuelled version. HIGH TEMPERATURE FUEL AND STEAM ELECTROLYSIS CELLS USING PROTON CONDUCTIVE SOLID ELECTROLYTES
H. IWAHARA, H. UCHIDA, and N. MAEDA (Tottori University, Tottori, Japan) Journal of Power Sources, vol. 7, Mar. 1982, p. 293-301. refs

High-temperature-type proton conductive solids are favorable materials as electrolytes for fuel cells and steam electrolysis cells for the production of hydrogen gas. An attempt has been made to construct a high temperature fuel cell and a steam electrolysis cell using an SrCeO3-based solid electrolyte, which was found to be a protonic conductor in the presence of hydrogen or water vapor. Both cells could be operated stably at 800 - 1000 C. The major limitation of the cell system was the resistance of the solid electrolytes. (Author)

WILL HYDROGEN-FUELED AIRCRAFT BE SAFE
G. D. BREWER (Lockheed-California Co., Burbank, CA) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 6 p. refs
(AIAA PAPER 82-1236)

Analysis has shown that liquid hydrogen will be significantly safer than liquid methane and synjet, the other alternative fuels for aircraft. With LH2 there will be less risk of a major spill occurring in event of a crash in which passengers can survive the impact. If fuel is spilled, and assuming ignition does not occur, LH2 will not spread as far before it vaporizes, becomes buoyant, and dissipates in the atmosphere. If the spilled fuel is ignited, as will occur more than 80 percent of the time with any of the fuels, the resulting hydrogen fire will be of such short duration and will be confined to such a small area that the passenger survival rate can be expected to be much higher. (Author)

A82-37436
CONTINUOUS MICROBIAL PRODUCTION OF HYDROGEN GAS
J. D. BROSSEAU and J. E. ZAJIC (Saskatchewan Research Council, Saskatoon; Western Ontario, University, London, Canada) International Journal of Hydrogen Energy, vol. 7, no. 8, 1982, p. 623-628. refs

Techniques utilized to study microbial hydrogen gas production involved intermittent flow digesters, chemostats (continuous culture), immobilized cells and immobilized enzymes. Overall, the chemostat appears to have the greatest potential to maximize hydrogen gas productivity. Immobilized systems tended to result in lower hydrogen-producing activities which may have been due to diffusion limitation. Organic compounds, such as carbohydrates, stimulate the greatest amount of H2. (Author)

CATALYTIC COMBUSTION OF HYDROGEN. III - ADVANTAGES AND DISADVANTAGES OF A CATALYTIC HEATER WITH HYDROGEN FUEL
M. HARUTA and H. SANO (Osaka, Government Industrial Research Institute, Ikeda, Japan) International Journal of Hydrogen Energy, vol. 7, no. 9, 1982, p. 737-740. refs

An experimental study of a catalytic heater with hydrogen fuel was conducted for comparison with a hydrocarbon-fuelled catalytic heater, in initiating temperature of combustion, adjustable heat output, and distribution of surface temperature of a catalyst. Hydrogen combustion was initiated at around room temperature even on pelletized oxides. There was no practical limitation of heat output on the lower side for hydrogen heaters, while 1.0 kcal/sq cm per hour was the lower limit for Liquified Petroleum Gas and natural gas heaters. Since hydrogen is extremely light in comparison with air and flows upwards across the catalyst body, the distribution of catalyst temperature tended to be considerably non-uniform. (Author)

A82-37445
A NOVEL BATCH-TYPE HYDROGEN TRANSMITTING SYSTEM USING METAL HYDRIDES
N. NISHIMIYA, A. SUZUKI, and S. ONO (National Chemical Laboratory for Industry, Tsukuba, Ibaraki, Japan) International Journal of Hydrogen Energy, vol. 7, no. 9, 1982, p. 741-750. refs

In the case of transporting hydrogen by means of metal hydrides, a key problem is to reduce the weight of the portable container filled with metal hydrides. The paper describes a novel batch-type hydrogen transmitting system characterized by a portable light container filled with metal hydrides, which is not pressure-proof but only mechanically durable. Hydriding is performed by setting the portable light container in a fixed pressure-proof vessel and admitting hydrogen and nitrogen inside and outside the portable container, respectively, while adjusting the pressure difference between both gases to be zero. Using this system, 2.9 cu Nm of hydrogen can be stored in 14.3 kg of the total mass of the solid constituents including 3.5 kg of Mg-10% Ni alloy. The portable container contains twice as much hydrogen per unit weight and volume as a conventional compressed gas cylinder. Due to the advanced design of this portable container, the optimum hydrogen content could be around 5 wt % based upon the total mass of the container. (Author)

Avail: NTIS HC A16/MF A01

A proof-of-concept bench-size hydride compressor was successfully built and tested. In continuous operation this unit delivered 20.3 liters/min (43SCFH) at a pressure of 42.2 atmospheres (650 Psia). The efficiency however was lower than anticipated. The operation of this small unit revealed several important factors which influence the overall efficiency of such a hydride hydrogen compressor. The reduced efficiency of the bench scale unit was caused by mechanical design details (such as excessive amount of copper due to the electrical heating system) as well as problems with the hydriding alloy (reduced capacity at elevated temperatures and decrease in plateau pressure after 700 cycles of operation). HYDROGEN MICROSPHERE HAZARD EVALUATION
R. G. ZALOSH and S. N. BAJPAI *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 211-213 Mar. 1981 refs
Avail: NTIS HC A16/MF A01

Progress on a preliminary hazard evaluation of hollow glass microspheres for hydrogen transport and storage is reported. The flammability and explosibility of representative hydrogen filled microspheres was assessed. The tests include dust cloud explosion; flame propagation; impact sensitivity; spark ignition; and autoignition furnace. The microspheres can be ignited and propagate flame either in the quiescent bulk form or as a suspended cloud. A preliminary comparison with flammability data for gaseous hydrogen and iron titanium hydride powder indicate that the autoignition temperature of hydrogen filled microspheres is comparable to that or the other forms of hydrogen, but suspended clouds of microspheres produce lower explosion pressures than hydride dust or hydrogen gas. Safety codes and government regulations pertinent to hydrogen filled microspheres are also reviewed. E.A.K.

NOX FORMATION IN FLAT, LAMINAR, OPPOSED JET METHANE DIFFUSION FLAMES
W. A. HAHN and J. O. L. WENDT (Arizona, University, Tucson, AZ) In: Symposium /International/ on Combustion, 18th, Waterloo, Ontario, Canada, August 17-22, 1980, Proceedings. Pittsburgh, PA, Combustion Institute, 1981, p. 121-129; Comments, p. 129-131. U.S. Environmental Protection Agency refs
(Contract EPA-68-02-2631; EPA-R-803715)

Diffusion flames can play a useful role in the study of the kinetic mechanisms of pollutant formation. A laminar diffusion flame which has a number of useful attributes is the flat laminar opposed jet diffusion flame. Such a flame is established between two coaxial opposed jets, one being fuel only and the other being oxidizer only, impinging on one other. This flame is strained in its own plane, and it can be envisioned as a prototype model for laminar flamelets in turbulent diffusion flames. It is shown that the considered flame, having a given stretching rate, is one dimensional in temperature, concentration, and axial, but not radial, velocity profiles, provided the correct boundary conditions are employed for the velocities of the two incoming jets. G.R.

A82-28672
FLAME PROPAGATION IN HETEROGENEOUS MIXTURES OF FUEL DROPLETS, FUEL VAPOR AND AIR
D. R. BALLAL (GM Research Laboratories, Warren, MI) and A. H. LEFEBVRE (Purdue University, West Lafayette, IN) In: Symposium /International/ on Combustion, 18th, Waterloo, Ontario, Canada, August 17-22, 1980, Proceedings. Pittsburgh, PA, Combustion Institute, 1981, p. 321-328; Comments, p. 328. refs

The reported experimental investigations make use of a technique for generating flat flames in tubes which has not been applied previously to heterogeneous mixtures. The obtained results are used as a basis for the formulation of a model. The model, which is based on considerations of evaporation rates and chemical reaction rates, describes the rate of flame propagation through quiescent multidroplet mists. When evaporation times are long relative to reaction times, flame speed is enhanced by increases in gas density, fuel volatility, vapor concentration, and reduction in mean drop size. However, when chemical reaction times are limiting to the rate of flame propagation, the flame speed reverts to the normal burning velocity for the mixture. G.R.

A82-28679
EXPERIMENTAL INVESTIGATION OF METHANOL OXIDATION IN FLAMES MECHANISMS AND RATE CONSTANTS OF ELEMENTARY STEPS
J. VANDOOREN and P. J. VAN TIGGELEN (Louvain, Universite Catholique, Louvain, Belgium) In: Symposium /International/ on Combustion, 18th, Waterloo, Ontario, Canada, August 17-22, 1980, Proceedings. Pittsburgh, PA, Combustion Institute, 1981, p. 473-482; Comments, p. 482, 483. Fonds National de la Recherche Fondamentale Collective refs
(Contract FRFC-2,9009,76)

An experimental study of methanol combustion in laminar flames is described that provides detailed information on the principal paths of methanol consumption and on subsequent elementary reactions. Data for the rate constants involved in the oxidation of methenol are given and the combustion processes of methane and methanol are compared. The different species in the flame front were analyzed with a molecular beam sampling technique coupled with a mass spectrometer. About 70 percent of the fuel molecules are consumed by reaction with hydroxyl radical and 30 percent by reaction with the hydrogen atom. The main product is

CH_2OH or CH_3O radical. These may in turn disappear either with molecular oxygen or with other radicals. During oxidation all methanol goes through a formaldehyde stage that either reacts with radicals or disappears in a bimolecular decomposition process. C.D.

A82-28681
STABILITY LIMITS OF NATURAL GAS DIFFUSION FLAMES WITH SWIRL
R. RAWE (Munster, Fachhochschule, Munster, West Germany) and H. KREMER (Bochum, Ruhr-Universitat, Bochum; Gaswarme-Institut, Essen, West Germany) In: Symposium /International/ on Combustion, 18th, Waterloo, Ontario, Canada, August 17-22, 1980, Proceedings. Pittsburgh, PA, Combustion Institute, 1981, p. 667-675; Comments, p. 675-677. refs

Complete blow-off limits are investigated as a function of swirl and burner geometry, quantitative information for the calculation of flame stability limits is provided, and a model is developed for swirling flame stabilization. The dependence of blow-off velocity on the fuel to air ratio was determined for a number of burner geometries and swirl levels, and it was found that flame stability expressed in terms of the tangential velocity component increases continuously with increasing swirl strength. The study of geometrical parameters revealed that increasing the diameter of the central fuel pipe improves flame stability. The stability limits of swirling flames are correlated by means of a dimensionless Peclet number based on the maximum tangential velocity component. The stability of swirling diffusion flames depends on the location of the stoichiometric mixture within the flow field near the burner exit. C.D.

A82-28690
THE TURBULENT REACTION FIELD IN A CONCENTRIC DIFFUSION FLAME
R. GUENTHER and V. WITTMER (Karlsruhe, Universitaet, Karlsruhe, West Germany) In: Symposium /International/ on Combustion, 18th, Waterloo, Ontario, Canada, August 17-22, 1980, Proceedings. Pittsburgh, PA, Combustion Institute, 1981, p. 961-967. refs

The flame of a concentric double jet, the central jet consisting of natural gas and the ring jet of air, was studied in free surroundings. Time mean values, fluctuations of axial and radial velocity, nozzle fluid concentration, ionization and temperature were measured. Data for the most important correlation terms of the momentum equation were obtained. The structure of the reaction zone was studied by deriving the necessary reaction area from the respective data for a laminar flame. There is reason to believe that about 1 sq cm/s is a suitable mean diffusion coefficient for turbulent methane flames. From the radial and axial distances of ionization fronts as well as from photographs it can be inferred that combustion occurs mainly in flat burning sheets, oriented parallel to the main flow and symmetrical to the axis. C.D.

A82-28692
THE COMBUSTION OF A FUEL JET IN A STREAM OF LEAN GASEOUS FUEL-AIR MIXTURES
G. A. KARIM, I. WIERZBA, M. METWALLY, and K. MOHAN (Calgary, University, Calgary, Alberta, Canada) In: Symposium /International/ on Combustion, 18th, Waterloo, Ontario, Canada, August 17-22, 1980, Proceedings. Pittsburgh, PA, Combustion Institute, 1981, p. 977-990; Comments, p. 990, 991. Research supported by the National Research Council of Canada, Imperial Oil, Ltd., and University of Calgary. refs

The purpose is to establish the way in which the presence of a fuel vapor homogeneously dispersed in the surrounding air influences the burning characteristics of the jet flame and the corresponding flammability limits for both co-flowing and contra-flowing surrounding streams in the presence of a pilot jet diffusion flame. A wide range of jet diameters and discharge velocities is employed involving methane or hydrogen at ambient temperature and pressure. Both laminar and turbulent co-flowing streams are considered; the streams involve a range of gaseous fuel-air mixtures and include methane, hydrogen, propane and ethylene. It is shown that the presence of very small concentrations of fuel in the surroundings of the jet flame tends to increase the flame thickness and height and to considerably enhance its stabilization. It is also found that the detected flame spread lean limit of the fuels is essentially independent of the type of jet fuel and the initial jet discharge velocity. C.R.

DETECTION OF ENVIRONMENTAL DISTURBANCE USING COLOR AERIAL PHOTOGRAPHY AND THERMAL INFRARED IMAGERY
S. ARONOFF and G. A. ROSS (Calgary, University, Calgary, Alberta, Canada) Photogrammetric Engineering and Remote Sensing, vol. 48, Apr. 1982, p. 587-591. Research supported by the Alberta Oil Sands Environmental Research Program. refs

Characteristics of a program for satellite remote sensing for long-period environmental monitoring are examined, noting that establishing early mapping surveys of areas of concern aids in detection of stressful environmental conditions. The process is described with an example from IR and color photography of a 30,000 sq km area in the Athabasca Oil Sands, with the photography carried out from aircraft and satellite. The IR data was gathered between 8-14 microns and the photographs were taken at a 1:11,000 scale. Water-related disturbances detected included turbidity which indicated the possible presence of oil, and higher thermal emission near a tailings pond which also suggested an oil source. The presence of surface aquatic vegetation is an indicator of nutrient imbalance in a pond near a sewage pond. Finally, dead trees were observed near improperly installed culverts along new roads. STATIONARY THERMAL IGNITION OF PARTICLE SUSPENSIONS
H. KHALIL, J. K. SHULTIS, and T. W. LESTER (Kansas State University of Agriculture and Applied Science, Manhattan, KS) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 12 p. Research supported by the Kansas State University of Agriculture and Applied Science and Alexander von Humboldt Stiftung. refs
(AIAA PAPER 82-0881)

A calculational method is presented for the stationary thermal ignition of pulverized coal suspensions, based on radiative energy transport in a heat generating medium. A diffusion-limited, Arrhenius model for heat generation is used in the description of the heterogeneous ignition and combustion of particles with the gases in which they are dispersed. The discrete ordinates method, which is used to solve numerically the radiative transfer equation, is combined with an iterative procedure to obtain both the temperature and radiation intensity distributions throughout the reacting system. Numerical examples are presented to show the variation in the critical behavior of a system in plane geometry with wall temperature and reflectivity, optical thickness of the system, particle size, optical parameters, anisotropy of the scattering, and the parameters of the heat generation model. NET ENERGY ANALYSIS OF METHANOL AND ETHANOL PRODUCTION
H. PEREZ-BLANCO (Oak Ridge National Laboratory, Oak Ridge, TN) and B. HANNON (Illinois, University, Urbana, IL) Energy (UK), vol. 7, Mar. 1982, p. 267-280. refs
(Contract W-31-109-38-5154)

Methanol (MeOH) and ethanol (EtOH) are industrial alcohols that can be used as liquid fuels. They may be obtained from renewable or non-renewable feedstocks. The production processes and end uses are analyzed in order to assess the potential energy savings introduced by alcohol production from renewable instead of nonrenewable feedstock. Whereas MeOH production from wood brings about energy savings, EtOH production from corn may or may not save energy depending on the end use of the alcohol. If the alcohol is used as a motor fuel, no overall energy savings are found. The economics and total labor requirements of each process are also considered. (Author)

HIGH SPECTRAL RESOLUTION AIRBORNE SPECTROMETRY
W. COLLINS, S. CHANG, J. T. KUO (Columbia University, New York, NY), M. DOUMA, S. MARSHALL (Massachusetts Manufacturing Corp., Cambridge, MA), and P. MURPHY (Sanders Associates, Inc., Nashua, NH) In: Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 22-28
(Contract JPL-955832; NSF ENG-78-24432)

An airborne spectroradiometer system developed at Columbia University has been providing new spectral data for use in remote sensing for natural resources. The system has been improved by addition of a solid state silicon detector array, and has been extended into the infrared by addition of a 64 element lead sulfide detector array. The infrared data in the 2000 to 2500 nm region especially holds large potential for mineral and oil exploration. (Author)

COAL TO ELECTRICITY - INTEGRATED GASIFICATION COMBINED CYCLE
J. C. CORMAN (GE Research and Development Center, Schenectady, NY) Applied Energy, vol. 10, Apr. 1982, p. 243-259. refs
(Contract EX-76-C-01-1806)

An advanced energy conversion system - the integrated gasification combined cycle (IGCC) - has been identified as an efficient and economical means of converting coal to electricity for utility application. Several demonstration projects on a near-commercial scale are approaching the construction stage. A coal conversion facility has been constructed to simulate the operational features of an IGCC. This process evaluation facility (PEF-scale) performs a dual function: (1) acquiring and processing data on the performance of the individual components - coal gasifier, gas clean up, and turbine simulator - that comprise the IGCC concept and (2) simulating the total system in an operational control mode that permits evaluation of system response to imposed load variations characteristic of utility operation. The results to date indicate that an efficient, economical IGCC can be designed so that the gasification/gas clean up plant and the power generation system operate compatibly to meet utility requirements in an environmentally acceptable manner. PLAIN-JET AIRBLAST ATOMIZATION OF ALTERNATIVE LIQUID PETROLEUM FUELS UNDER HIGH AMBIENT AIR PRESSURE CONDITIONS
A. K. JASUJA (Cranfield Institute of Technology, Cranfield, Beds., England) American Society of Mechanical Engineers, International Gas Turbine Conference and Exhibit, 27th, London, England, Apr. 18-22, 1982, 7 p. Research supported by the Ministry of Defence (Procurement Executive). refs
(ASME PAPER 82-GT-32) MEMBERS, $2.00; NONMEMBERS, $4.00

The effects that air and fuel properties have upon the spray mean drop size characteristics of a plain-jet airblast atomizer of the type employed in the gas turbine engine are investigated. The tests used kerosene, gas oil and a high-viscosity blend of gas oil in residual fuel oil, and covered a wide range of ambient air pressures. Laser light-scattering technique was employed for drop size measurements. It is concluded that the atomizer's measured mean drop size characteristics are only slightly different from those of the pre-filming type, especially when operating on low-viscosity kerosene under higher ambient air pressure. The beneficial effect of increased levels of ambient air pressure on mean drop size is shown to be much reduced in the case of high-viscosity fuels, thus making the attainment of good atomization performance on such fuels difficult. An expression is derived for correlating the obtained mean drop size data. C.D.

DEPOSIT FORMATION IN HYDROCARBON FUELS
R. ROBACK, E. J. SZETELA, and L. J. SPADACCINI (United Technologies Research Center, East Hartford, CT) American Society of Mechanical Engineers, International Gas Turbine Conference and Exhibit, 27th, London, England, Apr. 18-22, 1982, 9 p. refs
(Contract NAS3-22277)
(ASME PAPER 82-GT-49) MEMBERS, $2.00; NONMEMBERS, $4.00

The hydrocarbon fuels RP-1, commercial-grade propane, JP-7 and chemically pure propane were subjected to tests in a high pressure fuel coking apparatus in order to evaluate their thermal decomposition limits and carbon deposition rates in heated copper tubes. A fuel thermal stability parametric evaluation was conducted at 136-340 atmospheres, bulk fuel velocities of 6-30 m/sec, and tube wall temperatures of 422-811 K, and the effect of inside wall material on deposit formation was evaluated in tests using nickel-plated tubes. Results show RP-1 deposit formation at wall temperatures between 600 and 800 K, with peak deposit formation near 700 K. Substitution of deoxygenated JP-7 for RP-1 showed no improvement, and the carbon deposition rates for propane fuels were found to be higher than those of either of the kerosene fuels. Nickel plating of the tube walls significantly reduced RP-1 carbon deposition rates. O.C.

CARBON FORMATION BY THE PYROLYSIS OF GAS TURBINE FUELS IN PREFLAME REGIONS OF GAS TURBINE COMBUSTORS
C. D. HURLEY (National Gas Turbine Establishment, Farnborough, Hants., England) American Society of Mechanical Engineers, International Gas Turbine Conference and Exhibit, 27th, London, England, Apr. 18-22, 1982, 7 p. refs
(ASME PAPER 82-GT-84) MEMBERS, $2.00; NONMEMBERS, $4.00

A series of experiments is carried out to investigate the formation of carbon from the pyrolysis of gas-turbine fuels, in both the gas and liquid phases, over the temperature range 573-1300 K. Two fuels are examined, a kerosene and a diesel, spanning the range of current and possible future aviation fuels. It is found that only gas-phase pyrolysis can account for the formation of carbon and that there is no difference in the carbon-forming tendencies of kerosene and diesel. The kinetics of the reaction is determined, making it possible to predict the amount of

decomposition of the fuels at temperatures up to those typical of the preflame regions of combustors. C.R.

THE POTENTIAL IMPACT OF FUTURE FUELS ON SMALL GAS TURBINE ENGINES
J. A. SAINTSBURY (Pratt and Whitney Aircraft of Canada, Ltd., Longueuil, Quebec, Canada) and P. SAMPATH American Society of Mechanical Engineers, International Gas Turbine Conference and Exhibit, 27th, London, England, Apr. 18-22, 1982, 8 p. refs (ASME PAPER 82-GT-133) MEMBERS, $2.00; NONMEMBERS, $4.00

The present investigation is based on the assumption that in the not too distant future aviation gas turbine fuels as they are known today will not be available and that it will be necessary to accept either degraded fuels or fuels derived from sources presently considered unconventional. The investigation addresses gas turbine fuels in general and their effect on combustion systems, giving particular attention to small gas turbine engine combustion systems. It is found that the impact of future fuels on aircraft gas turbine engines will vary depending on engine size and type, because of differences in fundamental design criteria, and constraints of weight, cost, and size. As a first step towards fuel conservation pending availability of viable alternate energy sources, broadened specification fuels with modest relaxations in aromatics, and freeze point will likely be in use in the near term, but fuels from alternate sources will be longer term because of the need to develop an appropriate production industry. G.R.

AN ALTERNATE TEST PROCEDURE TO QUALIFY FUTURE FUELS FOR NAVY AIRCRAFT
C. A. MOSES, N. R. SEFER, and M. L. VALTIERRA (Southwest Research Institute, San Antonio, TX) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 9 p. refs
(Contract N00140-80-C-2269)
(AIAA PAPER 82-1233)

The U.S. Navy is experiencing pressures to modify the JP-5 fuel specification because of the growing shortage of high-quality crude oils from which kerosene can be simply distilled, and the increased costs of refining lesser quality crude oils to meet the current specification. A program has been initiated with the objective to study and develop a qualification procedure for future fuels. The purpose of the Alternative Test Procedure (ATP) would be to reduce the number of large-scale engine and flight tests required to develop confidence that a new fuel type will perform satisfactorily. Attention is given to future Navy aircraft fuels, the impact of future fuels on aircraft systems, aspects of hot section durability, materials compatibility, lubricity, cold day ignition, and thermal stability. It is concluded that an ATP to qualify future fuels is both necessary and feasible. G.R.

Combustion tests of two scaled burners using actual coal gas from a 25 ton/day fluidized bed coal gasifier are described. The two combustor configurations studied were a ceramic lined, staged rich/lean burner and an integral, all metal multiannual swirl burner (MASB). The tests were conducted over a range of temperature and pressures representative of current industrial combustion turbine inlet conditions. Tests on the rich lean burner were conducted at three levels of product gas heating values: 104, 197 and 254 btu/scf. Corresponding levels of NOx emissions were 5, 20 and 70 ppmv. Nitrogen was added to the fuel in the form of ammonia, and conversion efficiencies of fuel nitrogen to NOx were on the order of 4 percent to 12 percent, which is somewhat lower than the 14 percent to 18 percent conversion efficiency when src-2 liquid fuel was used. The MASB was tested only on medium btu gas (220 to 270 btu/scf), and produced approximately 80 ppmv NOx at rated engine conditions. Both burners operated similarly on actual coal gas and erbs fuel, and all heating values tested can be successfully burned in current machines. S.L.

Vanadium-non-porphyrins were fractionated. Using graphite furnace atomic absorption, the signal for vanadium was found to follow the uv absorption of the chromatogram. In addition, a simpler, faster procedure was devised to isolate a vanadium porphyrin fraction that was more nearly free from both vanadium non-porphyrins and nickel porphyrins. Pyrolysis/GC with both the flame photometric (sulfur) detector and the flame ionization detector gave evidence for a variety of sulfur species in both the porphyrin and non-porphyrin fractions. DOE

A technical and economic evaluation of AFBC power plants with recycle systems, and a comparison of these plants with AFBC power plants with carbon burnup beds (CBB) and with pulverized coal fired power plants with flue gas desulfurization systems are presented. One thousand MWe plants burning both eastern and western coals are considered. The economic analyses are based on a plant located in the east central region of the United States with a 30 year life and a 70 percent capacity factor. The eastern coal fired plants are designed to burn Illinois bitminous coal with a higher heating value of 10,100 Btu/lb and a sulfur content of 4%. The required calcium to sulfur mole ratios for the eastern plants are 3.8:1 and 2.5:1 for the AFBC/CBB and AFBC/recycle plants, respectively. The western coal fired plants are designed to burn Wyoming subbituminous coal with a higher heating value of 8,020 Btu/lb and a sulfur content of 0.48%. The required calcium to sulfur mole ratios for the western plants are 0.7:1 and 0.4:1 for the AFBC/CBB and AFBC/recycle plants, respectively. DOE

SECONDARY RECOVERY: CHANGING OF THE VISCOSITY AND COMPRESSIBILITY OF MINERAL OILS WITH DISSOLVED GAS Final Report, Jun. 1981
E. KUSS and H. KILLESREITER Bonn Bundesministerium fuer Forschung und Technologie Dec. 1981 64 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-225; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 13,40

The viscosity of selected oils, i.e. paraffinic oil, naphthene based distillate, and solvent extract, was measured with a capillary viscometer in dependence of pressure, temperature, and the mole fraction of dissolved gases N2, CO2, CH4, and C3H8. The results show decreasing viscosity with increasing gas concentration that amounts to nearly three orders of magnitude, using propane. Apart from absolute values of the viscosity, the general form of the curve for saturated isotherms in dependence of pressure is determined only by the gas and not by the oil. This facilitates estimations as with the model substances squalane and squalene. A high pressure piezometer for gas/oil solutions provides further interpretation of solubility isotherms. STUDY PROJECT ON THE DESULFURIZATION OF FLUE GAS, USING THE BERGBAUFORSCHUNG (BF) PROCESS, AS PART OF THE INTEGRATED OPERATION OF A POWER PLANT WITH A CHEMICAL PLANT FOR PRODUCING SULFURIC ACID Final Report, May 1981
H. REOSNER and M. OED Bonn Bundesministerium fuer Forschung und Technologie Dec. 1981 36 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-229; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7,60

The BF process for the desulfurization of flue gas was investigated and improved. Operation of a prototype plant and of a demonstration plant, which was added onto a coal fired power plant, is described. Without cooling the flue gas, and using modified desorption at the demonstration plant, the BF process provides SO2 rich gas as an intermediate product that can be further processed into liquefied SO2 or into H2SO4. Production of H2SO4 by integrating chemical works into the power plant complex was followed up and is found cost feasible. The SO2 liquefaction scheme was not pursued. Any treatment of the enriched gas requires scrubbing. A waste treatment method that supplies a final product with good storage characteristics, after adding calcium hydroxide, is suggested. FEASIBILITY STUDY 20-MM GAL/YR FUEL GRADE ETHANOL FACILITY
Jun. 1981 141 p refs
(Contract DE-FG07-80RA-50392)
(DE82-002606; DOE/RA-50392/T1) Avail: NTIS HC A07/MF A01

Results of a preliminary process design and economic study of 20MM US gallons per year fuel grade anhydrous ethanol plant and an associated coal fired cogeneration facility are presented. The process was based on the use of No. 2 US yellow corn as the feedstock and a Wyoming low sulfur coal as the fuel. Distillers dried grains will be recovered as a by-product of the process. It is projected that approximately 80,000 tons of distillers dried grains will be recovered per year. The cogeneration portion will use 115,000 tons of coal a year to produce 115,000 pounds per hour of process steam while at the same time generating 13,300 kilowatts of electricity. The capital cost is estimated to be $87,504,000. Assessment of the environmental, health, safety, and socioeconomic impacts show that no significant adverse impacts are anticipated in conjunction with either facility construction or operation. Two air quality considerations require further study. DOE

CORN TO ETHANOL PLANT FEASIBILITY STUDY
Feb. 1981 507 p Prepared for Grand American, Inc., Yuma, Colo.
(Contract DE-FG07-80RA-50311)
(DE82-000029; DOE/RA-50311/T1) Avail: NTIS HC A22/MF A01

The technical and economic feasibility of a corn to fuel grade ethanol plant in Colorado was assessed. The results indicate that the Grand American project is commercially viable both from an economic and technical standpoint. The results of the economic and risk analysis show a 32.7 percent rate of return based on present state and federal fuel tax exemption legislation. The plant design is based on Raphael Katzen technology which has been used for several years in existing ethanol facilities. Pace does not foresee any technical problems with the facility. Markets for the ethanol appear to be the least secure aspect of the project at this point, although demand is expected to sufficiently increase to provide ample markets. The byproduct market for the dried distillers grains appears to be supply limited. Raw materials for plant operation, including corn, power, water, and coal are readily available. DOE

CONSTRUCTION OF A 15 T/HR PROTOTYPE PLANT FOR THE VEW COAL CONVERSION PROCESS Final Report, Feb. 1981
D. DEGGIM and R. KARGER Bonn Bundesministerium fuer Forschung und Technologie Dec. 1981 71 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-216; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 12,20

A 15t/hr prototype power plant was built in order to demonstrate the constructibility and operational efficiency of the VEW coal conversion process, after more than 5 years successful operation of a 1t/hr pilot plant. The prototype plant has a stone coal throughput of 15t/hr. It includes the most important units of the VEW coal conversion process, i.e., gasification unit, gas cleaning unit, and steam and power generation units. The gasification unit performs the operations: coal milling and drying, gasification and waste heat recovery, air preheating and gas cokes separation. The gas cleaning unit performs gas cooling and dust recovery, H2S-removal, salt splitting and evaporation. The gasification and gas cleaning sections are downstream, followed by a steam boiler, where the generated products are burnt. Simultaneously produced steam is processed in a steam turbine. (E82-10169; NASA-CR-168592; NAS 1.26:168592; INPE-2203-PRE/019) Avail: NTIS HC A02/MF A01 CSCL 08G

The importance of the choice of the carrying vehicle in aerial surveys of natural radioactivity, particularly in the location of uraniferous regions, is discussed. The results of observations depend on the exposure time, that is, the velocity and altitude the carrying vehicle can attain. Overflights of the same region using identical instrumentation but in two different types of aircraft were performed. A detailed statistical analysis of the measurements obtained during these flights demonstrates the precision of localization achievable by this method. Author

HEALTH AND SAFETY EVALUATION OF A MODIFIED TUNNEL BORER DESIGN FOR APPLICATION TO SINGLE ENTRY COAL MINE DEVELOPMENT
W. F. ZIMMERMAN 15 Feb. 1982 125 p refs
(Contract NAS7-100; DE-AI01-76ET-12548)
(NASA-CR-168807; JPL-PUB-82-12; NAS 1.26:168807; DOE/ET-12548/11) Avail: NTIS HC A06/MF A01 CSCL 08I

A health and safety analysis of a single entry coal tunnel borer system is given. The results of the health analysis indicated that while the tunnel borer design offered improvements in dust control through the use of water sprays, a higher face ventilation rule, and the application of spalling rather than the conventional grinding process, it interjected an additional mutagen and toxic compound into the environment through the use of shotcrete. The tunnel borer system easily conformed with the prescribed fatality limit, but exceeded the required limits for disabling and overall injuries. It also exhibited projected disabling and overall injury rates considerably higher than existing continuous mining injury rates. Consequently, the tunnel borer system was not considered an advanced system. R.J.F.

PARAHO OIL SHALE MODULE. CRITICAL ITEMS IDENTIFICATION, TASK 11
Oct. 1981 39 p 2 Vol.
(Contract DE-FC03-80ET-14103)
(DE82-003727; DOE/ET-14103/T2) Avail: NTIS HC A03/MF A01

A critical item in the demonstration plant is one that has a notable impact on plant performance. Generally, these items required that decisions be made throughout the course of the Phase I work to facilitate design work and preparation of estimates. The approach taken in each case represents the engineer's best judgement, based on both experience and timely evaluations. Certain critical items were identified as important enough to justify formal trade-off studies to document the alternatives considered and to justify explicitly the selected design. The critical items addressed during the Phase I work are summarized. Both the critical items and the area of performance affected are covered. A brief description of each critical item is presented including: mine and process shale areas; above ground process areas; and environmental and resource areas. DOE

Coal extraction by cutting was investigated. A low clearance machine design was tested. To decrease average seam thicknesses, a system able to operate in a seam aperture of approximately 1.7 m was needed. Maximum possible clearance above the machine was sought, while maintaining sufficient clearance underneath the machine for haulage. A machine height of 855 mm with underbody clearance of 475 mm was achieved. The drive performance and traction force of the winch require improvement. For better utilization of machine potential, a rotational angle should be adapted to the positioning of the drum cutters. Author (ESA)

GEOTHERMAL SOURCE POTENTIAL AND UTILIZATION FOR ALCOHOL PRODUCTION
J. C. AUSTIN Nov. 1981 71 p
(Contract DE-AC07-76ID-01570)
(DE82-003801; EGG-2138) Avail: NTIS HC A04/MF A01

A study was conducted to assess the technical and economic feasibility of using a potential geothermal source to drive a fuel grade alcohol plant. Test data from the well at the site indicated that the water temperature at approximately 8500 feet should

approach 2750 F. However, no flow data was available, and so the volume of hot water that can be expected from a well at this site is unknown. Using the available data, numerous fuel alcohol production processes and various heat utilization schemes were investigated to determine the most cost effective system for using the geothermal resource. The study found the direct application of hot water for alcohol production based on atmospheric processes using low pressure steam to be most cost effective. It was determined that a 3 million gpy alcohol plant is the largest facility that can practically be powered by the flow from one large geothermal well. DOE

COAL SEAM EXPLORATION WITH SPECIAL REGARD TO THE APPLICATION OF SEISMIC METHODS FOR THE DETECTION OF DYKES
W. N. MERTEN Jul. 1981 16 p refs
(CSIR-ME-1721; ISBN-0-7988-14810) Avail: NTIS HC A02/MF A01

The application of in seam seismic methods for coal seam exploration in connection with longwall mining is evaluated. The present exploration practice is reviewed. With the introduction of the relatively expensive high production longwall mining technique, in seam seismic methods are important to successful mining operations. The basics of relevant seismic methods are described, and a research outline is suggested. A detection of dykes is presented as a preliminary emphasis. S.L.

Avail: US Patent and Trademark Office CSCL 07D

High sulfur crude oil is desulfurized by a low temperature (25-80 C.) chlorinolysis at ambient pressure in the absence of organic solvent or diluent but in the presence of water (water/oil=0.3) followed by a water and caustic wash to remove sulfur and chlorine containing reaction products. The process described can be practiced at a well site for the recovery of desulfurized oil used to generate steam for injection into the well for enhanced oil recovery. Author

In order to assess the possible environmental impact of substituting synfuels for petroleum in utility and industrial boilers, two experimental programs have been undertaken at the Pittsburgh Energy Technology Center. First, a fully instrumented 20 hp firetube boiler capable of burning liquid fuels ranging in combustion characteristics from No. 2 to No. 6 petroleum has been installed in the Combustion Division. Second, a sampling and analytical methodology for the organic compounds present in the exhaust duct of the 20 hp boiler is being developed by the Analytical Chemistry Division. This report outlines the progress on this project to date: twenty-four successful combustion runs were completed on the 20 hp boiler, using a variety of petroleum based fuels and synfuels and a sampling protocol for organic vapors in hot exhaust gases was developed. Significant differences in the composition of the trace organics in the exhaust gases were observed as a function of the fuel being burned, but total polynuclear aromatic hydrocarbon levels are comparable for all fuels. CHARACTERIZATION OF ROCKY MOUNTAIN COALS AND COAL LIQUID BY COMPUTERIZED ANALYTICAL TECHNIQUES Annual Progress Report
H. L. C. MEUZELAAR, G. R. HILL, J. H. FUTRELL, A. M. HARPER, D. J. IWAMOTO, D. L. POPE, G. S. METCALF, and J. H. TOMLINSON 1981 72 p refs
(Contract DE-FG22-80PC-30242)
(DE82-001802; DOE/PC-30242/T1; APR-1) Avail: NTIS HC A04/MF A01

Over 100 Rocky Mountain coal samples were selected and analyzed by pyrolysis mass spectrometry (MS). Computerized pattern recognition permitted the successful reduction and evaluation of the mass data base generated (over 100,000 mass peak intensities) and revealed strong clustering tendencies of pyrolysis patterns. The pyrolysis mass spectra show strong rank effects allowing complete differentiation between HVCB and HVBB coals partial differentiation both between subbituminous and HVCB samples and between HVBB ahd HVAB samples. Besides rank effects, marked differences are frequently found between samples from different coal regions, fields or even seams. The high degree of similarity observed between the pyrolysis mass spectra of samples from the same coal seam demonstrates that the combined uncertainties in sample collection, preparation and analysis are

much smaller than the chemical differences detected by the pyrolysis MS methodology. DOE

PHOTOASSISTED ELECTROLYSIS APPLIED TO COAL GASIFICATION Quarterly Report, 1 Jul. - 30 Sep. 1981
S. M. PARK 1981 44 p refs
(Contract DE-AC21-81MC-16377)
(DE82-000224; DOE/MC-16377/T1) Avail: NTIS HC A03/MF A01

A literature search and study of coal oxidation mechanisms at noble metal electrodes were made. Ground work on photoassisted electrolysis of coal at the semiconductor thin film electrode was begun by preparing and characterizing n-SnO2 electrodes. It was concluded that coal is oxidized catalytically by iron(III), which in turn is reduced to iron(II). The iron(II) generated from this catalytic reaction undergoes the electrochemical oxidation, completing a cycle. The rate for this catalytic reaction is determined to be aproximately (3.0 for- 1.0) times 100,000 sec(+1) for iron(III) and 12,000 sec(+1) for Ce(IV) at 200 C, respectively. M.D.K.

WESTINGHOUSE COAL-GASIFICATION COMBINED-CYCLE PRELIMINARY PLANT EVALUATION FOR ELECTRIC-UTILITY APPLICATIONS Final Report, 30 Sep. 1979 - 30 Jun. 1981
F. GIGLIOTTI, R. M. STAVSKY, R. CHETTY, R. GARLAND, R. BENGE (Dravo Corp.), and F. KRAHULIK (Dravo Corp.) 30 Jun. 1981 133 p refs
(Contract DE-AC01-79ET-14672)
(DE82-002701; DOE/ET-14672/T1) Avail: NTIS HC A07/MF A01

An evaluation design study for electric utility application is presented. Process descriptions, cost estimates and flow diagrams are based on a plant configuration incorporating an air-blown fluidized bed gasification system, a combustion turbine system, and a reheat steam turbine system for the bottoming cycle. Scoping evaluations indicated that a plant capacity of approximately 650 megawatts electric net represents an appropriate plant size from an efficiency, as well as from a utility, point of view. Various cases are analyzed to determine the effect of plant configuration and equipment on the overall plant heat rate and annual bus bar costs. A heat rate of 8340 Btu per kilowatt hour is projected for a plant case that fully integrates the power cycle with the entire gasification process and assumes that 10000 F superheated steam is generated in the gasifier raw gas heat exchanger area. Other cases relecting less integration and lower superheated steam conditions are also presented. Heat rates and economics of conventional coal fired steam plants with stack gas scrubbers are provided for comparison. The system is projected to have efficiency and economic advantages over a conventional coal fired steam plant with stack gas scrubbers. DOE

PROCESS FOR UNDERGROUND GASIFICATION
R. I. ANTONOVA and E. V. KREININ Aug. 1981 18 p Transl. into ENGLISH of Belgian Patent no. 840,283 (1 Oct. 1976)
(Contract W-7405-ENG-48)
(DE82-000493; UCRL-TRANS-11720) Avail: NTIS HC A02/MF A01

An underground coal gasification process to obtain a gas having the maximum heat of combustion and to provide the capability for controlling the process is described. The underground gasification consists of a prior drainage and a gasification of a coal seam by bringing a blowing agent to the incandescent surface of the coal by means of blow holes, and vacuating the gasification products by means of a system of gas evaluation holes. The rate of the indicated gasification of the coal seam is determined as a function of natural conditions. DOE

(Contract DE-AC01-78ET-10328)
(DE82-004146; DOE/ET-10328/36; ATPR-3) Avail: NTIS HC A08/MF A01

Work performed on a coal hydrogasification process development project is described. Limited progress was made on construction of a coal feed rate integrated process development unit (IPDU) facility for conducting continuous hydrogasification tests of up to 30 days duration. A chemical kinetic model of coal particle hydropyrolysis was expanded to account for hydroconversion to a generic state of gaseous and liquid products, and this model was then used to correlate successfully carbon conversion results measured in previous flas hydropyrolysis experiments with both Kentucky No. 9 bituminous and Montana Rosebud subbituminous coals. Subsequently, that coal pyrolysis model was utilized to improve an earlier computerized model for entrained flow fluidized bed processor (FHP) coal conversion reactors. The improved model's predictions were checked against experimental conversion results and other data from 25 tests in the bituminous coal FHP data base with satisfactory agreements. Predesign process optimization and subsystem evaluations were completed. materials surveillance activities in support of the IPDU system were mainly concerned with obtaining archive specimens and data from components being fabricated, accumulating samples of alternative materials to be exposed during IPDU monitoring of key components. DOE

COMPUTER MODELING OF COAL-GASIFICATION REACTORS. VOLUME 3: USER'S MANUAL OF CHEMFLUB: A NUMERICAL MODEL FOR FLUIDIZED BED GASIFIERS (PLANAR AND AXISYMMTRIC VERSIONS) Final Report, Jun. 1975 - Nov. 1980
P. J. CHEN Apr. 1981 126 p refs 4 Vol.
(Contract DE-AC21-76ET-10242)
(DE82-000766; DOE/ET-10242/T1-VOL-3; FE-1770-75-VOL-3; SSS-R-81-5009-VOL-3) Avail: NTIS HC A07/MF A01

The CHEMFLUB code was designed to provide predictions of the transient, two-phase, reactive flow fields occurring in a fluidized bed coal gasification reactor. CHEMFLUB can be operated in either two dimensional Cartesian (planar) or axisymmetric geometry. The solid particle phase is treated in a Lagrangian manner in order to maintain sharp interfaces around bubbles and at the freeboard while the gas phase is treated using an Eulerian approach. A detailed chemistry model, encompassing both heterogeneous and homogeneous eactions of both combustin and gasification, is included in the model. Thus, the computer model CHEMFLUB incorporates the coupled dynamic effects of the hydrodynamic, thermodynamic, and chemical phenomena which dominate flow in most fluidized bed coal gasifiers. Detailed dicussions of the governing equations are given. A summary of the governing differential, and constitutive equations is given and a brief description of the code, including a flow chart, subroutine structure, and dimension parameters as well as a detailed input sequence are presented. DOE

N82-23339# Systems Science and Software, La Jolla, Calif.
COMPUTER MODELING OF COAL-GASIFICATION REACTORS. VOLUME 4: OPERATING MANUAL FOR EF (ENTRAINED FLOW COAL GASIFIER) COMPUTER MODEL Final Report, Jun. 1975 - Nov. 1980
D. H. BROWNELL, JR., J. L. COOK, and G. P. SCHNEYER Apr. 1981 112 p refs 4 Vol.
(Contract DE-AC21-76ET-10242; EX-77-C-01-1770)
(DE82-000765; DOE/ET-10242/T1-VOL-4; FE-1770-75-VOL-4; SSS-R-81-4920) Avail: NTIS HC A06/MF A01

The EF (Entrained Flow) computer code and three auxiliary computer codes encompass, in operational terms, the computer model of entrained flow coal gasification developed by Systems, Science and Software for the Department of Energy. The primary aspects (geometry, hydrodynamics, thermodynamics, chemistry, etc.) of the computer model are encompassed in the EF computer code which, however, uses tabular information previously generated by the three small, auxiliary computer codes; CEST, COEFTAB and PVAPOR. In this users' manual, each of the four computer programs is described in terms of the theoretical background and objective of each program. A list of the subroutines in each program and their purposes, a detailed description of the program input including an example, and a copy of real program output for the same example was presented. STATUS OF OCCIDENTAL PETROLEUM'S COAL-OIL-MIXTURE PROGRAM: AN INDUSTRIAL-BOILER RETROFIT
M. E. ALBERT and R. D. BESSETTA 1981 38 p refs Presented at the 20th Ann. Ky. Ind. Coal Conf., Lexington, Ky., 29 Apr. 1981
(DE82-900076; CONF-8104107-12) Avail: NTIS HC A03/MF A01

Conventional coal grinding and blending used for coal-oil-mixture preparation were investigrated. Stabilization techniques incorporated in the plant were studied. The economics for the use of COM can provide a savings sufficient to justify the retrofit for the boiler and a ROI on the facility to produce COM. The total cost difference between the cost of oil and the cost to produce COM which includes raw materials and production costs for a straight coal/oil mix with coal pulverized to 80% through 200 mesh was determined. The COM price will be based on a dollar per barrel delivered and adjusted to equivalent oil Btu's on a monthly or quarterly basis. It was concluded that COM is producible, handleable, storable and burnable. Information to minimize retrofit cost and maximize economic savings is available. Coal oil mixtures are ready to contribute dollars to the profit of each COM consuming plant. M.D.K.

OIL SHALE PROJECT RUN SUMMARY LARGE RETORT RUN L-4
J. H. RALEY, J. H. CAMPBELL, W. A. SANDHOLTZ, F. J. ACKERMAN, R. G. MALLON, L. L. OTT, and J. J. RONCHETTO 5 Nov. 1981 105 p refs
(Contract W-7405-ENG-48)
(DE82-003627; UCID-19238) Avail: NTIS HC A06/MF A01

A simulated MIS experiment was carried out in the 6 metric ton oil shale retort. An oil yield of 87% FA was achieved at a retorting rate of 2.8 to 3.0 m/day with a shale bed of -30 +0.001 cm particle size range and including a nearly two fold step change in grade. Temperature control was maintained by varying the steam/air ratio and injection gas rate. Oil yield, front position and retorting rate, as predicted in real time during the run from offgas data, agreed reasonably well with directly measured counterparts. Pre-run model calculations reliably predicted operating conditions for both inert gas pre-ignition and combustion retorting phases of the run. Pre-run steam logging predicted the degree of horizontal uniformity of the retorting front. Ultrasonic reflectometry, gas releasing capsules and differential pressure measurements were shown to be promising methods for temperature measurement.

Passage of the retorting front through the grade change was signalled by changes in offgas composition. DOE

HEAT FLOW AND GEOTHERMAL ASSESSMENT OF THE ESCALANTE DESERT, SOUTHWESTERN UTAH, WITH EMPHASIS ON THE NEWCASTLE KGRA
M. D. CLEMENT and D. S. CHAPMAN Feb. 1981 126 p refs
(Contract DE-AC07-79ID-12079)
(DE82-003952; DOE/ID-12079/28) Avail: NTIS HC A07/MF A01

Twenty-five regional heat flow measurements are presented for the Escalante Desert region within the Great Basin of the western US. Heat flow excluding geothermal areas ranges from 42 to 350 mW/sq m but much of the variability may be caused by deeply circulating groundwater redistributing the regional flux. A subset of 10 sites drilled specifically to characterize the heat flow of the region yielded a mean of 100 mW/sq m with a standard cylindrical discs and rock chips of rhyolite to andesite tuffs emphasized the importance of porosity corrections to thermal conductivity measurements. A blind geothermal system southwest of Newcastle, Utah, situated within the Escalante Desert was also studied. Heat flow results from 11 local drillholes yield values between 163 and 3065 mW/sq m. The 500 mW/sq m contour encloses an area of 9.4 sq km. By integrating the anomalous flux above background over the thermal anomaly, a thermal power loss of 12.8 mW and corresponding subsurface mass discharge of 32 kg/s are calculated for this geothermal system. AIRBORNE GAMMA-RAY SPECTROMETER AND MAGNETOMETER SURVEY. DEVIL'S LAKE QUADRANGLE, NORTH DAKOTA, VOLUME 1 Final Report
May 1981 98 p refs 2 Vol.
(Contract DE-AC13-76GJ-01664)
(DE82-004161; GJBX-354-81-VOL-1) Avail: NTIS HC A05/MF A01

During the months of June through October, 1980, an airborne high sensitivity gamma ray spectrometer and magnetometer survey was conducted over eleven 20 X 10 NTMS quadrangles located in the states of Minnesota and Wisconsin and seven 20 x 10 NTMS quadrangles in North and South Dakota. The results obtained over the Devil's Lake map area of North Dakota are

discussed. The final data are presented in four different forms: on magnetic tape; on microfiche; in graphic form as profiles and histograms; and in map form as anomaly maps, flight path maps, and computer printer maps. DOE

ANALYSES OF NATURAL GAS IN ILLINOIS
W. F. MEENTS 1981 70 p refs Sponsored in part by the Illinois Inst. of Natural Resources
(PB82-124322; IL/SGS/IP-122) Avail: NTIS HC A04/MF A01 CSCL 08D

By the end of 1979, natural gas samples from 2,321 sources in Illinois were analyzed. Major sources of gas samples and the number of samples from those sources include: solution gas from water wells (1,402), gas wells (412), solution gas from oil wells (166); solution gas from oil-filled water supply wells (142), abandoned coal mine vents (60), gas seeps (38), landfill vents (16), and water springs (16). Several methods were used for analysis: 242 early gas samples were analyzed using the Orsat method; 47 samples were checked on a Podbielniak apparatus; the remaining 2,033 were analyzed by gas chromatography. These data are presented as a computerized data base which should be particularly valuable to geologists and geochemists interested in the occurrence and geologic history of oil and gas, or who wish to assess the potential hazards to humans of certain gaseous emanations. PRELIMINARY ESTIMATES OF WIND POWER POTENTIAL AT THE NEVADA TEST SITE
H. G. BOOTH Jul. 1981 19 p refs Prepared in cooperation with National Weather Service, Las Vegas, Nev.
(PB82-127036; NOAA-TM-NWS-WR-166) Avail: NTIS HC A02/MF A01 CSCL 10A

An assessment of the potential for the useful conversion of wind power to electrical power is given for a Nevada test site. Annual wind power availability was estimated to be sufficient. The percentage of low wind hours was found to be high, and the persistence of favorably strong winds for periods of several days at a time was low. There was a pronounced diurnal cycle in wind power availability. It is concluded that baseload electrical power requirements would require alternate energy sources. Cost effectiveness of this configuration would have to be determined. R.J.F.

SOURCE ROCK GEOCHEMISTRY AND LIQUID AND SOLID PETROLEUM OCCURRENCES OF THE OUACHITA MOUNTAINS, OKLAHOMA Ph.D. Thesis
J. A. CURIALE 1981 305 p
Avail: Univ. Microfilms Order No. 8129427

Crude oils, solid bitumens and potential oil source rocks of the frontal and central Ouachita Mountains of southeastern Oklahoma are examined. The organic matter in each of these materials is characterized, and oils are correlated to potential source rocks in the Ouachita Mountains. Four Ouachita Mountain oils and seven solid bitumens (grahamite and impsonite) are analyzed. The oils are paraffinic and range from 31.8 to 43.1 API gravity. The oils are thermally mature and generally unaltered. All four oils are commonly sourced, by n-alkane, sterane and hopane distributions, stable isotope ratios, infrared spectra and vanadium/nickel ratios. A common source for the solid bitumens is also suggested by isotope ratios and pyrolyzate characteristics. An origin due to crude oil biodegradation is suggested for these solids, based on carbon isotope ratios, elemental analyses, and sterane distributions of the solid bitumen pyrolyzates. Dissert. Abstr.

EFFECT OF PULSE LOADS ON DYNAMIC ROCK FRACTURE
E. P. CHEN Oct. 1981 27 p refs
(Contract DE-AC04-76DP-00789)
(DE82-002311; SAND-81-1942) Avail: NTIS HC A03/MF A01

An analytical model was developed which is capable of predicting the fracture pattern in the rock surrounding a wellbore upon which a dynamic loading pulse is applied. The development of the model followed the principle of elastodynamic fracture mechanics. Specifically, inherent cracks are assumed to exist around the edge of the wellbore. Depending on the pulse shape, these cracks are activated to form various fracture patterns. The criterion for initiation of crack growth is determined by the magnitude of the dynamic stress intensity factor associated with the crack. The finite element code HONDO was used to calculate the dynamic stress intensity factors. Analytical predictions were correlated with field experimental data and good agreements were found. DOE

THERMODYNAMICS OF GEOTHERMAL FLUIDS Ph.D. Thesis
P. S. Z. ROGERS 1981 249 p
Avail: Univ. Microfilms Order No. 8200253

A model to predict the thermodynamic properties of geothermal brines, based on a minimum amount of experimental data on a few key systems, was tested. Volumetric properties of aqueous sodium chloride, taken from the literature, are represented by a parametric equation over the range 0 C to 300 C and 1 bar to 1 kbar. Density measurements at 20 bar needed to complete the volumetric description also are presented. The pressure dependence of activity and thermal properties, derived from the volumetric equation, were used to complete an equation of state for sodium chloride solutions. A flow calorimeter used to obtain heat capacity data at high temperatures and pressures is described. Heat capacity measurements from 30 C to 200 C and 1 bar to 200 bar are used to derive values for the activity coefficient and other thermodynamic properties of sodium sulfate solutions as a function of temperature. Literature data on the solubility of gypsum in mixed electrolyte solutions was used to evaluate model parameters for calculating gypsum solubility in seawater and natural brines. Predictions of strontium and barium sulfate solubility in seawater are also given. Dissert. Abstr.

MOESSBAUER SPECTROSCOPY STUDY ON THE EFFECT OF INFRARED AND GAMMA RADIATION ON THE STRUCTURE OF MINERALS. PART OF COORDINATED PROGRAMME ON DEVELOPMENT OF METHODS FOR APPLICATION OF MOESSBAUER SPECTROSCOPY IN MINERALOGY, SOIL SCIENCES AND THE STUDY OF CERAMICS Final Report, 1 Apr. 1978 - 30 Sep. 1981
H. POLLAK (National Univ. of Zaire) Aug. 1981 3 p
(DE81-700780; IAEA-R-2174-F) Avail: NTIS (US Sales Only) HC A02/MF A01; DOE Depository Libraries

A number of fundamental and applied problems were studied by Moessbauer spectroscopy. The observation of Moessbauer spectra in iron silicate deerite with respect to the structure of this mineral was interpreted by charge transfer between iron ions, and correlated with thermally activated electron delocalisation. The studies of local coals showed the suitability of Moessbauer spectroscopy in control of the desulfurization process. A simple method to use Moessbauer measurement to determine the obstructions in water pipes was developed. DOE

(Contract DAAK70-78-C-0001; DAAK70-80-C-0001; DA PROJ. 1L7-62733-AH-20)
(AD-A110694; AFLRL-137) Avail: NTIS HC A04/MF A01 CSCL 14B

This report details the development of a portable device to measure the cleanliness and stability of diesel fuels in both bulk and vehicle fuel cell storage. Both an initial laboratory prototype and a portable field unit are discussed. The monitor evaluates the cleanliness of the fuel by first filtering the fuel and then determining the amount of particulates on the filters using a contaminated filter measuring device. The filters are rated by measuring the amount of light which passes through the filters to estimate the amount of particulates based on a calibration chart. A measure of the stability of the fuel is obtained by aging a sample of the fuel at 150 C for 1.5 hours and determining the amount of sediment formed. Improvements to the diesel fuel quality monitor have been identified and are being investigated. A field test program to demonstrate monitor utility/effectiveness is planned for initiation in late 1981. In addition, a commercially available portable unit to measure particulate contamination is described and compared to the Army field test unit. GRA

LANDSAT REMOTE SENSING: OBSERVATIONS OF AN APPALACHIAN MOUNTAINTOP SURFACE COAL MINING AND RECLAMATION OPERATION
Oct. 1979 7 p refs Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198 Original contains color illustrations ERTS
(E82-10247; NASA-TM-84194; NAS 1.15:84194) Avail: NTIS HC A02/MF A01 CSCL 08I

The potential benefits of using LANDSAT remote sensing data by state agencies as an aide in monitoring surface coal mining operations are reviewed. A mountaintop surface mine in eastern Kentucky was surveyed over a 5 year period using satellite multispectral scanner data that were classified by computer analyses. The analyses were guided by aerial photography and by ground surveys of the surface mines procured in 1976. The application of the LANDSAT data indicates that: (1) computer classification of the various landcover categories provides information for monitoring the progress of surface mining and reclamation operations; (2) successive yearly changes in barren and revegetated areas can be qualitatively assessed for surface mines of 100 acres or more of disrupted area; (3) barren areas consisting of limestone and shale mixtures may be recognized, and revegetated areas in various stages of growth may be identified against the hilly forest background. A fuel quality processing study to provide a data base for an intelligent tradeoff between advanced turbine technology and liquid fuel quality, and also, to guide the development of specifications of future synthetic fuels anticipated for use in the time period 1985 to 2000 is given. Four technical performance tests are discussed: on-site pretreating, existing refineries to upgrade fuels, new refineries to upgrade fuels, and data evaluation. The base case refinery is a modern Midwest refinery processing 200,000 BPD of a 60/40 domestic/import petroleum crude mix. The synthetic crudes used for upgrading to marketable products and turbine fuel are shale oil and coal liquids. Of these syncrudes, 50,000 BPD are processed in the existing petroleum refinery, requiring additional process units and reducing petroleum feed, and in a new refinery designed for processing each syncrude to produce gasoline, distillate fuels, resid fuels, and turbine fuel, JPGs and coke. An extensive collection of synfuel properties and upgrading data was prepared for the application of a linear program model to investigate the most economical production slate meeting petroleum product specifications and turbine fuels of various quality grades. Technical and economic projections were developed for 36 scenarios, based on 4 different crude feeds to either modified existing or new refineries operated in 2 different modes to produce 7 differing grades of turbine fuels. A required product selling price of turbine fuel for each processing route was calculated. Procedures and projected economics were developed for on-site treatment of turbine fuel to meet limitations of impurities and emission of pollutants. R.J.F.

AUTOCATALYTIC COAL LIQUEFACTION PROCESS Patent Application

S. A. QADER, Principal Investigator (JPL, California Inst. of Technology, Pasadena) 3 Jan. 1980 32 p Sponsored by NASA

(NASA-CASE-NPO-14876-2; US-PATENT-APPL-SN-285194)

Avail: NTIS HC A03/MF A01 CSCL 21D

An improved process for liquefying coal in which coal minerals at high content are utilized as hydrocracking catalysts id described. A slurry of 10 to 60% by weight of coal in a recycled liquefied coal product containing 15 to 30% by weight of coal minerals is pressurized with excess hydrogen to a pressure of 2,000 to 4,000 psi and heated to a temperature of 450 to 550 degrees C. The coal minerals autocatalytically convert coal solids to a low viscosity liquid product and to a gas product in high yields while reducing oxygen, nitrogen, and sulfur content of the coal product as compared to other coal liquefaction processes under development. AN ECONOMIC MODEL OF FUTURE COAL/DENSIFIED REFUSE-DERIVED FUEL USE AT WRIGHT-PATTERSON AFB, OHIO M.S. Thesis

R. G. FEDORS Sep. 1981 184 p refs

(AD-A111376; AFIT-LSSR-97-81) Avail: NTIS HC A09/MF A01 CSCL 13A

A thirty-month evaluation/demonstration of densified refuse-derived fuel (dRDF) as a stoker boiler fuel in military heating plants was performed. The impact on plant operating expenses of burning coal dRDF mixtures at that particular base is examined. The figures for comparison were generated by a simulation model of the base heating system and environment. Projected yearly operating expenses were accumulated in the model and returned to present values for various fuel ratios, inflation rates, and discount factors. Under the assumptions made within the model, coal alone will remain less expensive to use than a mixture of dRDF until a local source of dRDF becomes available. J.D.

(Contract DAAK70-81-C-0134)

(AD-A110917; GTA-A-001) Avail: NTIS HC A04/MF A01 CSCL 21D

Fire-resistant fuels have been investigated by the United States Army as a means of reducing the risk of fire in land combat vehicles and certain aircraft. One approach has been the use of high-molecular-weight polymer additives for suppression of mist formations. The polymers which are effective in mist suppression are very difficult to dissolve in fuel. A newly discovered process for dissolving high-molecular-weight polymers is investigated to determine its applicability to the preparation of mist suppression fuels. The conclusions area that certain high-molecular-weight polymers which show strong mist suppression behavior can be dissolved rapidly in diesel fuel and that the new dissolving process appears to be adaptable to field use. EVALUATION OF THE SECOND HOT DRY ROCK GEOTHERMAL ENERGY RESERVOIR: RESULTS OF PHASE 1, RUN SEGMENT 5

G. A. ZYVOLOSKI, R. L. AAMODT, R. G. AGUILAR, D. A. COUNCE, H. N. FISHER, T. A. GRANT (Zia Co., Los Alamos, N.Mex.), C. O. GRIGSBY, R. H. HENDRON, C. E. HOLLEY, JR., and R. G. LAWSON Sep. 1981 99 p refs

(Contract W-7405-ENG-36)

(DE82-002520; LA-8940-HDR) Avail: NTIS HC A05/MF A01

The results of a long term (286 day) flow test of a second hot dry rock reservoir are presented. This second reservoir was created by fracturing an interval of granitic rock located at a depth of 2.93 km (9620 ft) in the same wellbore pair used in the creation of the first, smaller reservoir. The new fracture system has a vertical extent of at least 320 m (1050 ft), suggesting that the combined heat transfer area of the old and new fracture systems is much greater than that of the old system. The virgin rock temperature at the bottom of the deeper interval was 1970 C (3860 F). Downhole measurements of the water temperature at the reservoir outlet, as well as temperatures inferred from geothermometry, showed that the thermal drawdown of the reservoir was about 80 C, and preliminary estimates indicate that the minimum effective heat transfer area of the new reservoir is 45,000 sq m (480,000 sq ft), which is six times larger than the first reservoir. DOE

INVESTIGATIONS OF LOW-TEMPERATURE GEOTHERMAL POTENTIAL IN NEW YORK STATE

D. S. HODGE, R. DERITO (State Univ. of New York, Buffalo), K. MIFIKER (State Univ. of New York, Buffalo), P. MORGAN, and C. A. SWANBERG Sep. 1981 76 p refs

(Contract W-7405-ENG-36)

(DE82-002517; LA-8960-MS) Avail: NTIS HC A05/MF A01

Temperature gradient map and published heat flow data indicate a possible potential for a geothermal resource in western and central New York State. An analysis of bottom hole temperature data for New York State confirm the existence of three positive gradient anomalies: the East Aurora, Cayuga, and Elmira anomalies, with gradients as high as 320 C/km, 360 C/km, and 360 C/km, respectively. Ground waters from two of these anomalies are enriched in silica relative to surrounding areas. Heat flows based on silica geothermometry are 50 to 70 sq mWm (+2) for the anomalies and 41.4 sq mWm (+2) for bordering regional flux. A correlation between Bougner gravity anomalies and the temperature gradient map suggests that the geothermal anomalies may occur above radioactive granites in the basement. DOE

METHANE HYDRATE RESOURCE ASSESSMENT PROGRAM Progress Report, Jul. - Sep. 1980
B. L. BARRACLOUGH, P. L. MCGUIRE, and S. P. KOCZAN Sep. 1981 36 p refs
(Contract W-7405-ENG-36)
(DE82-002478; LA-8933-PR; QR-2) Avail: NTIS HC A03/MF A01

Progress on a program to study the nature, occurrence, and resource potential of methane (natural gas) hydrate is described. Planning for an experimental field program is continuing and a range of feasible field efforts is outlined. A variety of methods and equipment suitable for hydrate coring work was identified. A new cryogenic wireline coring system, which is intended for use with very cold drilling fluids, was developed for retrieving hydrated samples from subsurface strata, and details are presented. A unique concept for forming hydrate in the pore space of various sediments is outlined, and details of the proposed experimental apparatus are given. Continuing studies of hydrate gas production by thermal stimulation methods indicate that steam injection is not practical. Two reservoir computer models were developed, which are believed to bracket probably hydrate gas production rates. These models are discussed and the preliminary results of reservoir parameter studies are presented. DOE

MEAN ANNUAL STREAMFLOW OF SELECTED DRAINAGE BASINS IN THE COAL AREA OF SOUTHEASTERN MONTANA Final Water Resources Investigations
R. F. FERREIRA Oct. 1981 28 p refs Prepared in cooperation with EPA
(PB82-137696; USGS/WRD/WRI-81/097; USGS/WRI-81-61)
Avail: NTIS HC A03/MF A01 CSCL 08H

Streamflow characteristics of drainage basins within the Fort Union coal region of southeastern Montana were estimated to provide premining data for evaluating the future effects of mining on the environment. Estimated annual mean streamflow at 22 data collection stations ranged from 0 to 887 cubic feet per second. These estimates are based on miscellaneous streamflow records at each station and continuous streamflow records from other stations in the study area. Estimated mean annual streamflow for a 10 year period ranged from 0 to 572 cubic feet per second. Many of the drainage basins had a mean annual runoff of less than 0.60 inch; the maximum observed mean annual runoff was 4.45 inches. GRA

LOW NOX HEAVY FUEL COMBUSTOR CONCEPT PROGRAM Final Report
A. S. NOVICK and D. L. TROTH Oct. 1981 206 p refs
(Contract DEN3-148; DE-AI01-77ET-13111)
(NASA-CR-165367; NAS 1.26:165367; DDA-EDR-10594; DOE/NASA/0148-1) Avail: NTIS HC A10/MF A01 CSCL 10B

The development of the technology required to operate an industrial gas turbine combustion system on minimally processed, heavy petroleum or residual fuels having high levels of fuel-bound nitrogen (FBN) while producing acceptable levels of exhaust emissions is discussed. Three combustor concepts were designed and fabricated. Three fuels were supplied for the combustor test demonstrations: a typical middle distillate fuel, a heavy residual fuel, and a synthetic coal-derived fuel. The primary concept was an air staged, variable-geometry combustor designed to produce low emissions from fuels having high levels of FBN. This combustor used a long residence time, fuel-rich primary combustion zone followed by a quick-quench air mixer to rapidly dilute the fuel rich products for the fuel-lean final burnout of the fuel. This combustor, called the rich quench lean (RQL) combustor, was extensively tested using each fuel over the entire power range of the model 570 K engine. Also, a series of parameteric tests was conducted to determine the combustor's sensitivity to rich-zone equivalence ratio, lean-zone equivalence ratio, rich-zone residence time, and overall system pressure drop. Minimum nitrogen oxide emissions were measured at 50 to 55 ppmv at maximum continuous power for all three fuels. Smoke was less than a 10 SAE smoke number. M.G.

EXPLOSIVELY PRODUCED FRACTURE OF OIL SHALE Progress Report, Jul. - Sep. 1980
Oct. 1981 38 p
(Contract W-7405-ENG-36)
(DE82-004182; LA-9045-PR) Avail: NTIS HC A03/MF A01

Explosive cratering experiments were conducted as a part of the research effort to study the explosively produced fracture of oil shale. They were designed to identify and analyze the major factors involved in the fracturing of oil shale, to provide data for the verification of the computer models, and ultimately to lead to

the design of a rubble bed for in situ retorting oil shale. The rubble excavated from eight cratering experiments was separated and the volumes of rubble in each screened size category are presented. Also presented are the data from the detailed investigation of the joint/fracture attitudes (strikes and dips) within a crater interior after excavation. The data were tabulated and plotted to allow future comparisons and analyses pertinent to similar experiments. A brief discussion of the experiment site and the graphical representation of the data are included. Finally, since the homogeneity of the oil shale is an important consideration in the selection of a site for these explosive fracture experiments, cores were taken and analyzed. The identification of the geological parameters and their extent and how they delineate the overall characterization of the experiment site, including the subsurface geology, is given. It is shown how the postshot core analysis will indicate how the blast affected the rock. M.D.K.

Ten passenger vehicles powered by the following were characterized on a common engineering and economic basis: gasoline internal combustion, diesel internal combustion, liquid-hydrogen internal combustion, liquid-hydrogen fuel cell, hydrogen internal combustion, hydrogen fuel cell, methanol internal combustion, methanol fuel cell, Ni/Zn battery, and Pb/Acid battery. Levelized life cycle costs were computed for each vehicle. The market penetration of the nongasoline vehicles was studied over a 50 yr period using a generalized equilibrium energy economic model. Results indicate that only the methanol internal combustion vehicle using methanol produced from coal is a viable alternative to the gasoline internal combustion vehicle. The market penetration of alternate vehicles was enhanced more by reduction in acquisition costs than by comparable improvements in engineering parameters. DOE

A distillation and adsorption treatment for reclaiming used MIL-L-7808 turbine oils was investigated. A viable additive package was tested on different MIL-L-7808 type virgin base stocks. Fifteen used oils were analyzed by acid number, high performance liquid chromatography, and gas chromatography. A distillation process utilizing caustic (sodium hydroxide) pretreatment was developed on 500-ml and 13-litre scales. Adsorption treatment of distilled oils with calcium hydroxide followed by attapulgus clay was examined. Preparations for large-scale (25 and 250 gal) reclamations are currently under way to elucidate the validity of caustic distillation and absorbent treatment parameters. Author (GRA)

CROSSED-REACTION NETWORKS IN THE CATALYTIC HYDRODENITROGENATION OF SYNTHETIC LIQUID FUELS Quarterly Report, 1 Aug. - 31 Oct. 1981
C. N. SCATTERFIELD and S. HSI 1981 8 p
(Contract DE-AC22-80PC-30075)
(DE82-003092; DOE/PC-30075/7) Avail: NTIS HC A02/MF A01

The effect of the ratio of hydrogen sulfide to quinoline on the HDN reaction was explored. Increasing the CS2/quinoline mole ratio to 2 caused a drop in total HDN activity from the maximum plateau level observed at a ratio of about 0.5. Throughout, an increase in this ratio causes a continuous enhancement of the hydrogenolysis reactions and inhibition of hydrogenation reactions in the reaction network. A large amount of kinetic data was taken using quinoline, BzTHQ (5,6,7,8-tetrahydroquinoline) and orthoprotpylaniline as a feed with various partial pressures of hydrogen sulfide present. The computer modelling of these kinetic data is still underway. The catalytic activity for HDN reaction increased with increased partial pressure of hydrogen sulfide during the initial sulfiding and resulfiding procedures. DOE

FUNDAMENTALS OF COAL DEPOLYMERIZATION: KINETIC MODELING AND EXPERIMENTAL DETERMINATION OF FREE RADICAL CHEMISTRY AND MINERAL MATTER EFFECTS IN DIRECT COAL HYDROLIQUEFACTION Quarterly Report, 1 Jul. - 30 Sep. 1981
L. PETRAKIS, G. L. JONES, and D. W. GRANDY Sep. 1981 236 p refs
(Contract DE-AC01-79ET-14940)
(DE82-003689; DOE/ET-14940/6) Avail: NTIS HC A11/MF A01

Fundamental phenomena involved in coal depolymerization under hydroliquefaction conditions were investigated. The role of free radical formation and behavior on the degree of coal dissolution and the quality of the product are discussed. Electron spin resonance measurements of coal dissolution as it is affected by mineral matter were performed. Solids isolated from hydroliquefaction experiments were added to determine the effect of added mineral matter on free radical formation. The degree of liquefaction and the quality of product obtained were assessed. Standard separation techniques were used to obtain overall conversion fractions and solubility-defined fractions such as oils, preasphaltenes, and asphaltenes. The conversion data and the free radical formation are used to develop a kinetic/mechanistic model. DOE

SUPERCRITICAL FLUIDS FOR REACTION AND EXTRACTION OF COAL AND HEAVY OILS Quarterly Progress Report, 1 Sep. - 30 Nov. 1981
G. D. HOLDER, J. GOPAL, and G. V. DESHPANDE Dec. 1981 8 p
(Contract DE-FG22-81PC-40800)
(DE82-005496; DOE/PC-40800/1; QPR-1) Avail: NTIS HC A02/MF A01

A program for the study of supercritical extraction of coal and coal liquids is discussed. A fundamental understanding of supercritical extraction with emphasis on extraction of coal liquids with supercritical water and deashing of coal liquids, solvent refined coal - bottoms and possibly shale oils is sought. The use of supercritical extraction techniques for extraction and fractionation of heavy residues which are often mixed with mineral matter and other non-volatile matter is discussed. The supercritical extraction of model compounds and their mixtures is discussed. An experimental apparatus and procedure were designed and ordered. A schematic diagram of the experimental set-up is shown. A special custom-made autoclave reactor was designed. The reactor is a 1 liter Magnedrive 2 agitated autoclave rated at 500 psi and 450 C and provided with ports for inlet and outlet for the process components, temperature and pressure measurement and cooling water connections. The reactor will be provided with a multiple zone electric furnace for heating the reactor to operating conditions. The top of the reactor (flange), and sampling tubes will be provided with heating elements so as to maintain a constant temperature throughout the reactor and sampling line assembly. DOE

MECHANISM OF CATALYTIC GASIFICATION OF COAL CHAR Quarterly Technical Progress Report, 1 Jan. - 31 Mar. 1981
B. J. WOOD, K. M. SANCIER, K. H. LAU, D. R. SHERIDAN, and H. WISE 15 Apr. 1981 56 p refs
(Contract DE-AC21-80MC-14593; SRI PROJ. 2202)
(DE82-004074; DOE/MC-14593/T1; QTPR-2) Avail: NTIS HC A04/MF A01

The mechanisms involved in the catalytic gasification reactions of coal char, from Illinois No. 6 coal, were studied and specific reaction steps and parameters that control the catalytic process were identified. To determine catalytic pathways and intermediate species, two experimental techniques were used. Temperature programmed reaction reveals the rate of formation of stable gaseous products and Knudsen cell mass spectrometry reveals the partial pressures of vapor species in equilibrium with the solid char. Physical measurements of the char including structural analysis (scanning electron microscopy), determination of internal surface area of char samples, (BET N2-isotherms) and evaluation of free-radical densities in char and carbons exposed to various pretreatments (electron spin resonance) were performed. Results suggest the operation of a redox couple (involving the catalyst cation) as a significant mechanistic step in the catalytic gasification of coal char. DOE

(Contract W-7405-ENG-92)
(DE82-003869; BMI-2088) Avail: NTIS HC A07/MF A01

A catalytic coal gasification system involving thorough incorporation of CaO catalyst into the coal is described. The catalytic treatment system can be used to improve both existing commercial gasification processes as well as advanced gasification systems. One gasification system that appears exceptionally attractive utilizing the treatment system is direct fluid bed hydrogasification or hydropyrolysis. A simple pressurized fluid bed steam/oxygen gasification system is also an attractive option which could be commercialized quickly. The technical and economic advantages of these approaches are demonstrated. DOE

MOBILITY FUELS FOR THE NAVY
T. ONEILL Jan. 1982 21 p refs
(Contract N00014-76-C-0001)
(AD-A112511; CNA-PP-336) Avail: NTIS HC A02/MF A01 CSCL 21D

As fuel declines, both specifications and engine designs will have to be modified to accommodate this change. In addition, specifications have to reflect the fact that fuel chemistry itself is undergoing change, so that new problems have begun to arise. Recently, batches of DFM and JP-5 that passed inspection have been associated with fuel filter clogging and excessive smoking. The mechanisms of these effects are not clearly understood. As synfuels are introduced, the variety of chemicals in fuels will be greatly expanded, and this will cause a new range of problems. Besides modifying the specifications of current fuels to address the issues of price and availability, other ways might come from changing the types of fuel burned. The Navy could attempt to switch to fuels in civilian use. Number 2 diesel oil is similar to the ship fuel DFM, while Jet A-1 is not unlike the aircraft fuel JP-5. Another approach could involve the use of just one type of fuel for both ships and airplanes. This would reduce storage and handling costs, perhaps enough to offset the modest differential of 5 cents per gallon between JP-5 and DFM that existed in October 1981. GRA

IMPACT OF GASOHOL ON THE L-141 AND LDT-465-1C ENGINES Interim Report, Oct. 1980 - Sep. 1981
W. E. LIKOS and D. M. YOST Dec. 1981 110 p refs
(Contract DAAK70-80-C-0001; DAAK70-82-C-0001; DA PROJ. 1L2-63104-D-150)
(AD-A112010; AFLRL-148) Avail: NTIS HC A06/MF A01 CSCL 21D

Gasohol was analyzed in the L-141 and LDT-465-1C engines in order to determine its impact upon engine operability. During various steady-state operating conditions, with the L-141 engine, gasohol was found to improve economy under heavily loaded conditions, while a deterioration will occur during light and intermediate loading. An evaluation of emission and nonemission-regulated carburetors shows the nonemissions carburetor better suited for gasohol use. No effects on maximum power produced were noted with gasohol. Simulated driveability tests with the L-141 engine on a dynamometer showed differences in engine response between the different fuels, but actual vehicle tests proved that driveability was not altered. A relatively short endurance test with the L-141 engine on gasohol fuel indicates, based on engine oil analysis, no significant change in engine wear rates. The endurance test did indicate, however, that more frequent oil drain intervals may be required due to TBN depletion of the engine oil. Cold start testing of the LDT-465-1C engine indicates that gasohol is of inadequate cetane number to sustain normal engine operation. Thus, it is recommended that gasohol not be used in the LDT-465 family of engines. Author (GRA)

DEVELOPMENT OF ARMY HIGH-ENERGY FUEL DIESEL/TURBINE-POWERED SURFACE EQUIPMENT, PHASE 2 Interim Report, Oct. 1979 - Sep. 1981
W. W. WIMER and D. M. YOST Dec. 1981 134 p refs
(Contract DAAK70-80-C-0001; DAAK70-82-C-0001; DA PROJ. 1L7-62733-AH-20)
(AD-A111942; AFLRL-147) Avail: NTIS HC A07/MF A01 CSCL 21D

The Army is interested in those fuels that have a high-energy content per unit volume and therefore result in increased payload capabilities and/or extended operational range of the vehicle. A series of screening processes are being used to identify those fuels and/or fuel components that could result in an increase of 10 percent in the range of the vehicle without an increase in the fuel tank size, i.e., fuels with a high-energy content percent volume. The chemical and physical properties of various candidate fuels and fuel components are described. The fuel components included both liquids and solids (at room temperature). The blending of the various components and the characterization of the resulting fuels are outlined. Solubility studies were done on some of the solid components to assist in obtaining the resulting fuel in the more desirable liquid state. Those solid components, such as anthracene, that were insoluble in the tests conducted but judged to have good high-energy potential, were studied as slurries. Catalyzed 'carbon black' was investigated. Settling studies with carbonaceous fuels included the effect of temperature upon the stability, the stability of FRF-carbon slurries, and the refinement of the previously reported 'Freezing Tube Technique' for measuring stability. Impact dispersion tests were conducted to study the fire-safety characteristics of energy-augmented fuels. The screening of candidate fuels with the Petter engine is described in detail. Other engine studies with the CLR engine are also included.

This report provides a tabulation of chemical compounds and physical/chemical properties with methods for their determination based on a review of physical and chemical methods for characterizing liquid mobility fuels. This tabulation is cross-referenced to a list of references organized by preselected categories. A complete bibliography is provided alphabetically by author's last name, both with and without annotations. For ease in utilization and updating, a system was developed to facilitate tabulation and recall of references from a word processor in which they are stored. While this tabulation serves as reference material to a program to develop improved analytical and correlative methodology for characterizing fuels, it may be of great utility to personnel developing and analyzing fuels. This tabulation will continue to be expanded and updated periodically.

SYNTHETIC-FUEL PRODUCTION USING TEXAS LIGNITE AND A VERY HIGH TEMPERATURE GAS COOLED REACTOR FOR PROCESS HEAT AND ELECTRICAL POWER GENERATION
M. A. ROSS and D. E. KLEIN May 1981 90 p refs
(DE82-900466; UT/CES-RR-13) Avail: NTIS HC A05/MF A01

Two alternatives to increased reliance on foreign energy sources are presented which utilize the abundant domestic resources of coal, uranium, and thorium. The gasification and liquefaction of coal are accomplished with Lurgi gasifiers and Fischer-Tropsch synthesis. A 50,000 barrel per day facility, consuming 15 million tons of lignite coal per year, is used. A nuclear assisted coal conversion approach using a very high temperature gas cooled reactor with a modified Lurgi gasifier and Fischer-Tropsch synthesis is also described. DOE

LLNL UNDERGROUND COAL-GASIFICATION PROJECT Quarterly Progress Report, Apr. - Jun. 1981
D. U. OLNESS, ed. and W. CLEMENTS, ed. 27 Jul. 1981 41 p refs
(Contract W-7405-ENG-48)
(DE82-002074; UCRL-50026-81-2) Avail: NTIS HC A03/MF A01

Laboratory studies of forward gasification in small blocks of coal, approximately 12 inches on a side are discussed. The coal is ignited near the inlet to a small hole drill through the center of the block, and a steam/oxygen mixture is fed through the hole to support the combustion. The ability to visually inspect the gasification cavities formed in these laboratory-scale experiments enhances understanding of the in situ gasification process. At the end of each experiment the coal block is split open and the cavity is examined. It was found that for the three coals studied for far (two from Wyoming and one from Washington) the cavities appear quite different, yet the product-gas heating values are very similar. A mathematical model for the small coal block experiments is under development in order to improve understanding of the physical and chemical processes governing the burning of the coal and the growth of the cavity within the block. Combined chemical kinetic and mass transfer rates were developed for the model. Results with the model were compared against experimentally observed cavity shapes burned in coal. DOE

CONVERSION OF CELLULOSIC WASTES TO LIQUID FUELS Interim Report
J. L. KUESTER Sep. 1981 77 p refs
(Contract DE-AS02-76CS-40202)
(DE82-001173; DOE/CS-40202/T5; COO-2982-74) Avail: NTIS HC A05/MF A01

The history, current status, and future plans for a project to convert waste cellulosic (biomass) materials to liquid hydrocarbon fuels are described. The process utilizes an indirect liquefaction approach (gasification followed by liquefaction) to produce a quality liquid hydrocarbon product similar to diesel fuel. A variety of feedstocks can be processed with product quality essentially independent of feedstock type. Operation of the system in an integrated, continuous mode and direct measurement and assessment of product yields are described. Additional factor studies (gasification, fluidizing gas type, solid type, and operating conditions) were also performed. DOE

APPLICATION OF ULTRASONIC TECHNIQUES TO CHEMICAL COAL CLEANING PROCESSES Final Report, 15 Apr. 1980 - 15 Aug. 1981
W. B. TARPLEY, JR., E. N. TWESME, P. L. HOWARD, and G. R. MOULDER Aug. 1981 52 p refs
(Contract DE-AC22-80PC-30143)
(DE82-003093; DOE/PC-30143/T4) Avail: NTIS HC A04/MF A01

Ultrasonic activation was applied to several coal cleaning processes, including chlorinolysis, oxygesulfurization, and sodium hypochlorite leaching, in small-scale batch treatment processing of Illinois No. 6, Lower Kittanning, and Western Kentucky No. 11 coals. In all cases, ultrasonic energy application demonstrated effects that would translate in production to processing efficiencies and/or capital equipment savings. Specifically, in the chlorinolysis reaction, pyritic sulfur was removed 23 times faster with ultrasonics than without it. (Organic sulfur could not be removed from the coal examined with or without ultrasonics in the chlorinolysis process). In sodium hypochlorite leaching, the total sulfur extraction rate was 3 times faster with ultrasonics. Two separate benefits were seen with oxydesulfurization: ultrasonics doubled the reaction rate and at slightly accelerated rates allowed a pressure reduction from 960 to 500 psi, which would be a significant cost efficiency in production. DOE

MOLTEN SALT COAL GASIFICATION PROCESS DEVELOPMENT UNIT, PHASE 2 Quarterly Progress Report, Apr. - Jun. 1981
M. H. SLATER 21 Jul. 1981 57 p
(Contract DE-AC21-77ET-10296)
(DE82-004717; DOE/ET-10296/194; QTPR-4) Avail: NTIS HC A04/MF A01

A molten salt coal gasification process development unit (PDU) program is discussed. A one-year operations program utilizing the existing PDU was planned to include a series of runs, each additional run progressively utilizing more plant hardware and subsystems and operating under increasingly severe conditions.

Run 7 data were evaluated and reported continuously on schedule for a full 7 days; the melt overflow system operated smoothly throughout the entire gasification program; a coal throughput of approximately 1 TPH, the rated design capacity of system, was achieved; the gasifier/quench system operated satisfactorily at a planned 15% ash in the melt; and the gasification system operated as predicted at 10-atm pressure over extended periods and satisfactorily at pressures up to 18 atm. The ash removal, sulfur removal, and sodium carbonate regeneration systems were all placed on line during the run. During Run 9 Illinois No. 6 coal was gasified at 20 atm pressure and at coal throughput of nominal 1 TPH and the gasifier was operated with the ash content in the melt at the design 20% concentration. The post-test inspection after PDU Run 9 is continued. Data reduction, data evaluation, and performance analysis of the various components and subsystems in the balance of plant are in progress. DOE

ADVANCED COAL GASIFICATION SYSTEM FOR ELECTRIC POWER GENERATION Quarterly Progress Report, 1 Jan. - 31 Mar. 1981

22 Apr. 1981 53 p

(Contract DE-AC21-80ET-14752)

(DE82-004539; DOE/ET-14752/16; QPR-2) Avail: NTIS HC A04/MF A01

Major activity was directed toward maintenance and modification of the process development of a pressurized fluidized bed gasification system. Currently, final assembly and preparation are in progress for tests to be conducted. The last part of commissioning test TP-M001-4, which is a functional checkout of the model structure and associated subsystems, was completed. From the experiments performed in a bed of wide size particle distribution, the two dimensional, wedge-shaped pitot tube with continuous gas purge successfully prevented the plugging of the tube holes over a long period of operation and simultaneously provided the required sensitivity of measurement. The pitot tube was calibrated in the wind tunnel at 0, 250, 310, and 390 cm(3)/m purge flow. These results will provide guidance for the operation of the purged pitot tube in the cold flow scaled-up facility. A simple mathematical model was proposed to estimate the solids circulation rate induced by a bubbling jet. Certain parameters in the model will require verificaton from cold flow experiments designed for this purpose. Two series of experiments were completed to investigate the motion of solid particles in the gasifier. The rate of particle mixing was studied as a function of the jet injection velocity. DOE

CONCEPTS OF FUNDAMENTAL PROCESSES RELATED TO GASIFICATION OF COAL Quarterly Progress Report, Oct. - Dec. 1980

W. H. WISER May 1981 6 p

(Contract DE-AM03-77SF-01484)

(DE81-023067; DOE/SF-01484/T1; FE-1484-5) Avail: NTIS HC A02/MF A01

Single stage catalytic coal gasification, single stage coal gasification to high Btu gas, and reactions of aromatic compounds with steam are discussed. The objective of the first project is to optimize the process variables and catalyst systems to maximize methane yields. The objective of the second investigation is to investigate the potential for obtaining high methane yields by direct catalytic hydrogenation of coal in a single stage with a maximum temperature of 550 C. The objectives for project three are: to develop a catalyst of suitable activity and sufficient life; to determine the conversion and approach to equilibrium as a function of the main variables of the reaction (temperature, pressure, contact time and steam/carbon ratio); and to determine reaction mechanisms and kinetics of the reforming reactions. Various construction activities are reported. DOE

CONCEPTS OF FUNDAMENTAL PROCESSES RELATED TO GASIFICATION OF COAL Quarterly Progress Report, Apr. - Jun. 1981

W. H. WISER Sep. 1981 8 p

(Contract DE-AM03-77SP-01484)

(DE82-000764; DOE/SF-01484/T3; FE-1484-7) Avail: NTIS HC A02/MF A01

Single stage catalytic coal gasification and the reaction of aromatic compounds with steam are discussed. The primary objective of the coal gasification is to optimize the process variables and catalyst systems to maximize methane yields. During this quarter, the gasification system was set up and pressure tested. The electrical system was also completed and is functional. The thermocouples and slurry feed system are being installed. The purpose of the steam process study is to assess the feasibility of coal liquefaction-steam reforming of coal-derived liquids for the production of synthesis gas and hydrogen. To date, a reactor has been built which is composed of two zones: the preheat and reaction zone and the control and product analysis zone. The Packard 7400 series gas chromatography system was redesigned. A thermal conductivity detector for H2, CO and CO2 analysis and flame ionization detector for hydrocarbon analysis can be used at the same time. The flow rates (water and benzene) and percent stroke (controlled volume pump) were established. Preliminary experiments were attempted with steam benzene mixtures at atmospheric pressure to establish the operating and analytical procedure. DOE

HIGH-TEMPERATURE TURBINE TECHNOLOGY PROGRAM ROTOR WATER DELIVERY AND DISTRIBUTION TESTS

M. W. HORNER Sep. 1981 107 p refs

(Contract DE-AC01-76ET-10340; EX-76-C-01-1806)

(DE82-000400; DOE/ET-10340/120) Avail: NTIS HC A06/MF A01

The design, fabrication, and test of a rotor water delivery and distribution system for an integrated gasification combined cycle power plant typical of the technology readiness vehicle (TRV) high temperature turbine (HTT) design conditions are described. The delivery and distribution of bucket cooling water were evaluated. This included water transfer onto the rotor, water metering to individual buckets, and water distribution among the cooling passages within each bucket. This task was accomplished by conducting rotating tests at the TRV gravitational force level and a wide range of water flow rates to demonstrate the following technology: transfer of water from a stationary supply onto the turbine rotor using a water commutator; delivery of water through the rotor to a circumferential manifold and its uniform metering to the individual buckets via individual orifices (one orifice to feed one bucket); uniform distribution of water to the cooling passages of each bucket via a resistance flow divider (RFD) at the bucket dovetail; and verification of turbine rotor dynamic stability with varying water flows and rotor speeds. Critical components of a water delivery and distribution system for an HTT water cooled gas turbine rotor were evaluated at typical TRV design conditions of water flow and gravitational force level and the concept and the system validated. Rotor dynamics behavior was not adversely affected by the presence of water in the rotor distribution components. DOE

ASSESSMENT OF SECONDARY RESIDUES. ENGINEERING AND ECONOMIC ANALYSIS Final Report
A. P. LEUSCHNER, C. E. WEST, and E. ASHARE Aug. 1981 279 p refs
(Contract DE-AC02-77CH-00178)
(DE82-000925; SERI/TR-98175-3) Avail: NTIS HC A13/MF A01

Case studies investigating the costs of converting liquid and/or solid secondary agricultural residuel streams to methane and/or ethanol. Several economically feasible examples were found: methane production from potato processing liquid residues, ethanol from potato processing solid residues, methane from cheese processing wastes, and methane from poultry processing liquid wastes. In facilities which operate year round, energy recovery is often feasible, whereas in seasonal operations, economic feasibility is not possible. Economic feasibility of energy production from secondary residues is strongly dependent on the current use of the solid and liquid residue. If the solid residue is sold as an animal feed, energy production is usually not economical. High solid and liquid residue disposal costs often make energy conversion economically feasible. DOE

N82-26911# California Univ., Livermore. Lawrence Livermore Lab.
MECHANICAL BEHAVIOR OF MESAVERDE SHALE AND SANDSTONE AT HIGH PRESSURE
W. LIN Apr. 1981 13 p refs Presented at SPE/DOE Low Permeability Symp., Denver, 27-29 May 1981 Submitted for publication
(Contract W-7405-ENG-48)
(DE82-001665; UCRL-85808) Avail: NTIS HC A02/MF A01

Rock mechanics measurements taken on Mesaverde shale (source rock) and sandstone (reservoir rock) from about 350 m depth (Colorado) and 1600 m depth (Wyoming) are reported. For each sandstone and shale, the following properties were determined: (1) tensile strength parallel and perpendicular to bedding, 0.1 MPa pressure; (2) triaxial stress failure envelope in compression to 300 MPa confining pressure, parallel and perpendicular to bedding; (3) pressure volume behavior to 1.2 GPa. The results for (1) indicate that, in general, the tensile strength of Wyoming sandstone is about three times that of Colorado sandstone. For both sandstones, the tensile strength is isotropic with respect to bedding. The tensile strength of both shales parallel to bedding is about 30 to 50% greater than that measured normal to bedding. The shale from Wyoming has a tensile strength about 25 to 50% greater than that from Colorado. Strengths and failure modes in compression (2) show that the transition between brittle failure and ductile deformation occurs at a confining pressure of about 0.1 GPa for the Colorado sandstone and 0.25 GPa for all other rocks tested. DOE

SEISMIC AND GEODETIC STUDIES OF THE IMPERIAL VALLEY, CALIFORNIA Final Technical Report
D. D. JACKSON (UCLA) 1 May 1981 50 p refs
(Contract W-7405-ENG-48)
(DE82-001686; UCRL-15382) Avail: NTIS HC A03/MF A01

Patterns of gravitational and thermal anomalies, strike slip faulting, volcanism in the Imperial Valley were investigated. These patterns suggest that the continental crust may still be spreading. In recent years, the United States Geological Survey and Caltech have added new seismic stations into a dense network in the Imperial Valley to study in detail the relationship between geothermal areas and earthquakes, and to understand the tectonic processes taking place there. The following areas were examined: (1) crustal structure data on P wave arrival times of local earthquakes; (2) leveling data for evidence of tectonic subsidence or uplift; and (3) correlations between seismicity, seismic velocity, geodetic motion, geothermal activity, and local geology. Activities and findings are reported for a 12-month program aimed at the development of procedures for accelerating the qualification of new fuels on Army equipment, emphasizing those derived from oil shale and coal. Prinicpal activities were identification of key tactical and combat surface and air vehicles, powerplants, and fuels systems components; identification of critical properties peculiar to new fuels anticipated to have significant impact upon Army materiel; laboratory evaluations of materials compatibility and fuels characteristics (including lubricity, elastomer compatibility, thermal stability, and corrosion); full-scale fuel systems component testing, and an overall review and evaluation of existing engine/fuel system qualification procedures. Conclusions and recommendations are presented in terms of methodology and criteria which will realistically address key peculiarities of altnerative fuels and thus serve to accelerate their qualification for field Army use. INVESTIGATION OF MECHANISMS OF HYDROGEN TRANSFER IN COAL HYDROGENATION Quarterly Progress Report, Mar. - Jun. 1981
D. C. CRONAUER Sep. 1981 52 p refs
(Contract DE-AC22-80PC-30080)
(DE82-004407; DOE/PC-30080/5) Avail: NTIS HC A04/MF A01

Model compound and coal liquefaction experiments were carried out in a stainless steel tubular reactor at 4500 C to observe the effects of hydrogen transfer on solvent isomerization. Significant observations are that: (1) methylindan production from tetrain in the presence of dibenzyl took place by at least two different mechanisms, only one of which involved the normal cracking dibenzyl; (2) deuterium hydrogen isotope studies with model compounds and coal liquefaction indicated that kinetic data from the model compound experiments should be applied to coal liquefaction only with caution; and (3) solvent isomerization by ring contraction is a problem in recycle operation due to the low hydrogen donor capability and exceptional stability of the rearranged product. MECHANISMS AND KINETICS OF COAL HYDROGENATION Quarterly Progress Report, Jul. - Sep. 1981
R. M. BALDWIN Oct. 1981 52 p
(Contract DE-AC22-79ET-14881)
(DE82-004867; DOE/ET-14881/7) Avail: NTIS HC A04/MF A01

A coal hydrogenation research project is described. The rates of coal hydrogenation in continuous flow stirred tank and tube flow reactors using pure hydrogen, catalyzed CO-STEAM, and syngas processing conditions are compared. The influence of coal properties on the rate of hydrogenation of coal to preasphaltenes, asphaltenes, and oil in batch reactors is studied. The effect of operating conditions (temperature, added catalysts, and pressure) on the rate of hydrogenation of coal derived preasphaltenes and asphaltenes is studied. The effect of selected disposable catalysts on the rate of batch hydrogenation of selected bituminous coals is studied. Promising catalyst systems in the continuous processing units are tested. A unified kinetic/mechanistic model was formulated for coal liquefaction taking into account petrography of the feed coal and hydrocarbon lumps in the product oil. DOE

RESEARCH ON SOLVENT REFINED COAL Quarterly Technical Progress Report, 1 Jan. - 31 Mar. 1981
Nov. 1981 67 p
(Contract DE-AC22-81PC-40005)
(DE82-004535; DOE/PC-40005/1) Avail: NTIS HC A04/MF A01

Pittsburgh seam coals from the Powhatan No. 3, Powhatan No. 6, McElroy, Robinson Run and a blend of coals from the Powhatan No. 6 and Ireland Mines were evaluated as feedstocks for major liquefaction facilities. Yields and operability with all of these coals were found to be generally satisfactory at normal SRC II operating conditions. In addition, a series of runs was conducted in the SRC II mode with Pittsburgh seam coal from the Powhatan No. 5 Mine at conditions expected to produce high oil yields. Oil yield was increased and SRC yield decreased significantly by increases in pressure, residence time and recycle solids levels over those normally used. T.M.

Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7,40

Prospecting on the Ortenburg plateau is described. Permian and mesozoic sedimentary rocks of the variscan orogene area are often U, Cu, Pb and Cu bearing, especially layers of reduced thickness and reducing environment as well as the border between crystalline basement and overlying rocks. The outcrops of these rocks are well investigated except where the prospected series are covered by younger formations. The few borings in this region corroborate their interest. Therefore, the boreholds Ortenburg 1 and 2 were sunk, reaching the crystalline basement by a 1 m clastic layer, under tertiary, cretaceous and mesozoic rocks. Chemical analyses show amounts up to 0.15% Pb and 0.1% Cu in the weathered basement and the clastic layer. At the basement top there are peaks in the Gamma Log with intensities of 2x to 3x crystalline background. Author (ESA)

FRACTIONATION OF DIESEL FUEL FROM PETROLEUM AND PARAHO SHALE OILS Final Report
C. F. HAMMER Oct. 1981 22 p refs
(Contract N00167-76-M-8549; ZF45451001)
(AD-A107042; DTNSRDC/SME-80/212) Avail: NTIS HC A02/MF A01 CSCL 21D

A fractionation scheme has been developed to separate diesel fuels into neutral water solubles, acidic components, basic components, saturated hydrocarbons, substituted benzenes, polycyclic aromatic hydrocarbons, and polar neutrals. A sample of conventional petroleum diesel fuel and a sample of diesel fuel derived from Paraho crude shale oil by the Gary-Western process were fractionated by this procedure. Each fraction was further analyzed by gas chromatography and proton magnetic resonance spectroscopy. The petroleum sample was found to contain 17.5%

total aromatics of which 9.5% were polycyclic aromatic hydrocarbons compounds. However, the Paraho-Gray Western shale oil fuel contained about twice as much total aromatics (38.2%) and polycyclic aromatic hydrocarbons compounds (19.3%). The total acyclic hydrocarbon straight chain compounds content was 66.7% for the petroleum sample and 59.3% for the Paraho-Gary Western shale sample. Suggestions for further work are also made. SUITABILITY OF SHALE FUELS FOR ARMY GENERATOR SETS Interim Report, May 1980 - Sep. 1981

A. F. MONTEMAYOR Dec. 1981 69 p refs

(Contract DAAK70-80-C-0001; DAAK70-82-C-0001; DA PROJ. 1L7-62733-AH-20)

(AD-A112609; AFLRL-142) Avail: NTIS HC A04/MF A01 CSCL 21D

Gasoline, diesel, and gas turbine generator sets were examined to determine which shale fuel properties might adversely affect their performance, Information from engine manufacturers, fuel system manufacturers, U.S. Army Troop Support and Aviation Readiness Command (USATSARCOM) personnel and existing literature was consulted to identify existing/potential problems. Known shale fuel properties were presented and compared to military specifications. Generator sets were separated into major grouping by the fuel systems they employ. A listing of generator sets was included in order to facilitate generator set selection for testing. In general, the performance of shale fuels seemed to be comparable to that of petroleum fuels. Long-term problems such as elastomer degradation, poor life, and difficult cold weather starting may manifest themselves if refiners are unable to meet military specifications. Based on the fuels produced to date, refiners should be able to meet specifications and provide shale fuels suitable for generator set operation. Several fuel properties not covered in military specifications (such as lubricity and hydrocarbon composition) were seen as potential problem areas. A recommended test procedure has been provided to test the areas of concern presented in this report. Author (GRA)

EVALUATION OF HYDROCRACKING CATALYSTS FOR CONVERSION OF WHOLE SHALE OIL INTO HIGH YIELDS OF JET FUELS Final Report, Dec. 1979 - Oct. 1981

A. M. TAIT and A. L. HENSLEY Wright-Patterson AFB, Ohio AFWAL Oct. 1981 196 p refs

(Contract F33615-79-C-2095; AF PROJ. 3048)

(AD-A112820; M81-65; AFWAL-TR-81-2098) Avail: NTIS HC A09/MF A01 CSCL 21D

A catalyst development and screening program has led to a formulation capable of upgrading whole shale oil into high yields of military jet fuel in a single operation. The catalyst is multifaceted in its functionality in that it sequentially saturates, denitrogenates, and hydrocracks the feedstock in the presence of high levels of contaminants, such as organic nitrogen compounds and ammonia, while maintaining a high selectivity towards jet-fuel, boiling range material. The catalyst, developed by optimization of both chemical and physical properties, consists of 1.5% cobalt oxide, 10% chromium oxide, and 15% molybdenum oxide on a support of 50% ultrastable molecular sieve in alumina. The effectiveness of the catalyst for the direct upgrading of an Occidental whole shale oil was demonstrated in a 100-day test. The feed, containing approximately 15 weight percent material boiling within the range for JP-4 and containing 13,000 ppm nitrogen, was upgraded to a water-white product containing 1 to 3 ppm nitrogen and approximately 75% JP-4 material. The hydrogen consumption required for this level of upgrading and conversion was approximately 1800 SCFB. The catalyst developed represents an advance in shale oil upgrading technology over more conventional petroleum-based technology. Author (GRA)

A selection of commercial aircraft airframe fuel systems has been studied to determine areas where incompatibility with antimisting kerosene fuel (AMK) may exist. Incompatibility can be due to reduced fuel system component performance with AMK or shear degradation of the AMK by the fuel system components. Survey results, to date, indicate that potential component performance problems with AMK are more significant than loss of AMK flammability protection due to shear degradation. Components of interest include ejector pumps, fuel filters, and auxiliary power units. The solubility of water in AMK and its effect on fuel system performance under actual operating conditions is also of major importance. Author (GRA)

LIQUID FOSSIL FUEL TECHNOLOGY Quarterly Technical Progress Report, Apr. - Jun. 1981

Oct. 1981 72 p

(DE82-004725; DOE/BETC/QPR-81/2) Avail: NTIS HC A04/MF A01

Highlights of progress made during the quarter ending June, 1981, are presented. Cation exchange capacity of oil and gas wells was determined using a semi-automated procedure. The equivalent alkane carbon number (EACN) was determined for Delaware-Childers oil. It was shown that for this oil, the type of surfactant and alcohol used causes the EACN to vary on unusual amount. Arsenic compounds from samples of Green River oil shale kerogen was identified (both inorganic and organometallic compounds). The concepts of adsorption isotherm, used for determining the thermodynamic properties of surfactant systems, has undergone some changes in order to better represent the physical model. A derivation of the new ideas and their application to immersion measurements are described. A method for analysis of alcohols in water, hydrocarbon mixtures, or exhaust gases was developed. The method, which utilizes two gas chromatographs, analyzes methanol, ethanol, and other alcohols up through the C4 group. DOE

ANALYSIS OF POTENTIAL METHODS TO DETERMINE VOLATILITIES OF HEAVY CRUDE OILS Final Report

R. J. BRYAN Dec. 1981 60 p refs

(Contract EPA-68-02-3509)

(PB82-145384; EPA-909/9-81-004) Avail: NTIS HC A04/MF A01 CSCL 21D

Alternative methods to measure the volatility of heavy crude oil are discussed. The work was restricted to a literature search and inquiries made to informed government and industry groups. Methods investigated include developing data to extend the temperature and vapor pressure range of the correlation nomograph, modifying the Reid vapor pressure method, use of a

vapor composition approach, and determining evaporation losses under controlled conditions. Sampling and analytical problems were evaluated for the alternatives. A recommendation was made to conduct further studies on the vapor composition method. GRA

SYNTHETIC FUELS DEVELOPMENT IN THE UPPER COLORADO REGION: SECTION 13(A) WATER ASSESSMENT REPORT
Jul. 1981 138 p refs
(PB82-153761) Avail: NTIS HC A07/MF A01 CSCL 13B

The following general conclusions and major specific findings were reached during the course of the water assessment for the Upper Colorado region. The production of synthetic fuels in the Upper Colorado River region by the extraction and processing of oil shale and/or coal, will require significant quantities of water. The overall supply of ground and surface water resources in the region is sufficient to accommodate a synthesis production level of nearly 3 million barrels oil equivalent per day. While the gross water supplies in the region are sufficient for accelerated synfuels development, water supply problems are apparent in some areas. GRA

INVESTIGATION OF THE GEOKINETICS HORIZONTAL IN SITU OIL SHALE RETORTING PROCESS Quarterly Report, Jul. - Sep. 1981
J. R. GILBERT Nov. 1981 30 p refs
(Contract DE-FC20-78LC-10787)
(DE82-004273; DOE/LC-10787/86) Avail: NTIS HC A03/MF A01

The development of an in-situ process for recovering shale oil is reported. A retort No. 26 was loaded with explosives on August 5 and 6. On August 7, retort No. 26 was detonated. The retort No. 26 blast was was highly successful. Following the blast of retort No. 26 preparations are made for the ignition of retort No. 25. Equipment and piping were set in place and the instrumentation systems were wired in. Ignition for retort No. 25 is scheduled for mid to late October 1981. The retort No. 26 Postblast coring program continues. With the ignition of retort No. 25 the anaytical lab began constant monitoring of the retort burn. DOE

INVESTIGATION OF PROBLEMS AND BENEFITS OF UNDERGROUND MULTIPLE SEAM COAL MINING Final Technical Report
M. M. SINGH and M. F. DUNN Washington DOE Oct. 1981 325 p refs
(Contract DE-AC01-79ET-14242)
(DE82-002807; DOE/ET-14242/T2) Avail: NTIS HC A14/MF A01

It is estimated that over 156 billion tons of coal in the United States are amenable to multiple-seam mining. However, currently most operations mine only a single seam, and in the past indiscriminate practices have sterilized large amounts of coal in contiguous seams. In the interests of conservation, it is imperative that procedures be followed that enhance resource recovery. The total life-cycle costs of mining are site specific because of the wide variations in land acquisition costs, capital expenditures, resource recovery, labor productivity, and geological conditions. However, under similar circumstances the costs of single- and multiple-seam mining are within 5 percent, using the best available technology. Improvements in present methods could lower costs of multiple-seam mining further, making it more competitive. Ground control (entailing roof support, bumps, and subsidence) is the most important technical problem encountered in multiple-seam mining, mainly caused by remnant pillars. DOE

The six Trans-Pecos Texas quadrangles (Van Horn, Pecos, Marfa, Port Stockton, Presidio, and Emory Park) were surveyed. The aeromagnetic gravity and geochemical data, their processing, and their analysis are discussed. The geologic history and setting of the Trans-Pecos are discussed along with the uranium potential of the region. Uranium anomalies and occurrences are present in the study area, and information is presented on 33 drill holes into these targets. A folio of maps reduced to a scale of 1:500,000. Geologic maps for each of the six quadrangles are included and the geophysical maps have been prepared to be overlays for the geologic maps. Residual aeromagnetic anomaly, complete Bougner gravity anomaly, flight line index, gravity station index, and anomaly interpretative maps were prepared for each quadrangle. A large suite of digitally processed maps of gravity and aeromagnetic are included. DOE

GEOTHERMAL POTENTIAL ON KIRTLAND AIR FORCE BASE LANDS, BERNALILLO COUNTY, NEW MEXICO
P. R. GRANT, JR. (Energy Resources Exploration, Inc.) Oct. 1981 65 p refs
(Contract DE-AC04-76DP-00789)
(AD-A107044; SAND-81-7141) Avail: NTIS HC A04/MF A01 CSCL 08H

Public policy expressed in a number of national directives in recent years stresses the conservation of conventional fuel supplies, a switch to alternative fuels, and the application of advanced energy technologies at federal installations. Natural gas currently furnishes 85 to 95 percent of the average 94 x 1,000,000 Btu/hr energy requirements for space heating and cooling at Kirtland Air Force Base. Studies of alternatives to the use of natural gas at the base include examination of the geothermal option. Four of North America's major physiographic provinces coalesce in central New Mexico on or near Kirtland AFB. Their junction is identified throughout much of this region by a tectonic depression occupied by the Rio Grande that is structurally complex, stratigraphically and hydrologically unique, and coincides with geologically recent volcanic centers. This trough, the Rio Grande rift, has been identified as a major geothermal resource area. The western part of Kirtland AFB is in the Albuquerque Basin segment of the Rio Grande rift. Extensive sampling and geochemical analysis of groundwater in and near the base disclosed no significant geothermal parameters. However, structural conditions and current hydrologics regimes strongly suggest that thermal waters would be masked by near surface, low temperature meteoric water originating as rain and snowfall in the nearby mountains. GRA

INVESTIGATION INTO THE ECONOMY OF METHANE GAS UTILIZATION IN SEWAGE TREATMENT PLANTS Final Report
P. WOLF Bonn Bundesministerium fuer Forschung und Technologie Mar. 1982 154 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-82-025; ISSN-0340-7608) Avail: NTIS HC A08/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 32

The economic feasibility of methane gas utilization in small and medium sized sewage treatment plants was studied. Assuming that rising energy costs make this energy source attractive, existing and theoretical model plants of various sizes were investigated by considering different price scales for electric power and fuel oil. This was done with variation of the kind of biological sewage treatment, sludge treatment, and of kinds and facilities of methane gas utilization. Results show that using methane gas for power generation is relatively economic in comparison to alternative methods of gas utilization for treatment plants bigger than 50,000 population equivalent. THE GAS TURBINE ENGINE
D. DRIVER, D. W. HALL, and G. W. MEETHAM (Rolls-Royce, Ltd., Derby, England) In: The development of gas turbine materials. London, Applied Science Publishers, 1981, p. 1-30. refs

An historical account is given of the developments in gas turbine engine mechanical design which, by increasing operating temperature requirements in their evolution towards greater thrust and lower fuel consumption, have strongly affected the choice of component materials. The desire to reduce powerplant weight, and especially the weight of rotating components, has also been a significant factor in the development of materials. Compressor materials, which were largely aluminum alloy in the earliest gas turbine engines, were supplanted by steels as temperatures rose above 200 C in the early 1950s; the development of high specific strength titanium alloys led to their application to compressor blades and casings after 1960. Combustion chamber and turbine materials have been a succession of increasingly corrosion-resistant nickel-based superalloys. Attention is also given to drive shafts and bearings. O.C.

APPROACH TO THE REALIZATION OF A CLOSED CYCLE OCEAN THERMAL ENERGY CONVERSION /OTEC/ SYSTEM
T. KAJIKAWA Electrotechnical Laboratory, Researches, no. 206, Aug. 1981. 225 p. In Japanese, with abstract in English. refs

The design and operational features and goals of a Japanese 1 MWe Ocean Thermal Energy Conversion (OTEC) demonstration plant are described. Japan research and development efforts in OTEC systems are reviewed, along with results which have encouraged the decision to construct the demonstration plant. The plant is being designed for implementation in the seas around Japan, is required to function for 6 mos/yr, and will provide engineering data on the performance of both tube and shell type heat exchangers. The initial test will be run using Freon 22 as the working fluid, followed by NH3 in subsequent trials. The system will be barge-mounted and have a cooling water pipe fixed by single-point mooring. Mainly a proof of principle in large-scale OTEC, the plant will provide a test bed for environmental monitoring and power transmission through the sea, and will serve as a model for a 10 MWe plant. FUTURE AUTO ENGINES - COMPETITION HEATS UP
C. RAIN High Technology, vol. 2, May-June 1982, p. 39-47.

The conventional internal combustion engine will remain an important factor in future automobile engines because it is perfectly suited to the widely varying conditions of city and highway driving, and engineers continue to eke out design advances. Diesels will continue to make strong gains in the near term because of their fuel economy advantage, but their emissions and fuel requirement problems are serious. Stratified charge engines could challenge the diesel because they satisfy governmental goals and would require the lowest retooling costs. Their multifuel capability gives them long-term viability. The gas turbine and the Stirling offer the best fuel economies and are clean-burning, and both run on a wide range of fuels. The Stirling requires engineering to improve its power density and to cut costs, while the gas turbine needs a breakthrough in durable high-temperature ceramics. C.D.

A82-30869
A FREQUENCY AND DURATION METHOD FOR THE EVALUATION OF WIND INTEGRATION
A. J. JANSSEN (Netherlands Energy Research Foundation-ECN, Petten, Netherlands) Wind Engineering, vol. 6, no. 1, 1982, p. 37-58. refs

The theory and extent of applicability of a frequency and duration (FD) method for reliability and energy production studies of wind-assisted utility power systems are detailed. Inputs to the FD are the frequencies and durations of system load levels and forced outages of the production units, which are ranked from base to peak loads. Scheduled down times are added to the calculations to form a model for a perfectly reliable system of units subjected to a random load. An algorithm is developed for evaluation of the effective load, and uncertainties in predictions of annual peak loads are included. A two-state Markov model for the production units is presented and a generalization for multistage generators is made for cases when correlations do and do not exist in the temporal variability of the system load and the intermittent wind energy source. The limited operating flexibility of the wind turbines indicates that some thermal power capacity be given priority as base load units while large scale windfarm development may result in the reduction of the total number of base load plants and an increase in the number of peaking plants. M.S.K.

A82-31572
RELIABILITY ANALYSIS OF COMBINED WIND-ELECTRIC AND CONVENTIONAL GENERATION SYSTEMS
R. G. DESHMUKH (Memphis State University, Memphis, TN) and R. RAMAKUMAR (Oklahoma State University, Stillwater, OK) Solar Energy, vol. 28, no. 4, 1982, p. 345-352. Research supported by the Oklahoma State University and Memphis State University. refs

Probabilistic models for wind-electric conversion systems and their use in the reliability studies of combined wind-electric and conventional generation systems are discussed. Representative numerical results for a typical site in Hawaii for the month with an excellent wind regime are presented. The results and discussions documented in this paper should be helpful in the planning and incorporation of wind-electric systems as a component in the generation mixes of the utility systems of the future. THE ALKALI METAL THERMOELECTRIC CONVERTER /AMTEC/ - A NEW DIRECT ENERGY CONVERSION TECHNOLOGY FOR AEROSPACE POWER
C. P. BANKSTON, T. COLE, R. JONES, and R. EWELL (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 10 p. refs
(Contract NAS7-100)
(AIAA PAPER 82-0862)

A thermally regenerative electrochemical device for the direct conversion of heat to electrical energy, the alkali metal thermoelectric converter (AMTEC), is characterized by potential efficiencies on the order of 15-40% and possesses no moving parts, making it a candidate for space power system applications. Device conversion efficiency is projected on the basis of experimental voltage vs current curves exhibiting power densities of 0.7 W/sq cm and measured electrode efficiencies of up to 40%. Preliminary radiative heat transfer measurements presented may be used in an investigation of methods for the reduction of AMTEC parasitic radiation losses. AMTEC assumes heat input and rejection temperatures of 900-1300 K and 400-800 K, respectively. The working fluid is liquid sodium, and the porous electrode employed is of molybdenum. O.C

FAULT ANALYSIS OF MID-CHANNEL POWER TAKEOFF IN DCW MHD GENERATORS
M. ISHIKAWA, Y. C. L. WU, and M. H. SCOTT (Tennessee, University, Tullahoma, TN) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 9 p. refs
(Contract DE-AC02-79ET-10815)
(AIAA PAPER 82-0922)

Analysis is presented of the effect of loading faults on the mid-channel power takeoff of a diagonal-conducting-wall MHD generator in special loading schemes. Two-dimensional calculations indicate that an open-circuit condition in the upstream load circuit results in a large current density at the power takeoff anode and drives a shorting current over the interframe insulators at the cathode side. A short-circuit condition in the upstream load circuit results in a large current density at the power takeoff cathode and a shorting current over the interframe insulators at the anode side. V.L.

INTERACTION BETWEEN MHD GENERATOR AND DC-AC POWER CONVERSION SYSTEM
D. TANAKA (Niihama Technical College, Niihama, Ehime, Japan) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 8 p. refs
(AIAA PAPER 82-0923)

Transient characteristics of an MHD power generating system including a DC-AC inverter are analyzed using a time-dependent quasi-one-dimensional approximation. The generator model considered is Faraday type of U-25 class with heavy-oil and air combustion gas. It is found that a short-circuited fault of the invertor may become more serious than an open-circuited fault, resulting in significant gas velocity reduction. An open-circuited fault, if retained for more than 5-8 ms, can substantially increase the gas velocity at the upstream end of the fault region. A protection system composed of a fast-acting DC circuit-breaker and an emergency load resistance is proposed. The switching speed of the DC breaker must be about 500 microsec to stop a pressure

increase, resulting, for example, from the short-circuiting of 20 electrode pairs, before it reaches 120% of the initial level. V.L.

(AIAA PAPER 82-0984)

Attention is given to a research project which has the goal to develop a two-stage slagging gasifier-combustor in the form of a high-intensity combustor, taking into account a suitable aerodynamic design of the second stage nozzle which will prevent the separation of the boundary layer as the flow turns from axial to radial direction. The specific objectives of the present investigation are to test the effect of various second-stage nozzle geometries, flow rates, swirl number, and distribution in the first and second stages upon the corresponding flowfield in the second stage. Special emphasis is given to the avoidance of boundary layer separation as the flow turns from axial to radial direction into the MHD disk generator. G.R.

SALINITY-GRADIENT VAPOR-PRESSURE POWER CONVERSION
M. S. OLSSON (California, University, La Jolla, CA) Energy (UK), vol. 7, Mar. 1982, p. 237-246. Research supported by the University of California and Foundation for Ocean Research. refs

The interface between water bodies of different salinities represents a large unexploited source of energy. An energy conversion approach that does not require the use of membranes but uses the differences in vapor pressure between solutions is examined. The resource potential, source solutions, system components, and operating characteristics are evaluated and, where similar, compared to research and development on open-cycle OTEC (Ocean Thermal Energy Conversion). It is shown that salinity-gradient, vapor-pressure power generation is within reach of current technology. (Author)

EFFICIENCIES OF HEAT ENGINES AND FUEL CELLS - THE METHANOL FUEL CELL AS A COMPETITOR TO OTTO AND DIESEL ENGINES
R. W. GLAZEBROOK (Shell Research, Ltd., Thornton Research Centre, Chester, England) Journal of Power Sources, vol. 7, Mar. 1982, p. 215-256. refs

As the real cost of fuel rises the efficiency of energy conversion devices will become of increasing importance. Efficiency is a variable factor depending inter alia on load factor. Whereas heat engines commonly yield optimum efficiencies at near to maximum power, fuel cells yield optimum efficiencies at zero power. Projections based on realistic developments suggest that fuel cells will operate overall with higher efficiencies than heat engines when load factors are below approximately 45%. Road transportation generally operates at load factors much lower than this and represents a suitable market for fuel cells. (Author)

LARGE AREA, HIGH SPEED DETECTORS FOR THE ULTRAVIOLET
S. C. STOTLAR, E. J. MCLELLAN, and C. R. JONES (Los Alamos National Laboratory, Los Alamos, NM) In: Los Alamos Conference on Optics '81, 2nd, Los Alamos, NM, April 7-10, 1981, Proceedings. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 421-425. Research sponsored by the U.S. Department of Energy.

Pyroelectric detectors are a type of energy sensor which provides broadband spectral operation, six-decade linearity and simplicity of application. It is shown that detectors of strontium barium niobate and lithium tantalate are the most useful in the family of pyroelectric materials for UV applications, with response times that range from below 100 picosec to 1 sec. The design of appropriate UV detectors requires characterization of a given pyroelectric substance's pulse damage threshold and the examination of surface preparation techniques. O.C.

THE PROBABILITY DISTRIBUTION OF WIND POWER FROM A DISPERSED ARRAY OF WIND TURBINE GENERATORS
J. CARLIN (Commonwealth Scientific and Industrial Research Organization, Div. of Mathematics and Statistics, Canberra, Australia) and J. HASLETT (Trinity College, Dublin, Ireland) Journal of Applied Meteorology, vol. 21, Mar. 1982, p. 303-313. Research supported by the National Energy Research, Development and Demonstration Council of Australia. refs

A method is presented for estimating the probability distribution of wind power from a dispersed array of wind turbine sites where the correlation between wind speeds at distinct sites is less than unity. The distribution is obtained from a model for the joint probability distribution of wind speeds. This is able to incorporate arbitrary inter-site correlations. It is shown that this joint distribution reduces in the single site case to a wind speed distribution closely approximating the widely used Weibull; the multiple site power distribution is also shown to fit adequately to data on wind speeds from four sites in Western Australia. Results presented in graphical and tabular form for a range of representative cases show that a significant reduction in the variability of total wind power output may result from dispersion of aerogenerator sites; a quantitative guide to the magnitude of these effects is also provided. (Author)

WIND POWER AS AN ELECTRICAL ENERGY SOURCE IN ILLINOIS
W. M. WENDLAND (Illinois State Water Survey, Dept. of Energy and Natural Resources, Champaign, IL) Journal of Applied Meteorology, vol. 21, Mar. 1982, p. 423-428.

A preliminary estimate of the total wind power available in Illinois was made using available historical data, and projections of cost savings due to the presence of wind-generated electricity were attempted. Wind data at 10 m height were considered from nine different sites in the state, with three years data nominally being included. Wind-speed frequency histograms were developed for day and night periods, using a power law function to extrapolate the 10 m readings to 20 m. Wind speeds over the whole state were found to average over 8 mph, the cut-in point for most wind turbines, for from 40-63% of the time. A maximum of 75% run-time was determined for daylight hours in April-May. A reference 1.8 kW windpowered generator was used in annual demand projections for a reference one family home, using the frequency histograms. The small generator was projected to fulfill from 25-53% of the annual load, and, based on various cost assumptions, exhibited paybacks taking from 14-27 yr. M.S.K.

OPTIMIZATION OF THE OPERATION OF A WIND POWER PLANT [OPTIMIZATSIIA REZHIMA RABOTY VETROSILOVOI USTANOVKI]
A. D. MUZYCHENKO and V. V. PSHENICHNYI (Akademiia Nauk Ukrainskoi SSR, Institut Elektrodinamiki, Kiev, Ukrainian SSR) In: Methods and technical tools for current stabilization (Metody i tekhnicheskie sredstva stabilizatsii toka). Kiev, Izdatel'stvo Naukova Dumka, 1980, p. 119-125. In Russian. refs

The paper proposes an optimal design scheme for a wind powerplant, whereby, in the case of variable wind velocity, maximum power extraction corresponding to this variable velocity is achieved. The optimal design must include a voltage-source to current-source converter between the aerogenerator and the buffer battery, and the control of the generator must provide for nonlinear feedback with respect to the rotation velocity of the aerogenerator shaft. BIENNIAL WIND ENERGY CONFERENCE AND WORKSHOP, 5TH, WASHINGTON, DC, OCTOBER 5-7, 1981, PROCEEDINGS
ASME, Transactions, Journal of Solar Energy Engineering, vol. 104, May 1982. 74 p.

The results of studies funded by the Federal government to advance the state of the art of wind energy conversion systems (WECS) construction, operation, applications, and financial viability are presented. The economics of WECS were considered in terms of applicable tax laws, computer simulations of net value of WECS to utilities, and the installation of Mod-2 2.5 MW and WTS-4 4MW wind turbines near Medicine Bow, WY to test the operation of two different large WECS on the same utility grid. Potential problems of increasing penetration of WECS-produced electricity on a utility grid were explored and remedies suggested. The structural dynamics of wind turbines were analyzed, along with means to predict potential noise pollution from large WECS, and to make blade fatigue life assessments. Finally, Darrieus rotor aerodynamics were investigated, as were dynamic stall in small WECS and lightning protection for wind turbines and components.

STRATEGIES FOR MINIMIZING OPERATIONAL IMPACTS OF LARGE WIND TURBINE ARRAYS ON AUTOMATIC GENERATION CONTROL SYSTEMS
T. W. REDDOCH, P. R. BARNES (Oak Ridge National Laboratory, Oak Ridge, TN), J. S. LAWLER (Tennessee, University, Knoxville, TN), and J. C. SKROSKI (Atlantic City Electric Co., Atlantic City, NJ) (Biennial Wind Energy Conference and Workshop, 5th, Washington, DC, Oct. 5-7, 1981.) ASME, Transactions, Journal of Solar Energy Engineering, vol. 104, May 1982, p. 65-69. refs
(Contract W-7405-ENG-26)

A primary application of wind electric generation is expected to be large clusters or arrays of MW-size wind turbines connected to the utility transmission network. Array output power variations due to the uncontrolled nature of the wind resource can cause undesirable dynamic impacts on the utility system, such as excessive frequency and/or tie-line power flow deviations. As a consequence, spinning reserve, unloadable generation, and load following requirements and their associated economic penalties tend to increase as wind electric generation is added to the system. However, if array power variations are limited and/or anticipated, the associated operation and economic penalties can be significantly reduced. In this paper, a number of operational concepts are considered which have the potential to enhance the effectiveness of wind turbine arrays in the utility system.

WIND SYSTEM VALUE ANALYSIS FOR ELECTRIC UTILITIES - A COMPARISON OF FOUR METHODS
J. HARPER, D. PERCIVAL, T. FLAIM (Solar Energy Research Institute, Golden, CO), and R. L. SULLIVAN (Florida, University, Gainesville, FL) (Biennial Wind Energy Conference and Workshop, 5th, Washington, DC, Oct. 5-7, 1981.) ASME, Transactions, Journal of Solar Energy Engineering, vol. 104, May 1982, p. 70-76.
(Contract EG-77-C-01-4042)

A comparison and suggestions for improvements in the SERI-H, SERI Weibull, AERO, and JBF value models for estimation of the economic worth of wind energy conversion systems (WECS) to utilities are made. The simulations comprise projections for operations with and without WECS, fuel, operation, and maintenance costs, base load and generating capacity, reliability, estimated WECS performance, wind resource, fuel escalation rates, and scenarios with pumped hydro storage. The Weibull curve was found to be good in the SERI-H model only for considering winds above cut-in. Reasonable agreement was found at the 5% peak load penetration level for all models. Installing 635 MW of WECS was determined to replace from 126-177.9 MW of conventional utility generator capacity. The breakeven value for Mod 2 installation was determined at $1620/kW for use in southern California and $1850-2470/kW in Michigan.

MEDICINE BOW WIND PROJECT
L. L. NELSON (U.S. Bureau of Reclamation, Denver, CO) (Biennial Wind Energy Conference and Workshop, 5th, Washington, DC, Oct. 5-7, 1981.) ASME, Transactions, Journal of Solar Energy Engineering, vol. 104, May 1982, p. 77-83.

The Bureau of Reclamation (Bureau) conducted studies for a wind turbine field of 100 MW at a site near Medicine Bow, WY, one of the windiest areas in the United States. The wind turbine system would be electrically interconnected to the existing Federal power grid through the substation at Medicine Bow. Power output from the wind turbines would thus be integrated with the existing hydroelectric system, which serves as the energy storage system. An analysis based on 'willingness to pay' was developed. Based on information from the Department of Energy's Western Area Power Administration (Western), it was assumed that 90 mills per kWh would represent the 'willingness to pay' for onpeak power, and 45 mills per kWh for offpeak power. The report concludes that a 100-MW wind field at Medicine Bow has economic and financial feasibility. The Bureau's construction of the Medicine Bow wind field could demonstrate to the industry the feasibility of wind energy.

THE TM 333, A TRUMP CARD FOR TURBOMECA [LE TM 333, ATOUT MAJEUR DE TURBOMECA]
J. MORISSET Air et Cosmos, vol. 20, May 8, 1982, p. 13, 15-17. In French.

The new dual turbine, digital control TM 333 helicopter motor is described as having benefitted from a ten year program in basic aerodynamics, metallurgy, and electronics research. High compression, high expansions in reverse flow digitally controlled engines are coupled with improvements in the gear reductions and joints. The helicopter achieves program goals set in July 1979 of low operating cost, efficient fuel consumption over a broad power range, modular maintenance, fewer parts and lower purchase price, and low specific weight. The power plant furnishes a take-off impulse of 625 kW with a continuous output of 560 kW, with a fuel consumption of 318-330 gr/kWh. Specific performance features are listed and comparisons are made with turbines of other manufacturers.

THE DEVELOPMENT OF MHD ENERGY CONVERSION METHODS IN THE USSR
V. A. KIRILLIN and A. E. SHEINDLIN (Akademiia Nauk SSSR, Institut Vysokikh Temperatur, Moscow, USSR) Indian Academy of Sciences, Proceedings, Section C: Engineering Sciences, vol. 4, Dec. 1981, p. 405-417. refs

It is noted that the development of magnetohydrodynamic (MHD) power conversion systems has evolved to the point where it is possible to commercially introduce MHD power plants into industry. Even with the present level of technology, the sharp increase in thermal efficiency of these plants by as much as 50-60% results in fuel economies of 20-35% and in reductions in generation costs of 6-7%. A description is given of an MHD power plant and its various aggregates. Also given are a review of the state of the art of MHD technology and an outline of the Soviet program for its commercial exploitation. The design of MHD electrical power plants, the interrelation between various aggregates, and the problems arising from nonstandard equipment are discussed.

OPTIMIZATION OF THE REGION OF INVERSE CONVERSION IN A CYCLOTRON MICROWAVE CONVERTER [OB OPTIMIZATSII OBLASTI OBRATNOGO PREOBRAZOVANIIA TSIKLOTRONNOGO SVCH-KONVERTORA]
B. F. BUNIMOVICH, K. V. GRECHUSHKIN, V. V. GURZO, V. N. PROKUSHKIN, and V. S. STALMAKHOV Radiotekhnika i Elektronika, vol. 27, May 1982, p. 1004-1008. In Russian. refs

Nonrelativistic equations of electron motion in varying magnetic and electric fields in a thin-sphere segment are presented. An analysis is given of the geometry-optimization of a collector with the aim of increasing the efficiency of inverse conversion in microwave converters (such as those planned for systems involving microwave power transmission from satellite solar power stations to earth). It is shown that high efficiency of the inverse-conversion region can be achieved at lengths of magnetic-field variation that are much greater than the cyclotron wavelength. This approach is particularly applicable to converters with plane-symmetric magnetic-field reversal. B.J.

AIR COOLING OF GAS TURBINE BLADES
O. N. FAVORSKII and S. Z. KOPELEV (Teploenergetika, vol. 28, Aug. 1981, p. 7-11.) Thermal Engineering, vol. 28, Aug. 1981, p. 435-438. Translation. refs

During the last 20 years, the gas temperature at the inlet of aircraft gas turbines has been raised by 450 K to a temperature of 1650 K. The achievement of the current high operational temperatures, which have led to a considerable enhancement in engine efficiency, has been largely made possible by the development of suitable approaches for cooling the gas turbine blades. The various factors involved in designing an effective cooling procedure are considered, taking into account the necessity that the involved flow processes must not result in a lowering of engine efficiency, and, in connection with large temperature gradients or the introduction of stress-raising design features, must not unduly reduce the operational life of the engine. Attention is given to the internal convective and the convection-film air cooling of blades, the promotion of flow turbulence by means of internal baffles, the hydraulic resistance of internal cooling channels, and merits and drawbacks of perforations. G.R.

SWITCHING NETWORKS FOR REALISATION OF VARIABLE DC TRANSFORMERS COUPLED TO RECTANGULAR ARRAYS
S. SINGER (Tel Aviv University, Tel Aviv, Israel) IEE Proceedings, Part G - Electronic Circuits and Systems, vol. 129, pt. G, no. 3, June 1982, p. 69-75.

The process by which the structure of a rectangular array with variable interconnections is changed can be described by an equivalent circuit in which a nonvariable array is coupled to the load by means of a variable 'DC transformer' (DCT). This kind of array can be applied in cases in which it is necessary to match the source and the load, when either one or both are composed of identical elements which can be organized into a rectangular array structure. Applications of the considered approach are related to maximum power trackers of photovoltaic systems, voltage multipliers, electric cars, and a special type of DC/AC convertor. A description is presented of the realization of a variable array by means of switching networks using a minimum number of switching elements. G.R.

AGT 100 AUTOMOTIVE GAS TURBINE SYSTEM DEVELOPMENT
H. E. G. HELMS (General Motors Corp., Detroit Diesel Allison Div., Indianapolis, IN) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 11 p. Research sponsored by the U.S. Department of Energy
(Contract DEN3-168)
(AIAA PAPER 82-1165)

General Motors is developing an automotive gas turbine system that can be an alternate powerplant for future automobiles. Work sponsored by DOE and administered by NASA Lewis Research Center is emphasizing small component aerodynamics and high-temperature structural ceramics. Reliability requirements of the AGT 100 turbine system include chemical and structural ceramic component stability in the gas turbine environment. The power train system, its configuration and schedule are presented, and its performance tested. The aerodynamic component development is reviewed with discussions on the compressor, turbine, regenerator, interturbine duct and scroll, and combustor. Ceramic component development is also reviewed, and production cost and required capital investment are taken into consideration. D.L.G.

AGT101 AUTOMOTIVE GAS TURBINE SYSTEM DEVELOPMENT
R. A. RACKLEY and J. R. KIDWELL (Garrett Turbine Engine Co., Phoenix, AZ) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 8 p. Research sponsored by the U.S. Department of Energy
(Contract DEN3-167)
(AIAA PAPER 82-1166)

The AGT101 automotive gas turbine system consisting of a 74.6 kw regenerated single-shaft gas turbine engine, is presented. The development and testing of the system is reviewed, and results for aerothermodynamic components indicate that compressor and turbine performance levels are within one percent of projected levels. Ceramic turbine rotor development is encouraging with successful cold spin testing of simulated rotors to speeds over 12,043 rad/sec. Spin test results demonstrate that ceramic materials having the required strength levels can be fabricated by net shape techniques to the thick hub cross section, which verifies the feasibility of the single-stage radial rotor in single-shaft engines. CERAMIC APPLICATIONS IN TURBINE ENGINES
J. A. BYRD and H. E. HELMS (General Motors Corp., Detroit Diesel Allison Div., Indianapolis, IN) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 12 p. Research supported by the U.S. Department of Energy and NASA.
(AIAA PAPER 82-1168)

In the past the potential of vehicular gas engines could not be realized because component materials served to limit the turbine operating temperature, thereby restricting fuel economy and initial cost. It was, therefore, not possible for the vehicular gas turbine to compete with more conventional engines. The emergence of low-cost, high-temperature ceramic components has the potential to reverse this situation. For example, the Allison GT404 engine, operating with ceramic components at turbine inlet temperatures up to 2350 F to 2500 F, has the potential of a fuel economy which is better than that of current Diesel engines. The Allison AGT100 engine operating with ceramic components offers the possibility of a 30% improvement in fuel economy over 1985 spark ignition engines. The materials considered for an employment in the ceramic components include silicon carbide, silicon nitride, aluminum silicate, and lithium aluminum silicate. G.R.

AGT100 TURBOMACHINERY
D. L. TIPTON and T. F. MCKAIN (General Motors Corp., Detroit Diesel Allison Div., Indianapolis, IN) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 11 p. Research supported by the U.S. Department of Energy
(Contract DEN3-168)
(AIAA PAPER 82-1207)

High-performance turbomachinery components have been designed and tested for the AGT100 automotive engine. The required wide range of operation coupled with the small component size, compact packaging, and low cost of production provide significant aerodynamic challenges. Aerodynamic design and development testing of the centrifugal compressor and two radial turbines are described. The compressor achieved design flow, pressure ratio, and surge margin on the initial build. Variable inlet guide vanes have proven effective in modulating flow capacity and in improving part-speed efficiency. With optimum use of the variable inlet guide vanes, the initial efficiency goals have been demonstrated in the critical idle-to-70% gasifier speed range. The gasifier turbine exceeded initial performance goals and demonstrated good performance over a wide range. The radial power turbine achieved 'developed' efficiency goals on the first build. COMBUSTOR DEVELOPMENT FOR AUTOMOTIVE GAS TURBINES
P. T. ROSS, J. R. WILLIAMS (General Motors Corp., Detroit Diesel Allison Div., Indianapolis, IN), and D. N. ANDERSON (NASA, Lewis Research Center, Cleveland, OH) AIAA, SAE, and ASME, Joint Propulsion Conference, 18th, Cleveland, OH, June 21-23, 1982, AIAA 9 p. Research supported by the U.S. Department of Energy refs
(Contract DEN3-168)
(AIAA PAPER 82-1208)

The development of a combustion system for the AGT 100 automotive gas turbine engine is described. A maximum turbine inlet temperature of 1288 C is reached during the regenerative cycle, and air up to 1024 C is supplied to the combustor inlet. A premix/prevaporization ceramic combustor employing variable geometry to control burning zone temperature was developed and tested. Tests on both metal and ceramic combustors showed that emissions were a function of burner inlet temperature (BIT). At 999 C BIT, NO(x) emissions were two orders of magnitude below program goals, and at the same temperature but at a different variable geometry position, the CO was 30 times below program goal. Tests to evaluate the durability of the ceramic materials showed no failures during steady-state operation; however, some cracks developed in the dome during extended transient operation. C.D.

A82-35229
INDUCTIVE POWER TRANSFER FOR PROPULSION
C. E. WALTER (California, University, Livermore, CA) Journal of Advanced Transportation, vol. 16, Spring 1982, p. 73-86. refs
(Contract W-7405-ENG-48)

Current research and development work on inductive power transfer to moving road vehicles at the Lawrence Livermore National Laboratory is described. The Roadway Powered Electric Vehicle (RPEV) project involves the use of an air gap transformer which inductively couples the primary power source in the roadway to the secondary, which is suspended beneath the vehicle. Incorporating electrical battery storage for operation independent of the primary power source, this scheme could provide highway transportation with no visual or audible presence, no noxious fumes, and without dedicated use constraints such as those of railways. Attention is given to the design details of roadway power components and automobile power system configuration, and the impact on electrical utility generating capacity is assessed. An appeal is made for a continuation of substantial state and federal funding of RPEV research, on the grounds of the severity of national dependence on imported petroleum. O.C.

CERAMIC COMPONENTS FOR AUTOMOTIVE AND HEAVY DUTY TURBINE ENGINES - CATE AND AGT 100
H. E. HELMS and J. A. BYRD (General Motors Corp., Detroit Diesel Allison Div., Indianapolis, IN) American Society of Mechanical Engineers, International Gas Turbine Conference and Exhibit, 27th, London, England, Apr. 18-22, 1982, 10 p. refs
(ASME PAPER 82-GT-253) MEMBERS, $2.00; NONMEMBERS, $4.00

Detroit Diesel Allison is actively applying advanced ceramic materials to components in gas turbine engines. Silicon carbide, silicon nitride, aluminum silicate, lithium aluminum silicate, and mullite are materials being used in various components in both the DDA GT 404-4 and AGT 100 engines. Approximately 9400 hr of ceramic component operating time in the GT 404 engine has been accumulated, and design, component processing, proof testing, and engine testing experience have begun to show the applicability of ceramic materials in production engines. Material variability, processing procedures, strength characterization, and nondestructive evaluations are emerging as critical but controllable factors. Ceramic components offer the potential of significant fuel consumption improvements in gas turbine engines for vehicles and other applications. (Author)

Significant improvements are reported in turbine engine ceramic thermal barrier coatings, with respect to both hot corrosion resistance and ceramic thermal cycle fatigue. Such coatings in turbine engine hot section airfoils improve engine performance, durability and fuel economy. After an historical account of ceramic coating development, attention is given to the recent development of mechanically segmented, or microcolumnar structure, coatings produced by the physical vapor deposition (PVD) of ceramic materials on metallic turbine airfoil components. PVD coatings accommodate thermal cycle stresses due to thermal expansion coefficient differences between the coating and its metallic substrate. Hot corrosion, erosion, and thermal fatigue protection properties are considered, and it is concluded that hot corrosion protection is provided for a wide range of fuels which includes the emerging alternate, coal-derived formulations. O.C.

PROGRESS IN THE DEVELOPMENT OF ENERGY EFFICIENT ENGINE COMPONENTS
R. W. BUCY (General Electric Co., Cincinnati, OH) American Society of Mechanical Engineers, International Gas Turbine Conference and Exhibit, 27th, London, England, Apr. 18-22, 1982, 7 p. refs
(Contract NAS3-20643)
(ASME PAPER 82-GT-275) MEMBERS, $2.00; NONMEMBERS, $4.00

Component test results are presented for the NASA Energy Efficient Engine program, whose design goals relative to the CF6-50C reference engine include a 12% reduction in specific fuel consumption, 5% reduction in direct operating costs, and 50% reduction in specific fuel consumption deterioration rate over the course of commercial service. Emphasis is placed on the engine's high pressure compressor, which has a design pressure ratio of 23:1, and has completed a series of component tests whose resulting configuration is expected to meet all major objectives of the program. Descriptions are given of the core engine and integrated core/low spool tests, and system test benefits are discussed. Attention is given to the design features of the engine's double annular combustor, high and low pressure air turbines, and scale model exhaust mixer. O.C.

This paper deals with the second area of Edison's wind energy R&D program: the demonstration of various WTG designs to provide, over a period of two to three years, the data needed to support the planning, installation and operation of WTGs on a commercial scale. The overall scope of the program is to document the performance of the WTGs being tested, to assess the operation and maintenance requirements of future WTGs, to train Edison personnel as WTG operators, and to evaluate the impact of WTGs on the Edison electrical system. The company is currently assessing horizontal-axis and vertical-axis WTGs. The results from the test program will provide information about specific performance characteristics and, at the same time, give Edison general operating experience with wind turbines. From the program Edison will be better able to properly judge the role that wind turbines can play in meeting future electrical generation needs. (Author)

This paper examines the two basic applications of SWECS - remote and utility interface - in the context of the products of the North Wind Power Company. First, the discussion of remote power briefly reviews the history of this type of application, describes

the specifications of the HR2 high reliability 2kW wind system, and examines in detail two commercial applications in the petroleum industry - their operation, environment and performance. Second, the discussion of utility interface briefly reviews the history of the LI6 line interface 6kW wind system, and discusses its potential application in small commercial windfarms, remote community power systems and dispersed industrial, residential and agricultural applications. Finally, a perspective on the future of small wind energy technology is given. (Author)

A review of the development and performance of the DAF Indal 50 kW vertical axis Darrieus wind turbines shows that a high level of technical development and reliability has been achieved. Features of the drive train, braking and control systems are discussed and performance details are presented. A description is given of a wind-diesel hybrid presently being tested. Details are also presented of a 375 kW VAWT planned for production in late 1982. A discussion of the economics of both the 50 kW and 375 kW VAWTs is included, showing the effects of charge rate, installed cost, operating cost, performance and efficiency. The energy outputs are translated into diesel fuel cost savings for remote communities. (Author)

(ASME PAPER 82-PET-7) MEMBERS, $2.00; NONMEMBERS, $4.00

A key problem in wind turbine siting is estimating how a given wind turbine will perform at a given site. Solving this problem requires a model for converting wind information from a site into accurate simulations of how a wind turbine installed at that site would have performed. This paper reviews current procedures for modeling wind turbine energy production and discusses the strengths and weaknesses of each procedure. Wind turbine performance simulations are compared at typical wind turbine sites. Comparisons of these simulations, as well as comparisons with existing data from actual wind turbine installations, suggest that accurate estimates of energy production for large wind turbine generators require simulation of the wind turbine's start-up, shutdown and, for the case of horizontal axis machines, yawing behavior. (Author)

THE DEVELOPMENT OF A 10 METER WIND TURBINE GENERATOR
H. MEYER (Windworks, Inc., Mukwonago, WI) American Society of Mechanical Engineers, Energy-Sources Technology Conference and Exhibition, New Orleans, LA, Mar. 7-10, 1982, 5 p. Research supported by the U.S. Department of Energy.
(ASME PAPER 82-PET-10) MEMBERS, $2.00; NONMEMBERS, $4.00

An 8 kW, 10 m-diameter horizontal axis wind system whose prototype has been recently tested is described. The wind turbine is suitable for use in dispersed, interconnected applications. After prototype development, the design was refined and re-engineered for volume production. Power is generated by means of a direct-drive, permanent magnet alternator which operates over a variable speed range. This feature allows fixed turbine blade pitch operation up to rated wind speed, while maintaining optimum aerodynamic characteristics. Attention is given to the helicopter-like flapping rotor design, generator configuration, and tower erection method. O.C.

INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, 3RD, DANMARKS TEKNISKE HOJSKOLE, LYNGBY, DENMARK, AUGUST 26-29, 1980, PROCEEDINGS
H. S. STEPHENS, (ED.) and C. A. STAPLETON (British Hydromechanics Research Association, Cranfield, Beds., England) Symposium sponsored by the British Hydromechanics Research Association. Cranfield, Beds., England, BHRA Fluid Engineering, 1980. 633 p $66.25

The design, fabrication, materials, and numerical modeling of large and small wind turbines, wind energy programs in various countries, and methods of measuring the available wind resource are discussed. Attention is given to the DOE/NASA, SERI, and U.K. wind turbine development and testing programs, as well as to blade construction for large WECS. Siting considerations are examined in terms of surveys performed in Hawaii, California, and New Hampshire. The choice of generator type is investigated, as are structural design criteria for large WECS, drive train assemblies, measurements of WECS output, and the performance of Danish, German, and Swedish experimental machines. The aerodynamic modeling of vertical axis wind turbines, the performance of wind turbine arrays, and remote applications of wind turbine technology are detailed. Finally, methods of integrating wind-derived electricity with the grid are explored. M.S.K.

ASSESSMENT OF OFFSHORE SITING OF WIND TURBINE GENERATORS
D. LINDLEY, P. B. SIMPSON (Taywood Engineering, Ltd., Southall, Middx., England), U. HASSAN (ERA Technology, Ltd., Leatherhead, Surrey, England), and D. MILBORROW (Central Electricity Generating Board, Central Electricity Research Laboratories, Leatherhead, Surrey, England) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 17-42. refs

A technical and economic assessment has been made of the generation of electricity using wind turbine generators located in shallow waters off the coast of the United Kingdom. This assessment entailed studies of siting criteria, meteorology, sea surface conditions, engineering geology, construction materials, support structures, marinisation of complete WTG installations, effect of cluster configuration on performance, electrical transmission and control, availability and environmental issues. On the basis of these studies, an analysis has been made to determine economic and performance trends of clusters of up to 200 machines of a maximum of 10 MW individual generating capacity. Generating costs based on central values in the ranges of the design parameters are found to exceed predicted economic value in the year 2000 by a factor of about 3, whilst with large diameter

turbines and average wind speeds exceeding the central value this factor is reduced to about 2. (Author)

A82-36078
WIND POWER GENERATION FOR NATIONAL AND REGIONAL GRID SYSTEMS DESIGN PROPOSALS FOR GENERATION AND TRANSMISSION
R. FREER In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 43-60. refs

Design features of large and medium WECS, the utility interconnection, and siting for introduction of wind-derived electricity as an integral part of the U.K. national electric grid are described. Noting that the technology to fabricate the machines exceeds the experience with applications, the construction of small test complexes of wind turbines is recommended in representative rural, coastal, and offshore sites to gain operational data and increase the ability to relate local winds to wind systems output. A hydraulic power system involving oil pumped by the rotor shaft to drive a generator at the base of the tower is planned for the U.K. WECS, producing 2 MWe at 40 rpm in a 15 m/sec wind, and 4.2 MW in a 21 m/sec wind. Control methods of arrays are examined, along with the 10-15 MW/sq km sized land-based farms. Offshore facilities are foreseen to require transmission of power to a central facility before transmission to shore to reduce costs. M.S.K.

A82-36079
A REVIEW OF THE SERI WIND ENERGY INNOVATIVE SYSTEMS PROGRAM
I. E. VAS and P. SOUTH (Solar Energy Research Institute, Golden, CO) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 61-74. Research supported by the U.S. Department of Energy.

Features of innovative wind energy conversion systems evaluated and/or tested at the Solar Energy Research Institute are reviewed. Cost, performance, and engineering data were acquired for the machines, along with proof-of-concept demonstrations. Machines which were examined included a straight-bladed vertical axis wind turbine with circulation controlled airfoils, the Grumman tornado wind energy tower with louvers, a wind-powered charged aerosol generator which has no moving parts and gains energy directly from the wind, and the electrofluid dynamic wind driven generator for providing low-mobility charged water droplets for deriving energy from the wind. Extracting mechanical energy from vortex flows which yield the latent heat of water vapor in humid air was tested, as were the Madaras cylinders mounted on rail cars on tracks, a vortex augmentor WECS, and an oscillating vane wind energy converter. M.S.K.

DEVELOPMENT OF COMPOSITE BLADES FOR LARGE WIND TURBINES
H. W. GEWEHR (Kaman Aerospace Corp., Bloomfield, CT) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 133-140.

The design, analysis, and tests of a 150 ft length fiberglass wind turbine blade and the development of a similar set of blades for the NASA Mod-1 WECS are described. Transverse filament tape was employed in order to lower costs on the composite blades. The woven roving E-glass tape featured fibers uniformly oriented across the tape width. Components of the blade included a wound glass/epoxy spar, an E-glass/polyester trailing edge spline made from pultrusions, sandwich panels made of resin impregnated kraft paper honeycomb faced with E-glass cloth epoxy skins, and a steel hub adaptor. The blade weighed 16,300 kg. Ultimate strength properties are given, as well as costs at $22/kg. The blades for the Mod-1 are intended to last through 400 million fatigue cycles over 30 years of operation. Details of lightning tests which proved the blade suffered minimal damage in a strike are presented. M.S.K.

A82-36084
EVOLUTION OF THE FLEXIBLE BLADE CONCEPT /VERTICAL AXIS WINDMILLS/
J. M. DE LAGARDE (Aerowatt Co.; Montpellier, Ecole Nationale Superieure Agronomique, Montpellier, France) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 159-168.

Operational characteristics of a panemone windmill with elastically fastened rotors are examined qualitatively and modeled numerically. The blades freely rotate at the leading edge while the trailing edge is spring-attached to the axle of the machine. The spring allows the blade to maintain a relatively constant angle of attack into the wind, thus raising the coefficient of lift in more regions of the rotation, permits self-starting, and provides efficiencies approaching that of Darrieus wind turbines. An inviscid model for panemones is developed and drag forces are considered for rigidly connected blades and for the elastically fastened rotors. The latter are found to maintain a constant circumferential speed once a maximum is reached, and then begin aerodynamic braking at another, higher limit. Optimum solidity choices are discussed. M.S.K.

A82-36085
COMBINED EFFECTS OF DETERMINISTIC AND RANDOM LOADS IN WIND TURBINE DESIGN
A. RAAB (Sikob AB, Sweden) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 169-182. Research sponsored by the Namnden for Energiproduktionsforskning. refs

Deficiencies of modeling the deterministic loading on wind turbine blades as a cumulative sum of wind shear, mean wind, tower shadow, gravitational, and centrifugal forces are examined. It is analytically shown by application of the Palmgren-Miner rule that periodic loadings which coincide in cycle result in damage exceeding the sum of the individual stresses. The necessity of calculating the probability that coincidence of cycles will occur is stressed for making fatigue life predictions for wind turbines, and it is suggested that a weighted sum is useful for simulation or for a probabilistic interaction method. The simulation is developed in terms of sample functions for individual wind speeds. Turbulence is defined by either one- or two point spectra and applied to a

sample point on the blade. Further attention is given to fatigue evaluation as combinations of partial damages M.S.K.

A82-36086
LOAD CASES FOR WIND ENERGY CONVERSION SYSTEMS
G. TORNKVIST (Saab-Scania AB, Linkoping, Sweden) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 183-192. Research supported by the Namnden for Energiproduktionsforskning. refs

Loading forces which impinge on the design of WECS are explored, based on the results of tests in the U.S. and western European countries. Wind characteristics known to influence WECS fatigue life include wind speed duration, extreme wind speed, wind shear, and turbulence. Wind speed duration is obtainable by Weibull distributions which characterize the deviation from a given wind speed in a year, and the probability that a certain speed will occur. Extreme wind speeds are found from historical data locally acquired, while turbulence is modeled in terms of resonant and nonresonant components. Wind shear is defined in gradients up to 10 m/sec. The Palmgren-Miner rule is noted to have been applied to fatigue life predictions for the NASA Mod-1 wind turbine. Finally, malfunctions during normal operating sequences including start-up, power generation, and parking are discussed. M.S.K.

A82-36087
APPLICATION OF THE FINITE ELEMENT METHOD TO THE STUDY OF THE BEHAVIOUR OF BLADES OF INDUSTRIAL WIND ENERGY SYSTEMS
J. SOREL, D. BAINVILLE, M. MAEGEY (Commissariat a l'Energie Atomique, Paris, France), J. M. NOEL, and G. SEGER (Aerowatt Co., Paris, France) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 193-206.

Finite element analyses of the stresses in the blade root of a commercially available 9.2 m diameter rotor wind turbine were performed and compared to tests results. The blades were an extruded aluminum alloy, internally ribbed with a constant cross sectional profile. Stresses are due to bolt tightening and operating conditions, including inertial loads of weight and centrifugal force. Wind loading occurs in the rotational plane and the plane perpendicular to it, generating a bending moment on the blade. The bending moment then becomes the cumulative effect of aerodynamical and gyroscopic loads. The effects of hollow blade and solid blade construction were examined to find anomalies in the stress distributions. Maximum stresses were found to be located just outside of the footing, and tests with a clamped sample blade which experienced the calculated loads revealed no permanent deformation and agreement with predicted stress. M.S.K.

A82-36088
ON WIND TURBINE POWER MEASUREMENTS
S. FRANDSEN and C. J. CHRISTENSEN (Forsogsanlaeg Riso, Roskilde, Denmark) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 207-222. refs

A statistical treatment of the wind turbine power curve is presented. It is shown that variations in u and p can be handled more conventionally by means of two parameters: The coherent variation along the power curve and the incoherent across the curve. The averaging time problem is discussed. The response of the power train to turbulence in the wind and to grid frequency variations is discussed in a spectral language. A spectral response function for the power train is derived. (Author)

DRIVE TRAIN ASSEMBLY OF THE SWEDISH WTS 3
N. G. BYGGETH, K.-E. HALLSTEN, and L. THORESON (Karlskronavarvet AB, Sweden) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 253-267.

Design features and expected operational characteristics of the Swedish WTS 3 3 MW WECS are reviewed. The wind turbine has a hub height of 80 m, a rotor diameter of 80 m, 2 blades, operates downwind, has a teetered hub, free yaw, and a 1:60 gear ratio. The blades are made of epoxy plastic and fiber glass, pitch controlled by hydraulic activation, and coupled by way of a soft shaft to the drive train. Nominal rotation is at 25 rpm, stepped up to 1500 rpm at the generator. The low speed shaft is provided with a disk brake for stopping and parking the rotor. Specific design considerations for oil drainage, the hub interface, the gear box interface, the low pressure oil return holes from the blade pitch change machinery, and the low pressure oil transfer bearing are discussed. The WTS 3 is intended for 30 yr of operation, with first rotation to have occurred in the summer of 1981. M.S.K.

ALTERNATOR DESIGNS FOR DIRECT COUPLING TO REMOTE WIND ENERGY SYSTEMS
R. W. MENZIES, R. M. MATHUR (Manitoba, University, Winnipeg, Canada), and W. R. BULLOCK (Bristol Aerospace, Ltd., Winnipeg, Canada) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 269-278. refs

System specifications and design considerations for the fabrication of Darrieus wind turbine generators producing up to 20 kW and operating in arctic conditions are reviewed. The conclusions are based on operation of an actual installation on an ice island in the Arctic Ocean. The 7.6 m diameter VAWT started turning in a 14 kph wind and powered the equipment at a GOES satellite relay station. To perform in hostile conditions, the generator was required to feature a low operating speed, have no drag torque at low speeds up to the start-up, yield either dc or 3-phase ac power, and be self-exciting. Major studies concentrated on inductor alternators, and numerical modeling procedures for generator efficiencies, materials, labor costs, and optimization of the airgap length are provided. A permanent magnet alternator was favored for constant voltage application up to 2 kW, while the Guy-type inductor alternator with 3-phase operation was considered best for reliable, higher power performance. M.S.K.

A82-36094
SOME ASPECTS OF SMALL AEROGENERATOR DESIGN AND TESTING
I. K. BUEHRING (Exeter, University, Exeter, Devon, England) and L. L. FRERIS (Imperial College of Science and Technology, London, England) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 297-305. Research supported by the Science Research Council.

The generating and power conditioning system, the testing procedures, and the results of an analog computer simulation of small wind energy conversion system (SWECS) aerodynamics for low-cost SWECS which produce electricity for home and space heating and for grid-interface are described. Various permanent magnet alternators are considered in terms of weight, cost, and power conditioning requirements. A gear box is found to be necessary to meet demands of economy, compactness, and coupling rotor to alternator. Tests with a cambered plate, a sailwing, and a single blade rotor are described in terms of performance in different wind regimes. Control strategies which were explored included uncontrolled operation with a resistive load, load switching, power feedback control, and tip speed ratio control. Best results were obtained with the tip-speed ratio control, which was concluded to be due to its characteristic of transient optimization. M.S.K.

A82-36095
STRUCTURAL DESIGN AND MAINTENANCE POLICIES FOR LARGE WIND TURBINES
D. W. BRIDSON (Exeter, University, Exeter, Devon, England) and P. J. WORTHINGTON (Central Electricity Generating Board, Central Electricity Research Laboratories, Leatherhead, Surrey, England) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 307-321. refs

Aerospace structural design and maintenance policies are reviewed to find policies and procedures suitable for applications to large WECS. Failures occurring from fatigue, corrosion, fretting, erosion, and water ingestion in composites are noted to be predictable to a limited degree, while failure due to overspeed overloading, ice accretion, and accidents are random. Acceptable risk levels are computed and components which cannot be allowed to fail are identified. Fatigue testing procedures which can accurately reflect the expected fatigue life of structural components are outlined, and test results are employed to develop reliable inspection schedules. The introduction of fail-safe design through multiple load paths ensures that no catastrophic failure can occur before inspection due to a transfer of load-bearing burden to structural parts which have not failed. Routine and opportunity visual and nondestructive WECS inspection are described.
M.S.K.

'L-180 POSEIDON' - A NEW SYSTEM CONCEPT IN VERTICAL AXIS WIND TURBINE TECHNOLOGY
O. LJUNGSTROM (Flygtekniska Forsoksanstalten, Bromma, Sweden) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 333-355. Research supported by the Styrelsen for Teknisk Utveckling and Namnden for Energiproduktionsforskning. refs

Operating and design characteristics, along with costs of the 20 MW Poseidon L-180 vertical axis wind turbine (VAWT) for offshore siting are described. The total height is projected to be 210 m, with a turbine diameter of 180 m. Double airfoil blades are attached at one point at the top of the tower and to a base ring with a 60 m diameter at the center of the tower. The two sets of dual blades mounted 90 deg apart would propel the base ring in a track around the tower at 6.4 rpm on rollers, of which every fourth would be a generator. The L-shape of the blade arrangements has been demonstrated to reduce rotor loading oscillations in wind tunnel tests, and additional calculations have shown that reduced loads in parking situations in high winds permit the construction of the 20 MW-sized machine. The design of the machine is noted to be unsuitable in smaller sizes, and construction of the 2.25 m chord blades is detailed. The L-180 is projected to produce 44.5 GWh/yr at 9.5 m/sec mean speeds. M.S.K.

A82-36098
A VORTEX-WAKE ANALYSIS OF A HORIZONTAL-AXIS WIND TURBINE AND A COMPARISON WITH A MODIFIED BLADE-ELEMENT THEORY
M. B. ANDERSON (Cambridge University, Cambridge, England) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 357-374. Research supported by the Science Research Council. refs

A theoretical method is developed for determining the geometry and strength distribution of the vortex-wake generated by a horizontal-axis wind turbine. The angle of relative flow and induced velocities are compared with those from a modified blade-element theory. The blade-element theory includes tip losses which are evaluated from either the Goldstein or Prandtl solution of the potential flow about a helical vortex sheet. (Author)

THE 25 M EXPERIMENTAL HORIZONTAL AXIS WIND TURBINE /25 M HAT/
F. J. C. SCHELLENS (FDO Technische Adviseurs, Amsterdam, Netherlands) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 375-390.

Design consideration and physical dimensions of a 25-m diameter experimental horizontal axis wind turbine (HAWT) in the Netherlands are presented. The turbine is intended for operation in the 5-6 to 17 m/sec regime, yielding an operating time of 4711 hr/yr at a site with a 3258 kWh/sq m/yr wind regime. The HAWT is equipped with a pitch change mechanism for coupling to a dc generator and dc/ac converter. A tip-speed ratio of 8 was chosen, yielding a rotor speed of 8.37 rad/sec, a power coefficient of 0.46, shaft power of 302 k/W, and a blade twist of 14.7 deg. An average power of 57 kWe is expected. Limiting load conditions which impinge on fatigue and elastic deformation behavior are described, noting the large damping modes present due to the use of a concrete tower. The HAWT is an upwind configuration, with a 1/20 gear ratio, a line-commutated converter, and active yaw control M.S.K.

TESTS PERFORMED ON THE 2 MW TVIND WECS
S. A. JENSEN and E. T. D. BJERREGAARD (Danish Ship Research Laboratory, Denmark) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 391-400.

Results from a 16-channel monitoring program on the Tvind 2 MW wind turbine are presented. The WECS has a rotor diameter of 54 m, three blades, operates downwind, has a cone angle of 9 deg, a tilt angle of 4 deg and each blade is constructed of glass-fiber reinforced epoxy. The blades were monitored for strain angular velocity, and position, the shaft for torque, and additional data were gathered on the linear acceleration of the nacelle, the wind speed at hub height, and the wind direction relative to the rotor. A difference in the center of mass of one of the three blades was detected during the torque measurements. The blade was also observed to experience tensile and compressive stresses,

with variations due to gravitational forces. Measurements of the tower wake effect on the torque and blade strains were not possible. M.S.K.

A82-36101
THE EFFICIENCY OF WIND TURBINE CLUSTERS
E. A. BOSSANYI, G. E. WHITTLE, P. D. DUNN, N. H. LIPMAN, P. J. MUSGROVE (Reading, University, Reading, Berks., England), and C. MACLEAN (Reading, University, Reading, Berks.; Science and Engineering Research Council, Rutherford Appleton Laboratory, Didcot, Oxon, England) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 401-416. refs

A computer simulation for the prediction of wind depletion in an array of wind turbines is presented, along with a discussion of the deficiencies and possible improvements in current array prediction techniques. Formulations for determining the available wind velocity profile without, with one, and with the addition of a cluster of wind turbines are explored analytically. Various values for the friction velocity, surface roughness length, and boundary layer thickness are derived. A computer simulation is detailed, taking as input a WECS' operating characteristics and wind speed and as output yields the power and the drag coefficient. It is found that clustering decreases the optimum rated wind speed, that the magnitude of decrease is dependent on the type of machine considered, and that difficulties exist in transferring wind tunnel data to actual wind turbine arrays. M.S.K.

A82-36102
MODELLING OF WIND TURBINE ARRAYS
P. J. H. BUILTJES (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek, The Hague, Netherlands) and D. J. MILBORROW (Central Electricity Generating Board, Central Electricity Research Laboratories, Leatherhead, Surrey, England) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 417-430. refs

Results derived from two sets of wind turbine wind tunnel tests are compared, with emphasis on the accuracy of modeling techniques and the effects of scale. Despite differences in approach, agreement is found between the sets of results, and comparisons with theoretical studies indicate that wind turbine array outputs can be predicted with reasonable accuracy. Although loss of power due to interactive effects is dependent on such factors as the size of the array and the spacing between its units, it is found that losses can be kept to within 20%. It is concluded that cluster configurations with spacings of 5 to 12 rotor diameters will yield power densities on the order of 2-10 mW per kilometer of surface. O.C.

A82-36104
ON WAKE DECAY AND ROW SPACING FOR WECS FARMS
P. A. TAYLOR (Department of the Environment, Atmospheric Environment Service, Ottawa, Canada) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 451-468. refs

A numerical model of wakes in the neutrally stratified atmospheric boundary layer is developed and applied to the flow behind horizontal and vertical axis wind turbines. The model is linearized, uses boundary layer approximations and is integrated across turbine rows but should still provide useful estimates of power reductions at turbines in second and subsequent rows of a WECS farm array. Variations with turbine size and other characteristics are investigated as well as variations due to different surface roughness, wind speed and direction. Comparisons are made with other theories of wake interactions and with wind tunnel investigations. (Author)

A REGIONAL WIND-HYDRO ELECTRICITY SUPPLY SYSTEM
B. SORENSEN (Copenhagen, University, Copenhagen, Denmark) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 533-543. refs

A simulation for a wind-hydro storage system involving a large wind turbine capacity in Denmark reciprocating with the 100% hydro system in Norway is described. A transfer capability either way of 5 GW was assumed for a system in which Denmark would receive hydro-generated electricity when insufficient winds were available in Denmark and Norway would buy wind-derived power to replace hydro power, thus effectively storing fuel, when winds were strong in Denmark. The model included diurnal and seasonal load and wind availability fluctuations, in addition to the historical power capacity of Norwegian hydro. The Danish/Norwegian power ratio was set at 0.3, and Danish wind-produced electricity was found to penetrate the Norwegian system by 3%. Losses from transmission were calculated to be 8% of the wind production. The combined wind/hydro system is noted to eliminate the necessity for thermal power station back-up. M.S.K.

THE CAPACITY CREDIT OF WIND POWER - A NUMERICAL MODEL
B. MARTIN (Australian National University, Canberra, Australia) and M. DIESENDORF (Commonwealth Scientific and Industrial Research Organization, Div. of Mathematics and Statistics, Canberra, Australia) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 555-564. Research supported by the National Energy Research, Development and Demonstration Council. refs

A numerical probabilistic model was formulated to evaluate wind-derived electricity capacity credit as a function of grid penetration levels and the model's sensitivity to several parameters. The simulation included loss of load probability as the fraction of time capacity was less than load, the effective load carrying capacity which could be maintained at different levels of windpower penetration, and a standard wind turbine operating from 4-40

m/sec. Inputs comprised hourly load and wind data, individual unit capacities, forced outages, start-up times, etc. The available wind speed distributions were varied, as were the grid generating composition, the load distribution, and the WECS characteristics. Capacity credit was found to be equal to the average wind power for small WECS penetration, about 0.4 of the available wind energy at 20% penetration, and to reach a constant value at large penetrations. M.S.K.

WIND ENERGY IN ARGENTINA
R. A. BASTIANON (Research and Development Naval Service, Argentina) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Cranfield, Beds., England, BHRA Fluid Engineering, 1980, p. 565-570.

The potential for wind energy generation in Argentina is discussed, and ongoing projects are described. Anemometers have been installed in Patagonia to measure wind speeds at various locations and heights, and an experimental windmill consisting of vanes confined in a cylinder has been tested in a wind tunnel. The economic circumstances of Patagonia and the southern islands are discussed and it is argued that wind power would improve the situation there. The first serious attempt to build a high-performance wind turbine in Argentina is described. C.D.

A82-36112
A VERTICAL AXIS WIND ENERGY CONVERTER WITH STRAIGHT BLADES
H. G. REIMERDES (Aachen, Rheinisch-Westfaelische Technische Hochschule, Aachen, West Germany) In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Symposium sponsored by the British Hydromechanics Research Association. Cranfield, Beds., England, BHRA Fluid Engineering, 1980. 20 p. refs

Engineering considerations and the design of a two-bladed vertical axis wind turbine (VAWT) capable of producing 20 kW in a 7 m/sec wind are presented. An airfoil with a NACA 65(4)-021 profile was chosen, along with equal height-to-diameter ratio, operation at 5-15 m/sec, rotation at 21/min, and a maximum lift coefficient at rated speed. Using diagonal struts for support was found to produce both drag and propulsive forces, with the total drag calculated to be 0.026 for the blades. Wind tunnel tests on a scale model revealed that the required 20 kW could not be attained at the 7 m/sec level, but could at higher speeds, improving the total annual energy output by 20%. Further investigations covered mass forces, wind loading in different operational modes, starting and braking, and snow and ice loads. Wood was chosen as the main structural material to permit ready repairs in developing nations. M.S.K.

THE SOUTHERN CALIFORNIA DESERT WIND-ENERGY ASSESSMENT
E. X. BERRY (Atmospheric Research and Technology, Inc., Sacramento, CA), R. K. HAUSER, W. G. LANE (California State University, Chico, CA), and J. B. PARK, II In: International Symposium on Wind Energy Systems, 3rd, Lyngby, Denmark, August 26-29, 1980, Proceedings. Symposium sponsored by the British Hydromechanics Research Association. Cranfield, Beds., England, BHRA Fluid Engineering, 1980. 12 p. Research supported by the California Energy Commission.

The goals of the ongoing Project Windesert, which has established 25 new microprocessor-based meteorological stations in the southern California desert, are reported. Surface winds are being mapped for windpower applications, and determinations are being made of the level of detail required, the flows over complex terrain, and methodology. The Universal Mercator system was employed to define 10,000 sq km areas within the 90,000 sq km project area. In comparisons of data gathered at different sites, it was found that use of the zonal wind as a climatological base will underestimate the wind regime locally. No general rule of increase of wind speeds with height was implied by the data, and Rayleigh distributions were found to be invalid for predicting available wind power. Indications of enhanced winds over ridges and in troughs were documented. Finally, techniques for ensuring the success of a field-oriented wind survey are reported. M.S.K.

A82-36209
ECONOMIC ANALYSIS OF SMALL WIND-ENERGY CONVERSION SYSTEMS
B. N. HAACK (Ball State University, Muncie, IN) Applied Energy, vol. 11, May 1982, p. 51-60. refs

A computer simulation was developed for evaluating the economics of small wind energy conversion systems (SWECS). Input parameters consisted of initial capital investment, maintenance and operating costs, the cost of electricity from other sources, and the yield of electricity. Capital costs comprised the generator, tower, necessity for an inverter and/or storage batteries, and installation, in addition to interest on loans. Wind data recorded every three hours for one year in Detroit, MI was employed with a 0.16 power coefficient to extrapolate up to hub height as an example, along with 10 yr of use variances. A maximum return on investment was found to reside in using all the energy produced on site, rather than selling power to the utility. It is concluded that, based on a microeconomic analysis, SWECS are economically viable at present only where electric rates are inordinately high, such as in remote regions or on islands. M.S.K.

FRANCE'S SUPERFAST TRAIN
J. DUPUY (Societe Nationale des Chemins de Fer Francais, Paris, France) IEEE Spectrum, vol. 19, July 1982, p. 38-43. refs

Operational characteristics and the testing program for the high speed French National Railroad TGV passenger train service between Paris and southeastern France are described. The train speed is optimized at between 250-300 km/hr on routing that includes 390 km of new track and 36 km of conventional track. Each train set has two power units and eight passenger coaches which draw a total power of 6300 kW from 25 kV lines along the track. The cars were designed with a three meter base, a low carriage, rheostatic and disk brakes, and aerodynamic profiling to reduce air drag. Switching and warning signals are incorporated in the operators console, which receives coded signals from each 3000-m long segment of track to indicate broken rails, power-outs, or oncoming trains. USE OF PULTRUDED REINFORCED PLASTICS IN ENERGY GENERATION AND ENERGY RELATED APPLICATIONS
R. ANDERSON (Morrison Molded Fiberglass Co., Bristol, VA) In: Reinforced Plastics/Composites Institute, Annual Conference, 36th, Washington, DC, February 16-20, 1981, Preprints. New York, Society of the Plastics Industry, Inc., 1981 (Session 22-B). 3 p.

Applications of pultrusion-formed fiber-reinforced plastics (FRP) in the wind, oil, and coal derived energy industries are reviewed. FRP is noted to be a viable alternative to wood, aluminum, and steel for reasons of availability, price, and weight. Attention is given to the development of FRP wind turbine blades for the DOE 8 kW low cost, high reliability wind turbine program. The blades feature a NACA 23112 profile with a 15 in. chord on the system which was tested at Rocky Flats, CO. Fabricating the blades involved a plus and minus 45 deg roving orientation, a heavy fiber-glass nose piece to assure blade strength, and a separately manufactured foam core. Additional uses for FRP products have been found in the structural members of coal stack scrubbers using a vinyl ester resin in a fire retardant formulation, and as low cost, light weight sucker rods for deep well oil drilling. M.S.K.

A82-37549
DETERMINATION OF TEMPERATURE DISTRIBUTION IN THE FLOW OF A HOT GAS ON THE BASIS OF A SELF-REVERSED SPECTRAL LINE PROFILE [OPREDELENIE TEMPERATURNOGO RASPREDELENIIA V POTOKE GORIACHEGO GAZA PO KONTURU SAMOOBRASHCHENNOI SPEKTRAL'NOI LINII]
I. A. VASILEVA, A. V. ORLOV, A. S. URINSON (Akademiia Nauk SSSR, Institut Vysokikh Temperatur, Moscow, USSR), S. GENDZHOV, and B. STEFANOV (B'lgarska Akademiia na Naukite, Institut po Elektronika, Sofia, Bulgaria) Akademiia Nauk SSSR, Doklady, vol. 264, no. 4, 1982, p. 853-856. In Russian. refs

The paper describes a method for determining the temperature distribution in a hot-gas flow on the basis of measurements of self-reversed spectral line profiles along one line of sight. A remotely controlled scanning monochromator was used to measure profiles of the resonance doublet of potassium at 7665 and 7699 A in a flow of combustion products of natural gas with a potassium additive in an MHD facility. Results show that this particular method of determining the temperature distribution in an inhomogeneous flow of radiating gas is particularly applicable to the study of boundary layers in MHD systems. DESIGN AND PERFORMANCE CHARACTERISTICS OF A CW SUBSONIC HF CHEMICAL LASER WITH 120 W POWER OUTPUT
Z. BABAROGIC, I. BELIC, I. MENDAS, and M. TRTICA (Beograd, Univerzitet, Belgrade, Yugoslavia) Review of Scientific Instruments, vol. 53, July 1982, p. 949-951. refs

A transverse flow CW subsonic HF chemical laser is presented which provides up to 46 and 120 W CW output power when argon and helium, respectively, are used as diluent gases. The HF laser power is found to be approximately a linear function of the discharge electrical input power, indicating a constant electrical-to-laser power conversion efficiency of about 0.4%. The best achieved value of the chemical efficiency is about 1.2%, using argon as a diluent gas; the specific power corresponding to the maximum output power of 46 W is about 13 J/g. V.L.

A82-37627
THE EFFECT OF SULFUR ON THE ANODIC H2 /NI/ ELECTRODE IN FUSED LI2CO3-K2CO3 AT 650 C
W. M. VOGEL and S. W. SMITH (United Technologies Corp., Power Systems Div., South Windsor, CT) Electrochemical Society, Journal, vol. 129, July 1982, p. 1441-1445. Research supported by the U.S. Department of Energy. refs

The effects of sulfur on the reaction of H2 at a nickel anode in a molten Li2CO3-K2CO3 fuel cell at 650 C are investigated. Steady-state polarization curves for rotating Ni wires were determined in the presence of H2 gas containing varying amounts of H2S. In the absence of sulfur, the diffusion-limiting currents are observed to be only slightly larger than the limiting currents, while the introduction of H2S leads to a reduction in limiting currents which may be attributed to the poisoning of the Tafel reaction which converts molecular hydrogen into a metal hydride. Results suggest a saturation of the sulfur effect at an H2S/H2 pressure ratio of about 0.0001, although the sulfur-saturated Ni surface retains a finite activity for H2 oxidation. An approximate rate equation for H2 oxidation is also derived for small sulfur coverages. A.L.W.

THE AGE OF FUSION - ON THE BRINK
S. WALTERS Mechanical Engineering, vol. 104, July 1982, p. 22-33.

The state of the art on magnetic fusion energy reactors is discussed in detail, and extensive diagrams of the different reactor designs as well as projected timetables for future advances in fusion capabilities are presented. During the 1980s, the scientific feasibility of fusion power will be tested in the US at the Tokamak Fusion Test Reactor (TFTR), and while the TFTR will not generate any electricity, it will be the first magnetic fusion system in the US capable of producing fusion energy in any significant quantity (30 MW). It will also be the first US system to use a deuterium-tritium fuel mixture, thus allowing studies to be conducted under reactor conditions. In addition, the TFTR incorporates a tritium-breeding blanket experiment, which will be used to test several features necessary for commercial fusion reactors. Another fusion reactor design showing promise is the magnetic mirror machine, a linear system utilizing magnetic mirrors to contain the plasma, and having several advantages over the tokamak-type machines. An example of this type of system, the Magnetic Mirror Test Facility, is scheduled to go into operation in the mid-1980s and will approach the energy break-even point, noting that recent tests of the superconducting magnet coils for this reactor achieved design expectations in all respects. RELIABLE POWER
J. M. S. KEEN Feb. 1981 21 p Presented at Intern. Aircraft Maintenance Eng. Exhibition and Conf., Zurich, Feb. 1981
(PNR-90078) Avail: NTIS HC A02/MF A01

The Rolls Royce RB211 engine design is reviewed. The three shaft concept increases engine thrust and cuts fuel consumption. The highest thrust version of the RB211 cuts fuel consumption of Boeing 747's by 17%. The 535E4 blends turbine and bypass flows in a buried nozzle within a longer cowl. The resultant gases are exhausted through a single final nozzle. This device provides an automatic rematching of the engine cycle at climb ratings, thereby saving fuel and reducing turbine entry temperature. Reverse thrust is increased by up to 38% relative to an unmixed engine. The on-condition maintenance policy reduces costs without reducing safety. The reliability management program ensures the most cost effective maintainance schedule. Author (ESA)

CROSS-LINKED POLYVINYL ALCOHOL FILMS AS ALKALINE BATTERY SEPARATORS
D. W. SHEIBLEY, M. A. MANZO, and O. D. GONZALEZ-SANABf .A Mar. 1982 19 p refs Presented at the 158th Meeting of the Electrochim. Soc., Hollywood, Fla., 5-10 Oct. 1980
(NASA-TM-82802; E-1141; NAS 1.15:82802) Avail: NTIS HC A02/MF A01 CSCL 07D

Cross-linking methods were investigated to determine their effect on the performance of polyvinyl alcohol (PVA) films as alkaline battery separators. The following types of cross-linked PVA films are discussed: (1) PVA-dialdehyde blends post-treated with an acid or acid periodate solution (two-step method) and (2) PVA-dialdehyde blends cross-linked during film formation (drying) by using a reagent with both aldehyde and acid functionality (one-step method). Laboratory samples of each cross-linked type of film were prepared and evaluated in standard separator screening tests. The pilot-plant batches of films were prepared and compared to measure differences due to the cross-linking method. The pilot-plant materials were then tested in nickel oxide - zinc cells to compare the two methods with respect to performance characteristics and cycle life. Cell test results are compared with those from tests with Celgard. Author

HIGH-TEMPERATURE-TURBINE TECHNOLOGY PROGRAM. PHASE 2: TECHNOLOGY TEST AND SUPPORT STUDIES. TURBINE SPOOL TECHNOLOGY RIG CASCADE TESTS
Jun. 1981 95 p
(Contract DE-AC01-76ET-10348)
(DE81-030352; DOE/ET-10348/T3; FE-2291-76; CW-WR-76-020.76A) Avail: NTIS HC A05/MF A01

Integrated gas turbine combined cycle electric power generating systems offer the promise for using coal in an economic and environmentally acceptable manner. Powerplant efficiencies well above 40% may be achieved with gas turbine firing temperatures of 26000 F and higher, if the turbine cooling requirements are not excessive. Transpiration air cooling protects turbine components from the aggressive environment produced by the combustion of coal derived fuels. A new single stage, high work transpiration air cooled turbine was designed and fabricated for evaluation in a rotating test vehicle designated the turbine spool technology rig (TSTR). Prior to operating the TSTR, a cascade test program was conducted on a 10 vane sector to determine the cooling characteristics of these parts and to develop changes as required to assure satisfactory operation of the TSTR. The cascade program is described including several changes incorporated into the vanes.

EFFECT OF ROTOR CONFIGURATION ON GUYED TOWER AND FOUNDATION DESIGNS AND ESTIMATED COSTS FOR INTERMEDIATE SITE HORIZONTAL AXIS WIND TURBINES
G. R. FREDERICK (Toledo Univ.), J. R. WINEMILLER, and J. M. SAVINO Mar. 1982 39 p refs
(NASA-TM-82804; DOE/NASA/20320-39; NAS 1.15:82804)
Avail: NTIS HC A03/MF A01 CSCL 10B

Three designs of a guyed cylindrical tower and its foundation for an intermediate size horizontal axis wind turbine generator are discussed. The primary difference in the three designs is the configuration of the rotor. Two configurations are two-blade rotors with teetering hubs - one with full span pitchable blades, the other with fixed pitch blades. The third configuration is a three-bladed rotor with a rigid hub and fixed pitch blades. In all configurations the diameter of the rotor is 38 meters and the axis of rotation is 30.4 meters above grade, and the power output is 200 kW and 400 kW. For each configuration the design is based upon for the most severe loading condition either operating wind or hurricane conditions. The diameter of the tower is selected to be 1.5 meters (since it was determined that this would provide sufficient space for access ladders within the tower) with guy rods attached at 10.7 meters above grade. Completing a design requires selecting the required thicknesses of the various cylindrical segments, the number and diameter of the guy rods. the number and size of soil anchors, and the size of the central foundation. The lower natural frequencies of vibration are determined for each design to ensure that operation near resonance does not occur. Finally, a cost estimate is prepared for each design. A preliminary design and cost estimate of a cantilever tower (cylindrical and not guyed) and its foundation is also presented for each of the three configurations.

A one MW helical rotary screw expander power system for electric power generation from geothermal brine was evaluated. The technology explored in the testing is simple, potentially very efficient, and ideally suited to wellhead installations in moderate to high enthalpy, liquid dominated field. A functional one MW geothermal electric power plant that featured a helical screw expander was produced and then tested with a demonstrated average performance of approximately 45% machine efficiency over a wide range of test conditions in noncondensing, operation on two-phase geothermal fluids. The Project also produced a computer equipped data system, an instrumentation and contro van, and a 1000 kW variable load bank, all integrated into a test array designed for operation at a variety of remote test sites. Data are presented for the Utah testing and for the noncondensing phases of the testing in Mexico. Test time logged was 437 hours during the Utah tests and 1101 hours during the Mexico tests.

THEORY AND TESTS OF TWO-PHASE TURBINES
D. G. ELLIOTT 15 Mar. 1982 149 p refs
(Contract NAS7-100; DE-AI01-80ER-10614)
(NASA-CR-168834; JPL-PUB-81-105; NAS 1.26:168834; DOE/ER-10614/1) Avail: NTIS HC A07/MF A01 CSCL 10B

A theoretical model for two-phase turbines was developed. Apparatus was constructed for testing one- and two-stage turbines (using speed decrease from stage to stage). Turbines were tested with water and nitrogen mixtures and refrigerant 22. Nozzle efficiencies were 0.78 (measured) and 0.72 (theoretical) for water and nitrogen mixtures at a water/nitrogen mixture ratio of 68, by mass; and 0.89 (measured) and 0.84 (theoretical) for refrigerant 22 expanding from 0.02 quality to 0.28 quality. Blade efficiencies (shaft power before windage and bearing loss divided by nozzle jet power) were 0.63 (measured) and 0.71 (theoretical) for water and nitrogen mixtures and 0.62 (measured) and 0.63 (theoretical) for refrigerant 22 with a single stage turbine, and 0,70 (measured) and 0.85 (theoretical) for water and nitrogen mixtures with a two-stage turbine.

NEAR-TERM HIGH POTENTIAL COUNTIES FOR SWECS Final Report
W. C. OSBORN and W. T. DOWNEY Golden, Colo. Midwest Research Inst. Feb. 1981 103 p refs Prepared for Midwest Research Inst., Golden, Colo.
(Contract EG-77-C-01-4042)
(SERI/TR-98282-11) Avail: NTIS HC A06/MF A01

Up-to-date market information to manufacturers of small wind energy conversion system (SWECS) to assist them in developing marketing strategies for their products are provided. The data are arranged in a format that permits rapid identification of a particular location or market segment for further investigation. Extensive backup information by state and county in state SWECS Market reports are appended. It is suggested that the information are useful to SWECS manufacturers for planning new marketing and advertising activities. Background information essential to market studies is synthesized and an initial framework to start such a study is provided.

ORBITER FUEL CELL IMPROVEMENT ASSESSMENT
R. E. JOHNSON *In* Houston Univ. The 1981 NASA ASEE Summer Fac. fellowship Program, Vol. 1 27 p 20 Aug. 1981 refs
Avail: NTIS HC A14/MF A01 CSCL 10A

The history of fuel cells and the theory of fuel cells is given. Expressions for thermodynamic and electrical efficiencies are developed. The voltage losses due to electrode activation, ohmic resistance and ionic diffusion are discussed. Present limitations of the Orbiter Fuel Cell, as well as proposed enhancements, are given. These enhancements are then evaluated and recommendations are given for fuel cell enhancement both for short-range as well as long-range performance improvement. Estimates of reliability and cost savings are given for enhancements where possible.

PARAMETRIC PERFORMANCE ANALYSIS OF STEAM-INJECTED GAS TURBINE WITH A THERMIONIC-ENERGY-CONVERTER-LINED COMBUSTOR
Y. K. CHOO and R. K. BURNS Feb. 1982 21 p refs
(NASA-TM-82736; E-1048; NAS 1.15:82736) Avail: NTIS HC A02/MF A01 CSCL 10B

The performance of steam-injected gas turbines having combustors lined with thermionic energy converters (STIG/TEC systems) was analyzed and compared with that of two baseline systems; a steam-injected gas turbine (without a TEC-lined combustor) and a conventional combined gas turbine/steam turbine cycle. Common gas turbine parameters were assumed for all of the systems. Two configurations of the STIG/TEC system were investigated. In both cases, steam produced in an exhaust-heat-recovery boiler cools the TEC collectors. It is then injected into the gas combustion stream and expanded through the gas turbine. The STIG/TEC system combines the advantage of gas turbine steam injection with the conversion of high-temperature combustion heat by TEC's. The addition of TEC's to the baseline steam-injected gas turbine improves both its efficiency and specific power. Depending on system configuration and design parameters, the STIG/TEC system can also achieve higher efficiency and specific power than the baseline combined cycle. Author

EVALUATION OF LIGHTNING ACCOMMODATION SYSTEMS FOR WIND-DRIVEN TURBINE ROTORS Final Report
H. BANKAITIS Mar. 1982 49 p refs
(Contract DE-AI01-76ET-20320)
(NASA-TM-82784; E-1116; DOE/NASA/20320-37; NAS 1.15:82784) Avail: NTIS HC A03/MF A01 CSCL 10B

Wind-driven turbine generators are being evaluated as an alternative source of electric energy. Areas of favorable location for the wind-driven turbines (high wind density) coincide with areas of high incidence of thunderstorm activity. These locations, coupled with the 30-m or larger diameter rotor blades, make the wind-driven turbine blades probable terminations for lightning strikes. Several candidate systems of lightning accommodation for composite-structural-material blades were designed and their effectiveness evaluated by submitting the systems to simulated lightning strikes. The test data were analyzed and system design were reviewed on the basis of the analysis. T.M.

WIND TURBINE DYNAMICS
R. W. THRESHER, ed. (Oregon State Univ., Corvallis) May 1981 422 p refs Workshop held in Cleveland 24-26 Feb. 1981 Sponsored in part by DOE
(NASA-CP-2185; NAS 1.55:2185; CONF-810226; SERI/CP-635-1238) Avail: NTIS HC A18/MF A01 CSCL 10B

Recent progress in the analysis and prediction of the dynamic behavior of wind turbine generators is discussed. The following areas were addressed: (1) the adequacy of state of the art analysis tools for designing the next generation of wind power systems; (2) the use of state of the art analysis tools designers; and (3) verifications of theory which might be lacking or inadequate. Summaries of these informative discussions as well as the questions and answers which followed each paper are documented in the proceedings.

AERODYNAMIC PERFORMANCE PREDICTION OF HORIZONTAL AXIS WIND TURBINES
D. R. JENG, T. G. KEITH, and A. ALIAKBARKHANAFJEH *In* NASA. Lewis Research Center Wind Turbine Dyn. p 9-18 May 1981 refs
(Contract NCC3-5)
Avail: NTIS HC A18/MF A01 CSCL 10B

A new method for calculating the aerodynamic performance of horizontal axis wind turbines is described. The method, entitled the helical vortex method, directly calculates the local induced velocity due to helical vortices that originate at the rotor blade. Furthermore, the method does not require a specified circulation distribution. Results of the method are compared to similar results obtained from Wilson PROP code methods as well as to existing experimental data taken from a Mod-O wind turbine. It is shown that results of the proposed method agree well with experimental values of the power output both near cut-in and at rated wind speeds. Further, it is found that the method does not experience some of the numerical difficulties encountered by the PROP code when run at low wind velocities. Author

DOUBLE-MULTIPLE STREAMTUBE MODEL FOR DARRIEUS IN TURBINES
I. PARASCHIVOIU *In* NASA. Lewis Research Center Wind Turbine Dyn. p 19-25 May 1981 refs Sponsored in part by IREQ
Avail: NTIS HC A18/MF A01 CSCL 10B

An analytical model is proposed for calculating the rotor performance and aerodynamic blade forces for Darrieus wind turbines with curved blades. The method of analysis uses a multiple-streamtube model, divided into two parts: one modeling the upstream half-cycle of the rotor and the other, the downstream half-cycle. The upwind and downwind components of the induced velocities at each level of the rotor were obtained using the principle of two actuator disks in tandem. Variation of the induced velocities in the two parts of the rotor produces larger forces in the upstream zone and smaller forces in the downstream zone. Comparisons of the overall rotor performance with previous methods and field test data show the important improvement obtained with the present model. The calculations were made using the computer code CARDAA developed at IREQ. The double-multiple streamtube model presented has two major advantages: it requires a much shorter computer time than the three-dimensional vortex model and is more accurate than multiple-streamtube model in predicting the aerodynamic blade loads. THE UTRC WIND ENERGY CONVERSION SYSTEM PERFORMANCE ANALYSIS FOR HORIZONTAL AXIS WIND TURBINES (WECSPER)
T. A. EGOLF and A. J. LANDGREBE *In* NASA. Lewis Research Center Wind Turbine Dyn. p 27-34 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

The theory for the UTRC Energy Conversion System Performance Analysis (WECSPER) for the prediction of horizontal axis wind turbine performance is presented. Major features of the analysis are the ability to: (1) treat the wind turbine blades as lifting lines with a prescribed wake model; (2) solve for the wake-induced inflow and blade circulation using real nonlinear airfoil data; and (3) iterate internally to obtain a compatible wake transport

velocity and blade loading solution. This analysis also provides an approximate treatment of wake distortions due to tower shadow or wind shear profiles. Finally, selected results of internal UTRC application of the analysis to existing wind turbines and correlation with limited test data are described. Author

THE VELOCITY FIELD OF A SYSTEM OF UNSTEADY CYCLOIDAL VORTICIES
B. J. YOUNG *In* NASA. Lewis Research Center Wind Turbine Dyn. p 35-40 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

An essential difference between two-dimensional and three-dimensional models of cycloidal rotors, the presence of unsteady trailing cycloidal vorticies in the wake, was studied. The velocity induced by these vorticies is the primary mechanism producing flow retardation for low span/radius ratio, finite blade number rotors. Results of using idealized rigid wake model of finite blade cycloidal rotors to investigate some cycloidal rotor problems are presented. Author

ON THE WAKE OF A DARRIEUS TURBINE
T. E. BASE, P. PHILLIPS, G. ROBERTSON, and E. S. NOWAK *In* NASA. Lewis Research Center Wind Turbine Dyn. p 51-66 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

The theory and experimental measurements on the aerodynamic decay of a wake from high performance vertical axis wind turbine are discussed. In the initial experimental study, the wake downstream of a model Darrieus rotor, 28 cm diameter and a height of 45.5 cm, was measured in a Boundary Layer Wind Tunnel. The wind turbine was run at the design tip speed ratio of 5.5. It was found that the wake decayed at a slower rate with distance downstream of the turbine, than a wake from a screen with similar troposkein shape and drag force characteristics as the Darrieus rotor. The initial wind tunnel results indicated that the vertical axis wind turbines should be spaced at least forty diameters apart to avoid mutual power depreciation greater than ten per cent.

PERFORMANCE OF WIND TURBINES IN A TURBULENT ATMOSPHERE
R. M. SUNDAR and J. P. SULLIVAN *In* NASA. Lewis Research Center Wind Turbine Dyn. p 79-86 May 1981 refs Sponsored in part by DOE
Avail: NTIS HC A18/MF A01 CSCL 10B

The effect of atmospheric turbulence on the power fluctuations of large wind turbines was studied. The significance of spatial non-uniformities of the wind is emphasized. The turbulent wind with correlation in time and space is simulated on the computer by Shinozukas method. The wind turbulence is modelled according to the Davenport spectrum with an exponential spatial correlation function. The rotor aerodynamics is modelled by simple blade element theory. Comparison of the spectrum of power output signal between 1-D and 3-D turbulence, shows the significant power fluctuations centered around the blade passage frequency.

WIND TURBULENCE INPUTS FOR HORIZONTAL AXIS WIND TURBINES
W. E. HOLLEY, R. W. THRESHER, and S. R. LIN *In* NASA. Lewis Research Center Wind Turbine Dyn. p 101-112 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

Wind turbine response characteristics in the presence of atmospheric turbulence was predicted using two major modeling steps. First, the important atmospheric sources for the force excitations felt by the wind turbine system were identified and characterized. Second, a dynamic model was developed which describes how these excitations are transmitted through the structure and power train. The first modeling step, that of quantifying the important excitations due to the atmospheric turbulence was established. The dynamic modeling of the second step was undertaken separately. Author

APPLICATIONS OF THE DOE/NASA WIND TURBINE ENGINEERING INFORMATION SYSTEM
H. E. NEUSTADTER and D. A. SPERA *In its* Wind Turbine Dyn. p 113-120 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

A statistical analysis of data obtained from the Technology and Engineering Information Systems was made. The systems analyzed consist of the following elements: (1) sensors which measure critical parameters (e.g., wind speed and direction, output power, blade loads and component vibrations); (2) remote multiplexing units (RMUs) on each wind turbine which frequency-modulate, multiplex and transmit sensor outputs; (3) on-site instrumentation to record, process and display the sensor output; and (4) statistical analysis of data. Two examples of the capabilities of these systems are presented. The first illustrates the standardized format for application of statistical analysis to each directly measured parameter. The second shows the use of a model to estimate the variability of the rotor thrust loading, which is a derived parameter. Author

(Contract DE-FG01-80IR-10320)
Avail: NTIS HC A18/MF A01 CSCL 10B

An hydraulic windmill is described. It pumps pressurized oil from rotor shaft level to the ground where a motor generator produces electricity. Alternatively, the useful output may be heat. Rotor speed is governed by a flow valve. Over pressure, the result of high wind velocity, rotates the tail to move the rotor blades out-of-the-wind. Loss of oil pressure causes a brake to

close as well as to swing the tail to its maximum distance from the rotor plane. Author

COMPARISON OF UPWIND AND DOWNWIND ROTOR OPERATION OF THE DOE/NASA 100-KW MOD-0 WIND TURBINE
J. C. GLASGOW, D. R. MILLER, and R. D. CORRIGAN *In its* Wind Turbine Dyn. p 225-234 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

Tests were conducted on a 38m diameter horizontal axis wind turbine, which had first a rotor downwind of the supporting truss tower and then upwind of the tower. Aside from the placement of the rotor and the direction of rotation of the drive train, the wind turbine was identical for both tests. Three aspects of the test results are compared: rotor blade bending loads, rotor teeter response, and nacelle yaw moments. As a result of the tests, it is shown that while mean flatwise bending moments were unaffected by the placement of the rotor, cyclic flatwise bending tended to increase with wind speed for the downwind rotor while remaining somewhat uniform with wind speed for the upwind rotor, reflecting the effects of increased flow disturbance for downwind rotor. Rotor teeter response was not significantly affected by the rotor location relative to the tower, but appears to reflect reduced teeter stability near rated wind speed for both configurations. Teeter stability appears to return above rated wind speed, however. Nacelle yaw moments are higher for the upwind rotor but do not indicate significant design problems for either configuration. T.M.

A REVIEW OF RESONANCE RESPONSE IN LARGE HORIZONTAL-AXIS WIND TURBINES
T. L. SULLIVAN *In its* Wind Turbine Dyn. p 237-244 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

Field operation of the Mod-0 and Mod-1 wind turbines is described. Operational experience shows that 1 per rev excitation exists in the drive train, high aerodynamic damping prevents resonance response of the blade flatwise modes, and teetering the hub substantially reduces the chordwise blade response to odd harmonic excitation. These results can be used by designer as a guide to system frequency placement. In addition it is found that present analytical techniques can accurately predict wind turbine natural frequencies. T.M.

VERTICAL AXIS WIND TURBINE DRIVE TRAIN TRANSIENT DYNAMICS
D. B. CLAUSS and T. G. CARNE *In* NASA. Lewis Research Center Wind Turbine Dyn. p 305-314 May 1982 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

Start up of a vertical axis wind turbine causes transient torque oscillations in the drive train with peak torques which may be over two and one half times the rated torque of the turbine. A computer code, based on a lumped parameter model of the drive train, was developed and tested for the low cost 17 meter turbine; the results show excellent agreement with field data. The code was used to predict the effect of a slip clutch on transient torque oscillations. It was demonstrated that a slip clutch located between the motor and brake can reduce peak torques by thirty eight percent. T.M.

KAMAN 40 KW WIND TURBINE GENERATOR - CONTROL SYSTEM DYNAMICS
R. PERLEY *In* NASA. Lewis Research Center Wind Turbine Dyn. p 325-332 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

The generator design incorporates an induction generator for application where a utility line is present and a synchronous generator for standalone applications. A combination of feed forward and feedback control is used to achieve synchronous speed prior to connecting the generator to the load, and to control the power level once the generator is connected. The dynamics of the drive train affect several aspects of the system operation. These were analyzed to arrive at the required shaft stiffness. The rotor parameters that affect the stability of the feedback control loop vary considerably over the wind speed range encountered. Therefore, the controller gain was made a function of wind speed in order to maintain consistent operation over the whole wind speed range. The velocity requirement for the pitch control mechanism is related to the nature of the wind gusts to be encountered, the dynamics of the system, and the acceptable power fluctuations and generator dropout rate. A model was

developed that allows the probable dropout rate to be determined from a statistical model of wind gusts and the various system parameters, including the acceptable power fluctuation. T.M.

EFFECT OF WIND TURBINE GENERATOR MODEL AND SITING ON WIND POWER CHANGES OUT OF LARGE WECS ARRAYS
R. A. SCHLEUTER, G. L. PARK, M. LOTFALIAN, J. DORSEY, and H. SHAYANFAR *In* NASA. Lewis Research Center Wind Turbine Dyn. p 343-352 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

Methods of reducing the WECS generation change through selection of the wind turbine model for each site, selection of an appropriate siting configuration, and wind array controls are discussed. An analysis of wind generation change from an echelon and a farm for passage of a thunderstorm is presented. Reduction of the wind generation change over ten minutes is shown to reduce the increase in spinning reserve, unloadable generation and load following requirements on unit commitment when significant WECS generation is present and the farm penetration constraint is satisfied. Controls on the blade pitch angle of all wind turbines in an array or a battery control are shown to reduce both the wind generation change out of an array and the effective farm penetration in anticipation of a storm so that the farm penetration constraint may be satisfied. T.M.

MEASURED AND CALCULATED CHARACTERISTICS OF WIND TURBINE NOISE
G. C. GREENE *In* NASA. Lewis Research Center Wind Turbine Dyn. p 355-362 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

The results of an analytical and experimental investigation of wind turbine noise are presented. Noise calculations indicate that for configurations with the rotor downwind of the support tower, the primary source of noise is the rapid change in rotor loadings which occurs as the rotor passes through the tower wake. Noise measurements are presented for solid and truss type tower models with both upwind and downwind rotors. Upwind rotor configurations are shown to be significantly quieter than downwind configurations. The model data suggest that averaged noise measurements and noise calculations based on averaged tower wake characteristics may not accurately represent the impulsive noise characteristics of downwind rotor configurations. Author

ACOUSTIC NOISE GENERATION BY THE DOE/NASA MOD-1 WIND TURBINE
N. D. KELLEY *In* NASA. Lewis Research Center Wind Turbine Dyn. p 375-387 May 1981 refs Sponsored in part by DOE
Avail: NTIS HC A18/MF A01 CSCL 10B

The results of a series of measurements taken over the past year of the acoustic emissions from the DOE/NASA MOD-1 Wind Turbine show the maximum acoustic energy is concentrated in the low frequency range, often below 100 Hz. The temporal as well as the frequency characteristics of the turbine sounds have been shown to be important since the MOD-1 is capable of radiating both coherent and incoherent noise. The coherent sounds are usually impulsive and are manifested in an averaged frequency domain plot as large numbers of discrete energy bands extending from the blade passage frequency to beyond 50 Hz on occasion. It is these impulsive sounds which are identified as the principal source of the annoyance to a dozen families living within 3 km of the turbine. The source of the coherent noise appears to be the rapid, unsteady blade loads encountered as the blade passes through the wake of the tower structure. Annoying levels are occasionally reached at nearby homes due to the interaction of the low frequency, high energy peaks in the acoustic impulses and the structural modes of the homes as well as by direct radiation outdoors. The peak levels of these impulses can be enhanced or subdued through complete propagation. Author

L. A. VITERNA *In its* Wind Turbine Dyn. p 411-418 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

Since regular operation of the DOE/NASA MOD-1 wind turbine began in October 1979 about 10 nearby households have complained of noise from the machine. Development of the NASA-LeRC with turbine sound prediction code began in May 1980 as part of an effort to understand and reduce the noise generated by MOD-1. Tone sound levels predicted with this code are in generally good agreement with measured data taken in the vicinity MOD-1 wind turbine (less than 2 rotor diameters). Comparison in the far field indicates that propagation effects due to terrain and atmospheric conditions may be amplifying the actual sound levels by about 6 dB. Parametric analysis using the code has shown that the predominant contributions to MOD-1 rotor noise are: (1) the velocity deficit in the wake of the support tower; (2) the high rotor speed; and (3) off column operation. NOISE GENERATION OF UPWIND MOTOR WIND TURBINE GENERATORS
R. H. SPENCER *In* NASA. Lewis Research Center Wind Turbine Dyn. p 419-423 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

Noise sources of wind turbines with rotors upstream of the support structure are discussed along with methodology for sound level prediction. Estimated noise levels for the MOD-2 wind turbine are presented operating in both the upwind and downwind configurations. Results indicate that upwind rotor configurations may be advantageous from an acoustical standpoint. Author

DOWNWIND ROTOR HORIZONTAL AXIS WIND TURBINE NOISE PREDICTION
F. B. METZGER and R. J. KLATTE *In* NASA. Lewis Research Center Wind Turbine Dyn. p 425-430 May 1981 refs Sponsored in part by NASA. Langley Research Center, Midwest Research Inst., and Wichita State Univ.
Avail: NTIS HC A18/MF A01 CSCL 10B

NASA and industry are currently cooperating in the conduct of extensive experimental and analytical studies to understand and predict the noise of large, horizontal axis wind turbines. This effort consists of (1) obtaining high quality noise data under well controlled and documented test conditions, (2) establishing the annoyance criteria for impulse noise of the type generated by horizontal axis wind turbines with rotors downwind of the support tower, (3) defining the wake characteristics downwind of the axial location of the plane of rotation, (4) comparing predictions with measurements made by use of wake data, and (5) comparing predictions with annoyance criteria. The status of work by Hamilton Standard in the above areas which was done in support of the cooperative NASA and industry studies is briefly summarized. Author

WIND TURBINE ACOUSTIC STANDARDS
D. G. STEPHENS, K. P. SHEPHERD (Bionetics Corp., Hampton, Va.), and F. GROSVELD (Bionetics Corp., Hampton, Va.) *In* NASA Lewis Research Center Wind Turbine Dyn. p 431-435 May 1981 refs
Avail: NTIS HC A18/MF A01 CSCL 10B

A program is being conducted to develop noise standards for wind turbines which minimize annoyance and which can be used to design specifications. The approach consists of presenting wind turbine noise stimuli to test subjects in a laboratory listening chamber. The responses of the subjects are recorded for a range of stimuli which encompass the designs, operating conditions, and ambient noise levels of current and future installations. Results to date have established the threshold of detectability for a range of impulsive stimuli of the type associated with blade/tower wake interactions. The status of the ongoing psychoacoustic tests, the subjective data, and the approach to the development of acoustic criteria/standards are described. Author

SMALL-WIND-SYSTEMS APPLICATION ANALYSIS. TECHNICAL REPORT AND EXECUTIVE SUMMARY
Jun. 1981 384 p refs Sponsored in part by Rockwell International Corp., Golden, Colo.
(Contract DE-AC04-76DP-03533)
(DE82-003748; RFP-3147/2) Avail: NTIS HC A17/MF A01

A small wind energy conversion systems (SWECS) analysis was conducted to estimate the potential market for SWEC, or wind machines smaller than 100 kW for five selected applications. The goals were to aid manufacturers in attaining financing by convincing venture capital investors of the potential of SWECS and to aid government planners in allocating R and D expenditures that will effectively advance SWECS commercialization. Based on these goals, the study: (1) provides a basis for assisting the DOE in planning R and D programs that will advance the state of SWECS industry; (2) quantifies estimates of market size vs. installed system cost to enable industry to plan expansion of capacity and product lines; (3) identifies marketing strategies for industry to use in attaining financing from investors and in achieving sales goals; and (4) provides DOE with data that will assist in determining actions, incentives, and/or legislation required to achieve a commercially viable SWECS industry. The five applications were selected through an initial screening and priority-ranking analysis. The year of analysis was 1985, but all dollar amounts, such as fuel costs, are expressed in 1980 dollars. The five SWECS applications investigated were farm residences, non-farm residences, rural electric cooperatives, feed grinders, and remote communities. DOE

GENERAL INTRODUCTION TO WIND ENERGY CONVERSION
O. DEVRIES Apr. 1981 128 p refs Presented at Von Karman Inst. for Fluid Dyn. Lecture Series No. 9 on Wind Energy Conversion Devices, Rhode-Saint-Genese, Belgium, 1-5 Jun. 1981
(NLR-MP-81014-U) Avail: NTIS HC A07/MF A01

Wind turbine and wind concentrator concepts are reviewed and the aerodynamic characteristics of wind turbines are discussed. The parameters which determine choice of conversion scheme, e.g., wind data, turbine control, conversion system, structural, dynamic and cost aspects, and environmental impediments, are considered. Design criteria are surveyed and the desirability of formulating building codes for wind energy conversion projects is stressed. Author (ESA)

MHD ELECTRICAL GENERATOR Patent Application
D. J. FITZGERALD, inventor (to NASA) (JPL, California Inst. of Technology, Pasadena) 14 Feb. 1982 13 p
(Contract NAS7-100)
(NASA-CASE-NPO-15399-1; US-PATENT-APPL-SN-330612)
Avail: NTIS HC A02/MF A01 CSCL 20I

An MHD (magnetohydrodynamic) electric generator is provided which is of high efficiency and which can operate in a closed cycle with minimal moving parts for unattended applications. The generator includes a porous tungsten element heated by a heat source and a system for passing primarily pure cesium vapor into the porous element, to produce contact ionization of the cesium with a higher percentage of ions than can be sustained. The highly ionized cesium vapor, and corresponding numbers of electrons from the tungsten element, recombine to produce a much higher temperature as the cesium flows through a tube past an MHD converter that generates electricity, and into a cool end of the tube where the cesium is cooled to a liquid temperature. The liquid can be recirculated by passing it through capillary passages extending towards the location where cesium vapor enters the porous tungsten element. NASA

STUDY OF REACTOR BRAYTON POWER SYSTEMS FOR NUCLEAR ELECTRIC SPACECRAFT
28 Sep. 1979 169 p refs Prepared for JPL, Pasadena, Calif. Original contains color illustrations
(Contract JPL-955008)
(NASA-CR-168942; NAS 1.26:166942; AIRESEARCH-31-3321)
Avail: NTIS HC A08/MF A01 CSCL 21C

The feasibility of using Brayton power systems for nuclear electric spacecraft was investigated. The primary performance parameters of systems mass and radiator area were determined for systems from 100 to 1000 kW sub e. Mathematical models of all system components were used to determine masses and volumes. Two completely independent systems provide propulsion power so that no single-point failure can jeopardize a mission. The waste heat radiators utilize armored heat pipes to limit meteorite puncture. The armor thickness was statistically determined to achieve the required probability of survival. A 400 kW sub e reference system received primary attention as required by the contract. The components of this system were defined and a conceptual layout was developed with encouraging results. An arrangement with redundant Brayton power systems having a 1500 K (2240 F) turbine inlet temperature was shown to be compatible with the dimensions of the space shuttle orbiter payload bay. B.W.

LINEAR MAGNETIC MOTOR/GENERATOR Patent
P. A. STUDER, inventor (to NASA) 9 Feb. 1982 13 p Filed 7 Feb. 1980 Supersedes N80-19424 (18 - 10, p 1287)
(NASA-CASE-GSC-12518-1; US-PATENT-4,315,197; US-PATENT-APPL-SN-119336; US-PATENT-CLASS-318-135; US-PATENT-CLASS-335-229; US-PATENT-CLASS-335-266; US-PATENT-CLASS-310-12) Avail: US Patent and Trademark Office CSCL 09A

A linear magnetic motor/generator is disclosed which uses magnetic flux to provide mechanical motion or electrical energy. The linear magnetic motor/generator includes an axially movable actuator mechanism. A permanent magnet mechanism defines a first magnetic flux path which passes through a first end portion of the actuator mechanism. Another permanent magnet mechanism defines a second magnetic flux path which passes through a second end portion of the actuator mechanism. A drive coil defines a third magnetic flux path passing through a third central portion of the actuator mechanism. A drive coil selectively adds magnetic flux to and subtracts magnetic flux from magnetic flux flowing in the first and second magnetic flux path.

DEVELOPMENT OF A DUAL-FIELD HETEROPOPLAR POWER CONVERTER
D. B. EISENHAURE, B. JOHNSON, T. E. BLIAMPTIS, and E. STGEORGE Aug. 1981 68 p refs
(Contract NAS3-20817; DE-AI01-77CS-1044)
(NASA-CR-165168; NAS 1.26:165168; R-1489) Avail: NTIS HC A04/MF A01 CSCL 10B

The design and testing of a 400 watt, dual phase, dual rotor, field modulated inductor alternator is described. The system is designed for use as a flywheel to ac utility line or flywheel to dc bus (electric vehicle) power converter. The machine is unique in that it uses dual rotors and separately controlled fields to produce output current and voltage which are in phase with each other. Having the voltage and current in phase allows the power electronics to be made of simple low cost components. Based on analytical predictions and experimental results, development of a complete 22 kilowatt (30 Hp) power conversion system is recommended. This system would include power electronics and controls and would replace the inductor alternator with an improved electromagnetic conversion system. Author

STRAIGHT AND CHOPPED DC PERFORMANCE DATA FOR A GENERAL ELECTRIC 5BY436A1 DC SHUNT MOTOR WITH A GENERAL ELECTRIC EV-1 CONTROLLER Final Report
P. C. EDIE Oct. 1981 58 p
(Contract DEN3-123; DE-AI01-77CS-51044)
(NASA-CR-165507; DOE/NASA/0123-4; NAS 1.26:165507; ERC-TR-8186) Avail: NTIS HC A04/MF A01 CSCL 09C

Both straight and chopped dc motor performance data for a General Electric 5BY436A1 motor with a General Electric EV-1 controller is presented in tabular and graphical formats. Effects of motor temperature and operating voltage are also shown. The maximum motor efficiency is approximately 85% at low operating temperatures in the straight dc mode. Chopper efficiency can be assumed to be 95% under all operating conditions. For equal speeds, the motor operated in the chopped mode develops slightly more torque and draws more current than it does in the straight mode. Author

EARTH-COUPLED HEAT PUMP Final Report, 1 Jul. 1979 - 30 Sep. 1980
J. A. EDWARDS 30 Aug. 1981 41 p refs
(DE82-900583; NCEI-0033) Avail: NTIS HC A03/MF A01

The object of the research work was to demonstrate that a water source heat pump could be used with an earth-coupled heat exchanger which was buried in an absorption field of a domestic sewage disposal system to provide the heating and cooling requirements for residential use in an energy efficient fashion. The system consists of a 3 ton heat pump (nominal rating of 34,000 Btu/hr), a closed-loop heat exchanger which was fabricated from 200 feet of 2 inch diameter cast iron soil pipe, and a calorimeter house which had heat transmission characteristics similar to a 100 sq ft house. The earth-coupled heat exchanger was connected to the water side heat exchanger of the heat pump. Water was circulated through the heat exchanger coil in the earth and through the water side heat exchanger of the heat pump. The earth served as the energy source (for heating) or sink (for cooling) for the heat pump. DOE

AMPLIFIED WIND TURBINE APPARATUS Patent
L. A. HEIN and W. N. MYERS, inventors (to NASA) 5 Jan. 1982 8 p Filed 12 Mar. 1980 Supersedes N80-21831 (18 - 12, p 1597)
(NASA-CASE-MFS-23830-1; US-PATENT-4,309,146; US-PATENT-APPL-SN-129780; US-PATENT-CLASS-415-2R; US-PATENT-CLASS-415-DIG.8) Avail: US Patent and Trademark Office CSCL 10B

An invention related to the utilization of wind energy and increasing the effects thereof for power generation is described. Amplified wind turbine apparatus is disclosed wherein ambient inlet air is prerotated in a first air rotation chamber having a high pressure profile increasing the turbulence and Reynolds number thereof. A second rotation chamber adjacent and downstream of the turbine has a low pressure core profile whereby flow across the turbine is accelerated and thereafter exits the turbine apparatus through a draft anti-interference device. Interference with ambient winds at the outlet of the turbine apparatus is thus eliminated. Pivotable vanes controlled in response to prevailing wind direction admit air to the chambers and aid in imparting rotation. A central core may be utilied for creating the desired pressure profile in the chamber. M.D.K.

IMPROVED ALKALINE HYDROGEN/AIR FUEL CELLS FOR TRANSPORTATION APPLICATIONS
S. SRINIVASAN, J. MCBREEN, G. KISSEL, K. V. KORDESCH, F. KULESA, E. J. TAYLOR, and E. GANNON *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 188-192 Mar. 1981 refs
Avail: NTIS HC A16/MF A01

The improvement of alkaline air electrodes for air depolarized chlor/alkali cells is discussed. Some of these electrodes were evaluated in alkaline hydrogen/air fuel cells. In initial tests with 289 sq cm electrodes, power densities of 100 mW/sq cm were obtained at 0.65 V. Further improvements in the air electrode flow field yielded power densities of 126 mW/sq cm at 0.65 V at an operating temperature of 70 C. The 289 sq cm cells were units in a 16 cell 0.5 kW module. This module yielded similar power densities and its power/weight and power/volume are considered as a building block for a fuel cell power plant in a fuel cell/battery hybrid vehicle. E.A.K.

AXIAL FIELD LIMITATIONS IN MHD GENERATORS. PART 2: ANALYTICAL INVESTIGATION AND COMPARISON WITH EXPERIMENTS
W. UNKEL and C. H. KRUGER Jan. 1981 32 p refs Backup document for AIAA Synoptic. 'Analytical Investigation of Axial Field Limitations in MHD Generators', scheduled for publication in Journal of Energy in Jan. - Feb. 1983
(LOG-E763) Avail: NTIS HC A03/MF A01

A detailed fluid and electrical model was developed and used to predict the prebreakdown and incipient breakdown characteristics for a simplified configuration. The model shows that an electro-thermal instability, in either the plasma or the interelectrode insulator, was responsible for the breakdown; the predicted values of the threshold voltage, below which breakdown would not occur, were comparable to the experimental values. Detailed comparison of theory and experiment, however, indicates only moderately good agreement, even for the relatively sophisticated model used. Nevertheless, the model can be used to predict the trends of threshold voltage with the channel parameters. Breakdown modeling of the full generator configuration was limited to a coarse electrical solution to simulate the effect of single or multiple breakdowns on the behavior of the surrounding gaps; moderate success was achieved with the model. (Contract W-7405-ENG-36)
(DE82-002437; LA-8882-MS) Avail: NTIS HC A99/MF A01

A complete power plant design of a 1200-MWe ELMO Bumpy Torus Rector (EBTR) is presented. An emphasis is placed on those features that are unique to the EBT confinement concept, with subsystems and balance-of-plant items that are more generic to magnetic fusion being adapted from past, more extensive Tokamak reactor designs. Similar to the latter Tokamak studies, this conceptual EBTR design also emphasizes the use of conventional or near state-of-the-art engineering technology and materials. An emphasis is also placed on system accessibility, reliability, and maintainability, as these crucial and desirable characteristics relate to the unique high-aspect-ratio configuration of EBTs. Equal and strong emphasis is given to physics, engineering/technology, and costing/economics components of this design effort. Parametric optimizations and sensitivity studies, using cost-of-electricity as an object function, are reported. Based on these results, the direction for future improvement on an already attractive reactor design is identified. DOE

OPTIMIZATION OF THE OXIDANT SUPPLY SYSTEM FOR COMBINED CYCLE MHD POWER PLANTS
A. J. JUHASZ 1982 14 p refs Presented a the 20th Symp. on the Eng. Aspects of Magnetohydrodyn., Irvine, Calif., 14-16 Jun. 1981
(Contract DE-AI01-77ET-10769)
(NASA-TM-82909; E-1294; DOE/NASA/10769-27; NAS 1.15:82909) Avail: NTIS HC A02/MF A01

An in-depth study was conducted to determine what, if any, improvements could be made on the oxidant supply system for combined cycle MHD power plants which could be reflected in higher thermal efficiency and a reduction in the cost of electricity, COE. A systematic analysis of air separation process varitions which showed that the specific energy consumption could be minimized when the product stream oxygen concentration is about 70 mole percent was conducted. The use of advanced air compressors, having variable speed and guide vane position control, results in additional power savings. The study also led to the conceptual design of a new air separation process, sized for a 500 MW sub e MHD plant, referred to a internal compression is discussed. In addition to its lower overall energy consumption, potential capital cost savings were identified for air separation plants using this process when constructed in a single large air separation train rather than multiple parallel trains, typical of conventional practice. DYNAMIC ANALYSIS OF DARRIEUS VERTICAL AXIS WIND TURBINE ROTORS
D. W. LOBITZ May 1981 26 p refs
(Contract DE-AC04-76DP-00789)
(DE82-000814; SAND-80-2820) Avail: NTIS HC A03/MF A01

The dynamic response characteristics of the VAWT rotor are important factors governing the safety and fatigue life of VAWT systems. The principal problems are the determination of critical rotor speeds (resonances) and the assessment of forced vibration response amplitudes. The solution to these problems is complicated by centrifugal and Coriolis effects which can have substantial influence on rotor resonant frequencies and mode shapes. The primary tools now in use for rotor analysis are described. These tools include a lumped spring mass model (VAWTDYN) and also finite element based approaches. The discussion centers on the accuracy and completeness of current capabilities and plans for future research. T.M.

COMPARISON OF RANKINE-CYCLE POWER SYSTEMS: EFFECTS OF SEVEN WORKING FLUIDS
T. J. MARCINIAK, J. L. KRAZINSKI (Purdue Univ., Hammond, Ind.), J. C. BRATIS, H. M. BUSHBY, and E. H. BUYCO Jun. 1981 88 p refs
(Contract W-31-109-ENG-38)
(DE82-005599; ANL/CNSV-TM-87) Avail: NTIS HC A05/MF A01

The safety, technical and economic issues surrounding the prime working-fluid candidates for industrial Rankine-cycle power systems in the range of 600 to 2400 kW are investigated. These fluids are water, methanol, 2-methyl pyridine/H2O, Fluorinol 85, toluene, Freon R 11, and Freon R 113. At temperatures below about 7000F (3710C), steam systems become less efficient and too expensive to be used. However, other working fluids, usually organic compounds, can be economically attractive at the lower temperatures. This study shows that, at current and projected energy costs, Rankine-cycle power systems using any of the seven working fluids investigated here can exceed the minimum return on investment (ROI) criteria of most industries. The highest ROIs occur for those systems using a 3000F (1490C) condensing stream as the heat source. There appear to be no significant health or safety problems that would prevent the use of any of the candidate working fluids. The only limitation of an organic fluid is its maximum stability temperature, which may prevent its use with high-temperature waste-heat streams. DOE

MHD COAL-FIRED FLOW FACILITY Annual Technical Progress Report, Oct. 1979 - Sep. 1980
M. C. ALSTATT, R. C. ATTIG, D. A. BROSNAN, J. N. CHAPNAN, R. W. CLEMONS, T. A. CLICK, J. A. COOPER, L. W. CRAWFORD, J. B. DICKS, and T. E. DWODY Mar. 1981 27 p refs
(Contract DE-AC01-76ET-10757; DE-AC02-79ET-10815)
(DE82-003814; DOE/ET-10815/59) Avail: NTIS HC A03/MF A01

Significant activity, task status, planned research, testing, development, and conclusions for the magnetohydrodynamics (MHD) coal fired flow facility (CFFF) and the energy conversion facility (ECF) is reported. The following tasks are considered: (1) compilation of design and construction of the CFFF and activation; (2) design and fabrication of the 8PPS test equipment; (3) phase operations for the CFFF and EC facility; (4) 8PPS high slag throughput testing; (5) testing of DOE supplied components; (6) modifications of the CFFF; and (7) technology development program. MHD PHENOMENA AT HIGH MAGNETIC REYNOLDS NUMBER Final Report
S. P. GILL and D. MUKHERJEE Dec. 1981 104 p refs
(Contract N00014-79-C-0565; NR PROJ. 099-429)
(AD-A110929; FR-137) Avail: NTIS HC A06/MF A01 CSCL 20C

Exact MHD solutions have been derived for the propagation of a shock-ionized plasma through applied magnetic field configurations pertinent to two- and three-dimensional MHD generators and plasma diagnostics. Calculated magnetic field perturbations and Faraday voltages are presented for a wide range of magnetic Reynolds number. The solutions provide insight into eddy current and magnetic diffusion effects in MHD generator sections. Author (GRA)

(Contract N00014-81-WR-10107)
(AD-A112049) Avail: NTIS HC A06/MF A01 CSCL 20C

Detonation driven magnetogasdynamic generators with external R-L load circuits are analyzed, for which the external and induced magnetic fields are parallel and antiparallel, respectively. Two plasma shock flow models are treated: (1) implosion produced jet flow and (2) plane detonation flow. A theory of power generation is developed for a stress polarizable solid between plane electrodes (with an external ohmic load circuit), which is electrically polarized by an explosion produced stress shock wave. In connection with the analysis of flux compression power generators, initial-boundary-value problems for the diffusion of magnetic fields into conductors with external electromagnetic transients and the electromagnetic induction in conductors accelerated in external magnetic fields are solved. A quantum-kinetic theory of the anomalous electron heating in plasmas by high-frequency electromagnetic fields is presented. Author (GRA)

DESIGN SCOPING STUDY OF THE 12T YIN-YANG MAGNET SYSTEM FOR THE TANDEM MIRROR NEXT STEP (TMNS) Final Report
Sep. 1981 308 p refs Prepared in cooperation with General Dynamics/Convair, San Diego
(Contract W-7405-ENG-48)
(DE82-003218; UCRL-15405) Avail: NTIS HC A14/MF A01

The feasibility of designing a Yin-Yang magnet capable of producing a peak field in the windings of 12T for the Tandem Mirror Next Step (TMNS) program was determined. A rough order of magnitude (ROM) cost estimate of the winding for this magnet was undertaken. The preferred approach to the winding design of the TMNS plug coil utilizes design concepts to meet the structural, electrical and thermodynamic requirements of the magnet system. Structurally, the coil is radially partitioned into four sections, preventing the accumulation of the radial loads and reacting them into the structural case. To safely dissipate the 13.34 GJ of energy stored in each Yin-Yang magnet, the winding is electrically subdivided into parallel or nested coils, each with its own power supply and protection circuitry. The arrangement divides the total stored energy of the coils into manageable subsystems. The windings are cooled with superfluid helium 2, operated at 1.8K and 1.2 atmospheres. DOE

CONCEPT EVALUATION OF AUTOMOTIVE PROPULSION USING LIQUID AIR/NITROGEN. TASK 1 REPORT. THERMODYNAMICS.
J. L. DOOLEY and R. P. HAMMOND Oct. 1981 56 p refs
(Contract DE-AC01-81ER-30011)
(DE82-002460; RDA-TR-118700-001) Avail: NTIS HC A04/MF A01

An automotive powerplant system using cryogenic liquid air or nitrogen as the working fluid in a powerplant operating on an open Rankine type cycle was assessed. The cold fluid is pressurized, heat energy is added to form hot gas and is expanded to atmospheric conditions in the engine which drive the vehicle. A range of gas pressures and temperatures as well as different expansion stages and reheat configurations are evaluated. The thermodynamic results indicate that this powerplant concept can be competitive with a comparable gasoline engine to give a vehicle equal in performance, weight, range and operating cost without using imported fuel. DOE

MAGNETOHYDRODYNAMICS (MHD) ENGINEERING TEST FACILITY (ETF) 200 MWE POWER PLANT. CONCEPTUAL DESIGN ENGINEERING REPORT (CDER). VOLUME 2: ENGINEERING. VOLUME 3: COSTS AND SCHEDULES Final Report
Sep. 1981 163 p Volume 3 is included as MF 5 Vol.
(Contract DEN3-224; DE-AI01-77ET-10769)
(NASA-CR-165452-VOL-2; NASA-CR-165452-VOL-3; NAS 1.26:165452-VOL-2; NAS 1.26:165452-VOL-3; DOE/NASA/0224-1) Avail: NTIS HC E08/MF A01 CSCL 10B

Engineering design details for the principal systems, system operating modes, site facilities, and structures of an engineering test facility (ETF) of a 200 MWE power plant are presented. The ETF resembles a coal-fired steam power plant in many ways. It is analogous to a conventional plant which has had the coal combustor replaced with the MHD power train. Most of the ETF components are conventional. They can, however, be sized or configured differently or perform additional functions from those in a conventional coal power plant. The boiler not only generates steam, but also performs the functions of heating the MHD oxidant, recovering seed, and controlling emissions. S.L.

COMPARATIVE ANALYSIS OF THE CONCEPTUAL DESIGN STUDIES OF POTENTIAL EARLY COMMERCIAL MHD POWER PLANTS (CSPEC)
R. J. SOVIE, J. M. WINTER, A. J. JUHASZ, and R. D. BERG (Gilbert Associates, Inc.) 1982 27 p refs Presented at the 20th Symp. on the Eng. Aspects of Magnetohydrodyn., Irvine, Calif., 14-16 Jun. 1982
(Contract DE-AI01-77ET-10769)
(NASA-TM-82897; DOE/NASA/10769-26; NAS 1.15:82897)
Avail: NTIS HC A03/MF A01 CSCL 10B

A conceptual design study of the MHD/steam plant that incorporates the use of oxygen enriched air preheated in a metallic heat exchanger as the combustor oxidant showed that this plant is the most attractive for early commercial applications. The variation of performance and cost was investigated as a function of plant size. The contractors' results for the overall efficiencies are in reasonable agreement considering the slight differences in their plant designs. NASA LeRC is reviewing cost and performance results for consistency with those of previous studies, including studies of conventional steam plants. LeRC in house efforts show that there are still many tradeoffs to be considered for these oxygen enriched plants and considerable variations can be made in channel length and level of oxygen enrichment with little change in overall plant efficiency. OXYGEN ELECTRODES FOR ENERGY CONVERSION AND STORAGE Annual Report, 1 Oct. 1979 - 30 Sep. 1980
5 Nov. 1981 284 p refs
(Contract DE-AC02-77ET-25502)
(DE82-005305; DOE/ET-25502/3) Avail: NTIS HC A13/MF A01

The main theme of this project has been to develop high performance oxygen electrodes for a spectrum of applications including industrial electrolysis, metal-air batteries and fuel cells. The research at CWRU emphasizes the development of more effective electrocatalysts for both O2 reduction and electrogeneration and also more effective electrode structures (particularly for O2 cathodes) for utilizing these catalysts. The approach used by the CWRU group involves the development of a predictive base to guide the search for the new catalysts systems. The DSC group is concerned principally with the evaluations of catalysts developed and recommended by CWRU as well as by their own staff and the fabrication of electrode structures for these evaluations. Progress is reported in detail. DOE

OSMOTIC PUMPED HEAT PIPES FOR LARGE SPACE PLATFORMS
H. J. TANZER, G. L. FLEISCHMAN (Hughes Aircraft Co., Torrance, CA), and D. D. STALMACH (Vought Corp., Dallas, TX) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 11 p. refs
(AIAA PAPER 82-0902)

A thermal bus will be required as a thermal control source for future space platforms. The osmotic heat pipe is one candidate device with potential significant payoff toward serving growing thermal management needs. Results of a study evaluating osmotic heat pipes for thermal bus applications are presented. Electrostatic and other techniques are proposed for flow control and solution circulation in zero-gravity. Baseline size and performance design parameters of cellulose acetate membrane/sugar-water solution and other combinations were scaled up to predict osmotic pump performance for heat loads and temperatures of 4 to 120 C. A compact hollow-fiber membrane module measuring 20 inches in diameter by 12 inches long and weighing 190 pounds is projected for 50-kW heat loads. (Author)

DESIGN, FABRICATION AND TEST OF LIQUID METAL HEAT-PIPE SANDWICH PANELS
A. BASIULIS (Hughes Aircraft Co., Torrance, CA) and C. J. CAMARDA (NASA, Langley Research Center, Hampton, VA) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 8 p. refs
(AIAA PAPER 82-0903)

Integral heat-pipe sandwich panels, which synergistically combine the thermal efficiency of heat pipes and the structural efficiency of honeycomb sandwich panel construction, were fabricated and tested. The designs utilize two different wickable honeycomb cores, facesheets with screen mesh sintered to the internal surfaces, and potassium or sodium as the working fluid. Panels were tested by radiant heating, and the results indicate successful heat pipe operation at temperatures of approximately 922 K (1200 F). These panels, in addition to solving potential thermal stress problems in an Airframe-Integrated Scramjet Engine, have potential applications as cold plates for electronic component cooling, as radiators for space platforms, and as low distortion, large area structures. (Author)

METEOROLOGICAL EFFECTS ON LASER PROPAGATION FOR POWER TRANSMISSION
R. E. BEVERLY, III Space Solar Power Review, vol. 3, no. 1, 1982, p. 9-29. refs
(Contract NAS8-32475)

An examination of possible laser operating parameters for power transmission to earth from solar power satellites is presented, with particular attention paid to assuring optimal delivery at midlatitudes. The degradation of beam efficiency due to molecular scattering, molecular absorption, aerosol scattering, and aerosol

absorption during beam propagation through the atmosphere can be alleviated by judicious choice of wavelength windows, elevating the receptor sites, using a vertical propagation path, or by hole boring, i.e., vaporizing the aerosol particles in the beam path. Analyses are given for the beam propagation through fog, haze, clouds, and snow using various transitions. Only weapons-quality lasers are seen as being capable of boring through clouds and aerosols, employing a CW beam with superimposed pulses at high power densities. It is concluded that further short wavelength transmission experiments be performed to demonstrate transmission feasibility with the CW/pulsed mode of beam propagation. M.S.K.

A82-32369*
POWER AVAILABILITY AT TERRESTRIAL RECEPTOR SITES FOR LASER-POWER TRANSMISSION FROM THE SATELLITE POWER SYSTEM
R. E. BEVERLY, III Space Solar Power Review, vol. 3, no. 1, 1982, p. 31-44. refs
(Contract NAS8-32475)

A statistical model was developed for relating the temporal transmission parameters of a laser beam from a solar power satellite to observable meteorological data to determine the influence of weather on power reception at the earth-based receiver. Sites within 100 miles of existing high voltage transmission lines were examined and the model was developed for clear-sky and clouded conditions. The cases of total transmission through clouds at certain wavelengths, no transmission, and partial transmission were calculated for the cloud portion of the model. The study covered cirriform, stratiform, cumiliform, and mixed type clouds and the possibility of boring holes through the clouds with the beam. Utilization of weapons-quality beams for hole boring, was found to yield power availability increases of 9-33%, although no beneficial effects could be predicted in regions of persistent cloud cover. An efficiency of 80% was determined as possible if several receptor sites were available within 200-300 miles of each other, thereby allowing changes of reception point in cases of unacceptable meteorological conditions. M.S.K.

A82-32370
LASER SATELLITE POWER SYSTEMS - CONCEPTS AND ISSUES
E. W. WALBRIDGE (Argonne National Laboratory, Argonne, IL) Space Solar Power Review, vol. 3, no. 1, 1982, p. 45-71. Research supported by the U.S. Department of Energy. refs

A laser satellite power system (SPS) converts solar power captured by Earth-orbiting satellites into electrical power on the Earth's surface, the satellite-to-ground transmission of power being effected by a laser beam. The laser SPS is an alternative to the microwave SPS. Lasers and how they work are described, as are the types of lasers - electric discharge, direct and indirect solar pumped, free electron, and closed-cycle chemical - that are candidates for application in a laser SPS. The advantages of a laser SPS over the microwave alternative are pointed out. One such advantage is that, for the same power delivered to the utility busbar, land requirements for a laser system are much smaller (by a factor of 21) than those for a microwave system. The four laser SPS concepts that have been presented in the literature are described and commented on. Finally key issues for further laser SPS research are discussed. (Author)

SIMULATION OF D AND E REGION HIGH-POWER MICROWAVE HEATING WITH HF IONOSPHERIC MODIFICATION EXPERIMENTS
G. MELTZ (United Technologies Research Center, East Hartford, CT), C. M. RUSH, and E. J. VIOLETTE (National Telecommunications and Information Administration, Institute for Telecommunication Sciences, Boulder, CO) Radio Science, vol. 17, May-June 1982, p. 701-715. refs

The satellite power system is to utilize a microwave beam for the transmission of electric power to earth. It is, therefore, important to investigate the possible effects of such beams on the operation of telecommunication systems. In 1979 and 1980 a series of heating experiments were conducted using the high-power HF transmitter facility at Platteville, Colorado, to investigate the effects of ionospheric heating on the performance of certain telecommunications systems. The present investigation has the objective to compare the results of ionospheric changes obtained during these experiments with the theoretical estimates of the expected electron temperature and density changes. The described results were obtained by heating the ionosphere with 5.2- and 9.9-MHz high-powered signals and using a pulse ionosonde probe to detect the changes in the D and lower E regions. G.R.

Dielectric breakdown and loss measurements in liquid hydrogen and liquid hydrogen impregnated synthetic dielectrics, at temperatures between 14 and 200K and at hydrostatic pressures up to 5 atmospheres are performed. Effects of dissolved impurities/additives in the liquid are included. The self field and low field superconducting properties of high critical temperature materials are characterized at temperatures between approximately 14 and 200K. The experiments on dielectrics were conducted outdoors, due to safety considerations. The Design of the auxiliary equipment for the tests on the dielectric properties of LH2 was finished, and all the key components were ordered. A safety analysis report was started to discuss the effect of the setting on the safety aspects of this project; the design of the system of small electrodes was modified to provide individual ground connections for each ground electrode; data on Tc vs. composition was obtained for several samples of carbon doped V3Si; and the Nb3 Ge chemical vapor deposition apparatus was reactivated. HIGH-POWER MICROWAVE OPTICS FOR FLEXIBLE POWER TRANSMISSION SYSTEMS
K. E. DREXLER and B. R. SPERBER (Boeing Aerospace Co.) *In* NASA, Washington The Final Proc. of the Solar Power Satellite Program Rev. p 352-355 Jul. 1980 refs
Avail: NTIS HC A99/MF A01 CSCL 10A

A large concave microwave mirror near the transmitter can magnify the apparent size of the Earth as seen from a phased array, and vice versa, permitting a small phased array to be coupled to a small rectenna while preserving the transmission efficiency (the reflection loss is slight) and peak power densities characteristic of the reference system. This augmentation of the phased array aperture with a large mirror gives the system greater resolution (in the optical sense), and opens new degrees of freedom in SPS design. The consequences of such an approach for a prototype satellite were explored. Its consequences for a mature SPS are discussed. N.W.

HIGH VOLTAGE SYSTEMS (TUBE-TYPE MICROWAVE)/LOW VOLTAGE SYSTEM (SOLID-STATE MICROWAVE) POWER DISTRIBUTION
A. A. NUSSBERGER and G. R. WOODCOCK (Boeing Aerospace Co., Seattle) *In* NASA, Washington The Final Proc. of the Solar Power Satellite Program Rev. p 364-367 Jul. 1980
Avail: NTIS HC A99/MF A01 CSCL 10A

SPS satellite power distribution systems are described. The reference Satellite Power System (SPS) concept utilizes high-voltage klystrons to convert the onboard satellite power from dc to RF for transmission to the ground receiving station. The solar array generates this required high voltage and the power is delivered to the klystrons through a power distribution subsystem. An array switching of solar cell submodules is used to maintain bus voltage regulation. Individual klystron dc voltage conversion is performed by centralized converters. The on-board data processing system performs the necessary switching of submodules to maintain voltage regulation. Electrical power output from the solar panels is fed via switch gears into feeder buses and then into main distribution buses to the antenna. Power also is distributed to batteries so that critical functions can be provided through solar eclipses. N.W.

HELIUM RESEARCH IN SUPPORT OF SUPERCONDUCTING POWER TRANSMISSION Annual Report, 1 Oct. 1979 - 1 Sep. 1980
D. E. DANEY, ed. Sep. 1981 45 p refs Sponsored in part by Brookhaven National Lab.
(PB82-122987; NBSIR-81-1649) Avail: NTIS HC A03/MF A01 CSCL 09C

In developing superconducting power transmission line cooldown strategies a computer code was used to explore cooldown times for a wide variety of realistic boundary conditions. Cooldown times of 10 days are feasible with only minor modification to previously proposed refrigeration systems if cooling channel lengths are reduced to two thirds or one half those dictated by steady state considerations. Evaluation of thermal flux meters was concluded. Below ground field tests revealed large effects due to seasonal variation in the soil heat flux. These effects are largely cancelled by algebraic addition of the signals from a pair of horizontally opposed sensors. A brief above ground field evaluation indicated that diurnal variations in the heat flux completely mask heat fluxes typical of the anticipated enclosure heat flux. GRA

METALS PROCESSING
In its Mater. Process. Res. Base of the Mater. Process. Center p 268-284 28 Jun. 1982 refs
Avail: NTIS HC A13/MF A01 CSCL 11F

The metals processing effort is directed towards improvement of performance and usefulness of materials through modification and control of shape and internal structure. Interaction of reactive gases, introduced into a plasma arc, with iron alloys were analyzed. The technology of magnesium production was assessed. The study of fast fluidized bed reactors is continued. Aspects of separation processes are being investigated. The development of high field superconducting composites for use in large magnetic fusion devices is also discussed. Processing, structure, and property relationships of superconducting materials and the substitution of precious metals in standard electrical contact and connector applications are tested. The influence of processing procedures on the structure of zircaloy and nickel base alloys with a goal of improving mechanical properties and performance is investigated. Investigation of the potential of metal insulator semiconductor junctions as photovoltaic devices is reported. E.A.K.

ACTIVE SUPERCONDUCTIVE GENERATOR DEVELOPMENT 400 HORSEPOWER GENERATOR DESIGN
H. O. STEVENS and M. J. CANNELL Oct. 1981 119 p refs (AD-A107513; DTNSRDC/PAS-81-14) Avail: NTIS HC A06/MF A01 CSCL 10B

A superconductive acyclic generator has been designed and constructed using the unique current-carrying capabilities of superconducting wire in the field winding to produce a very high flux density in the rotor region. This, along with the use of liquid-metal current collectors in lieu of conventional brushes has yielded a very high power density machine designed to operate at gas turbine speeds. The nominal 300-kilowatt generator is 0.66 meter long and 0.46 meter in diameter (26 x 18 inches) and is designed to operate at 19,500 revolutions per minute. Extrapolation of the design analyses indicates no barriers to operation up to 750 kilowatts. Efficiencies of 98% are estimated over the practical operating range. GRA

HYDRAULIC TRANSPORT OF COARSE SOLIDS IN CIRCULAR AND SEGMENTED PIPES
H. B. SAUERMANN May 1981 165 p refs
(CSIR-ME-1716; ISBN-0-7988-1479-9) Avail: NTIS HC A08/MF A01

A detailed investigation into the hydraulic transport of coarse solids in circular and segmented pipes is presented. The existing hydraulic transport pipelines carry relatively fine solids. It is believed that if coarse solids could be transported economically, many more hydraulic transport pipelines would come into operation. It is shown that by providing a wide bed, e.g., a base wear plate in a circular pipe (segmented pipe) to the sliding bed of coarse particles, the energy requirements for the same solids throughout in comparison with a circular pipe of the same diameter is, depending upon the position of the base wear plate and the solid material, reduced by up to 35%. METAL HYDRIDES FOR ENERGY STORAGE
D. G. IVEY and D. O. NORTHWOOD (Windsor, University, Windsor, Ontario, Canada) Canadian Metallurgical Quarterly, vol. 20, Oct.-Dec. 1981, p. 397-405. Research supported by the Natural Sciences and Engineering Research Council of Canada and Ontario Ministry of Energy. refs

Metal hydrides provide an efficient and safe method for storing hydrogen. Hydrogen can be stored indefinitely and released as needed for a number of energy usages. This paper conducts an overall review of the various alloys under consideration for hydrogen storage. The major classifications available are the AB compounds, AB5 compounds, and the AB2 or A2B compounds. Although none of these alloys fulfill storage criteria completely, a number of them show promise. (Author)

ENERGY STORAGE CAPACITY OF ROTATING COMPOSITE DISKS AND SHELLS /REVIEW/ [ENERGOEMKOST' VRASHCHAIUSHCHIKHSIA DISKOV I OBOLOCHEK IZ KOMPOZITOV /OBZOR/]
G. G. PORTNOV and IU. M. TARNOPOLSKII (Akademiia Nauk Latviiskoi SSR, Institut Mekhaniki Polimerov, Riga, Latvian SSR) (Vsesoiuznyi S'ezd po Teoreticheskoi i Prikladnoi Mekhanike, 5th, Alma-Ata, Kazakh SSR, May-June 1981.) Mekhanika Kompozitnykh Materialov, Mar.-Apr. 1982, p. 290-300. In Russian. refs

Research in the field of composite flywheels is briefly reviewed. Particular attention is given to the energy storage capacity of filament-wound structures and optimum shapes and reinforcement patterns for rotating shells. The maximum mass energy storage capacity of flywheels made from state-of-the-art composite materials is estimated at 400-800 J/g as compared with 100-200 J/g for steel flywheels. Energy storage capacities are calculated for filament-wound epoxy-matrix composite disks reinforced with glass, carbon, boron, and organic fibers. V.L.

A82-31563
ENERGY STORAGE CAPACITY OF ROTATING COMPOSITE STRUCTURES OPERATING UNDER UNIAXIAL TENSION [ENERGOEMKOST' VRASHCHAIUSHCHIKHSIA KONSTRUKTSII IZ KOMPOZITOV, RABOTAIUSHCHIKH NA ODNOOSNOE RASTIAZHENIE]
G. G. PORTNOV and V. A. POLIAKOV (Akademiia Nauk Latviiskoi SSR, Institut Mekhaniki Polimerov, Riga, Latvian SSR) Mekhanika Kompozitnykh Materialov, Mar.-Apr. 1982, p. 301-306. In Russian. refs

The energy storage capacity of filament-wound composite structures, such as rings, disks, and shells, is estimated using energy relationships derived from equilibrium equations. It is found that uniformly stressed structures have the highest energy storage capacity per specified mass. The maximum mass energy storage capacity is shown to be equal to one half of the specific material strength and is achieved in a thin ring. V.L.

A82-31841
VIBRATING ZINC ELECTRODES IN NI/ZN BATTERIES
M.-B. LIU, G. M. COOK, N. P. YAO (Argonne National Laboratory, Argonne, IL), and J. R. SELMAN (Illinois Institute of Technology, Chicago, IL) Electrochemical Society, Journal, vol. 129, May 1982, p. 913-920. Research supported by the U.S. Department of Energy. refs

It is noted that, in electrochemical processes where diffusion is rate controlling, the use of vibrating electrodes may result in an increase in the average mass transfer rate. The mechanism for this increase is that vibration changes the pattern of free convective flow developed during the process into a different flow pattern. Four models for the mass transfer enhancement are discussed and modified. An analysis is given of vibrating zinc electrodes in Ni/Zn batteries. The analysis comprises fluid dynamics, mass transfer, and electrochemical deposition phenomena. Consideration is also given to three types of fluid flows. The first, free-convective flow, is induced through the difference in the electrolyte density near the electrode and in the bulk. The other two, which are induced by the vibration of the zinc electrodes, are a periodic flow consisting of an oscillatory bulk flow and an oscillatory boundary flow, and a steady streaming near the upper and lower edges of the electrodes. A calculation is made of the mass-transfer coefficients of zincate and hydroxide ions. The morphology of the electrochemical deposition of zinc from alkaline zincate solution is related to ion-surface interactions. C.R.

SOME THERMOPHYSICAL PROPERTIES OF PARAFFIN WAX AS A THERMAL STORAGE MEDIUM
A. HAJI-SHEIKH, J. EFTEKHAR, and D. Y. S. LOU (Texas, University, Arlington, TX) American Institute of Aeronautics and Astronautics and American Society of Mechanical Engineers, Joint Thermophysics, Fluids, Plasma and Heat Transfer Conference, 3rd, St. Louis, MO, June 7-11, 1982, AIAA 7 p. Research supported by the University of Texas. refs
(AIAA PAPER 82-0846)

An experimental study is conducted to determine the suitability of paraffin wax SUNTECH P116 as a phase change material for storage of thermal energy. Certain temperature dependent thermophysical properties in the neighborhood of the melting point useful for this study, but not adequately available in the literature, are measured. They include thermal conductivity, density, thermal expansion coefficient, and viscosity. It is observed that the thermal conductivity of paraffin wax, in solid phase, is not a monotonic function of temperature as reported in the literature. Other thermophysical properties of the liquid phase measured vary monotonically with temperature. (Author)

A NEW TECHNIQUE FOR DETERMINING BATTERY INTERNAL RESISTANCE - STUDIES ON LECLANCHE CELLS
J. A. HAMILTON (Commonwealth Scientific and Industrial Research Organization, Institute of Earth Resources, Port Melbourne, Australia) Journal of Power Sources, vol. 7, Mar. 1982, p. 267-273. refs

A new technique for determining the internal resistance of batteries (and fuel cells) is described. The measuring circuit employs recently released VMOS field-effect transistors. The measurements do not require a storage or differential-input oscilloscope, and they can be performed in situ during battery discharge. The determination is similar to the constant-current, square-wave technique but is easier to use and does not rely on the use of approximations. Batteries can be tested without significant discharge because the mark-to-space ratio of the discharge pulse can be 0.1 percent. Data obtained on Leclanche cells using this technique are presented, showing the variation of internal resistance with discharge current and temperature.

TRANSIT BUS PROPULSION EMPLOYING FLYWHEEL ENERGY STORAGE
L. J. LAWSON (Garrett AiResearch Manufacturing Co., Torrance, CA) Journal of Advanced Transportation, vol. 16, Spring 1982, p. 87-101. refs

A Flywheel Energy Storage System (FESS) concept is described for application to urban transit buses which undergo recharging at route intervals of 3-5 miles. A detailed description is given of the composite flywheel rotor and the synchronous induction motor by which the flywheel is both recharged and discharged, functioning as a generator for the powering of a traction motor that drives the rear axle of the bus in the discharge mode. The development of an automatic collector and enroute charging technique is expected to obviate an otherwise necessary delay of 90 sec for recharging. A technical review of FESS characteristics has demonstrated the feasibility of retrofit installation into the buses of three of the five manufacturers consulted on this possibility. Attention is given to production and life cycle costs, based on a product life of ten years. O.C.

ENERGY STORAGE OPTIONS FOR HARNESSING WIND ENERGY
R. RAMAKUMAR (Oklahoma State University, Stillwater, OK) American Society of Mechanical Engineers, Energy-Sources Technology Conference and Exhibition, New Orleans, LA, Mar. 7-10, 1982, 6 p. Research supported by the Oklahoma State University. refs
(ASME PAPER 82-PET-9) MEMBERS, $2.00; NONMEMBERS, $4.00

The inherent variability of the wind energy resource necessitates either an energy storage and reconversion system or a back-up unit to supply customers 'on demand'. A brief survey of the technical aspects of the various energy storage and reconversion options proposed for use with wind energy conversion systems is presented. Energy can be stored in mechanical, chemical, thermal, or electrical form. The schemes discussed include hydrofirming, compressed air, flywheels, hydrogen, secondary batteries, and thermal storage. (Author)

NEW PERSPECTIVES FOR KINETIC ENERGY STORAGE
J.-P. BARTHELEMY (Societe Nationale Industrielle Aerospatiale, Les Mureaux, Yvelines, France) In: Energy conservation and thermal insulation. Chichester, Sussex, England, John Wiley and Sons, Ltd., 1981, p. 689-698.

Research on flywheels has produced fully integrated systems comprising a rotor, magnetic suspension, a motor-generator, and associated electronics. This makes it possible to introduce energy in electric form, store it in kinetic form, and recover it in electric form, the wheel being placed in a vacuum container for ground operations. A description is given of magnetic bearings and associated subsystems, with attention given to the passive permanent-magnet radial bearings, active electromagnetic axial bearing, axial servoloop, radial dampers, motor, emergency bearings, and electronics. It is shown that the main functional hardware can be adapted to ground applications without significant new developments for a range below 3 kW in power and 1 kWh in deliverable energy. Here, no special rooms or large surfaces are needed. Because of the inherent reliability of magnetic suspension, no maintenance is necessary. C.R.

A82-36256
NEW DEVELOPMENTS IN BATTERY TECHNOLOGY
J. GRAY (Chloride Group, Ltd., London, England) Endeavour, vol. 6, no. 2, 1982, p. 78-82.

Practical, high energy density alternatives to the lead-acid battery are considered for both vehicular and utility load-leveling use, in view of year 2000 potential markets. After demonstrating the high costs and low energy densities and life cycles of lead/acid, nickel/iron and nickel/zinc systems, as well as batteries using gaseous electrodes such as the nickel/hydrogen system employed by communication satellites and those taking advantage of light metals like lithium and sodium, a description is given of the design features and operational characteristics of the sodium/sulfur battery. Attention is given to both internal and external sodium volume battery configurations, both of which employ beta alumina as a solid electrolyte with high sodium ion conductivity, and molten sodium and sulfur at 350 C. It is the thermal insulation of the sodium/sulfur battery that makes its application to electric vehicles difficult, despite a very high energy density. O.C.

A82-36317
AN INNOVATION WHICH COMES FROM SPACE - KINETIC ENERGY STORAGE [UNE INNOVATION QUI VIENT DE L'ESPACE - LE STOCKAGE CINETIQUE D'ENERGIE]
J.-P. BARTHELEMY (Societe Nationale Industrielle Aerospatiale, Les Mureaux, Yvelines, France) La Recherche, vol. 12, Oct. 1981, p. 1162-1164. In French.

The potential ground-based applications of the technology of energy storage in a rotating flywheel, which was developed for use in satellites, are discussed. Problems of the conventional flywheel as used in satellite energy storage systems are identified, including limited storage capacity and losses due to wear, limited life and low autonomy, and solutions offered by the use of composite materials on the one hand and magnetic suspension are pointed out. The design of a kinetic energy battery making use of magnetic levitation and currently undergoing tests as a reserve energy supply for a rural telephone system is then presented, and the operational advantages of such a system with respect to an electrochemical cell are pointed out. A.L.W.

COMPOSITES IN ENERGY GENERATION AND STORAGE SYSTEMS - AN OVERVIEW
R. W. FULMER (Owens Corning Fiberglas Corp., Fiberglas Composites and Equipment Marketing Div., Toledo, OH) In: Reinforced Plastics/Composites Institute, Annual Conference, 36th, Washington, DC, February 16-20, 1981, Preprints. New York, Society of the Plastics Industry, Inc., 1981 (Session 22-A). 8 p. refs

Applications of glass-fiber reinforced composites (GER) in renewable and high-efficiency energy systems which are being developed to replace interim, long-term unacceptable energy sources such as foreign oil are reviewed. GFR are noted to have design flexibility, high strength, and low cost, as well as featuring a choice of fiber orientation and type of reinforcement. Blades, hub covers, nacelles, and towers for large and small WECS are being fabricated and tested and are displaying satisfactory strength, resistance to corrosion and catastrophic failure, impact tolerance, and light weight. Promising results have also been shown in the use of GFR as flywheel material for kinetic energy storage in conjunction with solar and wind electric systems, in electric cars, and as load levellers. Other applications are for heliostats, geothermal power plant pipes, dam-atoll tidal wave energy systems, and intake pipes for OTECs. M.S.K.

RPE-10 COMPOSITE FLYWHEEL TESTING Final Report
B. R. GINSBURG 15 Jun. 1981 47 p refs Prepared for California Univ., Livermore. Lawrence Livermore Lab.
(Contract W-7405-ENG-48)
(UCRL-15379; RI-RD81-166) Avail: NTIS HC A03/MF A01

A final report on the technical efforts in testing an RPE-10 composite flywheel is presented. The RPE-10 composite flywheel (unit no. 2) designed and fabricated for vehicle use, was tested to a speed of 21,600 rpm, at which time the overwrap separated from the flywheel, terminating the test. The primary cause of failure was attributed to overheating in the test cell, causing a deterioration in material properties of the epoxy bond. The RPE-10 composite flywheel unit no. 1 was successfully tested without failure to 24,120 rpm. At this speed, the rotor stored over 2.0 kilowatt hours of kinetic energy. M.D.K.

(DE82-000674; DOE/ET-29232/T4-VOL-3B) Avail: NTIS HC A02/MF A01

Fourteen sites considered to have potential for development with a 1000 MW compressed air energy storage (CAES) plant were identified by the Illinois State Geological Survey (ISGS) and the Indiana Geological Survey (IGS). The relative desirability of developing each of these sites was evaluated from the standpoints of geology, economics, air quality/meteorology, cultural resources, and ecology. Preliminary site layouts were developed for each of the 14 sites. Sites that were found to be incapable of supporting a 1000 MW plat, or that would require more than 2000 air injection-withdrawal wells to do so, were eliminated from consideration. The seven remaining top-ranked sites were then selected for further study. T.M.

LATENT HEAT THERMAL ENERGY STORAGE: DETERMINATION OF PROPERTIES OF STORAGE MEDIA AND DEVELOPMENT OF A NEW TRANSFER SYSTEM Final Report, Jun. 1980
A. ABHAT, S. ABOUL-ENEIN, and N. A. MALATIDIS Bonn Bundesministerium fuer Forschung und Technologie Jan. 1982 193 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-82-016; ISSN-0340-7608) Avail: NTIS HC A09/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 34,80

A latent heat storage system for low temperature solar heating applications was developed. Latent heat storage materials were studied and a heat exchanger design was evaluated. Thermophysical properties of 14 organic and inorganic heat storage materials, including 5 inexpensive commercial paraffins, 2 fatty acids, and 5 salt hydrates, were measured with a precision differential scanning calorimeter. Data pertaining to phase transition temperature, enthalphy and, specific heat of the heat storage materials in solid and liquid phases were taken. The influence of thermal cycling on the melting and freezing behavior of the materials and on changes in thermophysical properties was analyzed. A heat exchanger with finned annulus heat exchanger elements was investigated. Tests were performed, using two laboratory models that employed a paraffin, two fatty acids and one salt hydrate as heat storage materials. Author (ESA)

INVESTIGATIONS TO PREDICT AND REDUCE THE EVAPORATION RATE OF THE RESIDUAL BRINE IN SALT CAVERNS USED FOR GAS STORAGE Final Report, Dec. 1980
H. J. PETRICK, H. K. CAMMENGA, and D. HERZ Bonn Bundesministerium fuer Forschung und Technologie Dec. 1981 42 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-226; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 8,60

Tensides were tested for their ability to reduce the evaporation rate of residual brine in salt caverns used for gas storage. Fatty alcohols with more than 20 CH2 groups and perfluorinated alcohols with more than 12 CF 2 groups prove especially useful. The formation of a solid salt crust on the initialy free brine surface is due to the incorporation of alkaline Earth ions. After its completion, the solid salt crust enormously reduces the evaporation rate of the underlying brine. It is found that by the use of different tensides, crust formation can be either enhanced of retarded at will.

PRELIMINARY DESIGN STUDY OF UNDERGROUND PUMPED HYDRO AND COMPRESSED-AIR ENERGY STORAGE IN HARD ROCK. VOLUME 8: DESIGN APPROACHES. UPH, APPENDIX D: POWER PLANT Final Report
Jun. 1981 607 p Sponsored in part by Electric Power Research Inst. Prepared for Potomac Electric Power Co., Washington, D.C.
(Contract DE-AC02-77ET-28013; EPRI PROJ. 1081-1)
(DE82-003075; EPRI-EM-1589-VOL-8-APP-D; DOE/ET-5047/8.D) Avail: NTIS HC A99/MF A01

Studies were undertaken to determine power plant arrangements for a single stage reversible pump turbine two step underground pumped hydro (UPH) installation and for a multi-stage reversible pump turbine single step (MSRPT) UPH installation. Arrangements consist of: the underground powerhouses; transformer galleries; associated mechanical and electrical equipment; the administration and control building; hoist head frames; the access; draft tube and bus tunnels; and the switchyard. Primary considerations including the number and size of pump turbine and motor generator units, starting methods, transformers, high voltage connections, geotechnical and construction aspects and safety were studied. A feasibility analysis to minimize costs was conducted. The study led to the selection of suitable equipment and layouts for the powerhouses, transformer galleries, and associated facilities. The material presented and also the cost estimates are based on the requirements for a 2000 MW plant providing 20,000 MWh of storage with a nominal head of 4600 ft. DOE

PHOTOCHEMICAL ENERGY STORAGE: STUDIES OF INORGANIC PHOTOASSISTANCE AGENTS Progress Report, 17 Dec. 1980 - 14 Sep. 1981
M. S. WRIGHTON Sep. 1981 31 p refs
(Contract DE-AS02-76ER-04178)
(DE82-000403; DOE/ER-04178/5) Avail: NTIS HC A03/MF A01

Work concerning the use of certain n- and p-type semiconductors, including Si, InP, WS2, TiO2, and SrTiO3, as photoelectrode materials in photoelectrohemical cells for optical energy conversion is reported. Additionally, intrinsic a-Si:H on a stainless steel substrate was characterized where the contact to the stainless steel is a thin, heavily doped n-type layer resulting in an ohmic contact near the conduction band. Study of p-type Si bearing a redox polymer/Pt(O) or Pd(O) catalyst system was ongoing and improvements in photoelectrochemical H2 generation via surface catalysis were demonstrated. Highlights of the accomplishments so far are: (1) the demonstration that n-type WS2-based photoelectrochemical cells can be used to sustain the uphill conversion of SO2 and H2O to H2SO4 and H2 in 50% by weight H2SO4; (2) establishment of the behavior of photoconductor (a-Si:H) electrodes in contact with liquid electrolytes. PRELIMINARY DESIGN STUDY OF UNDERGROUND PUMPED HYDRO AND COMPRESSED-AIR ENERGY STORAGE IN HARD ROCK. VOLUME 11: PLANT DESIGN. UPH Final Report
Jun. 1981 379 p refs Prepared in cooperation with Potomac Electric Power Co. 13 Vol.
(Contract DE-AC02-77ET-28012; EPRI PROJ. 1981-1)
(DE82-000918; EPRI-EM-1589-VOL-11; DOE/ET-5047/11) Avail: NTIS HC A17/MF A01

The plant design for an underground pumped hydroelectric (UPH) storage facility having maximum generating capacity of 2000 MW and energy storage capacity of 20,000 MWh at a nominal heat of 5000 ft. is presented. The UPH facility is a two step configuration with single-stage reversible pump-turbines, each step consisting of a 1000 MW plant at a nominal head of 2500 ft. The surface facilities and upper reservoir, shafts and hoists, penstocks and hydraulic tunnels, powerhouses, and intermediate and lower reservoirs are described. Details of the power plant electrical and mechanical equipment, including pump-turbine and motor-generator units, are given. The development of the site is outlined together with the construction methods and schedule. The cost estimates and a cost-risk analysis are presented. Plant operation, including unit operation, two-step operation, plant efficiency, and availability, is outlined. T. M.

OVERVIEW OF THE THERMAL ENERGY STORAGE (TES) PROGRAM
M. GUREVICH *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 1-2 Mar. 1981
Avail: NTIS HC A16/MF A01

The program promotes energy savings and fuel substitution by developing and helping to commercialize technologies for storing heat or cold, with shot investment payback periods as a cost goal. The sources of energy include industrial and utility waste heat as well as primary sources such as solar, geothermal, nuclear and fossil fuels. The primary source of 'cold' for seasonal storage is winter chilled air. The program emphasizes near-term (1980's) approaches to energy conservation and displacement of natural gas and oil. It also provides for development of technologies which will allow use of renewable resources such as solar-thermal energy

during the mid-term (1990's) and advanced energy storage and transport techniques for the far-term (beyond 2000). T.M.

ORNL THERMAL ENERGY STORAGE PROGRAM OVERVIEW
J. F. MARTIN *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 3-10 Mar. 1981 refs
Avail: NTIS HC A16/MF A01

Development of thermal energy storage (TES) technologies and subsystems is relevant to national energy objectives in energy conservation and in the deployment of new energy soucss. Oak Ridge National Laboratory (ORNL) acts as a Lead Technical Laboratory in managing for DOE-STOR those elements of the program dealing with building heating and cooling, and industrial applications. The scope of ORNL activity in these two activities is described, and a summary of each of the in-house and subcontracted projects current or anticipated for the next fiscal year are presented. The major thrust of each of the elements of the ORNL program is given. Author

DESIGN AND DEMONSTRATION OF A STORAGE-ASSISTED AIR CONDITIONING SYSTEM
J. E. RIZZUTO *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 11-14 Mar. 1981
Avail: NTIS HC A16/MF A01

The system is a peak-shaving system designed to provide a levelized air conditioning load. The system also requires minimum air conditioner and thermal storage capacity. The storage-assisted air conditioning system uses a Glauber's salt-based phase change material in sausage like containers called CHUBS. The CHUBS are two (2) inches in diameter and 20 inches long. They are stacked in modules of 64 CHUBS which are appropriately spaced and oriented in the storage system so that air may pass perpendicular to the long axis of the CHUBS. The phase change material, has a thermal storage capacity in the range of 45 to 50 Btu/lb and a transition temperature of approximately 55 F. T.M.

Avail: NTIS HC A16/MF A01

Thermal energy storage (TES) for space heating is a load management technique that is successfully used in Europe. Results from the ANL assessment of energy storage technologies indicated that customer owned TES units of the type used in Europe could provide a cost-effective means for utility load management in the U.S. It is only necessary, therefore, that the technical and economic viability of this technology be examined under the U.S. climatic, institutional and other conditions. DIRECT CONTACT HEAT TRANSFER FOR THERMAL ENERGY STORAGE
J. D. WRIGHT *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 50-53 Mar. 1982 refs
Avail: NTIS HC A16/MF A01

Direct contact heat exchange offers the potential for increased efficiency and lower heat transfer costs in a variety of thermal energy storage systems. SERI models of direct contact heat transfer based on literature information identified dispersed phase drop size, the mechanism of heat transfer within the drop, and dispersed phase holdup as the parameters controlling direct contact system performance. Tests were defined and equipment constructed to provide independent determination of drop size, heat transfer mechanism, and hold up. Further experiments are needed to conclusively determine whether the salt in a salt hydrate melt acts to block internal circulation. The potential of low temperature oil/salt hydrate latent heat storage systems is being evaluated in the laboratory. M.D.K.

SYSTEMS ANALYSIS OF THERMAL STORAGE
R. J. COPELAND *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 54-57 Mar. 1981 refs
Avail: NTIS HC A16/MF A01

During FY80 analyses were conducted on thermal storage concepts for solar thermal applications. These studies include both estimates of the obtainable costs of thermal storage concepts and their worth to a user (i.e., value). Based on obtainable costs and performance, promising thermal storage concepts are being identified. A preliminary screening was completed in FY80 and a more in-depth study was initiated. Value studies are being conducted to establish cost goals. A ranking of storage concepts based on value in solar thermal electric plants was conducted for both diurnal and long duration applications. Ground mounted thermal storage concepts for a parabolic dish/Stirling system are also being evaluated. Author

HIGH-TEMPERATURE MOLTEN SALT THERMAL ENERGY STORAGE SYSTEMS FOR SOLAR APPLICATIONS
R. J. PETRI and T. D. CLAAR *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 60-64 Mar. 1982 refs
Avail: NTIS HC A16/MF A01

A plan for the selection and testing of latent-heat alkali and alkaline earth carbonate storage salts, containment materials, and thermal conductivity enhancement (TCE) materials for use in

high-temperature (704 to 871 C) thermal energy storage systems utilizing advanced solar-thermal power generation concepts is described. Screening of candidate salt/containment/TCE materials combinations will be performed. Results of these compatibility tests will lead to the selection of materials combinations that meet anticipated solar power system requirements. Needs for more reliable thermophysical and transport property data will be identified and measurements will then be performed on these salts to support the scale-up of solar-thermal TES subsystems. ACTIVE HEAT EXCHANGE: SYSTEM DEVELOPMENT FOR LATENT HEAT THERMAL ENERGY STORAGE
J. ALARIO and R. HASLETT *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 65-67 Mar. 1981
Avail: NTIS HC A16/MF A01

An active heat exchange method in a latent heat (salt) thermal energy storage system that prevents a low conductivity solid salt layer from forming on heat transfer surfaces was developed. An evaluation of suitable media with melting points in the temperature range of interest (250 to 400 C) limited the candidates to molten salts from the chloride, hydroxide, and nitrate families, based on high storage capacity, good corrosion characteristics, and availability in large quantities at reasonable cost. The specific salt recommended for laboratory tests was a choride eutectic (20.5KCl, 24.5NaCl, 55.0MgCl2 percent by wt.), with a nominal melting point of 385 C. Author

THERMAL ENERGY STORAGE FOR RESIDENTIAL ENERGY CONSERVATION
D. GOLDENBERG *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 79-83 Mar. 1981 refs
Avail: NTIS HC A16/MF A01

The potential for conservation of oil and gas was evaluated for thermal energy storage applications involving waste heat recovery and passive solar systems for houses that have gas- or oil-fired furnaces. A waste heat recovery device using pebbles as the TES medium increases furnace seasonal efficiency to 95%. Passive solar system performance was estimated from work sponsored by the Department of Energy. Potential market sizes and penetrations were evaluated by region to determine national oil and gas savings. The total oil and gas savings for the year 2000 were estimated to be 0.22 quads/year for the furnace waste heat recovery device and 0.10 quads/year for passive solar systems installed in houses heated by gas or oil furnaces. THERMAL ENERGY BUFFER STORAGE FOR THE SMALL COMMUNITY SOLAR THERMAL POWER EXPERIMENT
R. E. POLZIEN *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 123-128 Mar. 1981 refs
Avail: NTIS HC A16/MF A01

The application of a latent heat thermal energy buffer storage (TEBS) subsystem to the small community solar thermal power experiment (SCSE) is discussed. The SCSE consists of multiple point focusing distributed receiver (PFDR) power modules equipped with an organic Rankine cycle power conversion unit mounted at the focus of each paraboloidal concentrator. The objective of the TEBS is to minimize plant shutdowns during intermittent cloud coverages, thereby improving life expectancy of the major subsystems with attendant reduction in capital investment and maintenance costs. An SCSE plant performance model modified for operation with a TEBS system is used with time varying insolation to show that 70 to 80 percent of the potential engine shutdowns due to insolation dropout may be averted with the TEBS system. Results of preliminary design analyses of various TEBS concepts are discussed. Author

APPLICATIONS OF THERMAL ENERGY STORAGE TO WASTE HEAT RECOVERY IN THE FOOD PROCESSING INDUSTRY
G. J. TREBILCOX and W. L. LUNDBERG (Westinghouse Electric Corp., Pittsburgh, Pa.) *In* Courtesy Associates, Inc. Proc. of the DOE Thermal and Chem. Storage Ann. Contractor's Rev. Meeting p 137 Mar. 1981
(Contract EC-77-C-01-5002)
Avail: NTIS HC A16/MF A01

The canning segment of the food processing industry is a major energy user within that industry. Most of its energy demand is met by hot water and steam and those fluids, in addition to product cooling water, eventually flow from the processes as warm waste water. To minimize the possibility of product contamination, a large percentage of that waste water is sent directly to factory drains and sewer systems without being recycled and in many cases the thermal energy contained by the waste streams also goes unreclaimed and is lost from further use. Waste heat recovery in canning facilities can be performed economically using systems that employ thermal energy storage (TES). A project was proposed in which a demonstration waste heat recovery system, including a TES feature, would be designed, installed and operated. Author

Avail: NTIS HC A05/MF A01 CSCL 10C

Improved catalyzation techniques that included a pretreatment of carbon substrate and provided normalized carbon surface for uniform gold deposition were developed. This permits efficient use of different batches of carbon felt materials which initially vary significantly in their physical and surface chemical properties, as well as their electrochemical behavior. Further modification of gold impregnation technique gave the best performing electrodes. In addition to the linear sweep voltammetry, cyclic voltammetry was used to determine the effects of different activation procedures on the Cr(3)/Cr(2) Redox and H2 evolution reactions. The roles of carbon, gold and lead in the overall Redox cycle are identified. The behavior of the electrodes at both normal battery operating potentials and more extreme potentials is discussed preparing efficient and stable electrodes for the energy storage battery is implicated. VEHICLE TEST REPORT: JET INDUSTRIES ELECTRA VAN 600
T. W. PRICE and V. A. WIRTH, JR. 15 Feb. 1982 50 p refs
(Contract NAS7-100; DE-AI01-78CS-54209)
(NASA-CR-168986; JPL-PUB-82-36; NAS 1.26:168986; DOE/CS-54209/9) Avail: NTIS HC A03/MF A01 CSCL 13F

The Electra Van 600, an electric vehicle, was tested. Tests were performed to characterize parameters of the Electra Van 600 and to provide baseline data to be used for comparison of improved batteries and to which will be incorporated into the vehicle. The vehicle tests concentrated on the electrical drive subsystem, the batteries, controller, and motor; coastdowns to characterize the road load and range evaluation for cyclic and constant speed conditions; and qualitative performance was evaluated. It is found that the Electra Van 600 range performance is approximately equal to the majority of the vehicles tested previously. E.A.K.

(Contract F33615-78-C-2058)
(AD-A111087; AFWAL-TR-81-2039) Avail: NTIS HC A04/MF A01 CSCL 10C

Interim results are presented for a program dealing with the placement of nickel-zinc batteries in specific military applications, namely the BQM-34A and the PQM-102 Remotely Piloted Vehicles. The nickel-zinc system was chosen for these applications because RPV's demand a high quality secondary battery that offers a compromise between long life (calendar and cycle) and low weight and volume. Program tasks include continued development of the nickel zinc system, calendar and cycle life testing of the two candidate batteries, qualification testing, and flight testing in operational RPV's. Test results of developmental cells and batteries include cycle life testing of various separator materials, high rate/low temperature discharges with various types of nickel electrodes, zinc electrode substrate, and charging methods. Calendar and cycle life testing is underway which will demonstrate the ability of the nickel-zinc system to be routinely cycled over an extended period of time. Author (GRA)

MEMBRANE-LINED FOUNDATIONS FOR LIQUID THERMAL STORAGE Final Report, 1 May 1978 - 31 Dec. 1979
R. C. BOURNE Jun. 1981 102 p refs
(Contract DE-AS02-78ET-20111)
(DE82-003651; DOE/ET-20111/1) Avail: NTIS HC A06/MF A01

The membrane lined storage (MLS) container which is a spinoff of vinyl-lined swimming pool and waterbed technologies was developed. The state of development of MLS was evaluated and concepts for MLS structural and heat transfer systems were improved. Preferred structural supports were identified and designed for 1500 gal MLS containers for basement, crawl space, and slab-on-grade foundation types. Techniques are developed to provide space heating via forced air through a finned storage jacket for the two preferred structural enclosure designs. Cost effectiveness of the direct air heating technique is evaluated. Alternate free convection domestic water preheaters and a preferred heat exchanger material is selected. Collector and space heat inlet/outlet designs, design concepts for auxiliary heat input to MLS from resistance electric, combustion, and heat pump sources are developed. DOE

BATTERY RESOURCE ASSESSMENT. VOLUME 1: SCENARIOS, INVESTMENT, AND MATERIALS COST
D. SULLIVAN Jun. 1981 123 p refs
(Contract DE-AC02-80CH-10026)
(DE82-006243; DOE/CH-10026/2A) Avail: NTIS HC A06/MF A01

The possibility of widespread use of storage batteries for load leveling, photovoltaic, and electric vehicle applications creates a potential for major shifts in the utilization of various resources. In addition to materials requirements, significant investments will be required in order for the battery industry to manufacture a large number of batteries. A study to identify the resources required for a significant expansion of the battery industry and especially to note resources that may be strained as a result of accelerated battery development is presented. Scenarios of future battery demand, an analysis of battery manufacturing investments, an analysis of battery price sensitivity to materials prices, and an analysis of the availability of several key battery materials are included. TRANSIENT ANALYSIS OF HEAT TRANSMISSION SYSTEMS
G. E. PHETTEPLACE Dec. 1981 63 p refs
(Contract DA PROJ. 4A7-62730-AT-42)
(AD-A112365; CRREL-81-24) Avail: NTIS HC A04/MF A01 CSCL 20M

This report develops a method of analysis for heat transmission systems operating under district heating load conditions. The method accounts for the effects of heat source and load characteristics. The use of thermal energy storage systems is outlined and advantages are given. The transmission model itself considers the following technical aspects: (1) frictional pressure losses in piping system, (2) pump characteristics, (3) pump driver characteristics, and (4) heat losses from the buried piping. The capital costs considered are the piping system and necessary pumps. Operation and maintenance costs include cost of heat loss and cost of pumping energy input. Allowances are also made for system maintenance and repair over the assumed lifetime. GRA

MAGNETIC BEARING FLYWHEELS FOR ELECTRIC STORAGE
P. C. POUBEAU 1981 11 p refs Presented at Intern. Energy Agency Conf. on New Energy Conservation and their Commercialization, Berlin, 6-10 Apr. 1981
(SNIAS-821-422-110) Avail: NTIS HC A02/MF A01

A magnetic bearing flywheel was designed. In order to have a simple, reliable system, magnetic suspension with a single servoloop for one degree of freedom of the rotor was used, four other degrees of freedom being controlled passively and the sixth one, corresponding to the rotation axis. The motor that transfers electric energy to the rotor is of the ironless brushless dc type with electronic commutation. It is operated alternatively for accelerating the wheel and then as a generator for delivering the stored energy. The use of high stress composite materials in the rotor greatly increases the operational limits of this equipment. Key characteristics of kinetic energy storage are mentioned along with a wide range of applications. Besides energy storage for satellites, these include power smoothing for solar and wind energy systems as well as backup power supplies, e.g., for electric vehicles. Author (ESA)

MAGNETIC SUSPENSION AND FLYWHEELS: SPACEBORNE AND TERRESTRIAL APPLICATIONS [LA SUSPENSION MAGNETIQUE ET LES VOLANTS D'INERTIE: APPLICATIONS SPATIAUX ET TERRESTRES]
P. C. POUBEAU 1981 4 p In FRENCH Presented at Conf. Aerospatiale a la Journee sur l'Espace et son Futur, Toulouse, Oct. 1981 Sponsored by SITEF
(SNIAS-821-422-111) Avail: NTIS HC A02/MF A01

Satellite attitude control, using inertia wheels, is discussed. Elimination of friction effects through application of magnetic bearings is considered. The inertia wheel/magnetic bearing configuration can also be used to store kinetic energy. Higher rotational velocities create a need for stronger rotor construction materials; improved mechanical properties can be achieved with composite materials. Kinetic energy storage for earthside applications (solar energy storage; electric vehicles) is mentioned. Author (ESA)

GENERAL

A82-28642
THE PRACTICAL UTILISATION OF FIBRE COMPOSITE HYBRIDS
W. PATON (National Engineering Laboratory, East Kilbride, Scotland) In: Fibre composite hybrid materials. London, Applied Science Publishers, 1981, p. 221-260. refs

The application potential and practical approaches to the design of hybrid components and structures are discussed and illustrated by examples of applications in automotive, aerospace, and energy

generation fields. Advantages in design and manufacture due to hybridization include increased structural stiffness, the possibility to control the coefficient of thermal expansion to match design requirements, high dimensional stability, corrosion resistance, and the possibility of accurate control of in-plane and through-thickness conductivity. Cost-effective hybridization depends on accurately matching laminate and reinforcement configurations within a product to an adequate performance specification; maximum structural utilization of the more expensive high performance phase is particularly important. V.L.

A82-29483
FRACTURE MECHANICS OF DUCTILE AND TOUGH MATERIALS AND ITS APPLICATIONS TO ENERGY RELATED STRUCTURES
H. W. LIU, (ED.) (Syracuse University, Syracuse, NY), T. KUNIO (Keio University, Yokohama, Japan), V. WEISS (Syracuse University, Syracuse, NY), and H. OKAMURA (Tokyo, University, Tokyo, Japan) The Hague, Martinus Nijhoff Publishers, 1981. 330 p $53

The evaluation, prediction, and calculation of failure processes in ductile energy related structures are examined. The J-integral is considered, including applications in estimations of structural strength, for cracks in nuclear reactor vessels, for fracture analyses of tough materials, for the development of plastic fracture mechanics capabilities, and for relationships between the J-integral and crack tip opening displacement. Experiments are reported with the J-integral being used for evaluating the crack tip plastic blunting and the elastic-plastic fracture, a semi-elliptical surface crack, and elastic-plastic toughness of irradiated steels. Stress, strain, and COD are discussed as fracture criteria, and the effects of material properties on fracture toughness are investigated. Finally, the fracture mechanics of creep and fatigue are explored, along with fatigue limits, notch sensitivity, and low cycle fatigue in metals. M.S.K.

A82-33029
FRACTURE STRENGTH OF SINTERED AND SILICONIZED SIC AND SIC JOINTS
G. G. TRANTINA (GE Research and Development Center, Schenectady, NY) American Ceramic Society Bulletin, vol. 61, May 1982, p. 555-558. Research supported by the Electric Power Research Institute. refs
(ACS PAPER 35-N-80)

Fracture strength properties that are related to the design of ceramic structures were evaluated. Sintered alpha SiC with a coarse microstructure exhibits more strength degradation at 1500 C than does alpha SiC with normal microstructure. The strength of a siliconized SiC can be increased by about 25% with a one hour/1200 C treatment and can be further strengthened (15-30%) by exposures to 1200 C and stress. Similarly, the strength of siliconized SiC joints can be increased by a one hour/1200 C exposure and further strengthened by exposures to 1200 C and stress. Both sintered alpha and siliconized SiC exhibit a size effect in the fracture strength that can be treated with a Weibull statistical approach. (Author)

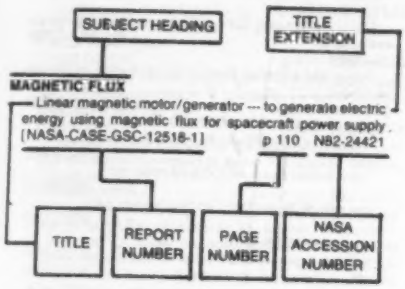
RESEARCH AND DEVELOPMENT AT MBB. TECHNICAL AND SCIENTIFIC PUBLICATIONS, 1981 [FORSCHUNG UND ETWICKLUNG. TECHNISCH-WISSENSCHAFTLICHE VEROEFFENTLICHUNGEN 1981]
1981 193 p refs Partly in ENGLISH and GERMAN
Avail: NTIS HC A09/MF A01

Research and development work carried out during 1981 at Messetschmitt-Bolkow-Blohm GmbH, Ottobrunn, FRG is presented. Aerodynamics, materials science, infrared imagery, aircraft and spacecraft design, and production engineering are discussed. Calculation methods, mathematical and scale models, and computer aided design are treated. Solar energy and high speed trains were investigated.

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title, and title extension if used, provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any subject heading the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

[DE82-000675] p 121 N82-23736
Compressed-Air Energy Storage: Preliminary design and site development program in aquifer. Volume 6: Balance of plant design
[DE82-000670] p 121 N82-23737
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000669] p 121 N82-23738
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 8: Aquifer flow code simulation
[DE82-000668] p 121 N82-23739
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 9: Cost estimate and schedule
[DE82-000667] p 122 N82-23740
Assessment of precise surface-gravity measurements for monitoring the response of a geothermal reservoir to exploitation
[DE82-003904] p 78 N82-24775
ARCHITECTURE
Energy conservation in buildings and general operations
[DE82-002723] p 8 N82-23734
Description of five houses instrumented for class B analysis --- solar houses
[DE82-001186] p 52 N82-25412
Solar energy research at Los Alamos
[DE82-004222] p 53 N82-25654
Shared inverter residential photovoltaic system concept
[DE82-006281] p 60 N82-26859
ARMATURES
Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller
[NASA-CR-165507] p 110 N82-24425
ARRAYS
Modelling of wind turbine arrays p 101 A82-36102
On wake decay and row spacing for WECS farms p 101 A82-36104
Effect of wind turbine generator model and siting on wind power changes out of large WECS arrays p 108 N82-23723
ASTRONOMICAL OBSERVATORIES
The effects of a satellite power system on ground-based astronomy p 44 N82-22749
ASTRONOMY
Possible applications of large solar arrays in astronomy and astrophysics p 24 A82-31571
ASTROPHYSICS
Possible applications of large solar arrays in astronomy and astrophysics p 24 A82-31571
ATMOSPHERIC ATTENUATION
Meteorological effects on laser propagation for power transmission p 115 A82-32368
Power availability at terrestrial receptor sites for laser-power transmission from the satellite power system p 116 A82-32380
Rectenna related atmospheric effects p 6 N82-22754
ATMOSPHERIC BOUNDARY LAYER
On wake decay and row spacing for WECS farms p 101 A82-36104
ATMOSPHERIC CHEMISTRY
Sources of atmospheric ammonia p 3 A82-36291
ATMOSPHERIC CIRCULATION
Standard deviations and confidence intervals for atmospheric design criteria used in WECS development --- Wind Energy Conversion Systems p 98 A82-36082
ATMOSPHERIC COMPOSITION
Sources of atmospheric ammonia p 3 A82-36291
ATMOSPHERIC EFFECTS
Meteorological effects on laser propagation for power transmission p 115 A82-32368
Overview of atmospheric effects p 5 N82-22686
ATMOSPHERIC HEATING
Microwave heating of the lower ionosphere p 117 N82-22747
ATMOSPHERIC MODELS
Simulation of D and E region high-power microwave heating with HF ionospheric modification experiments --- solar power satellite transmission effects p 116 A82-33447
Three-dimensional, conservation equation model for simulating LNG vapor dispersion in the atmosphere
[DE82-001053] p 20 N82-27874
ATMOSPHERIC STRATIFICATION
On wake decay and row spacing for WECS farms p 101 A82-36104
ATMOSPHERIC TURBULENCE
Performance of wind turbines in a turbulent atmosphere p 106 N82-23693
Wind turbulence inputs for horizontal axis wind turbines p 106 N82-23695
Performance testing of a 50 kW VAWT in a built-up environment p 106 N82-23696
ATOMIZERS
Plain-jet airblast atomization of alternative liquid petroleum fuels under high ambient air pressure conditions
[ASME PAPER 82-GT-32] p 87 A82-35293
ATTITUDE (INCLINATION)
On the climatic optimization of the tilt and azimuth of flat-plate solar collectors p 21 A82-29318
ATTITUDE CONTROL
Passive cyclic pitch control for horizontal axis wind turbines p 107 N82-23715
Dynamics and stability of wind turbine generators p 107 N82-23720
Kaman 40 kW wind turbine generator - control system dynamics p 107 N82-23721
Effect of wind turbine generator model and siting on wind power changes out of large WECS arrays p 108 N82-23723
AUDITORY PERCEPTION
Guide to the evaluation of human exposure to noise from large wind turbines
[NASA-TM-83288] p 11 N82-24051
AUGMENTATION
Technical and economic assessment of fluidized-bed-augmented compressed-air energy-storage system: System load following capability
[DE82-000958] p 19 N82-27843
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 2: Introduction and technology assessment
[DE82-000938] p 19 N82-27844
AUTOCLAVING
Supercritical fluids for reaction and extraction of coal and heavy oils
[DE82-005496] p 81 N82-26426
AUTOMATIC CONTROL
Strategies for minimizing operational impacts of large wind turbine arrays on automatic generation control systems p 93 A82-33702
ID slicing and the automated factory p 47 N82-23672
Effect of wind turbine generator model and siting on wind power changes out of large WECS arrays p 108 N82-23723
Process Research ON Semix Silicon Materials (PROSSM)
[NASA-CR-169049] p 55 N82-26794
AUTOMATIC FLIGHT CONTROL
Flight management computer
[SNIAS-821-111-110] p 12 N82-24842
AUTOMATIC GAIN CONTROL
Kaman 40 kW wind turbine generator - control system dynamics p 107 N82-23721
AUTOMOBILE ENGINES
Future auto engines - Competition heats up p 90 A82-29793
AGT 100 automotive gas turbine system development
[AIAA PAPER 82-1165] p 94 A82-35038
AGT101 automotive gas turbine system development
[AIAA PAPER 82-1166] p 94 A82-35039
Ceramic applications in turbine engines --- for automotive application
[AIAA PAPER 82-1168] p 95 A82-35040
AGT100 turbomachinery --- for automobiles
[AIAA PAPER 82-1207] p 95 A82-35061
Combustor development for automotive gas turbines
[AIAA PAPER 82-1208] p 95 A82-35062
The AGT 101 advanced automotive gas turbine
[ASME PAPER 82-GT-72] p 86 A82-35321
The AGT 100 automotive gas turbine status and assessment
[ASME PAPER 82-GT-118] p 95 A82-35349
Ceramic components for automotive and heavy duty turbine engines - CATE and AGT 100
[ASME PAPER 82-GT-253] p 96 A82-35432
Characterization of alcohol/gasoline blends as automotive fuel: Performance and emissions characteristics
[DE82-000124] p 72 N82-23331
Mobile source emissions of formaldehyde and other aldehydes
[PB82-118159] p 11 N82-23813
Brief synopsis of EPA Office of Research and Development and the Health Effects Institute mobile source work
[PB82-124421] p 11 N82-23821
Preliminary analysis of a downsized advanced gas-turbine engine in a subcompact car
[NASA-TM-82848] p 14 N82-26051
Multiroller traction drive speed reducer: Evaluation for automotive gas turbine engine
[NASA-TP-2027] p 112 N82-26878
Sulfate control technology vehicle testing
[PB82-154345] p 17 N82-26889
Study of accumulator passenger cars based on the fliield hydrostatic pump/motor unit
[DE82-002522] p 18 N82-27195
AUTOMOBILE FUELS
Characterization of alcohol/gasoline blends as automotive fuel: Performance and emissions characteristics
[DE82-000124] p 72 N82-23331
Analysis of alternate-fueled passenger vehicles: A sample technology assessment
[DE82-004190] p 80 N82-26053
AUTOMOBILES
Cooperative international liquid hydrogen automotive progress report p 63 A82-32164
Characterization of exhaust emissions from high mileage catalyst-equipped automobiles
[PB82-131566] p 7 N82-22811
A fleet manager's guide to vehicles for valid results
[DOE/CS-56051/04] p 8 N82-23533
Analysis of alternate-fueled passenger vehicles: A sample technology assessment
[DE82-004190] p 80 N82-26053
Urban transportation energy accounts. Volume 1: Procedures. Volume 2: Case study of the Chicago region
[PB82-135542] p 15 N82-26054
Concept evaluation of automotive propulsion using liquid air/nitrogen. Task 1 report. Thermodynamics.
[DE82-002460] p 114 N82-27190
AUXILIARY POWER SOURCES
MHD coal-fired flow facility
[DE82-003814] p 113 N82-26853
AVALANCHE DIODES
ZAP - Introducing the zero-bias avalanche photodiode p 38 A82-36215
AZIMUTH
On the climatic optimization of the tilt and azimuth of flat-plate solar collectors p 21 A82-29318
Second-generation heliostat development for solar-central receivers, detail design report. Volume 1, appendix
[DE82-001642] p 45 N82-22778
Second-generation heliostat development for solar-central receivers: Volume 1, detail design report. Appendix 2
[DE82-001643] p 45 N82-22779

B

BACTERIA
Solar bacterial biomass farm for space vehicles p 27 A82-33695
BARRIER LAYERS
New experimental evidence for minority-carrier reflection at negative-barrier MIS contacts --- from solar cell open circuit voltage measurement p 34 A82-35247
BEAM PLASMA AMPLIFIERS
Alfven-wave generation in a beam-plasma system p 90 A82-29738
BEAMS (RADIATION)
Encounters between SPS power beams and satellites in lower orbits p 44 N82-22751
BEARINGS
New perspectives for kinetic energy storage p 120 A82-35525

BENDING MOMENTS
Comparison of upwind and downwind rotor operation of the DOE/NASA 100-kW MOD-0 wind turbine p 107 N82-23710

BERYLLIUM
The role of Be in /GaAl/As/GaAs solar cells p 30 A82-34096
The role of Be in /GaAl/As/GaAs solar cells p 40 A82-37633

BIBLIOGRAPHIES
Solar Energy Legal Bibliography second update [SERI/TR-744-876] p 48 N82-23681
Review of physical and chemical methods for characterization of fuels [AD-A111943] p 83 N82-26488

BIOCONVERSION
Feasibility study for 400,000 gal/day ethanol plant at Benicia, California, volume 1 [DE82-002606] p 69 N82-22378

BIODEGRADATION
The biological degradation of spilled jet fuels: A literature review [AD-A110758] p 17 N82-28873

BIOMASS
Purification of rice hulls as a source of solar grade silicon for solar cells p 20 A82-28881
Solar bacterial biomass farm for space vehicles p 27 A82-33895

BIOMASS ENERGY PRODUCTION
Net energy analysis of methanol and ethanol production p 67 A82-32333
Continuous microbial production of hydrogen gas p 83 A82-37436
Feasibility study 20-MM gal/yr fuel grade ethanol facility [DE82-002606] p 69 N82-22374
Corn to ethanol plant feasibility study [DE82-000029] p 69 N82-22375
Feasibility study for 400,000 gal/day ethanol plant at Benicia, California, volume 1 [DE82-002606] p 69 N82-22378
Feasibility study for 400,000 gal/day ethanol plant at Benicia, California. Volume 3: Environmental Report [DE82-002610] p 69 N82-22380
Geothermal source potential and utilization for alcohol production [DE82-003801] p 70 N82-22782
Alcohol distillation by internal-combustion engines [DE82-005294] p 83 N82-26495
Conversion of cellulosic wastes to liquid fuels [DE82-001173] p 83 N82-26496
Assessment of secondary residues. Engineering and economic analysis [DE82-000925] p 85 N82-26771
Fuel from the Sun: Solar commercial and industrial applications for the 1980's [DE82-003285] p 61 N82-27847

BITUMENS
The significance of coal and other solid fuels for the requirements of the energy economy. I - The present and future significance of solid and other fuels for the world and particularly Western Europe p 1 A82-29425
Source rock geochemistry and liquid and solid petroleum occurrences of the Ouachita Mountains, Oklahoma p 75 N82-23830

BLACK BODY RADIATION
Conversion of blackbody radiation into laser energy [AIAA PAPER 82-0871] p 24 A82-31879

BLADES (CUTTERS)
Overview of a new slicing method: Fixed Abrasive Slicing Technique (FAST) p 47 N82-23669

BOILERS
Power plant III - Steam p 32 A82-34557
Power plant VII revisited - Air-air /Scirocco/ p 33 A82-34583
Status of Occidental Petroleum's coal-oil-mixture program: An industrial-boiler retrofit [DE82-900076] p 73 N82-23340
Analysis of 70-tube pilot-plant solar-receiver-panel test data [DE82-001728] p 49 N82-23752
Solar production of industrial-process hot water. Phase 3: Operation and evaluation of the York Building Products Co., Inc. solar facility [DE82-003526] p 60 N82-26665

BOREHOLES
Raft River geoscience case study: Appendixes [DE82-003553] p 75 N82-23835
Effect of pulse loads on dynamic rock fracture [DE82-002311] p 76 N82-23837

BORING MACHINES
Health and safety evaluation of a modified tunnel borer design for application to single entry coal mine development [NASA-CR-168807] p 70 N82-22691

BORON
An effect of back-surface boron implantation on silicon solar cells p 26 A82-32895

BOUNDARY VALUE PROBLEMS
Numerical solution of the one-dimensional boundary value problem of charge transfer in solar-cell elements p 22 A82-30058

BRAYTON CYCLE
Study of reactor Brayton power systems for nuclear electric spacecraft [NASA-CR-168942] p 110 N82-24289
Air Brayton Solar Receiver, phase 1 [NASA-CR-169081] p 55 N82-26787

BRAZIL
Test station for solar collectors in Brazil [BMFT-FB-T-81-224] p 46 N82-22788

BRINES
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 2: Detailed report [NASA-CR-168806] p 42 N82-22665
Investigations to predict and reduce the evaporation rate of the residual brine in salt caverns used for gas storage [BMFT-FB-T-81-226] p 121 N82-22843
Thermodynamics of geothermal fluids p 76 N82-24123
Conceptual design of the Truscott brine lake solar-pond system, volume 1: Utility-independent scenario [DE82-003024] p 58 N82-26833

BROMINE
The Br/Cl ratio in atmospheric aerosols as a tracer of automobile pollution p 1 A82-32147

BUDGETING
Fossil and synthetic fuels miscellaneous, part 1 [GPO-84-010] p 78 N82-24351

BUFFER STORAGE
Air Brayton Solar Receiver, phase 1 [NASA-CR-169081] p 55 N82-26787

BUILDINGS
California experience with energy conservation standards for buildings [DE81-000972] p 11 N82-24391

BUMPY TORUSES
ELMO Bumpy Torus Reactor and power plant: Conceptual design study [DE82-002437] p 112 N82-25984

BURNERS
Low NO sub x heavy fuel combustor concept program. Phase 1A: Combustion technology generation coal gas fuels [NASA-CR-165614] p 68 N82-22326

BURNING RATE
Flame propagation in heterogeneous mixtures of fuel droplets, fuel vapor and air p 85 A82-29672

BUS CONDUCTORS
Parabolic model for optimizing grid and bus metallization patterns in circular solar cells p 29 A82-34088

C

CADMIUM SELENIDES
Efficient CdSe/p/ + /n Si tunnel junction photoanode for solar cell p 26 A82-33683

CADMIUM SULFIDES
Frequency dependent capacitance studies of the CdS/Cu2S thin-film solar cell p 25 A82-32892
Deep trap levels in CdS solar cells observed by capacitance measurements p 26 A82-32893
Preparation and analysis of CdS-Cu2S solar cells p 30 A82-34540
Photovoltaic performances of Cu2S/CdS sprayed solar cells p 31 A82-34541
Single-crystal Zn/x/Cd/1-x/S/Cu2S photovoltaic cells p 31 A82-34542
Trends and problems in CdS/Cu/x/S thin film solar cells - A review p 31 A82-34543
Simulation of the behaviour of a set of Cu2S-CdS unit photocells p 31 A82-34544

CALCIUM CHLORIDES
A chemical heat pump based on the reaction of calcium chloride and methanol for solar heating, cooling and storage p 51 N82-24692

CALCIUM OXIDES
Novel approach to coal gasification using chemically incorporated catalysts, phase 2 [DE82-003869] p 81 N82-26429
Novel approach to coal gasification using chemically incorporated catalysts, phase 2. Appendix A-F [DE82-003804] p 81 N82-26430

CALCULATORS
A program for single-phase moderate-temperature geothermal well drawdown and pumping energy for the HP-97 and other desk calculators [PB82-148420] p 89 N82-27829

CALIFORNIA
Electricity tommorrow [PB82-124165] p 7 N82-22791
Energy tommorrow: Challenges and opportunities for California [PB82-117821] p 10 N82-23783
Characterization of the corrosion environment of the desert near Bartstow, California [DE82-003876] p 50 N82-23800
California experience with energy conservation standards for buildings [DE81-000972] p 11 N82-24391

CANNING
Applications of thermal energy storage to waste heat recovery in the food processing industry p 125 N82-24687

CAPACITANCE
Parametric photovoltaic cell p 23 A82-31207
Frequency dependent capacitance studies of the CdS/Cu2S thin-film solar cell p 25 A82-32892
Deep trap levels in CdS solar cells observed by capacitance measurements p 26 A82-32893

CARBON
Carbon formation by the pyrolysis of gas turbine fuels in preflame regions of gas turbine combustors [ASME PAPER 82-GT-84] p 67 A82-35330

CARBON DIOXIDE
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary [DE82-001349] p 74 N82-23619
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp [DE82-001347] p 74 N82-23620

CARBON DIOXIDE LASERS
Conversion of blackbody radiation into laser energy [AIAA PAPER 82-0871] p 24 A82-31879

CARBON MONOXIDE
Effect of heated diesel fuel on particulate generation and fuel consumption for a Deutz F6L 912 engine [DE82-900385] p 7 N82-22803

CARBONATES
The thermodynamics of electrolyte distribution in molten carbonate fuel cells p 91 A82-31843
Alternate matrix material for molten carbonate fuel cell electrolyte structures p 91 A82-31844

CARBURIZING
Demonstration of a nitrogen-based carburizing atmosphere [DE82-004196] p 19 N82-27851

CARGO AIRCRAFT
Very large aircraft with alternate fuels - LH2 most promising [AIAA PAPER 82-0813] p 62 A82-31986
The potential for long-range high-payload aircraft with alternate fuels [AIAA PAPER 82-0814] p 62 A82-31987

CARNOT CYCLE
Physical basis of power conversion of energy fluctuations p 40 A82-37671

CARRIER DENSITY (SOLID STATE)
Ionized impurity induced photocarrier generation in organic energy conversion systems p 41 A82-37944

CARRIER INJECTION
Variation of minority carrier lifetime with level of injection in p-n-junction devices p 20 A82-29233
Evidence for hot-electron injection across p-GaP/electrolyte junctions — during photoconversion process of solar energy p 37 A82-35716

CARRIER TRANSPORT (SOLID STATE)
Transport in hydrogenated amorphous silicon p-i-n solar cells p 21 A82-29696
Determination of the grain boundary recombination velocity in polycrystalline silicon as a function of illumination from photoconductance measurements p 24 A82-32183

CASCADE FLOW
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Turbine spool technology rig cascade tests [DE81-030352] p 104 N82-22502

CASSEGRAIN OPTICS
Concentration of a Cassegrain solar furnace p 25 A82-32546

CASTING
LSA project perspective of wafering technology p 46 N82-23651
Arco Solar, Incorporated: The industrial point of view p 47 N82-23653

CATALYSIS
Catalytic combustion of hydrogen. III - Advantages and disadvantages of a catalytic heater with hydrogen fuel
p 63 A82-37444
Investigation of coal-gasification catalysis-reaction mechanisms
[DE82-003305] p 68 N82-22334
Photoassisted electrolysis applied to coal gasification
[DE82-000224] p 72 N82-23294
Autocatalytic coal liquefaction process
[NASA-CASE-NPO-14876-2] p 76 N82-25394
Requirements for optimization of electrodes and electrolyte for the iron/chromium Redox flow cell
[NASA-CR-165218] p 125 N82-25640
Mechanism of catalytic gasification of coal char
[DE82-004074] p 81 N82-26427
Novel approach to coal gasification using chemically incorporated catalysts, phase 2
[DE82-003869] p 81 N82-26429
Novel approach to coal gasification using chemically incorporated catalysts, phase 2. Appendix A-F
[DE82-003804] p 81 N82-26430
Concepts of fundamental processes related to gasification of coal
[DE81-023067] p 84 N82-26501
Concepts of fundamental processes related to gasification of coal
[DE82-000764] p 84 N82-26502

CATALYSTS
Supercritical fluids for reaction and extraction of coal and heavy oils
[DE82-005496] p 81 N82-26426
Sulfate control technology vehicle testing
[PB82-154345] p 17 N82-26689
Evaluation of hydrocracking catalysts for conversion of whole shale oil into high yields of jet fuels
[AD-A112820] p 87 N82-27523

CATIONS
Liquid fossil fuel technology
[DE82-004725] p 87 N82-27530

CAVES
Investigations to predict and reduce the evaporation rate of the residual brine in salt caverns used for gas storage
[BMFT-FB-T-81-226] p 121 N82-22843

CELL ANODES
The effect of sulfur on the anodic H2 /Ni/ electrode in fused Li2CO3-K2CO3 at 650 C p 103 A82-37627

CELLULOSE
Conversion of cellulosic wastes to liquid fuels
[DE82-001173] p 83 N82-26496

CERAMIC COATINGS
Physical vapor deposition of ceramic coatings for gas turbine engine components
[ASME PAPER 82-GT-264] p 96 A82-35440

CERAMICS
Fracture strength of sintered and siliconized SiC and SiC joints
[ACS PAPER 35-N-80] p 127 A82-33029
Ceramic applications in turbine engines — for automotive application
[AIAA PAPER 82-1166] p 95 A82-35040
Ceramic components for automotive and heavy duty turbine engines - CATE and AGT 100
[ASME PAPER 82-GT-253] p 96 A82-35432

CHALCOGENIDES
Further studies of the photoelectrochemical properties of the group VI transition metal dichalcogenides
p 23 A82-30915
Ternary chalcogenide-based photoelectrochemical cells. II - The n-CdIn2Se4/aqueous polysulfide system
p 40 A82-37619

CHARACTERIZATION
Characterization of exhaust emissions from high mileage catalyst-equipped automobiles
[PB82-131566] p 7 N82-22911
Mobile source emissions of formaldehyde and other aldehydes
[PB82-118159] p 7 N82-23813
Shale characterization and resource appraisal of Devonian black shales of the Appalachian basin
[DE82-004191] p 89 N82-27909

CHARGE TRANSFER
Numerical solution of the one-dimensional boundary value problem of charge transfer in solar-cell elements
p 22 A82-30058

CHEMICAL ANALYSIS
Analyses of natural gas in Illinois
[PB82-124322] p 75 N82-23645

CHEMICAL COMPOSITION
Fractionation of diesel fuel from petroleum and Paraho shale oils
[AD-A107042] p 86 N82-27520

CHEMICAL EFFECTS
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning
p 1 A82-29637

CHEMICAL ENERGY
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652

CHEMICAL ENGINEERING
Study project on the desulfurization of flue gas, using the Bergbauforschung (BF) process, as part of the integrated operation of a power plant with a chemical plant for producing sulfuric acid
[BMFT-FB-T-81-229] p 69 N82-22340
Investigations to predict and reduce the evaporation rate of the residual brine in salt caverns used for gas storage
[BMFT-FB-T-81-226] p 121 N82-22843

CHEMICAL FRACTIONATION
Chromatographic studies of vanadium compounds from boscan crude oil
[DE82-000977] p 68 N82-22335

CHEMICAL FUELS
Review of physical and chemical methods for characterization of fuels
[AD-A111943] p 83 N82-26488

CHEMICAL LASERS
Design and performance characteristics of a CW subsonic HF chemical laser with 120 W power output
p 103 A82-37577

CHEMICAL REACTIONS
A photoelectrochemical cell based on chemically deposited Sb2Se3 thin film electrodes and dependence of deposition on various parameters p 23 A82-30863

CHEMICAL REACTORS
Relatively low-temperature pyrolysis of silane in free space p 28 A82-34080
Coal-hydrogasification process development, government fiscal year 1981
[DE82-004146] p 72 N82-23329
Computer modeling of coal-gasification reactors. Volume 2: Technical report
[DE82-009767] p 73 N82-23337
Metals processing p 118 N82-27405
Modelling of oil shale retorts for electromagnetic sensing techniques
[PB82-153321] p 86 N82-27459

CHLORIDES
Conceptual design of the Truscott brine lake solar-pond system, volume 1: Utility-independent scenario
[DE82-003024] p 58 N82-26833

CHLORINE
The Br/Cl ratio in atmospheric aerosols as a tracer of automobile pollution p 1 A82-32147
Improved alkaline hydrogen/air fuel cells for transportation applications p 111 N82-24701

CHLOROPHYLLS
Photochemical energy conversion in chlorophyll-containing lipid bilayer vesicles
p 21 A82-29317

CHROMIUM
Spectral selectivity of nickel and chromium rough surfaces p 23 A82-31440
Requirements for optimization of electrodes and electrolyte for the iron/chromium Redox flow cell
[NASA-CR-165218] p 125 N82-25640
Efficiency of silicon solar cells containing chromium
[NASA-CASE-NPO-15179-1] p 54 N82-26777

CHROMIUM ALLOYS
Corrosion behavior of alloys p 51 N82-24679

CHROMIUM STEELS
Development of automated welding process for field fabrication of thick walled pressure vessels — for coal gasification plants
[DE82-004421] p 85 N82-26695

CIRCULAR CYLINDERS
Dynamics of wakes downstream of wind turbine towers p 108 N82-23725

CIRCULAR POLARIZATION
Alfven-wave generation in a beam-plasma system
p 90 A82-29738

CIVIL AVIATION
Principles of efficient energy use at Interflug
p 1 A82-33250
Solutions to the aviation fuel problem
p 2 A82-34113
The 1983 NASA Authorization, Volume 1
[GPO-91-488-VOL-1] p 8 N82-23068
Symposium on Commercial Aviation Energy Conservation Strategies, papers and presentations
[AD-A107106] p 15 N82-26490

CLASSIFICATIONS
Appropriateness in using LANDSAT in development energy related data bases p 4 N82-22585
Characterization of Rocky Mountain coals and coal liquid by computerized analytical techniques
[DE82-001802] p 71 N82-23287

CLEAN ENERGY
Design, performance and economics of the DAF Indal 50 kW and 375 kW vertical axis wind turbine
[ASME PAPER 82-PET-6] p 97 A82-35486
Mod-2 wind turbine system cluster research test program. Volume 1: Initial plan E-1290
[NASA-TM-82906] p 112 N82-26807

CLIMATOLOGY
The value of seasonal climate forecasts in managing energy resources p 2 A82-35235

CLOSED CYCLES
. Approach to the realization of a closed cycle Ocean Thermal Energy Conversion /OTEC/ system
p 90 A82-29070
MHD electrical generator
[NASA-CASE-NPO-15399-1] p 110 N82-24079

CLOUD COVER
Thermal energy buffer storage for the small community solar thermal power experiment p 124 N82-24684

COAL
Feasibility study 20-MM gal/yr fuel grade ethanol facility
[DE82-002606] p 69 N82-22374
Health and safety evaluation of a modified tunnel borer design for application to single entry coal mine development
[NASA-CR-168807] p 70 N82-22831
Evaluation of ADAM/1 model for advanced coal extraction concepts
[NASA-CR-168812] p 70 N82-22832
Testing the shearer-loader EDW 170/200 LN for thin seams in connection with chainless haulage — coal mining
[BMFT-FB-T-82-017] p 70 N82-22838
Coal seam exploration with special regard to the application of seismic methods for the detection of dykes
[CSIR-ME-1721] p 71 N82-22831
Petrographic characterization of Kentucky coals
[DE82-000411] p 71 N82-22834
Ultrasonically enhanced size reduction of coal
[DE82-001601] p 71 N82-22989
Characterization of Rocky Mountain coals and coal liquid by computerized analytical techniques
[DE82-001802] p 71 N82-23287
Photoassisted electrolysis applied to coal gasification
[DE82-000224] p 72 N82-23294
An economic model of future coal/densified refuse-derived fuel use at Wright-Patterson AFB, Ohio
[AD-A111376] p 78 N82-25396
Mean annual streamflow of selected drainage basins in the coal area of southeastern Montana
[PB82-137696] p 79 N82-25627
Fundamentals of coal depolymerization: Kinetic modeling and experimental determination of free radical chemistry and mineral matter effects in direct coal hydroliquefaction
[DE82-003689] p 81 N82-26425
Application of ultrasonic techniques to chemical coal cleaning processes
[DE82-003093] p 83 N82-26497
Research on solvent refined coal
[DE82-004535] p 86 N82-27454
Investigation of problems and benefits of underground multiple seam coal mining
[DE82-002807] p 88 N82-27801

COAL DERIVED GASES
Low NO sub x heavy fuel combustor concept program. Phase 1A: Combustion technology generation coal gas fuels
[NASA-CR-165614] p 68 N82-22326

COAL DERIVED LIQUIDS
Characterization of Rocky Mountain coals and coal liquid by computerized analytical techniques
[DE82-001802] p 71 N82-23287
Low NOx heavy fuel combustor concept program
[NASA-CR-165367] p 79 N82-25635
Mechanisms and kinetics of coal hydrogenation
[DE82-004867] p 86 N82-27453

COAL GASIFICATION
Coal to electricity - Integrated gasification combined cycle p 67 A82-34487
Investigation of coal-gasification catalysis-reaction mechanisms
[DE82-003305] p 68 N82-22334
Construction of a 15 t/hr prototype plant for the VEW coal conversion process — Westfalen Joint Electricity Generating Company (VEW)
[BMFT-FB-T-81-216] p 70 N82-22385
Photoassisted electrolysis applied to coal gasification
[DE82-000224] p 72 N82-23294
Westinghouse coal-gasification combined-cycle preliminary plant evaluation for electric-utility applications
[DE82-002701] p 72 N82-23326
Process for underground gasification
[DE82-000493] p 72 N82-23327
Feasibility study of medium Btu coal gas for fuel and feedstock at Mobay's New Martinsburg, West Virginia plant
[DE82-004321] p 72 N82-23330

Computer modeling of coal-gasification reactors. Volume 1: Executive summary
[DE82-000766] p 73 N82-23336
Computer modeling of coal-gasification reactors. Volume 2: Technical report
[DE82-000767] p 73 N82-23337
Computer modeling of coal-gasification reactors. Volume 3: User's manual of CHEMFLUB: A numerical model for fluidized bed gasifiers (planar and axisymmtric versions)
[DE82-000768] p 73 N82-23338
Computer modeling of coal-gasification reactors. Volume 4: Operating manual for EF (Entrained Flow coal gasifier) computer model
[DE82-000765] p 73 N82-23339
Environmental report: Combustion Engineering/Gulf States Utilities Company fuel gas demonstration plant, Westlake, Louisiana
[DE82-004141] p 11 N82-23806
Fossil-energy materials program
[DE82-001057] p 77 N82-24732
Mechanism of catalytic gasification of coal char
[DE82-004074] p 81 N82-26427
Novel approach to coal gasification using chemically incorporated catalysts, phase 2
[DE82-003869] p 81 N82-26429
Novel approach to coal gasification using chemically incorporated catalysts, phase 2. Appendix A-F
[DE82-003804] p 81 N82-26430
Synthetic-fuel production using Texas lignite and a very high temperature gas cooled reactor for process heat and electrical power generation
[DE82-000486] p 83 N82-26492
LLNL underground coal-gasification project
[DE82-002074] p 83 N82-26493
Molten salt coal gasification process development unit, phase 2
[DE82-004717] p 83 N82-26496
Advanced coal gasification system for electric power generation
[DE82-004539] p 84 N82-26499
Concepts of fundamental processes related to gasification of coal
[DE81-023067] p 84 N82-26501
Concepts of fundamental processes related to gasification of coal
[DE82-000764] p 84 N82-26502
High-temperature turbine technology program rotor water delivery and distribution tests
[DE82-000400] p 84 N82-26692
Development of automated welding process for field fabrication of thick walled pressure vessels — for coal gasification plants
[DE82-004421] p 85 N82-26695
BI-GAS pilot plant
[DE82-004753] p 87 N82-27532

COAL LIQUEFACTION

Status of Occidental Petroleum's coal-oil-mixture program: An industrial-boiler retrofit
[DE82-900076] p 73 N82-23340
Development of environmental assessment screening criteria for coal-conversion solid wastes
[DE82-000751] p 11 N82-23798
Autocatalytic coal liquefaction process
[NASA-CASE-NPO-14876-2] p 78 N82-25394
Fundamentals of coal depolymerization: Kinetic modeling and experimental determination of free radical chemistry and mineral matter effects in direct coal hydroliquefaction
[DE82-003689] p 81 N82-26425
Supercritical fluids for reaction and extraction of coal and heavy oils
[DE82-005496] p 81 N82-26426
Concepts of fundamental processes related to gasification of coal
[DE82-000764] p 84 N82-26502
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE82-004407] p 86 N82-27451
Mechanisms and kinetics of coal hydrogenation
[DE82-004887] p 86 N82-27453
Research on solvent refined coal
[DE82-004535] p 86 N82-27454

COAL UTILIZATION

The significance of coal and other solid fuels for the requirements of the energy economy. I - The present and future significance of solid and other fuels for the world and particularly Western Europe p 1 A82-29425
Stationary thermal ignition of particle suspensions
[AIAA PAPER 82-0661] p 66 A82-31956
Assessment of atmospheric fluidized-bed combustion recycle systems
[DE82-900879] p 62 N82-22337
Study project on the desulfurization of flue gas, using the Bergbauforschung (BF) process, as part of the integrated operation of a power plant with a chemical plant for producing sulfuric acid
[BMFT-FB-T-81-229] p 69 N82-22340
Coal-Fired Power Plant (Western Coal): Environmental characterization information report
[DOE/EP-0019] p 6 N82-22769
Melting chamber combustion with reduced emission of nitrogen oxides — coal fired power plant furnace design
[BMFT-FB-T-81-228] p 7 N82-22810
Status of Occidental Petroleum's coal-oil-mixture program: An industrial-boiler retrofit
[DE82-900076] p 73 N82-23340
National Interregional Coal Models: Proceedings of a Workshop
[PB82-120932] p 75 N82-23786
Direct combustion of coal
[GPO-88-628] p 76 N82-24352
Fossil-energy materials program
[DE82-001057] p 77 N82-24732
Supercritical solvent coal extraction
[NASA-CASE-NPO-15210-1] p 82 N82-26481
US energy flow, 1980
[DE82-002647] p 16 N82-26855
Uses of the FRS data base for energy policy analysis
[DE82-001662] p 16 N82-26864
Basic combustion and pollutant formation processes for pulverized fuels
[DE82-002236] p 17 N82-26879
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[DE82-900580] p 18 N82-27802
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[DE82-900581] p 19 N82-27803
The debate over acid precipitation: Opposing views, status of research
[AD-A106925] p 19 N82-27870

COARSENESS

Hydraulic transport of coarse solids in circular and segmented pipes
[CSIR-ME-1716] p 118 N82-27685

COATINGS

Basic research needs and opportunities in thin films and coatings p 36 A82-35513

COBALT OXIDES

Properties of spray-deposited cobalt oxide selective coatings on aluminium and galvanised iron substrates — for solar absorbers p 30 A82-34489

COGENERATION

Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power
[DE82-001921] p 46 N82-23742
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power, appendices
[DE82-001852] p 48 N82-23743
Fort Hood solar cogeneration facility conceptual design study. Volume 1: Technical report
[DE82-000836] p 49 N82-23765
Fort Hood solar cogeneration facility conceptual design study. Volume 2: System specification
[DE82-001579] p 49 N82-23766
Texasgulf solar cogeneration program, volume 1
[DE82-001900] p 50 N82-23767
Texasgulf solar cogeneration program. Volume 2: Appendices
[DE82-001848] p 50 N82-23768
An overview of the value of parabolic dish solar thermal systems in industrial cogeneration applications
[NASA-CR-169063] p 54 N82-26785
Industrial Cogeneration Optimization Program: A summary of two studies
[DE82-005587] p 16 N82-26849

COLD WATER

High-temperature turbine technology program rotor water delivery and distribution tests
[DE82-000400] p 84 N82-26692

COLOR PHOTOGRAPHY

Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 66 A82-29327

COLORADO RIVER (NORTH AMERICA)

Synthetic fuels development in the Upper Colorado Region: Section 13(a) water assessment report
[PB82-156761] p 88 N82-27535

COLUMNS (SUPPORTS)

Dynamics of wakes downstream of wind turbine towers p 108 N82-23725

COMBINED CYCLE POWER GENERATION

Parametric performance analysis of steam-injected gas turbine with a thermionic-energy-converter-lined combustor
[NASA-TM-82736] p 105 N82-23678

COMBINED STRESS

Combined effects of deterministic and random loads in wind turbine design p 98 A82-36085

COMBUSTIBLE FLOW

Determination of temperature distribution in the flow of a hot gas on the basis of a self-reversed spectral line profile p 103 A82-37549

COMBUSTION

Oil shale project run summary large retort run L-4
[DE82-003627] p 73 N82-23616
Investigation of the geokinetics horizontal in situ oil shale retorting process
[DE82-004273] p 88 N82-27798

COMBUSTION CHAMBERS

Modeling parameter influences on MHD swirl combustion nozzle design
[AIAA PAPER 82-0984] p 92 A82-31947
Energy efficient engine /E3/ technology status
[AIAA PAPER 82-1052] p 2 A82-34980
Combustor development for automotive gas turbines
[AIAA PAPER 82-1208] p 95 A82-35062
The potential impact of future fuels on small gas turbine engines
[ASME PAPER 82-GT-133] p 68 A82-35362
Low NO sub x heavy fuel combustor concept program. Phase 1A: Combustion technology generation coal gas fuels
[NASA-CR-165614] p 66 N82-22326
Assessment of atmospheric fluidized-bed combustion recycle systems
[DE82-900879] p 68 N82-22337
Low NOx heavy fuel combustor concept program
[NASA-CR-165367] p 79 N82-25635
Optimization of the oxidant supply system for combined cycle MHD power plants
[NASA-TM-82909] p 112 N82-26790
MHD coal-fired flow facility
[DE82-003814] p 113 N82-26953
Pulverized-fuel combustion: Modeling and scaleup methodologies
[DE82-004790] p 86 N82-27456

COMBUSTION CONTROL

Melting chamber combustion with reduced emission of nitrogen oxides — coal fired power plant furnace design
[BMFT-FB-T-81-228] p 7 N82-22810

COMBUSTION EFFICIENCY

Energy efficient engine /E3/ technology status
[AIAA PAPER 82-1052] p 2 A82-34980
Combustion behavior of solid fuel Ramjets. Volume 2: Effects of fuel properties and fuel-air mixing on combustion efficiency
[AD-A110798] p 80 N82-26303
Advanced thermionic technology program
[DE82-002116] p 115 N82-27846

COMBUSTION PHYSICS

The combustion of a fuel jet in a stream of lean gaseous fuel-air mixtures p 66 A82-28692

COMBUSTION PRODUCTS

NOx formation in flat, laminar, opposed jet methane diffusion flames p 65 A82-28660
Low NOx heavy fuel combustor concept program
[NASA-CR-165367] p 79 N82-25635
Basic combustion and pollutant formation processes for pulverized fuels
[DE82-002236] p 17 N82-26879
Sulfate control technology vehicle testing
[PB82-154345] p 17 N82-26889

COMMERCE

Fossil and synthetic fuels miscellaneous, part 1
[GPO-84-010] p 76 N82-24351

COMMERCIAL AIRCRAFT

Technology advancements for energy efficient aircraft engines
[AIAA PAPER 82-1051] p 2 A82-35479

COMMERCIAL ENERGY

Audio-visual summary of passive solar commercial buildings development in the MASEC region
[DE82-003136] p 46 N82-23368
Energy use in office buildings: Analysis of use in a random sample of 1100 buildings
[DE82-000518] p 9 N82-23761
Demand 80/81: Forecasts of energy consumption to the year 2000. Volume 1: Forecasts and description of the forecasting model
[DE82-900871] p 9 N82-23769
Intermediate photovoltaic system application experiment operational executive summary. Volume 2: For Lovington Square Shopping Center, Lovington, New Mexico
[DE81-003081] p 50 N82-23772
Distributed thermal energy storage in the residential sector: Commercialization readiness assessment and implementation strategy p 12 N82-24661
A cost-effectiveness evaluation of chemical heat pumps p 12 N82-24693
Development status of a metal hydride process for hydrogen recovery p 84 N82-24696

Symposium on Commercial Aviation Energy Conservation Strategies, papers and presentations
[AD-A107106] p 15 N82-26490
COMMUNITIES
Mitigating socioeconomic impacts of energy development
[EMD-82-13] p 15 N82-26789
COMPARISON
SPS and alternative technologies cost and performance evaluations p 43 A82-22605
Comparison of Rankine-cycle power systems: Effects of seven working fluids
[DE82-005599] p 113 N82-26844
COMPONENT RELIABILITY
Solar industrial process heat systems: An assessment of standards for materials and components
[PB82-133703] p 50 N82-24394
COMPOSITE STRUCTURES
Energy storage capacity of rotating composite structures operating under uniaxial tension p 110 A82-31563
Development of composite blades for large wind turbines p 98 A82-36083
A significant role for composites in energy-efficient aircraft p 3 A82-37065
Composites in energy generation and storage systems - An overview p 120 A82-37076
RPE-10 composite flywheel testing
[UCRL-15379] p 120 N82-22429
COMPRESSED AIR
Compressed-air energy storage: Preliminary design and site development program in an aquifer. Volume 3B: Site selection study, part 2
[DE82-000674] p 120 N82-22773
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 1: Executive summary
[DE82-000670] p 121 N82-23735
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 3A: Site selection study, part 1
[DE82-000675] p 121 N82-23736
Compressed-Air Energy Storage: Preliminary design and site development program in aquifer. Volume 6: Balance of plant design
[DE82-000670] p 121 N82-23737
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000669] p 121 N82-23738
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 8: Aquifer flow code simulation
[DE82-000668] p 121 N82-23739
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 9: Cost estimate and schedule
[DE82-000667] p 122 N82-23740
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 11: Plant design. UPH
[DE82-000916] p 122 N82-23771
Technical and economic assessment of fluidized-bed-augmented compressed-air energy-storage system: System load following capability
[DE82-000958] p 19 N82-27843
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 2: Introduction and technology assessment
[DE82-000938] p 19 N82-27844
COMPRESSIBILITY
Secondary recovery: Changing of the viscosity and compressibility of mineral oils with dissolved gas
[BMFT-FB-T-81-225] p 69 N82-22339
COMPRESSIVE STRENGTH
Mechanical behavior of Mesaverde shale and sandstone at high pressure
[DE82-001665] p 85 N82-26911
COMPRESSOR EFFICIENCY
Progress in the development of energy efficient engine components
[ASME PAPER 82-GT-275] p 96 A82-35450
COMPRESSORS
Hydride chemical compressor, phase 1
p 84 N82-24695
COMPUTATIONAL FLUID DYNAMICS
Simulation of the start-up transient responses of the UTSI coal-fired MHD power generating system
[AIAA PAPER 82-0920] p 91 A82-31910
COMPUTER PROGRAMS
Evaluation of ADAM/1 model for advanced coal extraction concepts
[NASA-CR-166812] p 70 N82-22632
Computer modeling of coal-gasification reactors. Volume 3: User's manual of CHEMFLUID: A numerical model for fluidized bed gasifiers (planar and axisymmtric versions)
[DE82-000766] p 73 N82-23338
Short-term energy outlook: Methodology
[DE82-002940] p 9 N82-23754
A program for single-phase moderate-temperature geothermal well drawdown and pumping energy for the HP-97 and other desk calculators
[PB82-148420] p 89 N82-27829
COMPUTER SYSTEMS DESIGN
Building energy analysis computer programs developed by Federal agencies: Cost, use, and need
[PLRD-82-47] p 15 N82-26788
COMPUTER TECHNIQUES
Characterization of Rocky Mountain coals and coal liquid by computerized analytical techniques
[DE82-001802] p 71 N82-23287
COMPUTERIZED SIMULATION
A frequency and duration method for the evaluation of wind integration p 90 A82-30869
The efficiency of wind turbine clusters
p 101 A82-36101
A regional wind-hydro electricity supply system
p 101 A82-36108
Economic analysis of small wind-energy conversion systems p 102 A82-36209
Computer modeling of coal-gasification reactors. Volume 2: Technical report
[DE82-000767] p 73 N82-23337
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 8: Aquifer flow code simulation
[DE82-000668] p 121 N82-23739
Analysis of 70-tube pilot-plant solar-receiver-panel test data
[DE82-001728] p 49 N82-23752
Energy-performance targets for federal buildings: Retrofit energy-target bands for existing postal facilities
[DE82-000070] p 16 N82-26845
Long-term energy options for Sweden. The IEA model and some simulation results
[DE82-900916] p 19 N82-27849
CONCENTRATION (COMPOSITION)
Potable water standards project
[MLM-2819] p 10 N82-23791
CONCENTRATORS
Investigation of mirror concentrators intended for operation with high-current solar cells
p 22 A82-30061
Enhancement of concentration using simple multi-plane mirrors p 23 A82-31099
Concentration of a Cassegrain solar furnace
p 25 A82-32546
Optical characterization method for concentrating solar collectors using reverse illumination p 25 A82-32570
Comparison of Fresnel lenses and parabolic mirrors as solar energy concentrators p 26 A82-33022
The effects of non-uniform illumination of solar cells with concentrated light p 31 A82-34546
Heat loss factor for linear solar concentrators
p 38 A82-36206
A comment on the generalization of the theoretical basis of photovoltaic concentrators for extended light sources
p 39 A82-36860
Subsystems design and component development for the parabolic dish module for solar thermal power systems
[NASA-CR-166941] p 51 N82-24646
Dish concentrators for solar thermal energy: Status and technology development
[NAS 1.26:166994] p 52 N82-25639
CONDUCTIVE HEAT TRANSFER
Some thermophysical properties of paraffin wax as a thermal storage medium
[AIAA PAPER 82-0846] p 119 A82-31869
CONFERENCES
American Vacuum Society, National Symposium, 28th, Anaheim, CA, November 2-6, 1981, Proceedings. Parts 1 & 2 p 22 A82-30327
Biennial Wind Energy Conference and Workshop, 5th, Washington, DC, October 5-7, 1981, Proceedings
p 92 A82-33701
Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings p 27 A82-34076
Basic research needs and opportunities on interfaces in solar materials; Proceedings of the Workshop, Denver, CO, June 30-July 3, 1980 p 34 A82-35501
International Symposium on Wind Energy Systems, 3rd, Danmarks Tekniske Hojskole, Lyngby, Denmark, August 26-29, 1980, Proceedings p 97 A82-36076
The 19th Project Integration Meeting
[NASA-CR-163822] p 41 N82-22652
The Final Proceedings of the Solar Power Satellite Program Review
[NASA-TM-84183] p 42 N82-22676
Proceedings of the Low-Cost Solar Array Watering Workshop
[NASA-CR-168847] p 46 N82-23660
Validation and Assessment of energy Models. Proceedings
[PB82-123951] p 10 N82-23782
Detection, Diagnosis and Prognosis: Contribution to the energy challenge: Proceedings of the Meeting of the Mechanical Failures Prevention Group
[NASA-CR-169713] p 10 N82-23785
Jet fuel from shale oil: The 1981 technology review
[AD-A111217] p 82 N82-26484
Symposium on Commercial Aviation Energy Conservation Strategies, papers and presentations
[AD-A107106] p 15 N82-26490
Future Raw Materials and Energy Use in Industry: A Research Agenda
[DE82-005975] p 15 N82-26812
CONFIDENCE LIMITS
Standard deviations and confidence intervals for atmospheric design criteria used in WECS development --- Wind Energy Conversion Systems p 99 A82-36082
CONGRESSIONAL REPORTS
Strategic petroleum reserve: Substantial progress made, but capacity and oil quality concerns remain
[EMD-82-19] p 3 N82-22537
A National Index for Energy Productivity
[GPO-75-866] p 6 N82-22772
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 7 N82-23043
The 1983 NASA Authorization, Volume 1
[GPO-91-468-VOL-1] p 9 N82-23060
Fossil and synthetic fuels miscellaneous, part 1
[GPO-84-010] p 76 N82-24351
Direct combustion of coal
[GPO-99-629] p 76 N82-24352
Summary of hearings on the future of the nation's energy utilities: Implications for Federal RD&D
[GPO-91-815] p 13 N82-25633
National energy conservation policy under the Reagan administration: Analysis of hearings on the Department of Energy authorization for fiscal year 1982
[GPO-92-174] p 13 N82-25634
Greater energy efficiency can be achieved through land use management
[AD-A111552] p 15 N82-26808
CONSTRUCTION
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 1: Executive summary
[NASA-CR-166805] p 42 N82-22664
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 2: Detailed report
[NASA-CR-166806] p 42 N82-22665
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000669] p 121 N82-23738
Environmental report: Combustion Engineering/Gulf States Utilities Company fuel gas demonstration plant, Westlake, Louisiana
[DE82-004141] p 11 N82-23806
CONSUMERS
State solar initiatives. Volume 1: A review
[DE82-002425] p 59 N82-26842
CONTAINMENT
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030057] p 126 N82-27749
CONTAMINANTS
Characterization of exhaust emissions from high-mileage catalyst-equipped automobiles
[PB82-131506] p 7 N82-22611
CONTINENTAL SHELVES
A summary of Environmental Geologic Studies on the southeastern United States Atlantic Outer Continental Shelf
[PB82-109273] p 80 N82-25731
CONTINUOUS WAVE LASERS
Design and performance characteristics of a CW subsonic HF chemical laser with 120 W power output
p 103 A82-37577
CONTROL EQUIPMENT
Passive cyclic pitch control for horizontal axis wind turbines p 107 N82-23715
CONTROLLED ATMOSPHERES
Demonstration of a nitrogen-based carburizing atmosphere
[DE82-004196] p 19 N82-27851
CONTROLLED FUSION
The age of fusion - On the brink p 103 A82-37971

CONTROLLERS

Energy programs at the John Hopkins University Applied Physics Laboratory
[PB82-126599] p 122 N82-23781

CONTROLLERS

Dynamic characteristics of a wind driven induction generator equipped with thyristor controlled inductances on the stator side p 100 A82-36093

Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller
[NASA-CR-165507] p 110 N82-24425

CONVERSION

Status report of thermocline thermal energy storage studies at Sandia National Laboratories p 124 N82-24660

CONVERTERS

The 2.5 m experimental horizontal axis wind turbine /25 m HAT/ p 100 A82-36089

COOLING SYSTEMS

Solar powered desiccant air conditioning system
[DE82-002656] p 44 N82-22775

Helium research in support of superconducting power transmission
[PB82-122987] p 118 N82-23412

Performance of stratified thermal storage system for Oliver Springs Elementary School p 123 N82-24665

High-temperature turbine technology program rotor water delivery and distribution tests
[DE82-000400] p 84 N82-26892

COPPER

Development of technique for AR coating and nickel and copper metallization of solar cells. FPS Project: Product development
[NASA-CR-169055] p 55 N82-26797

The boreholes Ortenburg 1 and 2 (1980/81)
[BMFT-FB-T-82-004] p 86 N82-27518

COPPER OXIDES

Photovoltaic effects in Cu2O-Cu solar cells grown by anodic oxidation p 23 A82-31187

COPPER SULFIDES

Frequency dependent capacitance studies of the CdS/Cu2S thin-film solar cell p 25 A82-32892

Preparation and analysis of CdS-Cu2S solar cells p 30 A82-34540

Photovoltaic performances of Cu2S/CdS sprayed solar cells p 31 A82-34541

Single-crystal Zn/x/Cd/1-x/S/Cu2S photovoltaic cells p 31 A82-34542

Trends and problems in CdS/Cu/x/S thin film solar cells - A review p 31 A82-34543

Simulation of the behaviour of a set of Cu2S-CdS unit photocells p 31 A82-34544

CORE SAMPLING

Raft River geoscience case study: Appendixes
[DE82-003553] p 75 N82-23835

Methane Hydrate Resource Assessment Program
[DE82-002478] p 79 N82-25624

CORN

Corn to ethanol plant feasibility study
[DE82-000029] p 69 N82-22375

CORROSION

Corrosion behavior of alloys p 51 N82-24679

CORROSION RESISTANCE

High temperature metallic recuperator
[PB82-141102] p 8 N82-23373

Characterization of the corrosion environment of the desert near Bartstow, California
[DE82-003676] p 50 N82-23800

COST ANALYSIS

Solutions to the aviation fuel problem p 2 A82-34113

Czochralski silicon solar cell modules - Present cost and future prospects p 38 A82-36864

Near-term high potential counties for SWECS
[SERI/TR-98282-11] p 104 N82-22871

SPS cost methodology and sensitivities p 43 N82-22695

Reference system characterization and cost overview p 43 N82-22694

Offshore recterns feasibility p 117 N82-22741

A fleet manager's guide to vehicles for valid results
[DOE/CS-58051/04] p 8 N82-23533

Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 9: Cost estimate and schedule
[DE82-000667] p 122 N82-23740

Cost and performance of thermal storage concepts in solar thermal systems p 51 N82-24689

Silicon dendritic web material
[NASA-CR-169053] p 55 N82-26793

Membrane-lined foundations for liquid thermal storage
[DE82-003651] p 126 N82-26851

Design scoping study of the 12T Yin-Yang magnet system for the Tandem Mirror Next Step (TMNS)
[DE82-003218] p 114 N82-27151

Benefit cost analysis of the aircraft energy efficiency program
[NASA-CR-169116] p 16 N82-27280

COST EFFECTIVENESS

Analytical calculation of thickness versus diameter requirements of silicon solar cells p 29 A82-34089

A review of the SERI wind energy innovative systems program p 98 A82-36079

'L-100 Poseidon' - A new system concept in vertical axis wind turbine technology p 100 A82-36097

A cost-effectiveness evaluation of chemical heat pumps p 12 N82-24693

Vehicle test report: Jet Industries Electra Van 600
[NASA-CR-168986] p 125 N82-26048

Investigation into the economy of methane gas utilization in sewage treatment plants
[BMFT-FB-T-82-025] p 89 N82-27857

COST ESTIMATES

Reference system characterization and cost overview p 43 N82-22694

SPS and alternative technologies cost and performance evaluations p 43 N82-22695

Sensitivity analysis of add-on price estimate for select silicon watering technologies p 47 N82-23667

Low cost solar energy collection for cooling applications
[DE82-003255] p 48 N82-23751

COST REDUCTION

Photovoltaic encapsulation materials p 29 A82-34093

Technology transfer - LSA project to industry p 30 A82-34099

Technology advancements for energy efficient aircraft engines
[AIAA PAPER 82-1051] p 2 A82-35479

COUPLING CIRCUITS

Switching networks for realisation of variable DC transformers coupled to rectangular arrays p 94 A82-34951

CRACKING (CHEMICAL ENGINEERING)

Ammonia as a hydrogen energy-storage medium p 64 N82-24704

CRASH LANDING

Will hydrogen-fueled aircraft be safe
[AIAA PAPER 82-1236] p 63 A82-35077

CREEP PROPERTIES

Biaxial cyclic deformation and creep-fatigue behavior of materials for solar thermal systems
[ASME PAPER 82-PVP-74] p 27 A82-33714

CROP GROWTH

Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 1 A82-29537

CROSSLINKING

Cross-linked polyvinyl alcohol films as alkaline battery separators
[NASA-TM-82802] p 103 N82-22327

CRUDE OIL

Chromatographic studies of vanadium compounds from boscan crude oil
[DE82-000977] p 68 N82-22395

Strategic petroleum reserve: Substantial progress made, but capacity and oil quality concerns remain
[EMD-82-19] p 3 N82-22537

Crude oil desulfurization
[NASA-CASE-NPO-14542-1] p 71 N82-23282

Fuel conservation by the application of spill prevention and fail-safe engineering (a guideline manual) p 8 N82-23662

Source rock geochemistry and liquid and solid petroleum occurrences of the Ouachita Mountains, Oklahoma p 75 N82-23830

A summary of Environmental Geologic Studies on the southeastern United States Atlantic Outer Continental Shelf
[PB82-100273] p 80 N82-25731

US energy flow, 1980
[DE82-002647] p 16 N82-26855

Analysis of potential methods to determine volatilities of heavy crude oils
[PB82-145384] p 87 N82-27534

CRUISE MISSILES

Toxicology of high energy fuels
[AD-A111686] p 17 N82-26966

CRUSTAL FRACTURES

Seismic and geodetic studies of the Imperial Valley, California
[DE82-001686] p 85 N82-26915

CRYOGENIC FLUIDS

Concept evaluation of automotive propulsion using liquid air/nitrogen. Task 1 report. Thermodynamics.
[DE82-002460] p 114 N82-27193

CRYOGENICS

Investigation of the application of a cryogenic blending process to produce antimisting diesel fuels
[AD-A110917] p 76 N82-25399

CRYSTAL DEFECTS

Reduction of solar cell efficiency by bulk defects across the back-surface-field junction p 21 A82-29804

CRYSTAL GROWTH

Silicon sheet - A key to low cost solar cells p 28 A82-34082

Metallurgical grade silicon substrates for solar cell application p 28 A82-34084

The 19th Project Integration Meeting
[NASA-CR-168822] p 41 N82-22652

LSA project perspective of watering technology p 46 N82-23651

Arco Solar, Incorporated: The industrial point of view p 47 N82-23653

Large-area sheet task advanced dendritic web growth development
[NASA-CR-169047] p 55 N82-26796

Silicon web process development
[NASA-CR-169050] p 56 N82-26805

Ribbon growth of single crystal GaAs for solar cell application
[AD-A112038] p 56 N82-26810

Improved slicing method for silicon
[DE82-003517] p 57 N82-26817

CULTURE TECHNIQUES

Continuous microbial production of hydrogen gas p 63 A82-37436

CURRENT CONVERTERS (AC TO DC)

Ac/dc power converter for batteries and fuel cells
[DE82-900867] p 103 N82-22441

CURRENT DENSITY

Diagnostic study of BSF silicon solar cells p 28 A82-34086

Effective drift current densities in the n-type heavily doped emitter region of p-n/plus/ junction silicon solar cells p 39 A82-36867

CURRENT DISTRIBUTION

Distributed series resistance effects in solar cells p 25 A82-32693

Impact of uniform electrode current distribution on ETF
[NASA-TM-82875] p 111 N82-25636

CURVED PANELS

Development effort of sheet molding compound /SMC/ parabolic trough panels p 39 A82-37116

CUTTERS

Testing the shearer-loader EDW 170/200 LN for thin seams in connection with chainless haulage --- coal mining
[BMFT-FB-T-82-017] p 70 N82-22638

CYCLIC LOADS

Biaxial cyclic deformation and creep-fatigue behavior of materials for solar thermal systems
[ASME PAPER 82-PVP-74] p 27 A82-33714

CYCLOTRON RADIATION

Optimization of the region of inverse conversion in a cyclotron microwave converter --- for microwave to electric conversion p 94 A82-34521

Numerical simulation of recovery processes in a cyclotron converter --- for microwave to electric conversion . p 94 A82-34522

CYTOPLASM

Photochemical energy conversion in chlorophyll-containing lipid bilayer vesicles p 21 A82-29317

CZOCHRALSKI METHOD

Analytical calculation of thickness versus diameter requirements of silicon solar cells p 29 A82-34089

Czochralski silicon solar cell modules - Present cost and future prospects p 38 A82-36864

D

DAMS

Hydropowered electrolysis in New York State p 111 N82-24707

DATA ACQUISITION

A review of the SERI wind energy innovative systems program p 98 A82-36079

Data on energy conservation activity in multifamily housing
[DE82-000467] p 16 N82-26862

Uses of the FRS data base for energy policy analysis
[DE82-001662] p 16 N82-26864

Solar production of industrial-process hot water. Phase 3: Operation and evaluation of the York Building Products Co., Inc. solar facility
[DE82-003526] p 60 N82-26865

DATA BASE MANAGEMENT SYSTEMS

New York State industrial energy profile, volume 1
[PB82-126648] p 7 N82-22790

DATA BASES

Appropriateness in using LANDSAT in development energy related data bases p 4 N82-22585

Analyses of natural gas in Illinois
[PB82-124322] p 75 N82-23645
Energy use in office buildings: Analysis of use in a random sample of 1100 buildings
[DE82-000518] p 9 N82-23761
Residential Energy Consumption Survey (RECS): National interim energy consumption survey, 1978-1979. Household monthly energy consumption and expenditures. User's guide
[PB82-114919] p 9 N82-23778
Residential Energy Consumption Survey (RECS): National interim energy consumption survey, 1978-1979. household monthly energy consumption and expenditures. Shopper's guide
[PB82-114927] p 10 N82-23779

DATA PROCESSING

Timesaving methods adaptable to mining which utilize structural information on the forefield while applying new technologies — forefield survey methods, data processing and analysis
[BMFT-FB-T-81-220] p 4 N82-22637
Applications of the DOE/NASA wind turbine engineering information system p 106 N82-23696
Uses of the FRS data base for energy policy analysis
[DE82-001682] p 16 N82-26864

DECOMPOSITION

Production cost comparisons of hydrogen from fossil and nuclear fuel and water decomposition
p 65 N82-24710
Recent work in advanced hydrogen production concepts p 65 N82-24711

DEEP SPACE NETWORK

Potential reduction of DSN uplink energy cost
p 13 N82-25110
A simplified solar cell array modelling program
p 52 N82-25111

DEER

Application of remote sensing to state and regional problems
[E82-10288] p 77 N82-24566

DEMAND (ECONOMICS)

Small wind systems application analysis. Executive summary
[DE82-004208] p 113 N82-26841

DENDRITIC CRYSTALS

High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
Silicon dendritic web material
[NASA-CR-169053] p 55 N82-26793
Large-area sheet task advanced dendritic web growth development
[NASA-CR-169047] p 55 N82-26796
Silicon web process development
[NASA-CR-169050] p 56 N82-26805
Ribbon growth of single crystal GaAs for solar cell application
[AD-A112038] p 56 N82-26810

DENITROGENATION

Crossed-reaction networks in the catalytic hydrodenitrogenation of synthetic liquid fuels
[DE82-003002] p 81 N82-26422

DEPLOYMENT

A deployment mechanism for the double roll-out flexible solar array on the space telescope p 46 N82-23359

DEPOLYMERIZATION

Fundamentals of coal depolymerization: Kinetic modeling and experimental determination of free radical chemistry and mineral matter effects in direct coal hydroliquefaction
[DE82-003689] p 81 N82-26425

DEPOSITION

A photoelectrochemical cell based on chemically deposited Sb2Se3 thin film electrode and dependence of deposition on various parameters p 23 A82-30663
Investigation of continuous deposition of AMA-type coatings onto strip and sheet by sputtering
[DE82-004266] p 53 N82-26456

DEPOSITS

Deposit formation in hydrocarbon fuels
[ASME PAPER 82-GT-49] p 67 A82-35307

DESALINIZATION

Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 1: Executive summary
[NASA-CR-168805] p 42 N82-22664
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 2: Detailed report
[NASA-CR-168806] p 42 N82-22665

DESERTS

The southern California desert wind-energy assessment p 102 A82-36113
Heat flow and geothermal assessment of the Escalante Desert, southwestern Utah, with emphasis on the Newcastle KGRA
[DE82-003952] p 74 N82-23618
Characterization of the corrosion environment of the desert near Bartstow, California
[DE82-003878] p 50 N82-23800

DESICCANTS

Solar powered desiccant air conditioning system
[DE82-002656] p 44 N82-22775

DESIGN ANALYSIS

Ineffectiveness of low-high junctions in optimized solar cell designs p 31 A82-34545
New perspectives for kinetic energy storage
p 120 A82-35525
Drive train assembly of the Swedish WTS 3 — Wind Turbine System p 99 A82-36091
Alternator designs for direct coupling to remote wind energy systems p 99 A82-36092
Design and performance characteristics of a CW subsonic HF chemical laser with 120 W power output
p 103 A82-37577
Second-generation heliostat development for solar-central receivers
[DE82-001844] p 45 N82-22777
Second-generation heliostat development for solar-central receivers, detail design report. Volume 1, appendix
[DE82-001842] p 45 N82-22778
Second-generation heliostat development for solar-central receivers: Volume 1, detail design report. Appendix 2
[DE82-001843] p 45 N82-22779
Wind turbine acoustic standards p 109 N82-23733
Compressed-Air Energy Storage: Preliminary design and site development program in aquifer. Volume 6: Balance of plant design
[DE82-000670] p 121 N82-23737
A conceptual design study of a high temperature solar thermal receiver
[NASA-CR-168925] p 51 N82-24720
Building energy analysis computer programs developed by Federal agencies: Cost, use, and need
[PLRD-82-47] p 15 N82-26788
Optical analysis and optimization of parabolic-trough collectors: A user's guide
[DE82-003146] p 58 N82-26834
Custom Engineering parabolic glass reflector for the Sandia prototype solar collector
[DE82-000800] p 59 N82-26838
Design scoping study of the 12T Yin-Yang magnet system for the Tandem Mirror Next Step (TMNS)
[DE82-003218] p 114 N82-27151
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p 126 N82-27749
Comparative analysis of the conceptual design studies of potential early commercial MHD power plants (CSPEC)
[NASA-TM-82897] p 114 N82-27838
Power supply subsystem for MHD generator superconducting magnet, baseline power supply designs and costs
[DE81-024285] p 115 N82-27850

DESULFURIZING

Study project on the desulfurization of flue gas, using the Bergbauforschung (BF) process, as part of the integrated operation of a power plant with a chemical plant for producing sulfuric acid
[BMFT-FB-T-81-229] p 69 N82-22340
Crude oil desulfurization
[NASA-CASE-NPO-14542-1] p 71 N82-23282
Autocatalytic coal liquefaction process
[NASA-CASE-NPO-14876-2] p 78 N82-25394

DETONATION

Explosion driven magnetogasdynamic flows with high magnetic Reynolds and interaction numbers
[AD-A112049] p 113 N82-27141

DEVELOPING NATIONS

The possible share of soft/decentralized renewables in meeting the future energy demands of developing regions
[RR-81-18] p 4 N82-22648

DIELECTRICS

Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002170] p 116 N82-22444

DIESEL ENGINES

Efficiencies of heat engines and fuel cells - The methanol fuel cell as a competitor to Otto and Diesel engines
p 92 A82-32372
Effect of heated diesel fuel on particulate generation and fuel consumption for a Deutz F6L 912 engine
[DE82-900385] p 7 N82-22803
Brief synopsis of EPA Office of Research and Development and the Health Effects Institute mobile source work
[PB82-124421] p 11 N82-23821
Future fuels and engines for railroad locomotives. Volume 2: Technical document
[NASA-CR-169983] p 14 N82-26050

DIESEL FUELS

Substitution of diesel power plants by solar and wind electricity generators - A case study for a tropical island
p 101 A82-36107
Effect of heated diesel fuel on particulate generation and fuel consumption for a Deutz F6L 912 engine
[DE82-900385] p 7 N82-22803
A field monitor for the stability and cleanliness of distillate fuel
[AD-A110884] p 76 N82-24354
Investigation of the application of a cryogenic blending process to produce antimisting diesel fuels
[AD-A110917] p 78 N82-25399
Future fuels and engines for railroad locomotives. Volume 2: Technical document
[NASA-CR-169983] p 14 N82-26050
Mobility fuels for the Navy
[AD-A112511] p 82 N82-26485
Development of Army high-energy fuel diesel/turbine-powered surface equipment, phase 2
[AD-A111942] p 82 N82-26487
Fractionation of diesel fuel from petroleum and Paraho shale oils
[AD-A107042] p 86 N82-27520

DIFFUSION

Basic research needs and opportunities at the solid-solid interface - Diffusion p 35 A82-35509

DIFFUSION COEFFICIENT

The role of Be in /GaAl/As/GaAs solar cells
p 30 A82-34096

DIFFUSION FLAMES

NOx formation in flat, laminar, opposed jet methane diffusion flames p 65 A82-28680
Stability limits of natural gas diffusion flames with swirl
p 66 A82-28681
The turbulent reaction field in a concentric diffusion flame p 66 A82-28690

DIRECT CURRENT

Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller
[NASA-CR-165507] p 110 N82-24425

DIRECT POWER GENERATORS

Optimization of the region of inverse conversion in a cyclotron microwave converter — for microwave to electric conversion p 94 A82-34521
Numerical simulation of recovery processes in a cyclotron converter — for microwave to electric conversion p 94 A82-34522
An overview of the SERI Solar Energy Storage Program p 51 N82-24666

DIRECTIONAL SOLIDIFICATION (CRYSTALS)

Fracture of directionally solidified multicrystalline silicon p 38 A82-36263

DISPLAY DEVICES

Holography creates new breed of optical components — construction, reconstruction and application of surface relief and volume holograms p 37 A82-35886

DISSOLVED GASES

Secondary recovery: Changing of the viscosity and compressibility of mineral oils with dissolved gas
[BMFT-FB-T-81-225] p 69 N82-22339

DISTILLATION EQUIPMENT

Alcohol distillation by internal-combustion engines
[DE82-005294] p 83 N82-26495

DISTRIBUTING

Distributed thermal energy storage in the residential sector: Commercialization readiness assessment and implementation strategy p 12 N82-24661

DOMESTIC ENERGY

Wind power generation for national and regional grid systems Design proposals for generation and transmission p 98 A82-36078
The status of windpower research and development for space and water heating in the United States
p 101 A82-36106
Demand 80/81: Forcasts of energy consumption to the year 2000. Volume 2: Appendixes
[DE82-900870] p 9 N82-23770

DOPED CRYSTALS

The role of Be in /GaAl/As/GaAs solar cells
p 30 A82-34096
The role of Be in /GaAl/As/GaAs solar cells
p 40 A82-37633
Improved slicing method for silicon
[DE82-003517] p 57 N82-26817

DRAINAGE PATTERNS

Mean annual streamflow of selected drainage basins in the coal area of southeastern Montana
[PB82-137696] p 79 N82-25627

DRILLING
US Lake Erie natural gas resource development. Programmatic environmental impact statement
[AD-A112074] p 14 N82-25662
DROP SIZE
Plain-jet airblast atomization of alternative liquid petroleum fuels under high ambient air pressure conditions
[ASME PAPER 82-GT-32] p 67 A82-35293
Direct contact heat transfer for thermal energy storage p 123 N82-24867
DRYING
Modification and operation of the hydrogen homestead hydride vessel energy storage system p 65 N82-24705
DUCTILITY
Fracture mechanics of ductile and tough materials and its applications to energy related structures --- Book p 127 A82-29463
DUCTS
Results and comparison of Hall and DW duct experiments
[NASA-TM-82984] p 111 N82-25661
DUST
Dust-emission measurements in two power plants p 2 A82-33407
DYNAMIC CHARACTERISTICS
Dynamic characteristics of a wind driven induction generator equipped with thyristor controlled inductances on the stator side p 100 A82-36093
Dynamics and stability of wind turbine generators p 107 N82-23720
DYNAMIC STABILITY
Kamen 40 kW wind turbine generator - control system dynamics p 107 N82-23721
DYNAMIC STRUCTURAL ANALYSIS
Wind turbine dynamics
[NASA-CP-2185] p 105 N82-23684
Experience on the use of MOSTAB-HFW computer code for horizontal-axis wind turbines p 107 N82-23709
SWECS tower dynamics analysis methods and results p 107 N82-23712
Dynamic analysis of Darrieus vertical axis wind turbine rotors
[DE82-000814] p 112 N82-26823

E

EARTH ATMOSPHERE
Three-dimensional, conservation equation model for simulating LNG vapor dispersion in the atmosphere
[DE82-001053] p 20 N82-27874
EARTH CRUST
Seismic and geodetic studies of the Imperial Valley, California
[DE82-001686] p 85 N82-26915
EARTH ORBITS
Comparison of low Earth orbit and geosynchronous Earth orbits p 6 N82-22716
EARTH RESOURCES PROGRAM
High spectral resolution airborne spectrometry p 67 A82-32443
EARTH TERMINALS
Potential reduction of DSN uplink energy cost p 13 N82-25110
EARTHQUAKES
Seismic and geodetic studies of the Imperial Valley, California
[DE82-001686] p 85 N82-26915
ECOLOGY
Nonmicrowave health and ecological effects: Overview p 5 N82-22691
SPS microwave health and ecological effects: Program area overview p 5 N82-22692
ECONOMETRICS
Wafering economies for industrialization from a wafer manufacturer's viewpoint p 47 N82-23686
Short-term energy outlook: Methodology
[DE82-002940] p 9 N82-23754
ECONOMIC ANALYSIS
Wind system value analysis for electric utilities - A comparison of four methods p 93 A82-33703
The thermodynamic conversion of solar energy - Technical and economic comparison of different power plants p 32 A82-34554
Economic analysis of small wind-energy conversion systems p 102 A82-36209
Western oil shale development: A technology assessment. Volume 1: Main report
[DE82-003132] p 74 N82-23617
Sensitivity analysis of add-on price estimate for select silicon wafering technologies p 47 N82-23687
Design handbook for photovoltaic-power systems: Simplified methods for utility interconnected systems
[DE82-003909] p 48 N82-23745
Assessment of secondary residues. Engineering and economic analysis
[DE82-000925] p 85 N82-26771
Methodology for determining the value of wind energy conversion systems for specific utility systems
[DE82-002679] p 113 N82-26832
Comparison of Rankine-cycle power systems: Effects of seven working fluids
[DE82-005599] p 113 N82-26844
Process selection and investment analysis, methanation facility for purox pyrolysis system off-gas
[DE82-004584] p 18 N82-27452
Electric power from orbit: A critique of a satellite power system
[PB82-133083] p 62 N82-27856
Preliminary assessment of alternative dry storage methods for the storage of commercial spent nuclear fuel
[DE82-002303] p 20 N82-28150
Energy-economy analysis and application to R and D planning
[PB82-141138] p 20 N82-28221
ECONOMIC FACTORS
The significance of coal and other solid fuels for the requirements of the energy economy. I - The present and future significance of solid and other fuels for the world and particularly Western Europe p 1 A82-29425
Strategies for minimizing operational impacts of large wind turbine arrays on automatic generation control systems p 93 A82-33702
An assessment of the industrial energy conservation program. Volume 1: Summary
[PB82-122755] p 7 N82-22793
ECONOMIC IMPACT
Design, performance and economics of the DAF Indal 50 kW and 375 kW vertical axis wind turbine
[ASME PAPER 82-PET-6] p 97 A82-35486
Mitigating socioeconomic impacts of energy development
[EMD-82-13] p 15 N82-26780
Solar central receivers: The technology, industry, markets, and economics
[DE82-005267] p 60 N82-26957
ECONOMICS
An economic model of future coal/densified refuse-derived fuel use at Wright-Patterson AFB, Ohio
[AD-A111376] p 78 N82-25396
EFFLUENTS
Overview of atmospheric effects p 5 N82-22686
EIKONAL EQUATION
Enhancement of far field sound levels by refractive focusing p 109 N82-23728
ELASTODYNAMICS
Effect of pulse loads on dynamic rock fracture
[DE82-002311] p 76 N82-23837
ELASTOMERS
Photovoltaic encapsulation materials p 29 A82-34093
ELASTOMETERS
Membrane-lined foundations for liquid thermal storage
[DE82-003651] p 126 N82-26851
ELECTRIC BATTERIES
Ac/dc power converter for batteries and fuel cells
[DE82-900867] p 103 N82-22441
Battery resource assessment. Volume 1: Scenarios, investment, and materials cost
[DE82-006243] p 126 N82-26852
ELECTRIC CHOPPERS
Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller
[NASA-CR-165507] p 110 N82-24425
ELECTRIC CONNECTORS
Terrestrial solar modules p 30 A82-34095
ELECTRIC CONTACTS
Processing for high photocurrent in IBC solar cells p 29 A82-34087
New experimental evidence for minority-carrier reflection at negative-barrier MIS contacts --- from solar cell open circuit voltage measurement p 34 A82-35247
ELECTRIC CURRENT
Processing for high photocurrent in IBC solar cells p 29 A82-34087
Theory of photocurrent in semiconductor-electrolyte junction solar cells p 37 A82-35816
ELECTRIC ENERGY STORAGE
New perspectives for kinetic energy storage p 120 A82-35525
A regional wind-hydro electricity supply system p 101 A82-36108
RPE-10 composite flywheel testing
[UCRL-15379] p 120 N82-22498
Magnetic bearing flywheels for electric storage --- energy storage flywheels
[SMAS-821-422-110] p 128 N82-27750
ELECTRIC FIELDS
Effective drift current densities in the n-type heavily doped emitter region of p-n/plus/ junction silicon solar cells p 39 A82-36867
ELECTRIC GENERATORS
Power optimization of wind electric conversion systems integrated into the utility grid p 90 A82-30866
Reliability analysis of combined wind-electric and conventional generation systems p 91 A82-31572
Laser satellite power systems - Concepts and issues p 116 A82-32370
Strategies for minimizing operational impacts of large wind turbine arrays on automatic generation control systems p 93 A82-33702
Wind system value analysis for electric utilities - A comparison of four methods p 93 A82-33703
Medicine Bow wind project p 93 A82-33704
Ground-based receiving-converting complex for satellite solar power systems p 94 A82-34523
Small wind energy conversion systems, application and performance
[ASME PAPER 82-PET-3] p 96 A82-35483
Wisconsin Power and Light Company's wind energy research and demonstration program
[ASME PAPER 82-PET-4] p 97 A82-35484
The development of a 10 meter wind turbine generator
[ASME PAPER 82-PET-10] p 97 A82-35489
A simulation model of an electricity generating system incorporating wind turbine plant p 101 A82-36109
The capacity credit of wind power - A numerical model p 101 A82-36110
Economic analysis of small wind-energy conversion systems p 102 A82-36209
Helical screw expander evaluation project
[NASA-CR-168803] p 104 N82-22659
Intermediate photovoltaic system application experiment operational executive summary. Volume 3: For Lovington Square Shopping Center, Lovington, New Mexico
[DE82-003082] p 48 N82-23747
Preliminary design study of Underground Pumped Hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches. UPH, Appendix D: Power plant
[DE82-003075] p 122 N82-23753
Linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft power supply
[NASA-CASE-GSC-12518-1] p 110 N82-24421
Hydropowered electrolysis in New York State p 111 N82-24707
US energy flow, 1980
[DE82-002647] p 16 N82-26855
Suitability of shale fuels for Army generator sets
[AD-A112608] p 87 N82-27522
Active superconductive generator development 400 horsepower generator design
[AD-A107513] p 119 N82-27884
ELECTRIC MOTOR VEHICLES
Inductive power transfer for propulsion --- Roadway Powered Electric Vehicle project p 95 A82-35229
Transit bus propulsion employing flywheel energy storage p 119 A82-35230
France's supertast train p 102 A82-36394
Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller
[NASA-CR-165507] p 110 N82-24425
Vehicle test report: Jet Industries Electra Van 600
[NASA-CR-168996] p 125 N82-26048
Automotive absorption air conditioner utilizing solar and motor waste heat
[NASA-CASE-NPO-15183-1] p 54 N82-26776
ELECTRIC MOTORS
Linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft power supply
[NASA-CASE-GSC-12518-1] p 110 N82-24421
Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller
[NASA-CR-165507] p 110 N82-24425
ELECTRIC POTENTIAL
Impact of uniform electrode current distribution on ETF
[NASA-TM-82875] p 111 N82-25636
Advanced thermionic technology program
[DE82-002116] p 115 N82-27946
ELECTRIC POWER
Wind power as an electrical energy source in Illinois p 92 A82-32772
Coal to electricity - Integrated gasification combined cycle p 67 A82-34487
Physical basis of power conversion of energy fluctuations p 40 A82-37671
ELECTRIC POWER PLANTS
Approach to the realization of a closed cycle Ocean Thermal Energy Conversion /OTEC/ system p 90 A82-29070

A frequency and duration method for the evaluation of wind integration p 96 A82-30880
Optimization of the operation of a wind power plant p 92 A82-33397
Dust-emission measurements in two power plants p 2 A82-33407
The development of MHD energy conversion methods in the USSR p 93 A82-33896
Thermis - A solar power station p 31 A82-34551
Power plant I - Fused salt p 32 A82-34555
Power plant II - Sodium-water p 32 A82-34556
Power plant III - Steam p 32 A82-34557
Power plant IV - Therm-Thek p 33 A82-34558
Power plant V - Thek generating station p 33 A82-34559
Power plant VI - Sodium-air p 33 A82-34560
Power plant VI revisited - Sodium-air /a grid-boiler/ p 33 A82-34561
Power plant VII - Air-air /tube boiler/ p 33 A82-34562
Power plant VII revisited - Air-air /Scirocco/ p 33 A82-34563
State of the art in solar thermoelectric power plant research p 33 A82-34565
The feasibility of electric power generation by the wind on the University of New Orleans campus [ASME PAPER 82-PET-1] p 96 A82-35481
Substitution of diesel power plants by solar and wind electricity generators - A case study for a tropical island p 101 A82-36107
A simulation model of an electricity generating system incorporating wind turbine plant p 101 A82-36109
Central solar receivers - Applications for utilities and industry p 41 A82-37973
Assessment of atmospheric fluidized-bed combustion recycle systems [DE82-900679] p 68 N82-22337
Construction of a 15 t/hr prototype plant for the VEW coal conversion process — Westfalen Joint Electricity Generating Company (VEW) [BMFT-FB-T-81-216] p 70 N82-22385
Solar pond power plant feasibility study for Davis, California [NASA-CR-168819] p 41 N82-22653
Integration of SPS with utility system networks p 43 N82-22684
SPS and alternative technologies cost and performance evaluations p 43 N82-22695
Coal-Fired Power Plant (Western Coal): Environmental characterization information report [DOE/EP-0019] p 6 N82-22709
Westinghouse coal-gasification combined-cycle preliminary plant evaluation for electric-utility applications [DE82-002701] p 72 N82-23326
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 5A: Site selection study, part 1 [DE82-000675] p 121 N82-23736
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 6: Aquifer flow code simulation [DE82-000666] p 121 N82-23739
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power [DE82-001921] p 48 N82-23742
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power, appendices [DE82-001852] p 48 N82-23743
Fort Hood solar cogeneration facility conceptual design study. Volume 1: Technical report [DE82-000836] p 49 N82-23785
Fort Hood solar cogeneration facility conceptual design study. Volume 2: System specification [DE82-001579] p 49 N82-23786
Texasgulf solar cogeneration program, volume 1 [DE82-001900] p 50 N82-23787
Systems analysis of thermal storage p 123 N82-24668
Fossil-energy materials program [DE82-001057] p 77 N82-24732
Screening methodology for calculating worst-case concentrations downwind from a large, isolated, air-pollutant-emission source [DE82-002286] p 14 N82-25664
Advanced coal gasification system for electric power generation [DE82-004539] p 84 N82-26499
High-temperature turbine technology program rotor water delivery and distribution tests [DE82-000400] p 84 N82-26692
Intermediate photovoltaic system application experiment operational performance report. Volume 3: For Newman Power Station, El Paso, Texas [DE82-000797] p 60 N82-26696
Acid rain in Texas' energy future [DE82-900465] p 17 N82-26880
Transient analysis of heat transmission systems [AD-A112365] p 126 N82-27691
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 2: Engineering. Volume 3: Costs and schedules [NASA-CR-165452-VOL-2] p 114 N82-27837

ELECTRIC POWER SUPPLIES

A regional wind-hydro electricity supply system p 101 A82-36108
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 1: Executive summary [NASA-CR-168805] p 42 N82-22664
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 2: Detailed report [NASA-CR-168806] p 42 N82-22665
Electricity tommorrow [PB82-124165] p 7 N82-22791
The hydraulic windmill p 106 N82-23700
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power. Executive summary [DE82-001898] p 48 N82-23741
Intermediate photovoltaic system application experiment operational performance report. Volume 4: For Newman Power Station, El Paso, Texas [DE82-002661] p 48 N82-23746
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1: Lovington Square Shopping Center, Lovington, New Mexico [DE82-001710] p 49 N82-23755
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 2: Newman power station, El Paso, Texas [DE82-001711] p 49 N82-23756
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume for Beverly High School, Beverly, Massachusetts [DE82-001726] p 49 N82-23757
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1 for Mt. Laguna Radar Station, Mt. Laguna, California [DE82-001727] p 49 N82-23758
Energy tommorrow: Challenges and opportunities for California [PB82-117821] p 10 N82-23783
Hydropowered electrolysis in New York State p 111 N82-24707
Summary of hearings on the future of the nation's energy utilities: Implications for Federal RD&D [GPO-91-615] p 13 N82-25633
Development of accelerated fuel-engines qualification procedures methodology, volume 1 [AD-A113461] p 85 N82-27317
Development of accelerated fuel-engines qualification procedures methodology. Volume 1: Appendices [AD-A113532] p 85 N82-27318
Power supply subsystem for MHD generator superconducting magnet, baseline power supply designs and costs [DE81-024265] p 115 N82-27850

ELECTRIC POWER TRANSMISSION

Power optimization of wind electric conversion systems integrated into the utility grid p 90 A82-30866
Wind power generation for national and regional grid systems Design proposals for generation and transmission p 98 A82-36078
Electric power processing, distribution, management and energy storage p 117 N82-22743

ELECTRIC ROCKET ENGINES

Study of reactor Brayton power systems for nuclear electric spacecraft [NASA-CR-168942] p 110 N82-24289

ELECTRICAL FAULTS

Fault analysis of mid-channel power takeoff in DCW MHD generators [AIAA PAPER 82-0922] p 91 A82-31911
Interaction between MHD generator and DC-AC power conversion system [AIAA PAPER 82-0923] p 91 A82-31912
Axial field limitations in MHD generators. Part 2: Analytical investigation and comparison with experiments [LOG-E769] p 111 N82-24981

ELECTRICAL MEASUREMENT

Deep trap levels in CdS solar cells observed by capacitance measurements p 26 A82-32893

ELECTRICAL PROPERTIES

Temperature dependence of silicon solar cell characteristics p 20 A82-29249
Use of solar furnaces. II - Thermophysical properties p 24 A82-31566
Energy conversion process of p-i-n amorphous Si solar cells p 28 A82-33255
The role of Be in /GaAl/As/GaAs solar cells p 30 A82-34096
Spray-deposited SnO2/n-Si/polycrystalline/ solar cells p 38 A82-36663

ELECTRICAL RESISTANCE

A new technique for determining battery internal resistance - Studies on Leclanche cells p 119 A82-32373
Distributed series resistance effects in solar cells p 25 A82-32693

ELECTRICITY

SPS and alternative technologies cost and performance evaluations p 43 N82-22695

ELECTROCATALYSTS

Oxygen electrodes for energy conversion and storage [DE82-005305] p 115 N82-27848

ELECTROCHEMICAL CELLS

The thermodynamics of electrolyte distribution in molten carbonate fuel cells p 91 A82-31843
High temperature fuel and steam electrolysis cells using proton conductive solid electrolytes p 63 A82-32375
Chemical/Hydrogen Energy Storage Systems p 64 N82-24690

ELECTROCHEMICAL OXIDATION

Photovoltaic effects in Cu2O-Cu solar cells grown by anodic oxidation p 23 A82-31187

ELECTROCHEMISTRY

MHD generator electrode development [DE82-002561] p 114 N82-27155

ELECTRODE FILM BARRIERS

Conductor-insulator-semiconductor organic solar cells p 39 A82-36865
Cross-linked polyvinyl alcohol films as alkaline battery separators [NASA-TM-82802] p 100 N82-22327

ELECTRODEPOSITION

Electrodeposition of solar silicon p 20 A82-29248

ELECTRODES

Improved alkaline hydrogen/air fuel cells for transportation applications p 111 N82-24701
Impact of uniform electrode current distribution on ETF [NASA-TM-82875] p 111 N82-25636
Electrochemical photovoltaic cells 2-6 compound thin film electrodes [DE82-000394] p 59 N82-26840
MHD generator electrode development [DE82-002561] p 114 N82-27155
Oxygen electrodes for energy conversion and storage [DE82-005305] p 115 N82-27848

ELECTRODIALYSIS

Solar energy conversion and storage through synthetic light-driven proton pumps p 37 A82-35920

ELECTROLYSIS

Design of a system for solar energy storage via water electrolysis p 39 A82-37436
Photoassisted electrolysis applied to coal gasification [DE82-000224] p 72 N82-23294
Static feed water electrolysis for large scale hydrogen generation p 64 N82-24699
Hydropowered electrolysis in New York State p 111 N82-24707
Oxygen electrodes for energy conversion and storage [DE82-005305] p 115 N82-27848

ELECTROLYTES

Evidence for hot-electron injection across p-GaP/electrolyte junctions — during photoconversion process of solar energy p 37 A82-35716
Theory of photocurrent in semiconductor-electrolyte junction solar cells p 37 A82-35816
p-type amorphous silicon/liquid junction solar cell p 40 A82-37634
Static feed water electrolysis for large scale hydrogen generation p 64 N82-24699
Requirements for optimization of electrodes and electrolyte for the iron/chromium Redox flow cell [NASA-CR-165218] p 125 N82-25640

ELECTROLYTIC CELLS

Overview of the Chemical/Hydrogen Energy Systems (C/HES) program p 64 N82-24689
Development status of solid polymer electrolyte water electrolysis for large scale hydrogen generation p 64 N82-24697

ELECTROMAGNETIC COMPATIBILITY

Electromagnetic compatibility overview p 5 N82-22690
Summary of the electromagnetic compatibility evaluation of the proposed satellite power system p 44 N82-22748
The EMC of satellite power systems and DoD C-E systems p 44 N82-22750

ELECTROMAGNETIC INTERFERENCE

The effects of a satellite power system on ground-based astronomy p 44 N82-22749

ELECTROMAGNETISM
Development of a dual-field heteropoplar power converter
[NASA-CR-165169] p 110 N82-24424
ELECTRON BEAMS
Numerical simulation of recovery processes in a cyclotron converter — for microwave to electric conversion p 94 A82-34522
Metals processing p 116 N82-27405
ELECTRON CAPTURE
Characterization of electron traps in n/plus/ indium tin oxide on p-type InP solar cells p 21 A82-29693
ELECTRON RECOMBINATION
Back surface field and vertical solar cell p 21 A82-29695
Determination of the grain boundary recombination velocity in polycrystalline silicon as a function of illumination from photoconductance measurements p 24 A82-32183
Grain boundary recombination analysis of GaAs Schottky barrier solar cells p 34 A82-35496
ELECTRON TRANSFER
Photochemical energy conversion in chlorophyll-containing lipid bilayer vesicles p 21 A82-29317
ELECTRON TUBES
Solar-central-receiver system integrated with a cogeneration facility for copper smelting, volume 1
[DE82-001580] p 60 N82-26863
ELECTRON TUNNELING
Efficient CdSe/p/ + /n Si tunnel junction photoanode for solar cell p 26 A82-33663
ELECTROPLATING
Silicon dendritic web material
[NASA-CR-169053] p 55 N82-26793
ENCAPSULATING
Photovoltaic encapsulation materials p 29 A82-34093
Terrestrial solar modules p 30 A82-34095
ENERGY
USAF solar thermal applications case studies
[NASA-CR-169054] p 56 N82-26801
ENERGY ABSORPTION FILMS
Solar absorptance and thermal emittance of Al2O3 films on Al - A theoretical assessment p 21 A82-29250
Energy related optical coatings p 90 A82-30331
Spectral selectivity of nickel and chromium rough surfaces p 23 A82-31440
Germanium selective solar absorber surfaces p 38 A82-36163
ENERGY CONSERVATION
Principles of efficient energy use at Interflug p 1 A82-33250
A significant role for composites in energy-efficient aircraft p 3 A82-37065
Greater energy efficiency can be achieved through land use management
[EMD-82-1] p 4 N82-22647
Energy conservation in houses. A technical press day report on the results of the low energy experimental house project in Garsfontein, Pretoria p 6 N82-22771
A National Index for Energy Productivity
[GPO-75-886] p 6 N82-22772
Utilization of waste heat from major transformer substations. Volume 3: Appendix
[DE82-900357] p 6 N82-22781
The potential for utility conservation investments in Minnesota
[PB82-122219] p 7 N82-22792
An assessment of the industrial energy conservation program. Volume 1: Summary
[PB82-122755] p 7 N82-22793
A fleet manager's guide to vehicles for valid results
[DOE/CS-56051/04] p 8 N82-23533
Energy conservation in buildings and general operations
[DE82-002723] p 8 N82-23734
Energy in New England: Transition to the 80's
[DE82-000234] p 9 N82-23763
Demand 80/81: Forecasts of energy consumption to the year 2000. Volume 1: Forecasts and description of the forecasting model
[DE82-900871] p 9 N82-23769
California experience with energy conservation standards for buildings
[DE81-000972] p 11 N82-24301
Develop and test fuel cell powered on-site integrated total energy systems: Phase 3: Full-scale power plant development
[NASA-CR-165568] p 12 N82-24648
Overview of the Thermal Energy Storage (TES) Program p 122 N82-24653
ORNL Thermal Energy Storage program overview p 123 N82-24654
Experimental evaluation of thermal energy storage p 123 N82-24656
Distributed thermal energy storage in the residential sector: Commercialization readiness assessment and implementation strategy p 12 N82-24661
Thermal energy storage for residential energy conservation p 124 N82-24674
Overview of energy-conservation research opportunities. Executive summary
[DE82-004031] p 12 N82-24727
Energy consumed in 2010 by an energy-efficient building sector
[DE82-003520] p 12 N82-24731
Evaluation for FY 1981 of MASEC's retrofit residential single-family dwellings passive solar heating project
[DE82-001168] p 52 N82-25409
National energy conservation policy under the Reagan administration: Analysis of hearings on the Department of Energy authorization for fiscal year 1982
[GPO-92-174] p 13 N82-25634
Passive solar class B monitoring reports
[DE82-003139] p 53 N82-25646
National solar data network success stories
[DE82-002281] p 14 N82-25652
Heat Energy Recovery from Domestic Output Fluids (HERDOF)
[PB82-134156] p 14 N82-25657
Future fuels and engines for railroad locomotives. Volume 2: Technical document
[NASA-CR-168983] p 14 N82-26050
Energy and materials flows in the production of primary aluminum
[DE82-005983] p 15 N82-26453
Symposium on Commercial Aviation Energy Conservation Strategies, papers and presentations
[AD-A107106] p 15 N82-26490
Future Raw Materials and Energy Use in Industry: A Research Agenda
[DE82-005975] p 15 N82-26512
Case study of the Mastin double-envelope house
[DE82-006833] p 15 N82-26513
Greater energy efficiency can be achieved through land use management
[AD-A111552] p 15 N82-26808
Solar-energy-system performance evaluation, General Electric - Milwaukee operational test site, Milwaukee, Wisconsin, September 1980 - March 1981
[DE82-001934] p 57 N82-26814
Energy-performance targets for federal buildings: Retrofit energy-target bands for existing postal facilities
[DE82-000070] p 16 N82-26845
Industrial Cogeneration Optimization Program: A summary of two studies
[DE82-005587] p 16 N82-26849
Data on energy conservation activity in multifamily housing
[DE82-000467] p 16 N82-26862
Utilization of flywheel-hybrid drive trains for commercial taxicab vehicles
[DE82-001670] p 18 N82-27194
Possibilities for energy consumption through microelectronics
[BMFT-FB-T-82-0022] p 19 N82-27856
ENERGY CONSUMPTION
The value of seasonal climate forecasts in managing energy resources p 2 A82-35235
Investigating the relationship between land use planning, transportation and energy consumption
[PB82-122185] p 3 N82-22393
Heat pump demand characteristics: A study of the impacts of single-family residential heat-pump technologies on electric-utility-system loads
[DE82-900861] p 3 N82-22464
Satellite power system operations p 44 N82-22745
Energy conservation in houses. A technical press day report on the results of the low energy experimental house project in Garsfontein, Pretoria p 6 N82-22771
Electricity tommorrow
[PB82-124165] p 7 N82-22791
Present and future energy consumption for passenger transportation in Germany
[ISBN-3-87977-051-4] p 8 N82-23072
Status of Occidental Petroleum's coal-oil-mixture program: An industrial-boiler retrofit
[DE82-900076] p 73 N82-23340
Energy conservation in buildings and general operations
[DE82-002723] p 8 N82-23734
Energy use in office buildings: Analysis of use in a random sample of 1100 buildings
[DE82-000518] p 9 N82-23761
Energy in New England: Transition to the 80's
[DE82-000234] p 9 N82-23763
Demand 80/81: Forecasts of energy consumption to the year 2000. Volume 1: Forecasts and description of the forecasting model
[DE82-900871] p 9 N82-23769
Demand 80/81: Forcasts of energy consumption to the year 2000. Volume 2: Appendixes
[DE82-900870] p 9 N82-23770
Residential Energy Consumption Survey (RECS): National interim energy consumption survey, 1978-1979. Household monthly energy consumption and expenditures. User's guide
[PB82-114919] p 9 N82-23778
Residential Energy Consumption Survey (RECS): National interim energy consumption survey, 1978-1979, household monthly energy consumption and expenditures. Shopper's guide
[PB82-114927] p 10 N82-23779
Geothermal energy market study on the Atlantic Coastal plain: Ocean City, Maryland geothermal energy evaluation
[PB82-123050] p 10 N82-23780
Energy tommorrow: Challenges and opportunities for California
[PB82-117821] p 10 N82-23783
State energy data report: Statistical tables and technical documentation 1960 through 1979
[PB82-119470] p 10 N82-23784
Collection and dissemination of thermal energy storage system information for the pulp and paper industry p 125 N82-24686
Building and occupant characteristics as determinants of residential energy consumption
[DE82-002417] p 12 N82-24728
Energy consumed in 2010 by an energy-efficient building sector
[DE82-003520] p 12 N82-24731
Potential reduction of DSN uplink energy cost p 13 N82-25110
National solar data network success stories
[DE82-002281] p 14 N82-25652
Data report for the Northeast Residential Experiment Station, September 1981
[DE82-005616] p 54 N82-26514
Greater energy efficiency can be achieved through land use management
[AD-A111552] p 15 N82-26808
US energy flow, 1980
[DE82-002647] p 16 N82-26855
ENERGY CONVERSION
Biennial Wind Energy Conference and Workshop, 5th, Washington, DC, October 5-7, 1981, Proceedings p 93 A82-33701
Medicine Bow wind project p 93 A82-33704
Coal to electricity - Integrated gasification combined cycle p 87 A82-34487
Utility siting of WECS: A preliminary legal/regulatory assessment
[SERI/TR-744-778] p 4 N82-22667
Near-term high potential counties for SWECS
[SERI/TR-98282-11] p 104 N82-22671
The UTRC wind energy conversion system performance analysis for horizontal axis wind turbines (WECSPER) p 105 N82-23688
Feasibility study: Codisposal with energy recovery from wastewater sludge and municipal refuse. Phase 2, Gloucester County, New Jersey
[DE82-000882] p 9 N82-23759
National Interregional Coal Models: Proceedings on a Workshop
[PB82-120932] p 75 N82-23788
Collection and dissemination of thermal energy storage system information for the pulp and paper industry p 125 N82-24686
Oxygen electrodes for energy conversion and storage
[DE82-005305] p 115 N82-27848
ENERGY CONVERSION EFFICIENCY
Temperature dependence of silicon solar cell characteristics p 20 A82-29249
Reduction of solar cell efficiency by bulk defects across the back-surface-field junction p 21 A82-29694
Back surface field and vertical solar cell p 21 A82-29695
High-efficiency silicon solar cells and prospects for their improvement p 22 A82-30057
Polycrystalline thin films for terrestrial solar cells p 22 A82-30328
Energy related optical coatings p 90 A82-30331
Hydrogenated amorphous silicon carbide as a window material for high efficiency a-Si solar cells p 23 A82-30662
Power optimization of wind electric conversion systems integrated into the utility grid p 20 A82-30868
A frequency and duration method for the evaluation of wind integration p 90 A82-30869
Daily efficiency of solar collectors p 23 A82-31098
Parametric photovoltaic cell p 23 A82-31207
The alkali metal thermoelectric converter /AMTEC/ - A new direct energy conversion technology for aerospace power
[AIAA PAPER 82-0862] p 91 A82-31876

Efficiencies of heat engines and fuel cells - The methanol fuel cell as a competitor to Otto and Diesel engines
p 92 A82-32372
Effect of thickness on silicon solar cell efficiency
p 25 A82-32696
Efficiency of hot-carrier solar energy converters
p 25 A82-32891
Energy conversion process of p-i-n amorphous Si solar cells p 26 A82-33255
Non-mass-analyzed ion implantation from a solid phosphorus source p 26 A82-33885
High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
Parabolic model for optimizing grid and bus metallization patterns in circular solar cells p 29 A82-34086
Practical limiting efficiencies for crystalline silicon solar cells p 29 A82-34090
Optimization of the region of inverse conversion in a cyclotron microwave converter — for microwave to electric conversion p 94 A82-34521
Numerical simulation of recovery processes in a cyclotron converter — for microwave to electric conversion p 94 A82-34522
Photovoltaic performances of Cu2S/CdS sprayed solar cells p 31 A82-34541
Trends and problems in CdS/Cu/x/S thin film solar cells - A review p 31 A82-34543
Ineffectiveness of low-high junctions in optimized solar cell designs p 31 A82-34545

A program for single-phase moderate-temperature geothermal well drawdown and pumping energy for the HP-97 and other desk calculators
[PB82-148420] p 89 N82-27829
Long-term energy options for Sweden. The IEA model and some simulation results
[DE82-900916] p 19 N82-27849
Energy-economy analysis and application to R and D planning
[PB82-141128] p 20 N82-28221

ENERGY STORAGE

Metal hydrides for energy storage p 118 A82-29650
Energy storage capacity of rotating composite disks and shells /Review/ p 119 A82-31562
Energy storage capacity of rotating composite structures operating under uniaxial tension p 119 A82-31563
Transit bus propulsion employing flywheel energy storage p 119 A82-35230
Energy storage options for harnessing wind energy [ASME PAPER 82-PET-9] p 120 A82-35488
Solar energy conversion and storage through synthetic light-driven proton pumps p 37 A82-35920
The rates of solar energy storage and retrieval in a zeolite-water system p 37 A82-35922
An innovation which comes from space - Kinetic energy storage p 120 A82-36317
Composites in energy generation and storage systems - An overview p 120 A82-37076
Design of a system for solar energy storage via water electrolysis p 39 A82-37436
The trade-off between collector area, storage volume, and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22668
The trade-off between collector area, storage volume and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22670
Electric power processing, distribution, management and energy storage p 117 N82-22743
Compressed-air energy storage: Preliminary design and site development program in an aquifer. Volume 3B: Site selection study, part 2
[DE82-000674] p 120 N82-22773
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 1: Executive summary
[DE82-000270] p 121 N82-23735
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 3A: Site selection study, part 1
[DE82-000675] p 121 N82-23736
Compressed-Air Energy Storage: Preliminary design and site development program in aquifer. Volume 6: Balance of plant design
[DE82-000670] p 121 N82-23737
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000669] p 121 N82-23738
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 8: Aquifer flow code simulation
[DE82-000668] p 121 N82-23739
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 9: Cost estimate and schedule
[DE82-000667] p 122 N82-23740
Photochemical energy storage: Studies of inorganic photoassistance agents
[DE82-000403] p 122 N82-23764
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 11: Plant design. UPH
[DE82-000918] p 122 N82-23771
Energy programs at the John Hopkins University Applied Physics Laboratory
[PB82-126699] p 122 N82-23781
Develop and test fuel cell powered on-site integrated total energy systems: Phase 3: Full-scale power plant development
[NASA-CR-165388] p 12 N82-24648
Thermal energy storage testing facility
p 123 N82-24662
Chemical/Hydrogen Energy Storage Systems
p 64 N82-24690
A chemical heat pump based on the reaction of calcium chloride and methanol for solar heating, cooling and storage p 51 N82-24692
Ammonia as a hydrogen energy-storage medium
p 64 N82-24704
Modification and operation of the hydrogen homestead hydride vessel energy storage system
p 65 N82-24705
Hydrogen microsphere hazard evaluation
p 65 N82-24706
Requirements for optimization of electrodes and electrolyte for the iron/chromium Redox flow cell
[NASA-CR-165218] p 125 N82-25640
Heat Energy Recovery from Domestic Output Fluids (HERDOF)
[PB82-134156] p 14 N82-25657
Vehicle test report: Jet Industries Electra Van 600
[NASA-CR-168996] p 125 N82-26048
Calculated effects of temperature, intensity and atmospheric conditions on the thermodynamic limits for conversion of solar energy to work on stored energy
[DE81-030876] p 57 N82-26815
Results of roof pond heating experiments using the Passive Test Facility for warm, humid climates
[DE82-003226] p 60 N82-26850
Solar-central-receiver system integrated with a cogeneration facility for copper smelting, volume 1
[DE82-001580] p 60 N82-26863
Transient analysis of heat transmission systems
[AD-A112365] p 126 N82-27691
Technical and economic assessment of fluidized-bed-augmented compressed-air energy-storage system: System load following capability
[DE82-000958] p 19 N82-27843
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 2: Introduction and technology assessment
[DE82-000938] p 19 N82-27844
Oxygen electrodes for energy conversion and storage
[DE82-005305] p 115 N82-27848

ENERGY TECHNOLOGY

Approach to the realization of a closed cycle Ocean Thermal Energy Conversion /OTEC/ system
p 90 A82-29070
Fracture mechanics of ductile and tough materials and its applications to energy related structures --- Book
p 127 A82-29483
Energy related optical coatings p 90 A82-30331
Solar grade silicon as a potential candidate material for low-cost terrestrial solar cells p 23 A82-30861
Hydrogen economy assessment for long-term energy systems in Japan p 63 A82-32150
Salinity-gradient vapor-pressure power conversion
p 92 A82-32331
Net energy analysis of methanol and ethanol production p 67 A82-32333
Wind power as an electrical energy source in Illinois
p 92 A82-32772
Wind system value analysis for electric utilities - A comparison of four methods p 93 A82-33703
Medicine Bow wind project p 93 A82-33704
The development of MHD energy conversion methods in the USSR p 93 A82-33996
Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings p 27 A82-34076
Solar photovoltaic programs in the Sunshine Project and present status of R&D in Japan p 27 A82-34077
Silicon sheet - A key to low cost solar cells
p 28 A82-34082
High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
Photovoltaic power systems - State of the art - 1980
p 25 A82-34085
Diagnostic study of BSF silicon solar cells
p 28 A82-34086
Processing for high photocurrent in SiC solar cells
p 29 A82-34087
Low-cost processes for thin-film solar cells
p 29 A82-34091
Terrestrial solar modules p 30 A82-34095
Technology transfer - LSA project to industry
p 30 A82-34099
Space and energy - A global viewpoint
p 2 A82-34119
Sail-type wind-turbines - A review and annotated bibliography p 93 A82-34488
State of the art in solar thermoelectric power plant research p 33 A82-34565
Inductive power transfer for propulsion --- Roadway Powered Electric Vehicle project p 95 A82-35229
Small wind energy conversion systems, application and performance
[ASME PAPER 82-PET-3] p 96 A82-35483
Design, performance and economics of the DAF Indal 50 kW and 375 kW vertical axis wind turbine
[ASME PAPER 82-PET-6] p 97 A82-35486
Basic research needs and opportunities on interfaces in solar materials; Proceedings of the Workshop, Denver, CO, June 30-July 3, 1980 p 34 A82-35501
Overview of solar energy conversion technologies - Quantum processes and thermal processes
p 34 A82-35502
Design requirements for interfaces in solar energy conversion technologies p 34 A82-35503
Basic research needs and opportunities at the solid-solid interface - Diffusion p 35 A82-35509
Basic research needs and opportunities at the solid-liquid interface p 35 A82-35510
Basic research needs and opportunities in thin films and coatings p 36 A82-35513
Description of the two Danish 630 kw wind turbines, NIBE-A and NIBE-B, and some preliminary test results
p 99 A82-36089
The conceptual design of the high speed ratio wind rotor for the 52 m diameter horizontal axis Voith wind energy converter p 99 A82-36090
The status of windpower research and development for space and water heating in the United States
p 101 A82-36106
Wind energy in Argentina p 102 A82-36111
A vertical axis wind energy converter with straight blades p 102 A82-36112
New developments in battery technology
p 120 A82-36256
A review of United Kingdom windpower
p 3 A82-36752
Composites in energy generation and storage systems - An overview p 120 A82-37076
Central solar receivers - Applications for utilities and industry p 41 A82-37973
Salton sea project, phase 1 --- solar pond power plant
[NASA-CR-166804] p 41 N82-22654
Space and energy: Global viewpoint
[MBB-UR-489-81-O] p 45 N82-22784
Development of control systems for solar water and solar space heating equipment. Choice of heat conducting fluid. Testing
[BMFT-FB-T-81-185] p 45 N82-22785
General introduction to wind energy conversion
[NLR-MP-81014-U] p 109 N82-23775
Energy programs at the John Hopkins University Applied Physics Laboratory
[PB82-126699] p 122 N82-23781
Detection, Diagnosis and Prognosis: Contribution to the energy challenge: Proceedings of the Meeting of the Mechanical Failures Prevention Group
[NASA-CR-168713] p 10 N82-23785
Environmental readiness document. Industrial programs, fiscal year 1980
[DOE/ERD-0031] p 10 N82-23794
Overview of the Thermal Energy Storage (TES) Program p 122 N82-24653
Fossil-energy materials program
[DE82-001057] p 77 N82-24732
Results and comparison of Hall and DW duct experiments
[NASA-TM-82864] p 111 N82-25961
Development of technique for AR coating and nickel and copper metallization of solar cells. FPS Project: Product development
[NASA-CR-169055] p 55 N82-26797
USAF solar thermal applications case studies
[NASA-CR-169054] p 56 N82-26801
International energy indicators, October-November 1981
[DE82-004101] p 16 N82-26848
Solar central receivers: The technology, industry, markets, and economics
[DE82-005267] p 60 N82-26857

Water and emerging energy technologies: Summary report
[PB82-153123] p 89 N82-27859
Water and emerging energy technologies
[PB82-153131] p 89 N82-27860

ENGINE DESIGN

The gas turbine engine p 90 A82-26587
Future auto engines - Competition heats up p 90 A82-29793
The TM 333, a trump card for Turbomeca p 93 A82-33750
Air cooling of gas turbine blades p 94 A82-34700
Energy efficient engine /E3/ technology status
[AIAA PAPER 82-1052] p 2 A82-34980
AGT100 turbomachinery — for automobiles
[AIAA PAPER 82-1207] p 95 A82-35061
Combustor development for automotive gas turbines
[AIAA PAPER 82-1208] p 95 A82-35062
The AGT 101 advanced automotive gas turbine
[ASME PAPER 82-GT-72] p 95 A82-35321
The potential impact of future fuels on small gas turbine engines
[ASME PAPER 82-GT-133] p 68 A82-35362
Technology advancements for energy efficient aircraft engines
[AIAA PAPER 82-1051] p 2 A82-35479
Development of composite blades for large wind turbines p 96 A82-36083
Evolution of the flexible blade concept /Vertical axis windmills/ p 96 A82-36084
Load cases for wind energy conversion systems p 99 A82-36086
Drive train assembly of the Swedish WTS 3 — Wind Turbine System p 99 A82-36091
'L-180 Poseidon' - A new system concept in vertical axis wind turbine technology p 100 A82-36097
The 25 m experimental horizontal axis wind turbine /25 m HAT/ p 100 A82-36099
Reliable power — RB211 aircraft engines
[PNR-90078] p 103 N82-22275
Fuel efficiency engines for large transport aircraft
[PNR-90082] p 3 N82-22276
Solar engine
[NASA-CASE-LAR-12148-1] p 50 N82-24640
Current status of EPA Office of Mobile Source Air Pollution Control characterization projects: Summary
[PB82-105909] p 13 N82-25400
Low NOx heavy fuel combustor concept program
[NASA-CR-165367] p 79 N82-25635
Advanced stratified charge rotary aircraft engine design study
[NASA-CR-165398] p 18 N82-27743

ENGINE PARTS

The gas turbine engine p 90 A82-26587
The AGT 101 advanced automotive gas turbine
[ASME PAPER 82-GT-72] p 95 A82-35321
Ceramic components for automotive and heavy duty turbine engines - CATE and AGT 100
[ASME PAPER 82-GT-253] p 96 A82-35432
Progress in the development of energy efficient engine components
[ASME PAPER 82-GT-275] p 96 A82-35450

ENGINE TESTS

AGT100 turbomachinery — for automobiles
[AIAA PAPER 82-1207] p 95 A82-35061
Combustor development for automotive gas turbines
[AIAA PAPER 82-1208] p 95 A82-35062
Progress in the development of energy efficient engine components
[ASME PAPER 82-GT-275] p 96 A82-35450
Load cases for wind energy conversion systems p 99 A82-36086
Tests performed on the 2 MW Tvind WECS — Wind Energy Conversion System p 100 A82-36100
Impact of gasohol on the L-141 and LDT-465-1C engines
[AD-A112010] p 82 N82-26486

ENTRAINMENT

Computer modeling of coal-gasification reactors. Volume 1: Executive summary
[DE82-000768] p 73 N82-23336
Computer modeling of coal-gasification reactors. Volume 4: Operating manual for EF (Entrained Flow coal gasifier) computer model
[DE82-000765] p 73 N82-23339

ENVIRONMENT EFFECTS

Feasibility study for 400,000 gal/day ethanol plant at Benicia, California. Volume 3. Environmental Report
[DE82-002610] p 69 N82-22380
Environmental assessment overview p 4 N82-22678
Electromagnetic compatibility overview p 5 N82-22690
Nonmicrowave health and ecological effects: Overview p 5 N82-22691
SPS microwave health and ecological effects: Program area overview p 5 N82-22692
An evaluation of the land and material requirements for the satellite power system p 5 N82-22693
Comparison of low Earth orbit and geosynchronous Earth orbits p 6 N82-22716
Rectenna related atmospheric effects p 6 N82-22754
Coal-Fired Power Plant (Western Coal): Environmental characterization information report
[DOE/EP-0019] p 6 N82-22789
Western oil shale development: A technology assessment. Volume 1: Main report
[DE82-003132] p 74 N82-23617
Western oil shale development: A technology assessment
[DE82-003004] p 74 N82-23622
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000669] p 121 N82-23738
Environmental readiness document. Industrial programs, fiscal year 1980
[DOE/ERD-0031] p 10 N82-23794
Development of environmental assessment screening criteria for coal-conversion solid wastes
[DE82-000751] p 11 N82-23798
Environmental report: Combustion Engineering/Gulf States Utilities Company fuel gas demonstration plant, Westlake, Louisiana
[DE82-004141] p 11 N82-23806
Analysis of environmental issues related to small-scale hydroelectric development. 5: Instream flow needs for fishery resources
[DE82-000901] p 11 N82-23811
Mean annual streamflow of selected drainage basins in the coal area of southeastern Montana
[PB82-137696] p 79 N82-25627
The energy supply model MESSAGE
[RR-81-31] p 13 N82-25632
US Lake Erie natural gas resource development. Programmatic environmental impact statement
[AD-A112074] p 14 N82-25662
Direct use of hydrothermal energy: A review of environmental aspects
[DE82-000069] p 16 N82-26654
Environmental effects of solar-thermal power systems. Environmental effects of heat transfer and storage fluids: Plant toxicity and movement in soils
[DE82-002003] p 17 N82-26881

ENVIRONMENT PROTECTION

Environmental readiness document. Industrial programs, fiscal year 1980
[DOE/ERD-0031] p 10 N82-23794
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments
[DE82-002439] p 14 N82-25665

ENVIRONMENTAL MONITORING

Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 66 A82-29327
LANDSAT Remote Sensing: Observations of an Appalachian mountaintop surface coal mining and reclamation operation — kentucky
[E82-10247] p 77 N82-24525

ENVIRONMENTAL SURVEYS

Feasibility study 20-MM gal/yr fuel grade ethanol facility
[DE82-002606] p 69 N82-22374
Screening methodology for calculating worst-case concentrations downwind from a large, isolated, air-pollutant-emission source
[DE82-002286] p 14 N82-25664

ENVIRONMENTAL TESTS

Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments
[DE82-002439] p 14 N82-25665

EPITAXY

Evaluation and verification of epitaxial process sequence for silicon solar-cell production
[NASA-CR-169044] p 56 N82-26802

EPOXY MATRIX COMPOSITES

Energy storage capacity of rotating composite disks and shells /Review/ p 119 A82-31562
A significant role for composites in energy-efficient aircraft p 3 A82-37085

ESTIMATES

Preliminary estimates of wind power potential at the Nevada test site
[PB82-127036] p 75 N82-23787

ETHYL ALCOHOL

Net energy analysis of methanol and ethanol production p 67 A82-32333
Feasibility study 20-MM gal/yr fuel grade ethanol facility
[DE82-002606] p 69 N82-22374
Feasibility study for 400,000 gal/day ethanol plant at Benicia, California, volume 1
[DE82-002608] p 69 N82-22378
Feasibility study for 400,000 gal/day ethanol plant at Benicia, California. Volume 3. Environmental Report
[DE82-002610] p 69 N82-22380
Characterization of alcohol/gasoline blends as automotive fuel: Performance and emissions characteristics
[DE82-000124] p 72 N82-23331
Alcohol distillation by internal-combustion engines
[DE82-005294] p 83 N82-26495

EUROPE

An overview on European SPS activities p 5 N82-22680
Critical technology areas of an SPS development and the applicability of European technology p 43 N82-22687

EVACUATING

Process for underground gasification
[DE82-000493] p 72 N82-23327

EVAPORATION RATE

Investigations to predict and reduce the evaporation rate of the residual brine in salt caverns used for gas storage
[BMFT-FB-T-81-226] p 121 N82-22843

EVOLUTION (DEVELOPMENT)

Evolution of the flexible blade concept /Vertical axis windmills/ p 96 A82-36084

EXHAUST EMISSION

Combustor development for automotive gas turbines
[AIAA PAPER 82-1208] p 95 A82-35062
Characterization of exhaust emissions from high mileage catalyst-equipped automobiles
[PB82-131586] p 7 N82-22811
Characterization of alcohol/gasoline blends as automotive fuel: Performance and emissions characteristics
[DE82-000124] p 72 N82-23331
Mobile source emissions of formaldehyde and other aldehydes
[PB82-118159] p 11 N82-23813
The determination of a range of concern for mobile source emissions of sulfuric acid
[PB82-117870] p 11 N82-23826
Current status of EPA Office of Mobile Source Air Pollution Control characterization projects: Summary
[PB82-105909] p 13 N82-25400

EXHAUST GASES

Study project on the desulfurization of flue gas, using the Bergbauforschung (BF) process, as part of the integrated operation of a power plant with a chemical plant for producing sulfuric acid
[BMFT-FB-T-81-229] p 69 N82-22340
Small-scale combustion testing of synthetic fuels
[DE82-002791] p 71 N82-23286
Characterization of alcohol/gasoline blends as automotive fuel: Performance and emissions characteristics
[DE82-000124] p 72 N82-23331
Brief synopsis of EPA Office of Research and Development and the Health Effects Institute mobile source work
[PB82-124421] p 11 N82-23821
Low NOx heavy fuel combustor concept program
[NASA-CR-165367] p 79 N82-25635

EXPLOITATION

Investigation of problems and benefits of underground multiple seam coal mining
[DE82-002807] p 86 N82-27801

EXPLORATION

Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 74 N82-23635

EXPLOSIONS

Explosively produced fracture of oil shale
[DE82-004162] p 79 N82-25726
Investigation of the geokinetics horizontal in situ oil shale retorting process
[DE82-004273] p 86 N82-27798

EXTRACTION

Supercritical fluids for reaction and extraction of coal and heavy oils
[DE82-005496] p 81 N82-26426

EXTRATERRESTRIAL RESOURCES

Powder metallurgy in space manufacturing p 36 A82-35637

F

FABRICATION
Large-area sheet task advanced dendritic web growth development
[NASA-CR-169047] p 55 N82-26795
Evaluation and verification of epitaxial process sequence for silicon solar-cell production
[NASA-CR-169044] p 56 N82-26802
Silicon web process development
[NASA-CR-169050] p 56 N82-26805
FAIL-SAFE SYSTEMS
Structural design and maintenance policies for large wind turbines p 100 A82-36095
Fuel conservation by the application of spill prevention and fail-safe engineering (a guideline manual) p 6 N82-23662
FAILURE ANALYSIS
Fault analysis of mid-channel power takeoff in DCW MHD generators
[AIAA PAPER 82-0922] p 91 A82-31911
Detection, Diagnosis and Prognosis: Contribution to the energy challenge: Proceedings of the Meeting of the Mechanical Failures Prevention Group
[NASA-CR-168713] p 10 N82-23785
FARM CROPS
Solar bacterial biomass farm for space vehicles p 27 A82-33895
FATIGUE LIFE
Combined effects of deterministic and random loads in wind turbine design p 98 A82-36085
Structural design and maintenance policies for large wind turbines p 100 A82-36095
FATIGUE TESTS
Biaxial cyclic deformation and creep-fatigue behavior of materials for solar thermal systems
[ASME PAPER 82-PVP-74] p 27 A82-33714
FEASIBILITY ANALYSIS
The feasibility of electric power generation by the wind on the University of New Orleans campus
[ASME PAPER 82-PET-1] p 95 A82-35481
Corn to ethanol plant feasibility study
[DE82-000029] p 69 N82-22375
Solar pond power plant feasibility study for Davis, California
[NASA-CR-168819] p 41 N82-22653
Offshore rectenna feasibility p 117 N82-22741
Geothermal source potential and utilization for alcohol production
[DE82-003601] p 70 N82-22782
Western oil shale development: A technology assessment. Volume 1: Main report
[DE82-003132] p 74 N82-23617
Small-wind-systems application analysis. Technical report and executive summary
[DE82-003748] p 109 N82-23749
Technical and economic assessment of fluidized-bed-augmented compressed-air energy-storage system: System load following capability
[DE82-000958] p 19 N82-27843
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 2: Introduction and technology assessment
[DE82-000938] p 19 N82-27844
FEDERAL BUDGETS
Mitigating socioeconomic impacts of energy development
[EMO-82-13] p 15 N82-26789
FEED SYSTEMS
Static feed water electrolysis for large scale hydrogen generation p 64 N82-24699
FEEDBACK CONTROL
Kaman 40 kW wind turbine generator - control system dynamics p 107 N82-23721
FIBER OPTICS
Optical fibers and solar energy p 21 A82-29790
Holography creates new breed of optical components --- construction, reconstruction and application of surface relief and volume holograms p 37 A82-35886
FIBER REINFORCED COMPOSITES
The practical utilisation of fibre composite hybrids p 126 A82-28642
Energy storage capacity of rotating composite disks and shells /Review/ p 119 A82-31562
Energy storage capacity of rotating composite structures operating under uniaxial tension p 119 A82-31563
Composites in energy generation and storage systems - An overview p 120 A82-37076
Use of pultruded reinforced plastics in energy generation and energy related applications p 102 A82-37077
FIELD EFFECT TRANSISTORS
A new technique for determining battery internal resistance - Studies on Leclanche cells p 119 A82-32373
FILAMENT WINDING
Energy storage capacity of rotating composite disks and shells /Review/ p 119 A82-31562
Energy storage capacity of rotating composite structures operating under uniaxial tension p 119 A82-31563
FILM THICKNESS
Effect of thickness on silicon solar cell efficiency p 25 A82-32696
Arco Solar, Incorporated: The industrial point of view p 47 N82-23653
FINANCIAL MANAGEMENT
Uses of the FRS data base for energy policy analysis
[DE82-001662] p 16 N82-26864
FINITE ELEMENT METHOD
Application of the finite element method to the study of the behaviour of blades of industrial wind energy systems p 99 A82-36087
FLAME PROPAGATION
Flame propagation in heterogeneous mixtures of fuel droplets, fuel vapor and air p 65 A82-28672
Experimental investigation of methanol oxidation in flames Mechanisms and rate constants of elementary steps p 65 A82-28679
Pulverized-fuel combustion: Modeling and scaleup methodologies
[DE82-004760] p 66 N82-27456
FLAME RETARDANTS
Investigation of the application of a cryogenic blending process to produce antimisting diesel fuels
[AD-A110017] p 78 N82-25399
FLAME STABILITY
Stability limits of natural gas diffusion flames with swirl p 66 A82-28681
FLAMMABILITY
Hydrogen microsphere hazard evaluation p 65 N82-24706
FLAT PLATES
On the climatic optimization of the tilt and azimuth of flat-plate solar collectors p 21 A82-29318
Daily efficiency of solar collectors p 23 A82-31096
Efficiency of hot-carrier solar energy converters p 25 A82-32691
Determination of the stagnation temperature of flat plate solar collectors p 39 A82-37566
The 19th Project Integration Meeting
[NASA-CR-168822] p 41 N82-22652
Solar engine
[NASA-CASE-LAR-12148-1] p 50 N82-24640
FSA field test
[NASA-CR-168991] p 52 N82-25638
FLIGHT OPTIMIZATION
Flight management computer
[SNIAS-821-111-110] p 12 N82-24842
Cost and fuel consumption per nautical mile for two engine jet transports using OPTIM and TRAGEN
[NASA-CR-166973] p 13 N82-25239
FLIGHT PLANS
Flight management computer
[SNIAS-821-111-110] p 12 N82-24842
FLIGHT TESTS
Fuel efficient and Mach 0.8, too p 1 A82-29774
FLIGHT TIME
Solar-powered airplane design for long-endurance, high-altitude flight
[AIAA PAPER 82-0811] p 24 A82-31994
FLOODS
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640
FLOW CHARACTERISTICS
Computer modeling of coal-gasification reactors. Volume 3: User's manual of CHEMFLUB: A numerical model for fluidized bed gasifiers (planar and axisymmtric versions)
[DE82-000766] p 73 N82-23336
FLOW DISTRIBUTION
The turbulent reaction field in a concentric diffusion flame p 66 A82-28690
Vibrating zinc electrodes in Ni/Zn batteries p 119 A82-31841
A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory p 100 A82-36098
Aerodynamic performance prediction of horizontal axis wind turbines p 105 N82-23686
Double-multiple streamtube model for Darrieus in turbines p 105 N82-23687
MHD coal-fired flow facility
[DE82-003814] p 113 N82-26853
FLOW GEOMETRY
A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory p 100 A82-36098
FLOW MEASUREMENT
Performance test of solar collector with intermittent output p 37 A82-35921
FLUID INJECTION
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp
[DE82-001347] p 74 N82-23620
FLUID MECHANICS
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Turbine spool technology rig cascade tests
[DE81-030352] p 104 N82-22502
Assessment of precise surface-gravity measurements for monitoring the response of a geothermal reservoir to exploitation
[DE82-003904] p 75 N82-24775
FLUIDIZED BED PROCESSORS
Assessment of atmospheric fluidized-bed combustion recycle systems
[DE82-900879] p 66 N82-22337
Coal-hydrogasification process development, government fiscal year 1981
[DE82-004146] p 72 N82-23329
Computer modeling of coal-gasification reactors. Volume 1: Executive summary
[DE82-000768] p 73 N82-23335
Computer modeling of coal-gasification reactors. Volume 3: User's manual of CHEMFLUB: A numerical model for fluidized bed gasifiers (planar and axisymmtric versions)
[DE82-000766] p 73 N82-23336
Advanced coal gasification system for electric power generation
[DE82-004539] p 84 N82-26499
Technical and economic assessment of fluidized-bed-augmented compressed-air energy-storage system: System load following capability
[DE82-000958] p 19 N82-27843
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 2: Introduction and technology assessment
[DE82-000938] p 19 N82-27844
FLYWHEELS
Energy storage capacity of rotating composite disks and shells /Review/ p 119 A82-31562
Transit bus propulsion employing flywheel energy storage p 119 A82-35230
New perspectives for kinetic energy storage p 120 A82-35525
An innovation which comes from space - Kinetic energy storage p 120 A82-36317
RPE-10 composite flywheel testing
[UCRL-15370] p 120 N82-22496
Development of a dual-field heteropolar power converter
[NASA-CR-165168] p 110 N82-24424
Utilization of flywheel-hybrid drive trains for commercial taxicab vehicles
[DE82-001670] p 18 N82-27194
Design and fabrication of containment rings fr use in tests of six prototype flywheel rotors
[DE81-030357] p 126 N82-27749
Magnetic bearing flywheels for electric storage --- energy storage flywheels
[SNIAS-821-422-110] p 126 N82-27750
Magnetic suspension and flywheels: Spaceborne and terrestrial applications
[SNIAS-821-422-111] p 126 N82-27751
FOOD
Solar bacterial biomass farm for space vehicles p 27 A82-33895
FORECASTING
Short-term energy outlook: Methodology
[DE82-002940] p 9 N82-23754
Demand 80/81: Forcasts of energy consumption to the year 2000. Volume 2: Appendixes
[DE82-900870] p 9 N82-23770
Energy tommorrow: Challenges and opportunities for California
[PB82-117821] p 10 N82-23783
Small wind systems application analysis. Executive summary
[DE82-004206] p 113 N82-26841
Energy-economy analysis and application to R and D planning
[PB82-141129] p 20 N82-26221
FOREST MANAGEMENT
Penobscot River basin overview
[PB82-131467] p 4 N82-22639
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640
FORMALDEHYDE
Mobile source emissions of formaldehyde and other aldehydes
[PB82-116159] p 11 N82-23813

FORMING TECHNIQUES
Development effort of sheet molding compound /SMC/ parabolic trough panels p 39 A82-37116
FOSSIL FUELS
Fossil and synthetic fuels miscellaneous, part 1 [GPO-84-010] p 76 N82-24351
Collection and dissemination of thermal energy storage system information for the pulp and paper industry p 125 N82-24686
Production cost comparisons of hydrogen from fossil and nuclear fuel and water decomposition p 65 N82-24710
Fossil-energy materials program [DE82-001057] p 77 N82-24732
Screening methodology for calculating worst-case concentrations downwind from a large, isolated, air-pollutant-emission source [DE82-002286] p 14 N82-25664
International energy indicators, October-November 1981 [DE82-004101] p 16 N82-26848
Liquid fossil fuel technology [DE82-004725] p 87 N82-27530
Advanced thermionic technology program [DE82-002116] p 115 N82-27846
FOUNDATIONS
Effect of rotor configuration on guyed tower and foundation designs and estimated costs for intermediate site horizontal axis wind turbines [NASA-TM-82804] p 104 N82-22649
FOURIER TRANSFORMATION
On the spectral energy and power components in horizontal wind gusts p 90 A82-30866
FRACTIONATION
Fractionation of diesel fuel from petroleum and Paraho shale oils [AD-A107042] p 86 N82-27520
FRACTURE MECHANICS
Fracture mechanics of ductile and tough materials and its applications to energy related structures --- Book p 127 A82-29483
Analytical calculation of thickness versus diameter requirements of silicon solar cells p 29 A82-34089
Effect of pulse loads on dynamic rock fracture [DE82-002311] p 76 N82-23837
FRACTURE STRENGTH
Fracture strength of sintered and siliconized SiC and SiC joints [ACS PAPER 35-N-80] p 127 A82-33029
Fracture of directionally solidified multicrystalline silicon p 38 A82-36283
FRACTURING
Effect of pulse loads on dynamic rock fracture [DE82-002311] p 76 N82-23837
Explosively produced fracture of oil shale [DE82-004182] p 79 N82-25726
Investigation of the geokinetics horizontal in situ oil shale retorting process [DE82-004273] p 86 N82-27798
FREE RADICALS
Fundamentals of coal depolymerization: Kinetic modeling and experimental determination of free radical chemistry and mineral matter effects in direct coal hydroliquefaction [DE82-003689] p 81 N82-26425
FREQUENCY RESPONSE
Frequency dependent capacitance studies of the CdS/Cu2S thin-film solar cell p 25 A82-32892
FRESNEL LENSES
Comparison of Fresnel lenses and parabolic mirrors as solar energy concentrators p 26 A82-33022
Development and testing of a high-efficiency/high-concentration, photovoltaic module employing AlGaAs/GaAs solar cells [DE82-002683] p 59 N82-26839
FUEL CAPSULES
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments [DE82-002439] p 14 N82-25665
Space nuclear safety and fuels program [DE82-004183] p 80 N82-25944
Space nuclear safety and fuels program [DE82-004188] p 80 N82-25945
FUEL CELLS
The thermodynamics of electrolyte distribution in molten carbonate fuel cells p 91 A82-31843
Alternate matrix material for molten carbonate fuel cell electrolyte structures p 91 A82-31844
Efficiencies of heat engines and fuel cells - The methanol fuel cell as a competitor to Otto and Diesel engines p 92 A82-32372
A new technique for determining battery internal resistance - Studies on Leclanche cells p 119 A82-32373
The effect of sulfur on the anodic H2 /N/ electrode in fused LiCO3-K2CO3 at 650 C p 103 A82-37627
Ac/dc power converter for batteries and fuel cells [DE82-900867] p 103 N82-22441
Orbiter fuel cell improvement assessment p 104 N82-23121
Improved alkaline hydrogen/air fuel cells for transportation applications p 111 N82-24701
Requirements for optimization of electrodes and electrolyte for the iron/chromium Redox flow cell [NASA-CR-165218] p 125 N82-25640
Introduction to proton conduction in solids [RISO-M-2244] p 114 N82-27172
Oxygen electrodes for energy conversion and storage [DE82-005305] p 115 N82-27848
FUEL COMBUSTION
Flame propagation in heterogeneous mixtures of fuel droplets, fuel vapor and air p 65 A82-28672
Experimental investigation of methanol oxidation in flames Mechanisms and rate constants of elementary steps p 65 A82-28679
The combustion of a fuel jet in a stream of lean gaseous fuel-air mixtures p 66 A82-28692
Carbon formation by the pyrolysis of gas turbine fuels in preflame regions of gas turbine combustors [ASME PAPER 82-GT-84] p 67 A82-35330
Catalytic combustion of hydrogen. III - Advantages and disadvantages of a catalytic heater with hydrogen fuel p 63 A82-37444
Small-scale combustion testing of synthetic fuels [DE82-002791] p 71 N82-23286
Direct combustion of coal [GPO-89-628] p 76 N82-24352
Combustion behavior of solid fuel Ramjets. Volume 2: Effects of fuel properties and fuel-air mixing on combustion efficiency [AD-A110796] p 80 N82-26303
Pulverized-fuel combustion: Modeling and scaleup methodologies [DE82-004790] p 86 N82-27456
FUEL CONSUMPTION
Fuel efficient and Mach 0.8, too p 1 A82-29774
A frequency and duration method for the evaluation of wind integration p 90 A82-30869
Principles of efficient energy use at Interflug p 1 A82-33250
Ceramic applications in turbine engines --- for automotive application [AIAA PAPER 82-1168] p 95 A82-35040
The AGT 101 advanced automotive gas turbine [ASME PAPER 82-GT-72] p 95 A82-35321
Progress in the development of energy efficient engine components [ASME PAPER 82-GT-275] p 96 A82-35450
Fuel efficiency engines for large transport aircraft [PNR-90082] p 3 N82-22276
Effect of heated diesel fuel on particulate generation and fuel consumption for a Deutz F6L 912 engine [DE82-900385] p 7 N82-22803
Demand 80/81: Forcasts of energy consumption to the year 2000. Volume 2: Appendixes [DE82-900870] p 9 N82-23770
Impact study of synthetic and alternative fuel usage in Army aircraft propulsion systems [AD-A111048] p 77 N82-24355
Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller [NASA-CR-165507] p 110 N82-24425
Flight management computer [SNIAS-821-111-110] p 12 N82-24842
Cost and fuel consumption per nautical mile for two engine jet transports using OPTIM and TRAGEN [NASA-CR-166973] p 13 N82-25239
Preliminary analysis of a downsized advanced gas-turbine engine in a subcompact car [NASA-TM-82848] p 14 N82-26051
Urban transportation energy accounts. Volume 1: Procedures. Volume 2: Case study of the Chicago region [PB82-135542] p 15 N82-26054
FUEL CORROSION
Commercial aircraft airframe fuel systems surveys [AD-A112241] p 87 N82-27524
FUEL OILS
Plain-jet airblast atomization of alternative liquid petroleum fuels under high ambient air pressure conditions [ASME PAPER 82-GT-32] p 67 A82-35293
FUEL PRODUCTION
Net energy analysis of methanol and ethanol production p 67 A82-32333
Process for underground gasification [DE82-000493] p 72 N82-23327
Feasibility study of medium Btu coal gas for fuel and feedstock at Mobay's New Martinsburg, West Virginia plant [DE82-004321] p 72 N82-23330
Western oil shale development: A technology assessment. Volume 1: Main report [DE82-003132] p 74 N82-23817
Fuel quality processing study, volume 1 [NASA-CR-165327-VOL-1] p 77 N82-24649
Fuel quality/processing study. Volume 2: Appendix. Task 1 literature survey [NASA-CR-165327-VOL-2] p 77 N82-24650
Alcohol distillation by internal-combustion engines [DE82-005294] p 83 N82-26495
Assessment of secondary reinduse. Engineering and economic analysis [DE82-000925] p 85 N82-26771
BI-GAS pilot plant [DE82-004753] p 87 N82-27532
FUEL SPRAYS
Flame propagation in heterogeneous mixtures of fuel droplets, fuel vapor and air p 65 A82-28672
FUEL SYSTEMS
Commercial aircraft airframe fuel systems surveys [AD-A112241] p 87 N82-27524
FUEL TESTS
Deposit formation in hydrocarbon fuels [ASME PAPER 82-GT-46] p 67 A82-35307
An alternate test procedure to qualify future fuels for Navy aircraft [AIAA PAPER 82-1233] p 68 A82-38175
Current status of EPA Office of Mobile Source Air Pollution Control characterization projects: Summary [PB82-105909] p 13 N82-25400
FUEL-AIR RATIO
Flame propagation in heterogeneous mixtures of fuel droplets, fuel vapor and air p 65 A82-28672
Plain-jet airblast atomization of alternative liquid petroleum fuels under high ambient air pressure conditions [ASME PAPER 82-GT-32] p 67 A82-35293
Combustion behavior of solid fuel Ramjets. Volume 2: Effects of fuel properties and fuel-air mixing on combustion efficiency [AD-A110796] p 80 N82-26303
Sulfate control technology vehicle testing [PB82-154345] p 17 N82-26869
FUELS
An economic model of future coal/densified refuse-derived fuel use at Wright-Patterson AFB, Ohio [AD-A111376] p 78 N82-25396
Geothermal potential on Kirtland Air Force Base lands, Bernalillo County, New Mexico [AD-A107044] p 89 N82-27841
FURNACES
Technical and economic assessment of fluidized-bed-augmented compressed-air energy-storage system: System load following capability [DE82-000958] p 19 N82-27843
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 2: Introduction and technology assessment [DE82-000938] p 19 N82-27844
FUSION REACTORS
ELMO Bumpy Torus Reactor and power plant: Conceptual design study [DE82-002437] p 112 N82-25984

G

GALLIUM ARSENIDES
The role of Be in /GaAl/As/GaAs solar cells p 30 A82-34096
The CLEFT process - A technique for producing epitaxial films on reusable substrates p 30 A82-34097
Grain boundary recombination analysis of GaAs Schottky barrier solar cells p 34 A82-35496
The role of Be in /GaAl/As/GaAs solar cells p 40 A82-37633
Evaluation of solar cell materials for a Solar Power Satellite p 44 N82-22721
Ribbon growth of single crystal GaAs for solar cell application [AD-A112038] p 56 N82-26810
Development and testing of a high-efficiency/high-concentration, photovoltaic module employing AlGaAs/GaAs solar cells [DE82-002683] p 59 N82-26839
GALLIUM PHOSPHIDES
Evidence for hot-electron injection across p-GaP/electrolyte junctions --- during photoconversion process of solar energy p 37 A82-35716

GAMMA RAY SPECTROMETERS
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 75 N82-23637
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 75 N82-23638
Airborne gamma-ray spectrometer and magnetometer survey: North/south beline, volume 1
[DE82-005542] p 88 N82-27804
GAMMA RAYS
Moessebauer spectroscopy study on the effect of infrared and gamma radiation on the structure of minerals. Part of coordinated programme on development of methods for application of Moessbauer spectroscopy in mineralogy, soil sciences and the study of ceramics
[DE81-700780] p 76 N82-24350
Airborne gamma-ray spectrometer and magnetometer survey: North/south beline, volume 2
[DE82-005570] p 88 N82-27805
GAS CHROMATOGRAPHY
Chromatographic studies of vanadium compounds from boscan crude oil
[DE82-000977] p 68 N82-22335
Analyses of natural gas in Illinois
[PB82-124322] p 75 N82-23645
Turbine engine lubricant reclamation
[AD-A112098] p 80 N82-26312
GAS COMPOSITION
Relatively low-temperature pyrolysis of silane in free space p 28 A82-34080
GAS DYNAMICS
Interaction between MHD generator and DC-AC power conversion system
[AIAA PAPER 82-0923] p 91 A82-31912
GAS EVOLUTION
Continuous microbial production of hydrogen gas p 63 A82-37436
GAS FLOW
Determination of temperature distribution in the flow of a hot gas on the basis of a self-reversed spectral line profile p 103 A82-37549
GAS INJECTION
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary
[DE82-001349] p 74 N82-23619
GAS JETS
The turbulent reaction field in a concentric diffusion flame p 66 A82-28690
GAS MIXTURES
Conversion of blackbody radiation into laser energy
[AIAA PAPER 82-0671] p 24 A82-31879
GAS RECOVERY
Effect of pulse loads on dynamic rock fracture
[DE82-002311] p 76 N82-23837
GAS STREAMS
The combustion of a fuel jet in a stream of lean gaseous fuel-air mixtures p 66 A82-28692
GAS TUNGSTEN ARC WELDING
Development of automated welding process for field fabrication of thick walled pressure vessels --- for coal gasification plants
[DE82-004421] p 85 N82-26885
GAS TURBINE ENGINES
The gas turbine engine p 90 A82-28587
The TM 333, a trump card for Turbomeca p 93 A82-33750
AGT 100 automotive gas turbine system development
[AIAA PAPER 82-1165] p 94 A82-35036
AGT101 automotive gas turbine system development
[AIAA PAPER 82-1166] p 94 A82-35039
Ceramic applications in turbine engines --- for automotive application
[AIAA PAPER 82-1168] p 95 A82-35040
AGT100 turbomachinery --- for automobiles
[AIAA PAPER 82-1207] p 95 A82-35061
Combustor development for automotive gas turbines
[AIAA PAPER 82-1208] p 95 A82-35062
Plain-jet airblast atomization of alternative liquid petroleum fuels under high ambient air pressure conditions
[ASME PAPER 82-GT-32] p 67 A82-35293
The AGT 101 advanced automotive gas turbine
[ASME PAPER 82-GT-72] p 95 A82-35321
Carbon formation by the pyrolysis of gas turbine fuels in preflame regions of gas turbine combustors
[ASME PAPER 82-GT-94] p 67 A82-35330
The AGT 100 automotive gas turbine status and assessment
[ASME PAPER 82-GT-118] p 96 A82-35349
The potential impact of future fuels on small gas turbine engines
[ASME PAPER 82-GT-133] p 68 A82-35362
The control of engine vibration using squeeze-film dampers
[ASME PAPER 82-GT-241] p 96 A82-35422
Ceramic components for automotive and heavy duty turbine engines - CATE and AGT 100
[ASME PAPER 82-GT-253] p 96 A82-35432
Physical vapor deposition of ceramic coatings for gas turbine engine components
[ASME PAPER 82-GT-264] p 96 A82-35440
Progress in the development of energy efficient engine components
[ASME PAPER 82-GT-278] p 96 A82-35450
Reliable power --- RB211 aircraft engines
[PNR-90078] p 103 N82-22275
Impact study of synthetic and alternative fuel usage in Army aircraft propulsion systems
[AD-A111046] p 77 N82-24355
Low NOx heavy fuel combustor concept program
[NASA-CR-165367] p 79 N82-25635
Future fuels and engines for railroad locomotives. Volume 2: Technical document
[NASA-CR-165963] p 14 N82-26050
Preliminary analysis of a downsized advanced gas-turbine engine in a subcompact car
[NASA-TM-82948] p 14 N82-26051
Multiroller traction drive speed reducer: Evaluation for automotive gas turbine engine
[NASA-TP-2027] p 112 N82-26678
GAS TURBINES
Air cooling of gas turbine blades p 94 A82-34700
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Turbine spool technology rig cascade tests
[DE81-030952] p 104 N82-22502
Parametric performance analysis of steam-injected gas turbine with a thermionic-energy converter-lined combustor
[NASA-TM-82736] p 105 N82-23678
GAS-SOLID INTERFACES
Overview of the current status of solid-gas interface science p 35 A82-35506
Limitation of experimental capabilities for interfacial studies p 35 A82-35507
Basic research needs and opportunities at the solid-gas interface p 36 A82-35511
Basic research needs and opportunities for characterizing the microstructure and microchemistry of interfaces p 36 A82-35514
GASEOUS DIFFUSION
Stability limits of natural gas diffusion flames with swirl p 66 A82-28681
GASEOUS FUELS
Flame propagation in heterogeneous mixtures of fuel droplets, fuel vapor and air p 65 A82-28672
The combustion of a fuel jet in a stream of lean gaseous fuel-air mixtures p 66 A82-28692
GASOHOL (FUEL)
Fossil and synthetic fuels miscellaneous, part 1
[GPO-84-010] p 76 N82-24351
Impact of gasohol on the L-141 and LDT-465-1C engines
[AD-A112010] p 82 N82-26486
GEOCHEMISTRY
Analyses of natural gas in Illinois
[PB82-124322] p 75 N82-23645
Source rock geochemistry and liquid and solid petroleum occurrences of the Ouachita Mountains, Oklahoma p 75 N82-23830
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5
[DE82-002520] p 78 N82-25616
Investigations of low-temperature geothermal potential in New York state
[DE82-002517] p 78 N82-25617
GEOCHRONOLOGY
The Mt. Hood region - Volcanic history, structure, and geothermal energy potential p 66 A82-31244
GEODETIC SURVEYS
Seismic and geodetic studies of the Imperial Valley, California
[DE82-001686] p 85 N82-26915
GEOLOGICAL SURVEYS
Airborne gamma-ray spectrometer and magnetometer survey, Kenora quadrangle, Minnesota, volume 1
[DE82-001029] p 74 N82-23625
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 74 N82-23635
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 75 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey: North/south beline, volume 1
[DE82-005542] p 88 N82-27804
GEOLOGY
Heat flow and geothermal assessment of the Escalante Desert, southwestern Utah, with emphasis on the Newcastle KGRA
[DE82-003952] p 74 N82-23618
A summary of Environmental Geologic Studies on the southeastern United States Atlantic Outer Continental Shelf
[PB82-109273] p 80 N82-25731
Geothermal potential on Kirtland Air Force Base lands, Bernalillo County, New Mexico
[AD-A107044] p 89 N82-27841
GEOMAGNETISM
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 74 N82-23635
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 75 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 75 N82-23637
GEOMETRICAL OPTICS
Concentration of a Cassegrain solar furnace p 25 A82-32546
GEOPHYSICAL FLUIDS
Thermodynamics of geothermal fluids p 76 N82-24123
GEOPHYSICS
Assessment of precise surface-gravity measurements for monitoring the response of a geothermal reservoir to exploitation
[DE82-003904] p 78 N82-24775
Airborne gamma-ray spectrometer and magnetometer survey: North/south beline, volume 1
[DE82-005542] p 88 N82-27804
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 88 N82-27808
GEOSYNCHRONOUS ORBITS
Comparison of low Earth orbit and geosynchronous Earth orbits p 6 N82-22716
GEOTEMPERATURE
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5
[DE82-002520] p 78 N82-25616
Investigations of low-temperature geothermal potential in New York state
[DE82-002517] p 78 N82-25617
GEOTHERMAL ENERGY CONVERSION
Helical screw expander evaluation project
[NASA-CR-166803] p 104 N82-22659
Theory and tests of two-phase turbines
[NASA-CR-168834] p 104 N82-22661
Energy programs at the John Hopkins University Applied Physics Laboratory
[PB82-126699] p 122 N82-23781
Geothermal potential on Kirtland Air Force Base lands, Bernalillo County, New Mexico
[AD-A107044] p 89 N82-27841
GEOTHERMAL ENERGY UTILIZATION
Geothermal source potential and utilization for alcohol production
[DE82-003801] p 70 N82-22782
Potential geothermal energy applications for Idaho Elks Rehabilitation Hospital
[DE82-003803] p 71 N82-22783
Direct use of hydrothermal energy: A review of environmental aspects
[DE82-000069] p 16 N82-26854
GEOTHERMAL RESOURCES
The Mt. Hood region - Volcanic history, structure, and geothermal energy potential p 66 A82-31244
Potential geothermal energy applications for Idaho Elks Rehabilitation Hospital
[DE82-003803] p 71 N82-22783
Heat flow and geothermal assessment of the Escalante Desert, southwestern Utah, with emphasis on the Newcastle KGRA
[DE82-003952] p 74 N82-23618
Raft River geoscience case study: Appendixes
[DE82-003553] p 75 N82-23835
Thermodynamics of geothermal fluids p 76 N82-24123
Assessment of precise surface-gravity measurements for monitoring the response of a geothermal reservoir to exploitation
[DE82-003904] p 78 N82-24775
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5
[DE82-002520] p 78 N82-25616

Investigations of low-temperature geothermal potential in New York state
[DE82-002517] p 78 N82-25617
Summary of hearings on the future of the nation's energy utilities: Implications for Federal RD&D
[GPO-91-815] p 13 N82-25633
A program for single-phase moderate-temperature geothermal well drawdown and pumping energy for the HP-97 and other desk calculators
[PB82-148420] p 89 N82-27829
Analysis of potential geothermal resources and their use: Lebanon Springs, New York
[PB82-147380] p 89 N82-27834
Geothermal potential on Kirtland Air Force Base lands, Bernalillo County, New Mexico
[AD-A107044] p 89 N82-27841

GERMANIUM
Germanium selective solar absorber surfaces
p 38 A82-36163

GEYSERS
Assessment of precise surface-gravity measurements for monitoring the response of a geothermal reservoir to exploitation
[DE82-003904] p 78 N82-24775

GIMBALS
Second-generation heliostat development for solar-central receivers
[DE82-001844] p 45 N82-22777
Second-generation heliostat development for solar-central central receivers. Detail design report: Volume 2, appendices I, J
[DE82-001837] p 45 N82-22780

GLASS FIBER REINFORCED PLASTICS
Tests performed on the 2 MW Twind WECS — Wind Energy Conversion System p 100 A82-36100
A significant role for composites in energy-efficient aircraft p 3 A82-37065
Composites in energy generation and storage systems - An overview p 120 A82-37076

GLASS FIBERS
Development of composite blades for large wind turbines p 98 A82-36083

GLOW DISCHARGES
Hydrogenated amorphous silicon carbide as a window material for high efficiency a-Si solar cells
p 23 A82-30862

GOLD
RF sputtered gold-amorphous silicon Schottky-barrier diodes p 34 A82-35246

GOVERNMENT/INDUSTRY RELATIONS
Building energy analysis computer programs developed by Federal agencies: Cost, use, and need
[PLRD-82-47] p 15 N82-26788

GRAIN BOUNDARIES
Determination of the grain boundary recombination velocity in polycrystalline silicon as a function of illumination from photoconductance measurements
p 24 A82-32183
Grain boundary recombination analysis of GaAs Schottky barrier solar cells p 34 A82-35496

GRAVITATIONAL FIELDS
Assessment of precise surface-gravity measurements for monitoring the response of a geothermal reservoir to exploitation
[DE82-003904] p 78 N82-24775

GREAT LAKES (NORTH AMERICA)
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 75 N82-23637

GREENHOUSES
Audio-visual summary of passive solar commercial buildings development in the MASEC region
[DE82-003136] p 46 N82-23368
Solar energy research at Los Alamos
[DE82-004222] p 53 N82-25654

GRINDING (COMMINUTION)
Ultrasonically enhanced size reduction of coal
[DE82-001601] p 71 N82-22989
Basic combustion and pollutant formation processes for pulverized fuels
[DE82-002238] p 17 N82-26879

GROUND STATIONS
Ground-based receiving-converting complex for satellite solar power systems p 94 A82-34523
Satellite power system operations p 44 N82-22745
Summary of the electromagnetic compatibility evaluation of the proposed satellite power system
p 44 N82-22746

GROUND WATER
Natural radioactivity contamination problems
[PB82-140443] p 89 N82-27884

GROUP 6B COMPOUNDS
Further studies of the photoelectrochemical properties of the group VI transition metal dichalcogenides
p 23 A82-30865

GUSTS
On the spectral energy and power components in horizontal wind gusts p 90 A82-30866

H

HABITATS
Passive and hybrid solar manufactured housing and buildings. Phase 1: Technical proposal
[DE82-002098] p 45 N82-22776
Application of remote sensing to state and regional problems
[E82-10258] p 77 N82-24566

HALL ACCELERATORS
Results and comparison of Hall and DW duct experiments
[NASA-TM-82864] p 111 N82-25981

HANDBOOKS
Standard deviations and confidence intervals for atmospheric design criteria used in WECS development — Wind Energy Conversion Systems p 98 A82-36082

HAULING
Testing the shearer-loader EDW 170/200 LN for thin seams in connection with chainless haulage — coal mining
[BMFT-FB-T-82-017] p 70 N82-22638

HAZARDS
Development of environmental assessment screening criteria for coal-conversion solid wastes
[DE82-000751] p 11 N82-23798

HEALTH
Health and safety evaluation of a modified tunnel borer design for application to single entry coal mine development
[NASA-CR-168807] p 70 N82-22631

HEAT EXCHANGERS
The Themis solar receiver p 32 A82-34553
Passive and hybrid solar manufactured housing and buildings. Phase 1: Technical proposal
[DE82-002098] p 45 N82-22776
Helium research in support of superconducting power transmission
[PB82-122987] p 118 N82-23412
Earth-coupled heat pump
[DE82-900583] p 110 N82-24461
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
Direct contact heat transfer for thermal energy storage
p 123 N82-24667
High-temperature molten salt thermal energy storage systems for solar applications p 123 N82-24670
Active heat exchange: System development for latent heat thermal energy storage p 124 N82-24671
The 1980 report on NRL energy storage program
p 124 N82-24672
A conceptual design study of a high temperature solar thermal receiver
[NASA-CR-168925] p 51 N82-24720
Heat Energy Recovery from Domestic Output Fluids (HERDOF)
[PB82-134156] p 14 N82-25657

HEAT FLUX
Advanced thermionic technology program
[DE82-002116] p 115 N82-27846

HEAT GENERATION
Stationary thermal ignition of particle suspensions
[AIAA PAPER 82-0661] p 66 A82-31886

HEAT OF COMBUSTION
Low NO sub x heavy fuel combustor concept program. Phase 1A: Combustion technology generation coal gas fuels
[NASA-CR-165614] p 68 N82-22326

HEAT OF FORMATION
Solar hydrogen production using two-step thermochemical cycles p 63 A82-37437

HEAT PIPES
Osmotic pumped heat pipes for large space platforms
[AIAA PAPER 82-0902] p 115 A82-31897
Design, fabrication and test of liquid metal heat-pipe sandwich panels
[AIAA PAPER 82-0903] p 115 A82-31898
Study of reactor Brayton power systems for nuclear electric spacecraft
[NASA-CR-168942] p 110 N82-24269
Storage requirements definition and SRE design for dish Stirling systems p 124 N82-24683

HEAT PUMPS
Osmotic pumped heat pipes for large space platforms
[AIAA PAPER 82-0902] p 115 A82-31897
Heat pump demand characteristics: A study of the impacts of single-family residential heat-pump technologies on electric-utility-system loads
[DE82-900861] p 3 N82-22464
Earth-coupled heat pump
[DE82-900583] p 110 N82-24461
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
Overview of the Chemical/Hydrogen Energy Systems (C/HES) program p 64 N82-24689
Chemical/Hydrogen Energy Storage Systems
p 64 N82-24690
The sulfuric acid/water chemical heat pump/energy storage program p 125 N82-24691
A chemical heat pump based on the reaction of calcium chloride and methanol for solar heating, cooling and storage p 51 N82-24692
A cost-effectiveness evaluation of chemical heat pumps p 12 N82-24693
Solar-energy-system performance evaluation, Rymark I and Rymark II, Frederick, Maryland, January 1981 - April 1981
[DE82-001501] p 58 N82-26829

HEAT RADIATORS
Study of reactor Brayton power systems for nuclear electric spacecraft
[NASA-CR-168942] p 110 N82-24269

HEAT RESISTANT ALLOYS
The gas turbine engine p 90 A82-28587

HEAT SOURCES
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments
[DE82-002439] p 14 N82-25665
Lead-acid batteries in solar photovoltaic power systems for marine aids to navigation
[AD-A112151] p 57 N82-26311

HEAT STORAGE
Some thermophysical properties of paraffin wax as a thermal storage medium
[AIAA PAPER 82-0646] p 119 A82-31869
The trade-off between collector area, storage volume, and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22666
Latent heat thermal energy storage: Determination of properties of storage media and development of a new transfer system
[BMFT-FB-T-82-016] p 121 N82-22789
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
Overview of the Thermal Energy Storage (TES) Program p 122 N82-24653
ORNL Thermal Energy Storage program overview
p 123 N82-24654
Design and demonstration of a storage-assisted air conditioning system p 123 N82-24655
Experimental evaluation of thermal energy storage
p 123 N82-24656
Distributed thermal energy storage in the residential sector: Commercialization readiness assessment and implementation strategy p 12 N82-24661
Performance of stratified thermal storage system for Oliver Springs Elementary School p 123 N82-24665
An overview of the SERI Solar Energy Storage Program p 51 N82-24666
Direct contact heat transfer for thermal energy storage
p 123 N82-24667
Systems analysis of thermal storage
p 123 N82-24668
Cost and performance of thermal storage concepts in solar thermal systems p 51 N82-24669
High-temperature molten salt thermal energy storage systems for solar applications p 123 N82-24670
Active heat exchange: System development for latent heat thermal energy storage p 124 N82-24671
The 1980 report on NRL energy storage program
p 124 N82-24672
Thermal energy storage for residential energy conservation p 124 N82-24674
Solar thermal power storage applications lead laboratory overview p 51 N82-24675
Status report of thermocline thermal energy storage studies at Sandia National Laboratories
p 124 N82-24680
Storage requirements definition and SRE design for dish Stirling systems p 124 N82-24683
Thermal energy buffer storage for the small community solar thermal power experiment p 124 N82-24684
Application of thermal energy storage to process heat recovery in the aluminum industry p 124 N82-24685
Collection and dissemination of thermal energy storage system information for the pulp and paper industry
p 125 N82-24686
Applications of thermal energy storage to waste heat recovery in the food processing industry
p 125 N82-24687

Once-through heat supply system for City of Bellingham p 125 N82-24686
The sulfuric acid/water chemical heat pump/energy storage program p 125 N82-24691
Membrane-lined foundations for liquid thermal storage [DE82-003661] p 138 N82-26851
Solar central receivers: The technology, industry, markets, and economics [DE82-005267] p 60 N82-26857
Low cost, multipurpose solar energy system [DE81-030855] p 62 N82-27854
Passive solar heating system [DE82-003269] p 62 N82-27855

HEAT TRANSFER
Thermal and photochemical studies of solar energy absorbers dissolved in heat transfer fluids p 38 A82-36750
Utilization of waste heat from major transformer substations. Volume 3: Appendix [DE82-900357] p 0 N82-22781
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting [CONF-801055] p 122 N82-24652
An overview of the SERI Solar Energy Storage Program p 51 N82-24656
Direct contact heat transfer for thermal energy storage p 123 N82-24667
High-temperature molten salt thermal energy storage systems for solar applications p 123 N82-24670
Active heat exchange: System development for latent heat thermal energy storage p 124 N82-24671
The 1980 report on NRL energy storage program p 124 N82-24672
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5 [DE82-002520] p 78 N82-25616
Membrane-lined foundations for liquid thermal storage [DE82-003651] p 126 N82-26851
Solar central receivers: The technology, industry, markets, and economics [DE82-005267] p 60 N82-26857
Solar-central-receiver system integrated with a cogeneration facility for copper smelting, volume 1 [DE82-001580] p 60 N82-26863
Environmental effects of solar-thermal power systems. Environmental effects of heat transfer and storage fluids: Plant toxicity and movement in soils [DE82-002603] p 17 N82-26881

HEAT TRANSFER COEFFICIENTS
Heat loss factor for linear solar concentrators p 38 A82-36206

HEAT TRANSMISSION
Determination of the stagnation temperature of flat plate solar collectors p 39 A82-37566
Helium research in support of superconducting power transmission [PB82-122987] p 118 N82-23412
Heat flow and geothermal assessment of the Escalante Desert, southwestern Utah, with emphasis on the Newcastle KGRA [DE82-003952] p 74 N82-23618
Transient analysis of heat transmission systems [AD-A112365] p 126 N82-27691

HEAT TREATMENT
Demonstration of a nitrogen-based carburizing atmosphere [DE82-004196] p 19 N82-27851

HEATING
Potential geothermal energy applications for Idaho Elks Rehabilitation Hospital [DE82-003803] p 71 N82-22783

HEATING EQUIPMENT
Catalytic combustion of hydrogen. III - Advantages and disadvantages of a catalytic heater with hydrogen fuel p 63 A82-37444
Thermal energy storage testing facility p 123 N82-24662
Performance of stratified thermal storage system for Oliver Springs Elementary School p 123 N82-24665
Passive solar class B monitoring reports [DE82-003139] p 53 N82-25646
Passive solar heating system [DE82-003269] p 62 N82-27855

HEAVY LIFT LAUNCH VEHICLES
Overview of atmospheric effects p 5 N82-22688

HELICOPTER ENGINES
The TM 333, a trump card for Turbomeca p 93 A82-33750

HELIOSTATS
A method for calculating the radiant energy incident on a vapor generator in a solar power station p 22 A82-30082
An optical heliostat for solar power stations p 23 A82-31492
The Themis heliostat field p 32 A82-34552
Second-generation heliostat development for solar-central receivers [DE82-001844] p 45 N82-22777
Second-generation heliostat development for solar-central receivers, detail design report. Volume 1, appendix [DE82-001842] p 45 N82-22778
Second-generation heliostat development for solar-central receivers: Volume 1, detail design report. Appendix 2 [DE82-001843] p 45 N82-22779
Second-generation heliostat development for solar-central central receivers. Detail design report: Volume 2, appendices I, J [DE82-001837] p 45 N82-22780
Analysis of 70-tube pilot-plant solar-receiver-panel test data [DE82-001728] p 49 N82-23752
Solar-central-receiver system integrated with a cogeneration facility for copper smelting, volume 1 [DE82-001580] p 60 N82-26863
User's manual for DELSOL2: A computer code for calculating the optical performance and optimal system design for solar-thermal central-receiver plants [DE82-003875] p 61 N82-27026

HELIUM
Helium research in support of superconducting power transmission [PB82-122987] p 118 N82-23412

HELIUM-NEON LASERS
Back surface field and vertical solar cell p 21 A82-29695

HETEROJUNCTION DEVICES
Investigation of mirror concentrators intended for operation with high-current solar cells p 22 A82-30081
Two-element cascade Al-Ga-As solar cell p 37 A82-36117
ZAP - Introducing the zero-bias avalanche photodiode p 38 A82-36215
Spray-deposited SnO2/n-Si/polycrystalline/ solar cells p 38 A82-36863

HF LASERS
Design and performance characteristics of a CW subsonic HF chemical laser with 120 W power output p 103 A82-37577

HIGH ALTITUDE
Solar-powered airplane design for long-endurance, high-altitude flight [AIAA PAPER 82-0811] p 24 A82-31984

HIGH PRESSURE
Plain-jet airblast atomization of alternative liquid petroleum fuels under high ambient air pressure conditions [ASME PAPER 82-GT-32] p 67 A82-35293
Mechanical behavior of Mesaverde shale and sandstone at high pressure [DE82-001665] p 85 N82-26911

HIGH RESOLUTION
High spectral resolution airborne spectrometry p 67 A82-32443

HIGH SPEED
The conceptual design of the high speed ratio wind rotor for the 52 m diameter horizontal axis Voith wind energy converter p 99 A82-36090

HIGH TEMPERATURE ENVIRONMENTS
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Turbine spool technology rig cascade tests [DE81-030352] p 104 N82-22502

HIGH TEMPERATURE GAS COOLED REACTORS
Synthetic-fuel production using Texas lignite and a very high temperature gas cooled reactor for process heat and electrical power generation [DE82-900466] p 83 N82-26492

HIGH TEMPERATURE GASES
Determination of temperature distribution in the flow of a hot gas on the basis of a self-reversed spectral line profile p 103 A82-37549
High temperature metallic recuperator [PB82-141102] p 8 N82-23373

HIGH TEMPERATURE TESTS
MHD generator electrode development [DE82-002561] p 114 N82-27155

HIGH VOLTAGES
High voltage systems (tube-type microwave)/low voltage system (solid-state microwave) power distribution p 117 N82-22744

HISTOGRAMS
Airborne gamma-ray spectrometer and magnetometer survey, Bemidji quadrangle, Minnesota, volume 2 [DE82-001026] p 75 N82-23638

HOLOGRAPHY
Holography creates new breed of optical components --- construction, reconstruction and application of surface relief and volume holograms p 37 A82-35886

HONEYCOMB STRUCTURES
Design, fabrication and test of liquid metal heat-pipe sandwich panels [AIAA PAPER 82-0903] p 115 A82-31898

HORIZONTAL ORIENTATION
Effect of rotor configuration on guyed tower and foundation designs and estimated costs for intermediate site horizontal axis wind turbines [NASA-TM-82804] p 104 N82-22649
Experience on the use of MOSTAB-HFW computer code for horizontal-axis wind turbines p 107 N82-23709
Comparison of upwind and downwind rotor operation of the DOE/NASA 100-kW MOD-0 wind turbine p 107 N82-23710
A review of resonance response in large horizontal-axis wind turbines p 107 N82-23711
Passive cyclic pitch control for horizontal axis wind turbines p 107 N82-23715

HORN ANTENNAS
Research and development at MBB. Technical and scientific publications, 1981 p 127 N82-23137

HOT CORROSION
Physical vapor deposition of ceramic coatings for gas turbine engine components [ASME PAPER 82-GT-264] p 96 A82-35440
Characterization of the corrosion environment of the desert near Barstow, California [DE82-003876] p 50 N82-23800

HOT ELECTRONS
Efficiency of hot-carrier solar energy converters p 25 A82-32891
Evidence for hot-electron injection across p-GaP/electrolyte junctions — during photoconversion process of solar energy p 37 A82-35716

HOT WATER ROCKET ENGINES
DOE/NASA SIMS Prototype Solar System, no. 4. Part 1: Market analysis. Part 2: Modular manufacturing cost estimate p 61 N82-27835

HUMAN BEHAVIOR
Building and occupant characteristics as determinants of residential energy consumption [DE82-002417] p 12 N82-24728

HUMAN FACTORS ENGINEERING
Fuel conservation by the application of spill prevention and fail-safe engineering (a guideline manual) p 8 N82-23682

HUMAN REACTIONS
Guide to the evaluation of human exposure to noise from large wind turbines [NASA-TM-83288] p 11 N82-24051

HUMAN TOLERANCES
Guide to the evaluation of human exposure to noise from large wind turbines [NASA-TM-83288] p 11 N82-24051

HYBRID CIRCUITS
Solar-central-receiver system integrated with a cogeneration facility for copper smelting, volume 1 [DE82-001580] p 60 N82-26863

HYDRATES
Methane Hydrate Resource Assessment Program [DE82-002478] p 79 N82-25624

HYDRAULIC EQUIPMENT
Feasibility of using large vertical pumps as turbines for small scale hydropower [DE82-004267] p 112 N82-26694
Study of accumulator passenger cars based on the Ifield hydrostatic pump/motor unit [DE82-002522] p 18 N82-27195
Hydraulic transport of coarse solids in circular and segmented pipes [CSIR-ME-1716] p 118 N82-27685

HYDRAZINES
Toxic hazards research unit [AD-A110587] p 80 N82-25780

HYDRIDES
Hydride chemical compressor, phase 1 p 64 N82-24695

HYDROBROMIC ACID
Recent work in advanced hydrogen production concepts p 65 N82-24711

HYDROCARBON COMBUSTION
NOx formation in flat, laminar, opposed jet methane diffusion flames p 65 A82-28660

HYDROCARBON FUEL PRODUCTION
Feasibility study 20-MM gal/yr fuel grade ethanol facility [DE82-002606] p 69 N82-22374
Feasibility study for 400,000 gal/day ethanol plant at Benicia, California, volume 1 [DE82-002608] p 69 N82-22378
Feasibility study for 400,000 gal/day ethanol plant at Benicia, California. Volume 3. Environmental Report [DE82-002610] p 69 N82-22380
Paraho oil shale module. Critical items identification, task 11 [DE82-003727] p 70 N82-22634

HYDROCARBON FUELS
Efficiencies of heat engines and fuel cells - The methanol fuel cell as a competitor to Otto and Diesel engines
p 92 A82-32372
Deposit formation in hydrocarbon fuels
[ASME PAPER 82-GT-49] p 67 A82-35307
Carbon formation by the pyrolysis of gas turbine fuels in preflame regions of gas turbine combustors
[ASME PAPER 82-GT-84] p 67 A82-35330
Conversion of cellulosic wastes to liquid fuels
[DE82-001173] p 93 N82-26496
MHD coal-fired flow facility
[DE82-003814] p 113 N82-26653
Uses of the FRS data base for energy policy analysis
[DE82-001982] p 16 N82-26864
HYDROCRACKING
Autocatalytic coal liquefaction process
[NASA-CASE-NPO-14876-2] p 78 N82-25394
Evaluation of hydrocracking catalysts for conversion of whole shale oil into high yields of jet fuels
[AD-A112520] p 97 N82-27523
HYDRODYNAMICS
Computer modeling of coal-gasification reactors. Volume 4: Operating manual for EF (Entrained Flow coal gasifier) computer model
[DE82-000765] p 73 N82-23339
HYDROELECTRIC POWER STATIONS
Medicine Bow wind project p 93 A82-33704
Penobscot River basin overview
[PB82-131467] p 4 N82-22639
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 1: Executive summary
[DE82-000270] p 121 N82-23735
Preliminary design study of Underground Pumped Hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches. UPH, Appendix D: Power plant
[DE82-003075] p 122 N82-23753
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 11: Plant design. UPH
[DE82-000918] p 122 N82-23771
Analysis of environmental issues related to small-scale hydroelectric development. 5: Instream flow needs for fishery resources
[DE82-000901] p 11 N82-23811
Hydropowered electrolysis in New York State
p 111 N82-24707
Feasibility of using large vertical pumps as turbines for small scale hydropower
[DE82-004267] p 112 N82-26694
HYDROELECTRICITY
A regional wind-hydro electricity supply system
p 101 A82-36108
Energy in New England: Transition to the 80's
[DE82-000234] p 9 N82-23763
HYDROGEN
The effect of sulfur on the anodic H2 /Ni/ electrode in fused Li2CO3-K2CO3 at 650 C p 103 A82-37627
Improved alkaline hydrogen/air fuel cells for transportation applications p 111 N82-24701
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE82-004407] p 86 N82-27451
HYDROGEN FUELS
Metal hydrides for energy storage p 118 A82-26650
The potential for long-range high-payload aircraft with alternate fuels
[AIAA PAPER 82-0614] p 62 A82-31987
Cooperative international liquid hydrogen automotive progress report p 63 A82-32164
Will hydrogen-fueled aircraft be safe
[AIAA PAPER 82-1236] p 63 A82-35077
Catalytic combustion of hydrogen. III - Advantages and disadvantages of a catalytic heater with hydrogen fuel
p 63 A82-37444
Modification and operation of the hydrogen homestead hydride vessel energy storage system
p 65 N82-24705
Hydrogen microsphere hazard evaluation
p 65 N82-24706
HYDROGEN OXYGEN FUEL CELLS
High temperature fuel and steam electrolysis cells using proton conductive solid electrolytes p 63 A82-32375
Improved alkaline hydrogen/air fuel cells for transportation applications p 111 N82-24701
HYDROGEN PRODUCTION
Continuous microbial production of hydrogen gas
p 63 A82-37435
Solar hydrogen production using two-step thermochemical cycles p 63 A82-37437
Design of a system for solar energy storage via water electrolysis p 39 A82-37438
Production cost comparisons of hydrogen from fossil and nuclear fuel and water decomposition
p 65 N82-24710
Recent work in advanced hydrogen production concepts p 66 N82-24711
HYDROGEN SULFIDE
Crossed-reaction networks in the catalytic hydrodenitrogenation of synthetic liquid fuels
[DE82-003092] p 81 N82-26422
HYDROGEN-BASED ENERGY
Hydrogen economy assessment for long-term energy systems in Japan p 63 A82-32159
A novel batch-type hydrogen transmitting system using metal hydrides p 64 A82-37445
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
Overview of the Chemical/Hydrogen Energy Systems (C/HES) program p 64 N82-24689
Chemical/Hydrogen Energy Storage Systems
p 64 N82-24690
Hydride chemical compressor, phase 1
p 64 N82-24695
Development status of a metal hydride process for hydrogen recovery p 64 N82-24696
Development status of solid polymer electrolyte water electrolysis for large scale hydrogen generation
p 64 N82-24697
HYDROGENATION
Transport in hydrogenated amorphous silicon p-i-n solar cells p 21 A82-29696
Hydrogenated amorphous silicon carbide as a window material for high efficiency a-Si solar cells
p 23 A82-30662
Static fped water electrolysis for large scale hydrogen generation p 64 N82-24689
Crossed-reaction networks in the catalytic hydrodenitrogenation of synthetic liquid fuels
[DE82-003092] p 81 N82-26422
Concepts of fundamental processes related to gasification of coal
[DE81-023067] p 84 N82-26501
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE82-004407] p 86 N82-27451
Mechanisms and kinetics of coal hydrogenation
[DE82-004867] p 86 N82-27453
HYDROLOGY
Geothermal potential on Kirtland Air Force Base lands, Bernalillo County, New Mexico
[AD-A107044] p 89 N82-27841
Water and emerging energy technologies: Summary report
[PB82-153123] p 89 N82-27859
Water and emerging energy technologies
[PB82-153131] p 89 N82-27860
HYDROPYROLYSIS
Coal-hydrogasification process development, government fiscal year 1981
[DE82-004146] p 72 N82-23329
HYDROSTATIC PRESSURE
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002170] p 116 N82-22444
HYDROTHERMAL SYSTEMS
Assessment of precise surface-gravity measurements for monitoring the response of a geothermal reservoir to exploitation
[DE82-003904] p 78 N82-24775
Direct use of hydrothermal energy: A review of environmental aspects
[DE82-000069] p 16 N82-26854

I

IGNITION TEMPERATURE
Stationary thermal ignition of particle suspensions
[AIAA PAPER 82-0681] p 66 A82-31886
ILLINOIS
Analyses of natural gas in Illinois
[PB82-124322] p 75 N82-23645
IMAGE PROCESSING
Optical characterization method for concentrating solar collectors using reverse illumination p 25 A82-32570
IMAGE RECONSTRUCTION
Holography creates new breed of optical components -- construction, reconstruction and application of surface relief and volume holograms p 37 A82-35866
IMPURITIES
Ionized impurity induced photocarrier generation in organic energy conversion systems p 41 A82-37944
Silicon materials task of the Low Cost Solar Array Project: Effect of impurities and processing on silicon solar cells
[NASA-CR-169051] p 56 N82-26606
INDEXES (DOCUMENTATION)
A National Index for Energy Productivity
[GPO-75-896] p 6 N82-22772
INDIUM PHOSPHIDES
Characterization of electron traps in n/plus/ indium tin oxide on p-type InP solar cells p 21 A82-29693
INDUCTANCE
Dynamic characteristics of a wind driven induction generator equipped with thyristor controlled inductances on the stator side p 100 A82-36093
INDUCTION MOTORS
Dynamic characteristics of a wind driven induction generator equipped with thyristor controlled inductances on the stator side p 100 A82-36093
INDUCTORS
Development of a dual-field heteropolar power converter
[NASA-CR-165166] p 110 N82-24424
INDUSTRIAL ENERGY
New York State industrial energy profile, volume 1
[PB82-126846] p 7 N82-22790
An assessment of the industrial energy conservation program. Volume 1: Summary
[PB82-122756] p 7 N82-22793
High temperature metallic recuperator
[PB82-141102] p 8 N82-23373
Texasgulf solar cogeneration program, volume 1
[DE82-001900] p 59 N82-23767
Demand 80/81: Forecasts of energy consumption to the year 2000. Volume 1: Forecasts and description of the forecasting model
[DE82-900671] p 9 N82-23769
Solar industrial process heat systems: An assessment of standards for materials and components
[PB82-133703] p 90 N82-24394
ORNL Thermal Energy Storage program overview
p 123 N82-24654
Energy and materials flows in the production of primary aluminum
[DE82-005963] p 15 N82-26453
An overview of the value of parabolic dish solar thermal systems in industrial cogeneration applications
[NASA-CR-169053] p 54 N82-26785
Effects off system factors on the economics of and demand for small solar thermal power systems
[NASA-CR-169043] p 55 N82-26800
Industrial Cogeneration Optimization Program: A summary of two studies
[DE82-005587] p 16 N82-26849
Solar production of industrial-process hot water. Phase 3: Operation and evaluation of the York Building Products Co., Inc. solar facility
[DE82-003526] p 60 N82-26865
Investigation into the economy of methane gas utilization in sewage treatment plants
[BMFT-FB-T-82-025] p 89 N82-27857
INDUSTRIAL PLANTS
Corn to ethanol plant feasibility study
[DE82-000029] p 60 N82-22375
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 1: Executive summary
[NASA-CR-168805] p 42 N82-22664
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 2: Detailed report
[NASA-CR-168806] p 42 N82-22665
Geothermal source potential and utilization for alcohol production
[DE82-003801] p 70 N82-22782
Feasibility study of medium Btu coal gas for fuel and feedstock at Mobay's New Martinsburg, West Virginia plant
[DE82-004321] p 72 N82-23330
ID slicing and the automated factory
p 47 N82-23672
INDUSTRIAL SAFETY
Health and safety evaluation of a modified tunnel borer design for application to single entry coal mine development
[NASA-CR-168807] p 70 N82-22631
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000869] p 121 N82-23738
INDUSTRIAL WASTES
Development of environmental assessment screening criteria for coal-conversion solid wastes
[DE82-000751] p 11 N82-23796
Application of thermal energy storage to process heat recovery in the aluminum industry p 124 N82-24665
Collection and dissemination of thermal energy storage system information for the pulp and paper industry
p 125 N82-24666
Applications of thermal energy storage to waste heat recovery in the food processing industry
p 125 N82-24667

Once-through heat supply system for City of Bellingham p 125 N82-24688
INDUSTRIES
Environmental readiness document. Industrial programs, fiscal year 1980
[DOE/ERD-0031] p 10 N82-23794
Uses of the FRS data base for energy policy analysis
[DE82-001662] p 16 N82-26864
INERTIAL UPPER STAGE
Satellite thermal design and analyses for Titan 34D/IUS and STS/IUS launch vehicle environments
[AIAA PAPER 82-0828] p 24 A82-31856
INFORMATION DISSEMINATION
Near-term high potential counties for SWECS
[SERI/TR-98282-11] p 104 N82-22671
A National Index for Energy Productivity
[GPO-75-886] p 6 N82-22772
Residential conservation service program support
[DE82-001205] p 13 N82-25650
INFORMATION MANAGEMENT
Applications of the DOE/NASA wind turbine engineering information system p 106 N82-23696
INFRARED ABSORPTION
Properties and structure of a-SiC:H for high efficiency a-Si solar cell p 40 A82-37851
INFRARED IMAGERY
Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 66 A82-29327
INFRARED RADIATION
Moessbauer spectroscopy study on the effect of infrared and gamma radiation on the structure of minerals. Part of coordinated programme on development of methods for application of Moessbauer spectroscopy in mineralogy, soil sciences and the study of ceramics
[DE81-700780] p 76 N82-24350
INFRARED RADIOMETERS
High spectral resolution airborne spectrometry p 67 A82-32443
INFRARED REFLECTION
Thick optical films for the conduction of optical and infrared radiation --- for light concentration onto solar cells p 24 A82-32543
INGOTS
Proceedings of the Low-Cost Solar Array Wafering Workshop
[NASA-CR-168847] p 46 N82-23650
LSA project perspective of wafering technology p 46 N82-23651
Arco Solar, Incorporated: The industrial point of view p 47 N82-23653
Some disconnected speculations on slicing silicon p 47 N82-23654
Some tradeoffs in ingot shaping and price of solar photovoltaic modules p 47 N82-23666
INLET TEMPERATURE
Air cooling of gas turbine blades p 94 A82-34700
INSOLATION
On the climatic optimization of the tilt and azimuth of flat-plate solar collectors p 21 A82-29318
Calculating the solar contribution to solar assisted systems p 37 A82-35918
Solar radiation characteristics and prediction methods
[FUB-7-1981] p 45 N82-22786
INSTRUMENT ORIENTATION
A comment on the generalization of the theoretical basis of photovoltaic concentrators for extended light sources p 39 A82-36869
INSULATION
Case study of the Mastin double-envelope house
[DE82-006833] p 15 N82-26513
INTEGRATED CIRCUITS
Possibilities for energy consumption through microelectronics
[BMFT-FB-T-82-0022] p 19 N82-27856
INTEGRATED ENERGY SYSTEMS
Medicine Bow wind project p 93 A82-33704
Coal to electricity - Integrated gasification combined cycle p 67 A82-34487
Wind power generation for national and regional grid systems Design proposals for generation and transmission p 96 A82-36078
Texasgulf solar cogeneration program, volume 1
[DE82-001900] p 50 N82-23767
Develop and test fuel cell powered on-site integrated total energy systems: Phase 3: Full-scale power plant development
[NASA-CR-165568] p 12 N82-24648
RHHU Clemson, Clemson, South Carolina: Solar-energy-system performance evaluation, November 1980 - May 1981
[DE82-002692] p 59 N82-26837
INTERFACES
Basic research needs and opportunities on interfaces in solar materials; Proceedings of the Workshop, Denver, CO, June 30-July 3, 1980 p 34 A82-35501
Overview of solar energy conversion technologies - Quantum processes and thermal processes p 34 A82-35502
Design requirements for interfaces in solar energy conversion technologies p 34 A82-35503
INTERLAYERS
The effect of the intermediate layer on the characteristics of Schottky-barrier solar-cell elements p 22 A82-30059
INTERNAL COMBUSTION ENGINES
Impact of gasohol on the L-141 and LDT-465-1C engines
[AD-A112010] p 82 N82-26486
Alcohol distillation by internal-combustion engines
[DE82-005294] p 83 N82-26495
Concept evaluation of automotive propulsion using liquid air/nitrogen. Task 1 report. Thermodynamics.
[DE82-002460] p 114 N82-27193
INTERNATIONAL TRADE
International energy indicators, October-November 1981
[DE82-004101] p 16 N82-26848
INVENTIONS
A review of the SERI wind energy innovative systems program p 98 A82-36079
INVERTED CONVERTERS (DC TO AC)
Interaction between MHD generator and DC-AC power conversion system
[AIAA PAPER 82-0923] p 91 A82-31912
INVESTMENTS
Battery resource assessment. Volume 1: Scenarios, investment, and materials cost
[DE82-006243] p 126 N82-26852
ION BEAMS
Non-mass-analyzed ion implantation from a solid phosphorus source p 26 A82-33685
ION CURRENTS
Introduction to proton conduction in solids
[RISO-M-2244] p 114 N82-27172
ION IMPLANTATION
An effect of back-surface boron implantation on silicon solar cells p 26 A82-32895
Non-mass-analyzed ion implantation from a solid phosphorus source p 26 A82-33685
Ion implantation of solar cell junctions without mass analysis p 29 A82-34092
IONIZATION
MHD electrical generator
[NASA-CASE-NPO-15399-1] p 110 N82-24079
IONOSPHERE
Microwave heating of the lower ionosphere p 117 N82-22747
IONOSPHERIC DISTURBANCES
Environmental assessment overview p 4 N82-22678
Ionospheric disturbance overview p 5 N82-22689
IONOSPHERIC HEATING
Simulation of D and E region high-power microwave heating with HF ionospheric modification experiments --- solar power satellite transmission effects p 116 A82-33447
IRIDIUM
Space nuclear safety and fuels program
[DE82-004188] p 80 N82-25945
IRON ALLOYS
Corrosion behavior of alloys p 51 N82-24679
IRRADIANCE
Terrestrial solar spectra, solar simulation and solar cell efficiency measurement
[DE82-002082] p 62 N82-27908
ISLANDS
Substitution of diesel power plants by solar and wind electricity generators - A case study for a tropical island p 101 A82-36107
ISOMERIZATION
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE82-004407] p 86 N82-27451

J

JET AIRCRAFT
Cost and fuel consumption per nautical mile for two engine jet transports using OPTIM and TRAGEN
[NASA-CR-166973] p 13 N82-25239
JET ENGINE FUELS
The combustion of a fuel jet in a stream of lean gaseous fuel-air mixtures p 66 A82-29692
Impact study of synthetic and alternative fuel usage in Army aircraft propulsion systems
[AD-A111046] p 77 N82-24355
Jet fuel from shale oil: The 1981 technology review
[AD-A111217] p 82 N82-26484
Mobility fuels for the Navy
[AD-A112511] p 82 N82-26485
The biological degradation of spilled jet fuels: A literature review
[AD-A110758] p 17 N82-26873
Evaluation of hydrocracking catalysts for conversion of whole shale oil into high yields of jet fuels
[AD-A112820] p 87 N82-27523
JET THRUST
Reliable power --- RB211 aircraft engines
[PNR-90078] p 103 N82-22275
JOINTS (JUNCTIONS)
Fracture strength of sintered and siliconized SiC and SiC joints
[ACS PAPER 35-N-80] p 127 A82-33029
JP-5 JET FUEL
An alternate test procedure to qualify future fuels for Navy aircraft
[AIAA PAPER 82-1233] p 68 A82-36175

K

KENTUCKY
LANDSAT Remote Sensing: Observations of an Appalachian mountaintop surface coal mining and reclamation operation --- kentucky
[E82-10247] p 77 N82-24525
KEROSENE
Commercial aircraft airframe fuel systems surveys
[AD-A112241] p 87 N82-27524
KINETIC ENERGY
New perspectives for kinetic energy storage p 120 A82-35525
An innovation which comes from space - Kinetic energy storage p 120 A82-36317
Investigation of the geokinetics horizontal in situ oil shale retorting process
[DE82-004273] p 88 N82-27798
KLYSTRONS
Power transmission and reception. An overview and perspective p 116 N82-22723
Microwave system performance summary p 117 N82-22724

L

LAKE ERIE
US Lake Erie natural gas resource development. Programmatic environmental impact statement
[AD-A112074] p 14 N82-25662
LAKE PONTCHARTRAIN (LA)
The feasibility of electric power generation by the wind on the University of New Orleans campus
[ASME PAPER 82-PET-1] p 96 A82-35481
LAMINAR FLOW
NOx formation in flat, laminar, opposed jet methane diffusion flames p 65 A82-29660
LAMINAR WAKES
On the wake of a Darrieus turbine p 106 N82-23691
LAND MANAGEMENT
Greater energy efficiency can be achieved through land use management
[EMD-82-1] p 4 N82-22647
Greater energy efficiency can be achieved through land use management
[AD-A111552] p 15 N82-26808
LAND USE
Investigating the relationship between land use planning, transportation and energy consumption
[PB82-122185] p 3 N82-22393
Greater energy efficiency can be achieved through land use management
[EMD-82-1] p 4 N82-22647
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 7 N82-23043
Application of remote sensing to state and regional problems
[E82-10288] p 77 N82-24566
Greater energy efficiency can be achieved through land use management
[AD-A111552] p 15 N82-26808
Solar central receivers: The technology, industry, markets, and economics
[DE82-005267] p 60 N82-26857
LARGE SPACE STRUCTURES
Osmotic pumped heat pipes for large space platforms
[AIAA PAPER 82-0902] p 115 A82-31897
Advanced space system concepts and their orbital support needs (1980 - 2000) p 118 N82-27362
Power Systems integration p 61 N82-27378
LARGE SPACE TELESCOPE
A deployment mechanism for the double roll-out flexible solar array on the space telescope p 46 N82-23359

LASER APPLICATIONS
Laser satellite power systems - Concepts and issues
p 116 A82-32370
Solar driven lasers for power satellite applications
p 116 N82-22722

LASER FUSION
Large area, high speed detectors for the ultraviolet --- pyroelectric sensor for laser fusion applications
p 92 A82-32566

LASER OUTPUTS
Conversion of blackbody radiation into laser energy
[AIAA PAPER 82-0871] p 24 A82-31879
Design and performance characteristics of a CW subsonic HF chemical laser with 120 W power output
p 103 A82-37577

LAW (JURISPRUDENCE)
Utility siting of WECS: A preliminary legal/regulatory assessment
[SERI/TR-744-778] p 4 N82-22667

LEACHING
On the processing of manganese nodules with sulphur containing reagents
[CSIR-TRANS-1503] p 13 N82-25336

LEAD (METAL)
The boreholes Ortenburg 1 and 2 (1980/81)
[BMFT-FB-T-82-004] p 86 N82-27516

LEAD ACID BATTERIES
Vehicle test report: Jet Industries Electra Van 600
[NASA-CR-168986] p 125 N82-26048
Nickeizinc batteries for RPV applications
[AD-A111087] p 125 N82-26809
Lead-acid batteries in solar photovoltaic power systems for marine aids to navigation
[AD-A112151] p 57 N82-26811

LEAD SULFIDES
Chemically sprayed PbS coatings for photothermal solar energy conversion. R. C. Agarwal and P. K. C. Pillai
p 38 A82-36210

LEARNING CURVES
Czochralski silicon solar cell modules - Present cost and future prospects p 38 A82-36864

LEASING
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 7 N82-23043

LEGAL LIABILITY
Solar Energy Legal Bibliography second update
[SERI/TR-744-876] p 48 N82-23681
Fossil and synthetic fuels miscellaneous, part 1
[GPO-84-010] p 76 N82-24351
Safety and liability considerations for photovoltaic modules/panels
[NASA-CR-168938] p 52 N82-24721

LENS DESIGN
Passive solar reflector satellite revisited
p 43 N82-22715

LIFE (DURABILITY)
Variation of minority carrier lifetime with level of injection in p-n-junction devices p 20 A82-29233

LIGHT SOURCES
A comment on the generalization of the theoretical basis of photovoltaic concentrators for extended light sources
p 39 A82-36869

LIGHTNING SUPPRESSION
Evaluation of lightning accommodation systems for wind-driven turbine rotors
[NASA-TM-82784] p 105 N82-23679

LIGNITE
Application of remote sensing to state and regional problems
[E82-10288] p 77 N82-24566
Synthetic-fuel production using Texas lignite and a very high temperature gas cooled reactor for process heat and electrical power generation
[DE82-900466] p 63 N82-26492
Acid rain in Texas' energy future
[DE82-900465] p 17 N82-26880

LINEAR ARRAYS
Heat loss factor for linear solar concentrators
p 38 A82-36208

LIPIDS
Photochemical energy conversion in chlorophyll-containing lipid bilayer vesicles
p 21 A82-29317

LIQUEFIED NATURAL GAS
Ammonia as a hydrogen energy-storage medium
p 64 N82-24704
Three-dimensional, conservation equation model for simulating LNG vapor dispersion in the atmosphere
[DE82-001053] p 20 N82-27874

LIQUID FUELS
Net energy anaysis of methanol and ethanol production p 67 A82-32333
Crossed-reaction networks in the catalytic hydrodenitrogenation of synthetic liquid fuels
[DE82-003092] p 81 N82-26422

LIQUID HYDROGEN
Very large aircraft with alternate fuels - LH2 most promising
[AIAA PAPER 82-0813] p 62 A82-31986
Cooperative international liquid hydrogen automotive progress report p 63 A82-32164
Will hydrogen-fueled aircraft be safe
[AIAA PAPER 82-1236] p 63 A82-35077
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002170] p 116 N82-22444
Static feed water electrolysis for large scale hydrogen generation p 64 N82-24699
Ammonia as a hydrogen energy-storage medium
p 64 N82-24704
Hydrogen microsphere hazard evaluation
p 65 N82-24706

LIQUID PHASES
Theory and tests of two-phase turbines
[NASA-CR-168834] p 104 N82-22661

LIQUID SODIUM
Power plant II - Sodium-water p 32 A82-34556
Power plant VI - Sodium-air p 33 A82-34560
Power plant VI revisited - Sodium-air /a grid-boiler/
p 33 A82-34561

LIQUID WASTES
Heat Energy Recovery from Domestic Output Fluids (HERDOF)
[PB82-134156] p 14 N82-25657

LIQUID-LIQUID INTERFACES
Salinity-gradient vapor-pressure power conversion
p 92 A82-32331

LIQUID-SOLID INTERFACES
Overview of the current status of solid-liquid interface science p 35 A82-35505
Basic research needs and opportunities at the solid-liquid interface p 35 A82-35510
Basic research needs and opportunities for characterizing the microstructure and microchemistry of interfaces p 36 A82-35514

LITHOLOGY
Petrographic characterization of Kentucky coals
[DE82-000411] p 71 N82-22834
Rafi River geoscience case study: Appendixes
[DE82-003553] p 75 N82-23835

LOAD TESTS
Load cases for wind energy conversion systems
p 99 A82-36086

LOADS (FORCES)
Custom Engineering parabolic glass reflector for the Sandia prototype solar collector
[DE82-000800] p 59 N82-26838

LOCOMOTIVES
Future fuels and engines for railroad locomotives. Volume 2: Technical document
[NASA-CR-168983] p 14 N82-26050

LONG RANGE WEATHER FORECASTING
The value of seasonal climate forecasts in managing energy resources p 2 A82-35235

LOW COST
Purification of rice hulls as a source of solar grade silicon for solar cells p 27 A82-34079
Silicon sheet - A key to low cost solar cells
p 28 A82-34082
Low-cost processes for thin-film solar cells
p 29 A82-34091
Ceramic applications in turbine engines --- for automotive application
[AIAA PAPER 82-1168] p 95 A82-35040
Low cost, multipurpose solar energy system
[DE81-030955] p 62 N82-27854

LOW TEMPERATURE
Relatively low-temperature pyrolysis of silane in free space p 28 A82-34080

LOW VOLTAGE
High voltage systems (tube-type microwave)/low voltage system (solid-state microwave) power distribution p 117 N82-22744

LUBRICANTS
Turbine engine lubricant reclamation
[AD-A112098] p 80 N82-26312

LUBRICATION
An alternate test procedure to qualify future fuels for Navy aircraft
[AIAA PAPER 82-1233] p 68 A82-36175

LUMINESCENCE
Luminescent solar-concentrator development
[DE82-000815] p 57 N82-26824

LUMINOUS INTENSITY
The effects of non-uniform illumination of solar cells with concentrated light p 31 A82-34546

M

MAGNETIC ANOMALIES
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 79 N82-25621

MAGNETIC FLUX
Linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft power supply
[NASA-CASE-GSC-12518-1] p 110 N82-24421

MAGNETIC MIRRORS
Design scoping study of the 12T Yin-Yang magnet system for the Tandem Mirror Next Step (TMNS)
[DE82-003218] p 114 N82-27151

MAGNETIC SURVEYS
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 74 N82-23635
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 75 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001002] p 75 N82-23637
Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A
[DE81-027158] p 79 N82-25620
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 79 N82-25621
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D
[DE81-027156] p 79 N82-25622
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1
[DE82-005542] p 88 N82-27804
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2
[DE82-005570] p 88 N82-27805
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 88 N82-27808

MAGNETIC SUSPENSION
New perspectives for kinetic energy storage
p 120 A82-35525
Magnetic bearing flywheels for electric storage --- energy storage flywheels
[SNIAS-821-422-110] p 126 N82-27750
Magnetic suspension and flywheels: Spaceborne and terrestrial applications
[SNIAS-821-422-111] p 126 N82-27751

MAGNETOHYDRODYNAMIC FLOW
Simulation of the start-up transient responses of the UTSI coal-fired MHD power generating system
[AIAA PAPER 82-0920] p 91 A82-31910
Explosion driven magnetogasdynamic flows with high magnetic Reynolds and interaction numbers
[AD-A112049] p 113 N82-27141

MAGNETOHYDRODYNAMIC GENERATORS
Alfven-wave generation in a beam-plasma system
p 90 A82-29738
Simulation of the start-up transient responses of the UTSI coal-fired MHD power generating system
[AIAA PAPER 82-0920] p 91 A82-31910
Fault analysis of mid-channel power takeoff in DCW MHD generators
[AIAA PAPER 82-0922] p 91 A82-31911
Interaction between MHD generator and DC-AC power conversion system
[AIAA PAPER 82-0923] p 91 A82-31912
Modeling parameter influences on MHD swirl combustion nozzle design
[AIAA PAPER 82-0964] p 92 A82-31947
The development of MHD energy conversion methods in the USSR p 93 A82-33996
MHD electrical generator
[NASA-CASE-NPO-15399-1] p 110 N82-24079
Axial field limitations in MHD generators. Part 2: Analytical investigation and comparison with experiments
[LOG-E763] p 111 N82-24981
Impact of uniform electrode current distribution on ETF
[NASA-TM-82675] p 111 N82-25636
Optimization of the oxidant supply system for combined cycle MHD power plants
[NASA-TM-82009] p 112 N82-26780
MHD phenomena at high magnetic Reynolds number
[AD-A110929] p 113 N82-27081
Explosion driven magnetogasdynamic flows with high magnetic Reynolds and interaction numbers
[AD-A112049] p 113 N82-27141

High power MHD system: Facility status and magnet test results
[AD-A112102] p 113 N82-27142
MHD generator electrode development
[DE82-002561] p 114 N82-27155
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 2: Engineering. Volume 3: Costs and schedules
[NASA-CR-165452-VOL-2] p 114 N82-27837
Comparative analysis of the conceptual design studies of potential early commercial MHD power plants (CSPEC)
[NASA-TM-82897] p 114 N82-27838
Power supply subsystem for MHD generator superconducting magnet, baseline power supply designs and costs
[DE81-024285] p 115 N82-27850

MAGNETOHYDRODYNAMICS
Results and comparison of Hall and DW duct experiments
[NASA-TM-82864] p 111 N82-25961

MAGNETS
High power MHD system: Facility status and magnet test results
[AD-A112102] p 113 N82-27142

MAINE
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640

MAINTENANCE
Structural design and maintenance policies for large wind turbines p 100 A82-36095

MANAGEMENT INFORMATION SYSTEMS
Appropriateness in using LANDSAT in development energy related data bases p 4 N82-22585

MANAGEMENT METHODS
Overview of the Chemical/Hydrogen Energy Systems (C/HES) program p 64 N82-24689

MANAGEMENT PLANNING
New York State industrial energy profile, volume 1
[PB82-126848] p 7 N82-22790

MANGANESE
On the processing of manganese nodules with sulphur containing reagents
[CSIR-TRANS-1603] p 13 N82-25336

MANUFACTURING
Near-term high potential counties for SWECS
[SERI/TR-98282-11] p 104 N82-22671
Overview of a new slicing method: Fixed Abrasive Slicing Technique (FAST) p 47 N82-23669
ID slicing and the automated factory p 47 N82-23672
Battery resource assessment. Volume 1: Scenarios, investment, and materials cost
[DE82-006243] p 126 N82-26852

MAPPING
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 75 N82-23638

MARINE ENVIRONMENTS
A summary of Environmental Geologic Studies on the southeastern United States Atlantic Outer Continental Shelf
[PB82-109273] p 80 N82-25731
Accelerated stress testing of solar photovoltaic modules
[AD-A107378] p 61 N82-27840

MARKET RESEARCH
The significance of coal and other solid fuels for the requirements of the energy economy. I - The present and future significance of solid and other fuels for the world and particularly Western Europe p 1 A82-29425
Near-term high potential counties for SWECS
[SERI/TR-98282-11] p 104 N82-22671
Small-wind-systems application analysis. Technical report and executive summary
[DE82-003748] p 109 N82-23749
Effects off system factors on the economics of and demand for small solar thermal power systems
[NASA-CR-169043] p 58 N82-26800
Small wind systems application analysis. Executive summary
[DE82-004206] p 113 N82-26841
Battery resource assessment. Volume 1: Scenarios, investment, and materials cost
[DE82-006243] p 126 N82-26852
DOE/NASA SIMS Prototype Solar System, no. 4. Part 1: Market analysis. Part 2: Modular manufacturing cost estimate p 61 N82-27835

MARKETING
Solar central receivers: The technology, industry, markets, and economics
[DE82-005267] p 60 N82-26857
Uses of the FRS data base for energy policy analysis
[DE82-001662] p 16 N82-26864

MASS SPECTROSCOPY
Characterization of Rocky Mountain coals and coal liquid by computerized analytical techniques
[DE82-001802] p 71 N82-23287

MASS TRANSFER
Vibrating zinc electrodes in Ni/Zn batteries p 119 A82-31841

MASSACHUSETTS
Analysis of potential geothermal resources and their use: Lebanon Springs, New York
[PB82-147380] p 89 N82-27834

MATERIALS HANDLING
A novel batch-type hydrogen transmitting system using metal hydrides p 64 A82-37445
Static feed water electrolysis for large scale hydrogen generation p 64 N82-24699

MATERIALS SCIENCE
Polycrystalline thin films for terrestrial solar cells p 22 A82-30328

MATERIALS TESTS
Photovoltaic encapsulation materials p 29 A82-34093

MATHEMATICAL MODELS
On the climatic optimization of the tilt and azimuth of flat-plate solar collectors p 21 A82-29318
Analysis of open inclined surface solar regenerators for absorption cooling applications - Comparison between numerical and analytical models p 21 A82-29319
Modeling parameter influences on MHD swirl combustion nozzle design
[AIAA PAPER 82-0984] p 92 A82-31947
Sites for wind-power installations - Physical modelling of the wind field over Kahuku Point, Oahu, Hawaii p 98 A82-36080
A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory p 100 A82-36096
Modelling of wind turbine arrays p 101 A82-36102
On wake decay and row spacing for WECS farms p 101 A82-36104
The capacity credit of wind power - A numerical model p 101 A82-36110
Computer modeling of coal-gasification reactors. Volume 2: Technical report
[DE82-009767] p 73 N82-23337
GE MOD-1 noise study p 108 N82-23727
Prediction of low frequency and impulsive sound radiation from horizontal axis wind turbines p 109 N82-23729
The NASA-LeRC wind turbine sound prediction code p 109 N82-23730
Validation and Assessment of energy Models. Proceedings
[PB82-123951] p 10 N82-23782
The energy supply model MESSAGE
[RR-81-31] p 13 N82-25632
Energy-economy analysis and application to R and D planning
[PB82-141126] p 20 N82-28221

MATRICES (CIRCUITS)
Switching networks for realisation of variable DC transformers coupled to rectangular arrays p 94 A82-34951

MATRIX MATERIALS
Alternate matrix material for molten carbonate fuel cell electrolyte structures p 91 A82-31844

MECHANICAL DEVICES
Testing the shearer-loader EDW 170/200 LN for thin seams in connection with chainless haulage --- coal mining
[BMFT-FB-T-82-017] p 70 N82-22638

MECHANICAL DRIVES
Second-generation heliostat development for solar-central receivers, detail design report. Volume 1, appendix
[DE82-001842] p 45 N82-22778
Second-generation heliostat development for solar-central receivers: Volume 1, detail design report. Appendix 2
[DE82-001843] p 45 N82-22779
Design aspects of a solar array drive for spot, with a high platform stability objective p 46 N82-23353
A deployment mechanism for the double roll-out flexible solar array on the space telescope p 46 N82-23359
Vertical axis wind turbine drive train transient dynamics p 107 N82-23719
Utilization of flywheel-hybrid drive trains for commercial taxicab vehicles
[DE82-001670] p 18 N82-27194

MECHANICAL PROPERTIES
Fracture mechanics of ductile and tough materials and its applications to energy related structures --- Book p 127 A82-29483
Use of solar furnaces. II - Thermophysical properties p 24 A82-31568

MEMBRANES
Silicon dendritic web material
[NASA-CR-169053] p 55 N82-26793

METAL COATINGS
Development of technique for AR coating and nickel and copper metallization of solar cells. FPS Project: Product development
[NASA-CR-169055] p 55 N82-26797

METAL HYDRIDES
Metal hydrides for energy storage p 118 A82-28650
A novel batch-type hydrogen transmitting system using metal hydrides p 64 A82-37445
Development status of a metal hydride process for hydrogen recovery p 64 N82-24696
Development status of solid polymer electrolyte water electrolysis for large scale hydrogen generation p 64 N82-24697

METAL SURFACES
Properties of spray-deposited cobalt oxide selective coatings on aluminium and galvanised iron substrates --- for solar absorbers p 30 A82-34489

METAL WORKING
Demonstration of a nitrogen-based carburizing atmosphere
[DE82-004196] p 19 N82-27851

METAL-GAS SYSTEMS
A novel batch-type hydrogen transmitting system using metal hydrides p 64 A82-37445

METALLIZING
Parabolic model for optimizing grid and bus metallization patterns in circular solar cells p 29 A82-34088

METEOROLOGICAL PARAMETERS
Meteorological effects on laser propagation for power transmission p 115 A82-32368
Power availability at terrestrial receptor sites for laser-power transmission from the satellite power system p 116 A82-32369
Rectenna related atmospheric effects p 6 N82-22754

METEOROLOGY
Calculated effects of temperature, intensity and atmospheric conditions on the thermodynamic limits for conversion of solar energy to work on stored energy
[DE81-030876] p 57 N82-26815

METHANE
NOx formation in flat, laminar, opposed jet methane diffusion flames p 65 A82-28660
The turbulent reaction field in a concentric diffusion flame p 66 A82-28690
Methane Hydrate Resource Assessment Program
[DE82-002478] p 79 N82-25624
Concepts of fundamental processes related to gasification of coal
[DE81-023067] p 84 N82-26501
Process selection and investment analysis, methanation facility for purox pyrolysis system off-gas
[DE82-004584] p 18 N82-27452
BI-GAS pilot plant
[DE82-004753] p 87 N82-27532
Investigation into the economy of methane gas utilization in sewage treatment plants
[BMFT-FB-T-82-025] p 89 N82-27857

METHYL ALCOHOLS
Experimental investigation of methanol oxidation in flames Mechanisms and rate constants of elementary steps p 65 A82-28679
Net energy analysis of methanol and ethanol production p 67 A82-32333
Efficiencies of heat engines and fuel cells - The methanol fuel cell as a competitor to Otto and Diesel engines p 92 A82-32372
Characterization of alcohol/gasoline blends as automotive fuel: Performance and emissions characteristics
[DE82-000124] p 72 N82-23331
A chemical heat pump based on the reaction of calcium chloride and methanol for solar heating, cooling and storage p 51 N82-24692

MICROELECTRONICS
Possibilities for energy consumption through microelectronics
[BMFT-FB-T-82-0022] p 19 N82-27856

MICROSTRUCTURE
Basic research needs and opportunities for characterizing the microstructure and microchemistry of interfaces p 36 A82-35514

MICROWAVE EQUIPMENT
High voltage systems (tube-type microwave)/low voltage system (solid-state microwave) power distribution p 117 N82-22744

MICROWAVE TRANSMISSION
Simulation of D and E region high-power microwave heating with HF ionospheric modification experiments --- solar power satellite transmission effects p 116 A82-33447

Optimization of the region of inverse conversion in a cyclotron microwave converter — for microwave to electric conversion p 94 A82-34521
Numerical simulation of recovery processes in a cyclotron converter — for microwave to electric conversion p 94 A82-34522
Ground-based receiving-converting complex for satellite solar power systems p 94 A82-34523
The Final Proceedings of the Solar Power Satellite Program Review
[NASA-TM-84183] p 42 N82-22676
Environmental assessment overview p 4 N82-22678
Societal assessment overview p 5 N82-22679
Critical technology areas of an SPS development and the applicability of European technology p 43 N82-22687
Ionospheric disturbance overview p 5 N82-22689
Electromagnetic compatibility overview p 5 N82-22690
Nonmicrowave health and ecological effects: Overview p 5 N82-22691
SPS microwave health and ecological effects: Program area overview p 5 N82-22692
An evaluation of the land and material requirements for the satellite power system p 5 N82-22693
Reference system characterization and cost overview p 43 N82-22694
Power transmission and reception. An overview and perspective p 116 N82-22723
Microwave system performance summary p 117 N82-22724
High-power microwave optics for flexible power transmission systems p 117 N82-22742
Microwave heating of the lower ionosphere p 117 N82-22747
Cooperative effort urged for development of orbital power stations p 118 N82-24261
Advanced space system concepts and their orbital support needs (1980 - 2000) p 118 N82-27362

MILITARY AIRCRAFT
An alternate test procedure to qualify future fuels for Navy aircraft
[AIAA PAPER 82-1233] p 68 A82-36175

MILITARY OPERATIONS
The EMC of satellite power systems and DoD C-E systems p 44 N82-22750
Nickelzinc batteries for RPV applications
[AD-A111087] p 125 N82-26809

MILITARY SPACECRAFT
Military implications of a satellite power system p 36 A82-35608

MILITARY TECHNOLOGY
Military implications of a satellite power system p 36 A82-35608
Suitability of shale fuels for Army generator sets
[AD-A112609] p 87 N82-27522

MINERAL DEPOSITS
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 7 N82-23043
Airborne gamma-ray spectrometer and magnetometer survey, Kenora quadrangle, Minnesota, volume 1
[DE82-001029] p 74 N82-23625
Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A
[DE81-027158] p 79 N82-25620
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D
[DE81-027156] p 79 N82-25622
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 88 N82-27808

MINERAL EXPLORATION
Influence of the carrying vehicle in the aerospatial survey of natural radioactivity
[E82-10169] p 70 N82-22604
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 79 N82-25621
The boreholes Ortenburg 1 and 2 (1980/81)
[BMFT-FB-T-82-004] p 86 N82-27516
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2
[DE82-005570] p 88 N82-27805

MINERAL OILS
Secondary recovery: Changing of the viscosity and compressibility of mineral oils with dissolved gas
[BMFT-FB-T-81-225] p 69 N82-22339

MINERALS
Moessbauer spectroscopy study on the effect of infrared and gamma radiation on the structure of minerals. Part of coordinated programme on development of methods for application of Moessbauer spectroscopy in mineralogy, soil sciences and the study of ceramics
[DE81-700780] p 76 N82-24350
On the processing of manganese nodules with sulphur containing reagents
[CSIR-TRANS-1603] p 13 N82-25336
A summary of Environmental Geologic Studies on the southeastern United States Atlantic Outer Continental Shelf
[PB82-109273] p 80 N82-25731

MINES (EXCAVATIONS)
Health and safety evaluation of a modified tunnel borer design for application to single entry coal mine development
[NASA-CR-168807] p 70 N82-22631
Paraho oil shale module. Critical items identification, task 11
[DE82-003727] p 70 N82-22634
LANDSAT Remote Sensing: Observations of an Appalachian mountaintop surface coal mining and reclamation operation — Kentucky
[E82-10247] p 77 N82-24525

MINING
Health and safety evaluation of a modified tunnel borer design for application to single entry coal mine development
[NASA-CR-168807] p 70 N82-22631
Evaluation of ADAM/1 model for advanced coal extraction concepts
[NASA-CR-168812] p 70 N82-22632
Timesaving methods adaptable to mining which utilize structural information on the forefield while applying new technologies — forefield survey methods, data processing and analysis
[BMFT-FB-T-81-220] p 4 N82-22637
Testing the shearer-loader EDW 170/200 LN for thin seams in connection with chainless haulage — coal mining
[BMFT-FB-T-82-017] p 70 N82-22638
Effect of heated diesel fuel on particulate generation and fuel consumption for a Deutz F6L 912 engine
[DE82-900385] p 7 N82-22803
Coal seam exploration with special regard to the application of seismic methods for the detection of dykes
[CSIR-ME-1721] p 71 N82-22831
Mean annual streamflow of selected drainage basins in the coal area of southeastern Montana
[PB82-137696] p 79 N82-25627
Investigation of problems and benefits of underground multiple seam coal mining
[DE82-002807] p 88 N82-27801
Natural radioactivity contamination problems
[PB82-140443] p 89 N82-27884

MINNESOTA
The potential for utility conservation investments in Minnesota
[PB82-122219] p 7 N82-22792
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 75 N82-23637
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 75 N82-23638

MINORITY CARRIERS
Variation of minority carrier lifetime with level of injection in p-n-junction devices p 20 A82-29233
New experimental evidence for minority-carrier reflection at negative-barrier MIS contacts — from solar cell open circuit voltage measurement p 34 A82-35247

MIRRORS
Enhancement of concentration using simple multi-plane mirrors p 23 A82-31099

MIS (SEMICONDUCTORS)
New experimental evidence for minority-carrier reflection at negative-barrier MIS contacts — from solar cell open circuit voltage measurement p 34 A82-35247
Modification of open-circuit voltage of metal-insulator-semiconductor solar cells due to a nonuniform insulating layer p 34 A82-35500
Conductor-insulator-semiconductor organic solar cells p 39 A82-36865

MISSILE BODIES
Research and development at MBB. Technical and scientific publications, 1981 p 127 N82-23137

MISSION PLANNING
USAF solar thermal applications case studies
[NASA-CR-169054] p 56 N82-26801

MISSISSIPPI
Application of remote sensing to state and regional problems
[E82-10266] p 77 N82-24568

MODELS
Modelling of oil shale retorts for electromagnetic sensing techniques
[PB82-153321] p 86 N82-27459

MOLDING MATERIALS
Development effort of sheet molding compound /SMC/ parabolic trough panels p 39 A82-37116

MOLTEN SALT ELECTROLYTES
The thermodynamics of electrolyte distribution in molten carbonate fuel cells p 91 A82-31843
Alternate matrix material for molten carbonate fuel cell electrolyte structures p 91 A82-31844
The effect of sulfur on the anodic H2 /Ni/ electrode in fused Li2CO3-K2CO3 at 650 C p 103 A82-37627

MOLTEN SALTS
Themis - A solar power station p 31 A82-34551
Power plant I - Fused salt p 32 A82-34555
Power plant IV - Therm-Thek p 33 A82-34558
Characterization of the corrosion environment of the desert near Bartstow, California
[DE82-003876] p 50 N82-23800
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
Direct contact heat transfer for thermal energy storage p 123 N82-24667
High-temperature molten salt thermal energy storage systems for solar applications p 123 N82-24670
Active heat exchange: System development for latent heat thermal energy storage p 124 N82-24671
The 1980 report on NRL energy storage program p 124 N82-24672
Solar thermal power storage applications lead laboratory overview p 51 N82-24675
Corrosion behavior of alloys p 51 N82-24679
Molten salt coal gasification process development unit, phase 2
[DE82-004717] p 83 N82-26498

MOLYBDENUM
Investigation of continuous deposition of AMA-type coatings onto strip and sheet by sputtering
[DE82-004266] p 53 N82-26458

MOLYBDENUM ALLOYS
Development of automated welding process for field fabrication of thick walled pressure vessels — for coal gasification plants
[DE82-004421] p 85 N82-26695

MOLYBDENUM OXIDES
Advanced thermionic technology program
[DE82-002116] p 115 N82-27846

MONTANA
Mean annual streamflow of selected drainage basins in the coal area of southeastern Montana
[PB82-137696] p 79 N82-25627

MOSSBAUER EFFECT
Moessbauer spectroscopy study on the effect of infrared and gamma radiation on the structure of minerals. Part of coordinated programme on development of methods for application of Moessbauer spectroscopy in mineralogy, soil sciences and the study of ceramics
[DE81-700780] p 76 N82-24350

MOTOR VEHICLES
Present and future energy consumption for passenger transportation in Germany
[ISBN-3-87977-051-4] p 8 N82-23072
Utilization of flywheel-hybrid drive trains for commercial taxicab vehicles
[DE82-001670] p 18 N82-27194

MULTISPECTRAL PHOTOGRAPHY
Appropriateness in using LANDSAT in development energy related data bases p 4 N82-22585

N

N-TYPE SEMICONDUCTORS
Processing for high photocurrent in IBC solar cells p 29 A82-34087
Effective drift current densities in the n-type heavily doped emitter region of p-n/plus/ junction silicon solar cells p 39 A82-36867

NASA PROGRAMS
The 1983 NASA Authorization, Volume 1
[GPO-91-488-VOL-1] p 8 N82-23066

NATURAL GAS
Stability limits of natural gas diffusion flames with swirl p 66 A82-28681
Analyses of natural gas in Illinois
[PB82-124322] p 75 N82-23645
Methane Hydrate Resource Assessment Program
[DE82-002478] p 79 N82-25624
US Lake Erie natural gas resource development. Programmatic environmental impact statement
[AD-A112074] p 14 N82-25662
US energy flow, 1980
[DE82-002647] p 16 N82-26855

Liquid fossil fuel technology
[DE82-004725] p 87 N82-27530

NATURAL GAS EXPLORATION
Methane Hydrate Resource Assessment Program
[DE82-002478] p 79 N82-25624

NAVIGATION AIDS
Lead-acid batteries in solar photovoltaic power systems for marine aids to navigation
[AD-A112151] p 57 N82-26811

NETWORK SYNTHESIS
Switching networks for realisation of variable DC transformers coupled to rectangular arrays
p 94 A82-34951
Impact of uniform electrode current distribution on ETF
[NASA-TM-82875] p 111 N82-25636

NEW ENGLAND (US)
Penobscot River basin overview
[PB82-131467] p 4 N82-22639
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640
Energy in New England: Transition to the 80's
[DE82-000234] p 9 N82-23763

NEW MEXICO
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary
[DE82-001349] p 74 N82-23619
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp
[DE82-001347] p 74 N82-23620
Geothermal potential on Kirtland Air Force Base lands, Bernalillo County, New Mexico
[AD-A107044] p 89 N82-27841

NEW YORK
New York State industrial energy profile, volume 1
[PB82-126848] p 7 N82-22790
Hydropowered electrolysis in New York State
p 111 N82-24707
Investigations of low-temperature geothermal potential in New York state
[DE82-002517] p 78 N82-25617
Analysis of potential geothermal resources and their use: Lebanon Springs, New York
[PB82-147380] p 89 N82-27834

NICKEL
Advanced thermionic technology program
[DE82-002116] p 115 N82-27846

NICKEL ALLOYS
The gas turbine engine p 90 A82-28587
Corrosion behavior of alloys p 51 N82-24679

NICKEL COATINGS
Spectral selectivity of nickel and chromium rough surfaces p 23 A82-31440

NICKEL COMPOUNDS
Chromatographic studies of vanadium compounds from boscan crude oil
[DE82-000977] p 68 N82-22335

NICKEL PLATE
Development of technique for AR coating and nickel and copper metallization of solar cells. FPS Project: Product development
[NASA-CR-169055] p 55 N82-26797

NICKEL ZINC BATTERIES
Vibrating zinc electrodes in Ni/Zn batteries
p 119 A82-31841
Cross-linked polyvinyl alcohol films as alkaline battery separators
[NASA-TM-82802] p 103 N82-22327
Nickelzinc batteries for RPV applications
[AD-A111087] p 125 N82-26809

NITRATES
Corrosion behavior of alloys p 51 N82-24679

NITRIC OXIDE
Low NO sub x heavy fuel combustor concept program. Phase 1A: Combustion technology generation coal gas fuels
[NASA-CR-165614] p 68 N82-22326
Environmental effects of solar-thermal power systems. The potential production of air pollutants near STPS receiver stations
[DE82-002413] p 17 N82-26882

NITRIDES
A conceptual design study of a high temperature solar thermal receiver
[NASA-CR-168925] p 51 N82-24720

NITROGEN OXIDES
NOx formation in flat, laminar, opposed jet methane diffusion flames p 65 A82-28660
Melting chamber combustion with reduced emission of nitrogen oxides — coal fired power plant furnace design
[BMFT-FB-T-81-228] p 7 N82-22810
The debate over acid precipitation: Opposing views, status of research
[AD-A106925] p 19 N82-27870

NODULES
On the processing of manganese nodules with sulphur containing reagents
[CSIR-TRANS-1603] p 13 N82-25336

NOISE MEASUREMENT
Measured and calculated characteristics of wind turbine noise p 108 N82-23724
Acoustic noise generation by the DOE/NASA MOD-1 wind turbine p 108 N82-23726
Prediction of low frequency and impulsive sound radiation from horizontal axis wind turbines
p 109 N82-23729

NOISE POLLUTION
Acoustic noise generation by the DOE/NASA MOD-1 wind turbine p 108 N82-23726

NOISE PROPAGATION
Enhancement of far field sound levels by refractive focusing p 108 N82-23728
Noise generation of upwind motor wind turbine generators p 109 N82-23731
Downwind rotor horizontal axis wind turbine noise prediction p 109 N82-23732
Guide to the evaluation of human exposure to noise from large wind turbines
[NASA-TM-83288] p 11 N82-24051

NOISE REDUCTION
Measured and calculated characteristics of wind turbine noise p 108 N82-23724
The NASA-LeRC wind turbine sound prediction code
p 109 N82-23730
Wind turbine acoustic standards p 109 N82-23733

NOISE THRESHOLD
Guide to the evaluation of human exposure to noise from large wind turbines
[NASA-TM-83288] p 11 N82-24051

NONUNIFORM FLOW
Determination of temperature distribution in the flow of a hot gas on the basis of a self-reversed spectral line profile p 103 A82-37549

NORTH DAKOTA
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 74 N82-23635
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 75 N82-23636

NOZZLE DESIGN
Modeling parameter influences on MHD swirl combustion nozzle design
[AIAA PAPER 82-0984] p 92 A82-31947

NUCLEAR ELECTRIC POWER GENERATION
Summary of hearings on the future of the nation's energy utilities: Implications for Federal RD&D
[GPO-91-815] p 13 N82-25633

NUCLEAR ELECTRIC PROPULSION
Study of reactor Brayton power systems for nuclear electric spacecraft
[NASA-CR-168942] p 110 N82-24289

NUCLEAR ENERGY
Space and energy - A global viewpoint
p 2 A82-34119
Space and energy: Global viewpoint
[MBB-UR-489-81-O] p 45 N82-22784

NUCLEAR FUELS
Production cost comparisons of hydrogen from fossil and nuclear fuel and water decomposition
p 65 N82-24710
Space nuclear safety and fuels program
[DE82-004183] p 80 N82-25944
Space nuclear safety and fuels program
[DE82-004188] p 80 N82-25945

NUCLEAR POWER PLANTS
Potable water standards project
[MLM-2819] p 10 N82-23791
ELMO Bumpy Torus Reactor and power plant: Conceptual design study
[DE82-002437] p 112 N82-25984

NUCLEAR PROPELLED AIRCRAFT
Very large aircraft with alternate fuels - LH2 most promising
[AIAA PAPER 82-0813] p 62 A82-31986

NUCLEAR REACTORS
Modular stellarator fusion reactor concept — MSR
[DE82-001883] p 111 N82-25981

NUMERICAL ANALYSIS
Numerical solution of the one-dimensional boundary value problem of charge transfer in solar-cell elements
p 22 A82-30058

NUMERICAL CONTROL
Automatic control algorithm effects on energy production p 108 N82-23722

O

OCEAN THERMAL ENERGY CONVERSION
Approach to the realization of a closed cycle Ocean Thermal Energy Conversion /OTEC/ system
p 90 A82-29070
Salinity-gradient vapor-pressure power conversion
p 92 A82-32331
OTEC support services
[DE82-005470] p 115 N82-27853

OCEANOGRAPHY
A summary of Environmental Geologic Studies on the southeastern United States Atlantic Outer Continental Shelf
[PB82-109273] p 80 N82-25731

OFFSHORE ENERGY SOURCES
'L-180 Poseidon' - A new system concept in vertical axis wind turbine technology p 100 A82-36097
US Lake Erie natural gas resource development. Programmatic environmental impact statement
[AD-A112074] p 14 N82-25662

OFFSHORE PLATFORMS
Assessment of offshore siting of wind turbine generators p 97 A82-36077

OIL EXPLORATION
Source rock geochemistry and liquid and solid petroleum occurrences of the Ouachita Mountains, Oklahoma
p 75 N82-23830

OIL FIELDS
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp
[DE82-001347] p 74 N82-23620

OIL RECOVERY
Secondary recovery: Changing of the viscosity and compressibility of mineral oils with dissolved gas
[BMFT-FB-T-81-225] p 69 N82-22339
Crude oil desulfurization
[NASA-CASE-NPO-14542-1] p 71 N82-23282
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary
[DE82-001349] p 74 N82-23619
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp
[DE82-001347] p 74 N82-23620
Liquid fossil fuel technology
[DE82-004725] p 87 N82-27530

OIL SLICKS
Fuel conservation by the application of spill prevention and fail-safe engineering (a guideline manual)
p 8 N82-23682

OILS
Status of Occidental Petroleum's coal-oil-mixture program: An industrial-boiler retrofit
[DE82-900076] p 73 N82-23340
Liquid fossil fuel technology
[DE82-004725] p 87 N82-27530

OPEN CIRCUIT VOLTAGE
Reduction of solar cell efficiency by bulk defects across the back-surface-field junction p 21 A82-29694
The effect of the intermediate layer on the characteristics of Schottky-barrier solar-cell elements
p 22 A82-30059
Temperature coefficients of the open-circuit voltage of p-n junction solar cells p 26 A82-32894
An effect of back-surface boron implantation on silicon solar cells p 26 A82-32895
Diagnostic study of BSF silicon solar cells
p 28 A82-34086
New experimental evidence for minority-carrier reflection at negative-barrier MIS contacts — from solar cell open circuit voltage measurement p 34 A82-35247
Modification of open-circuit voltage of metal-insulator-semiconductor solar cells due to a nonuniform insulating layer p 34 A82-35500

OPERATING COSTS
A fleet manager's guide to vehicles for valid results
[DOE/CS-56051/04] p 8 N82-23533

OPERATING TEMPERATURE
Determination of the stagnation temperature of flat plate solar collectors p 39 A82-37588

OPERATIONAL HAZARDS
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000669] p 121 N82-23738
OPTICAL EQUIPMENT
Energy related optical coatings p 90 A82-30331
Holography creates new breed of optical components --- construction, reconstruction and application of surface relief and volume holograms p 37 A82-35886
OPTICAL MEASURING INSTRUMENTS
An optical heliostat for solar power stations
p 23 A82-31492
OPTICAL PROPERTIES
Solar absorptance and thermal emittance of Al2O3 films on Al - A theoretical assessment p 21 A82-29250
Energy related optical coatings p 90 A82-30331
Properties of spray-deposited cobalt oxide selective coatings on aluminium and galvanised iron substrates --- for solar absorbers p 30 A82-34489
A comment on the generalization of the theoretical basis of photovoltaic concentrators for extended light sources
p 39 A82-36869
Optical characterization of solar concentrator mirrors using the solar beam of the JPL 25-foot space simulator
p 52 N82-25296
Optical analysis and optimization of parabolic-trough collectors: A user's guide
[DE82-003146] p 58 N82-26834
OPTICAL PUMPING
Laser satellite power systems - Concepts and issues
p 116 A82-32370
OPTICAL REFLECTION
Thick optical films for the conduction of optical and infrared radiation --- for light concentration onto solar cells p 24 A82-32543
OPTIMAL CONTROL
France's superfast train p 102 A82-36394
OPTIMIZATION
Solar power stations - Heat transfer and thermal optimization in the production of saturated water vapor
p 22 A82-30060
An optimal heliostat for solar power stations
p 23 A82-31492
Optimization of the operation of a wind power plant
p 92 A82-33397
Parabolic model for optimizing grid and bus metallization patterns in circular solar cells p 29 A82-34088
Optimization of the oxidant supply system for combined cycle MHD power plants
[NASA-TM-82909] p 112 N82-26790
ORBITAL ASSEMBLY
Cooperative effort urged for development of orbital power stations p 118 N82-24261
OREGON
The Mt. Hood region - Volcanic history, structure, and geothermal energy potential p 66 A82-31244
ORGANIC MATERIALS
Source rock geochemistry and liquid and solid petroleum occurrences of the Ouachita Mountains, Oklahoma
p 75 N82-23830
ORGANIC SEMICONDUCTORS
Conductor-insulator-semiconductor organic solar cells
p 39 A82-36965
Ionized impurity induced photocarrier generation in organic energy conversion systems p 41 A82-37944
ORGANIC WASTES (FUEL CONVERSION)
Assessment of secondary residues. Engineering and economic analysis
[DE82-000925] p 85 N82-26771
OSMOSIS
Osmotic pumped heat pipes for large space platforms
[AIAA PAPER 82-0902] p 115 A82-31897
OTTO CYCLE
Efficiencies of heat engines and fuel cells - The methanol fuel cell as a competitor to Otto and Diesel engines
p 92 A82-32372
OUTLET FLOW
Amplified wind turbine apparatus
[NASA-CASE-MFS-23830 1] p 111 N82-24639
OXIDATION
Experimental investigation of methanol oxidation in flames Mechanisms and rate constants of elementary steps p 65 A82-26679
OXIDE FILMS
Solar absorptance and thermal emittance of Al2O3 films on Al - A theoretical assessment p 21 A82-29250
Spectral selectivity of nickel and chromium rough surfaces p 23 A82-31440
Properties of spray-deposited cobalt oxide selective coatings on aluminium and galvanised iron substrates --- for solar absorbers p 30 A82-34489
OXIDIZERS
Optimization of the oxidant supply system for combined cycle MHD power plants
[NASA-TM-82909] p 112 N82-26790
OXYGEN PRODUCTION
Optimization of the oxidant supply system for combined cycle MHD power plants
[NASA-TM-82909] p 112 N82-26790

P

P-I-N JUNCTIONS
Transport in hydrogenated amorphous silicon p-i-n solar cells p 21 A82-29096
Energy conversion process of p-i-n amorphous Si solar cells p 26 A82-33255
High current post-hydrogenated chemical vapor deposited amorphous silicon p-i-n diodes
p 27 A82-33686
P-N JUNCTIONS
Variation of minority carrier lifetime with level of injection in p-n-junction devices p 20 A82-29233
Temperature dependence of silicon solar cell characteristics p 20 A82-29249
Numerical solution of the one-dimensional boundary value problem of charge transfer in solar-cell elements
p 22 A82-30058
Temperature coefficients of the open-circuit voltage of p-n junction solar cells p 26 A82-32894
Efficient CdSe/p/+/n Si tunnel junction photoanode for solar cell p 26 A82-33683
Photovoltaic power systems - State of the art - 1980
p 28 A82-34085
Ineffectiveness of low-high junctions in optimized solar cell designs p 31 A82-34545
Two-element cascade Al-Ga-As solar cell
p 37 A82-36117
Effective drift current densities in the n-type heavily doped emitter region of p-n/plus/ junction silicon solar cells p 39 A82-36867
P-N-P JUNCTIONS
Investigation of mirror concentrators intended for operation with high-current solar cells
p 22 A82-30061
The role of Be in /GaAl/As/GaAs solar cells
p 40 A82-37633
P-TYPE SEMICONDUCTORS
p-type amorphous silicon/liquid junction solar cell
p 40 A82-37634
PANELS
Design, fabrication and test of liquid metal heat-pipe sandwich panels
[AIAA PAPER 82-0903] p 115 A82-31898
PAPER (MATERIAL)
Collection and dissemination of thermal energy storage system information for the pulp and paper industry
p 125 N82-24686
PARABOLIC ANTENNAS
A point focusing collector for an integrated water/power complex
[MBB-UR-579-81-OE] p 46 N82-23149
PARABOLIC BODIES
Optical analysis and optimization of parabolic-trough collectors: A user's guide
[DE82-003146] p 58 N82-26834
PARABOLIC REFLECTORS
Development effort of sheet molding compound /SMC/ parabolic trough panels p 39 A82-37116
Subsystems design and component development for the parabolic dish module for solar thermal power systems
[NASA-CR-168941] p 51 N82-24646
Storage requirements definition and SRE design for dish Stirling systems p 124 N82-24683
Thermal energy buffer storage for the small community solar thermal power experiment p 124 N82-24684
Dish concentrators for solar thermal energy: Status and technology development
[NAS 1.26:168994] p 52 N82-25639
An overview of the value of parabolic dish solar thermal systems in industrial cogeneration applications
[NASA-CR-169063] p 54 N82-26785
Custom Engineering parabolic glass reflector for the Sandia prototype solar collector
[DE82-000800] p 59 N82-26838
PARABOLOID MIRRORS
Investigation of mirror concentrators intended for operation with high-current solar cells
p 22 A82-30061
Concentration of a Cassegrain solar furnace
p 25 A82-32546
Comparison of Fresnel lenses and parabolic mirrors as solar energy concentrators p 26 A82-33022
Optical characterization of solar concentrator mirrors using the solar beam of the JPL 25-foot space simulator
p 52 N82-25296
PARAFFINS
Some thermophysical properties of paraffin wax as a thermal storage medium
[AIAA PAPER 82-0846] p 119 A82-31869
PARAMETER IDENTIFICATION
Modeling parameter influences on MHD swirl combustion nozzle design
[AIAA PAPER 82-0984] p 92 A82-31947
PARTICLE SIZE DISTRIBUTION
Stationary thermal ignition of particle suspensions
[AIAA PAPER 82-0881] p 66 A82-31886
PASSENGERS
Present and future energy consumption for passenger transportation in Germany
[ISBN-3-87977-051-4] p 8 N82-23072
Urban transportation energy accounts. Volume 1: Procedures. Volume 2: Case study of the Chicago region
[PB82-135542] p 15 N82-26054
PASTES
Development of technique for AR coating and nickel and copper metallization of solar cells. FPS Project: Product development
[NASA-CR-169055] p 55 N82-26797
PATENT APPLICATIONS
Supercritical solvent coal extraction
[NASA-CASE-NPO-15210-1] p 82 N82-26481
PEELING
The CLEFT process - A technique for producing epitaxial films on reusable substrates p 30 A82-34097
PERFORMANCE PREDICTION
Solar-powered airplane design for long-endurance, high-altitude flight
[AIAA PAPER 82-0811] p 24 A82-31984
Design, performance and economics of the DAF Indal 50 kW and 375 kW vertical axis wind turbine
[ASME PAPER 82-PET-6] p 97 A82-35486
The efficiency of wind turbine clusters
p 101 A82-36101
A simulation model of an electricity generating system incorporating wind turbine plant p 101 A82-36109
SPS and alternative technologies cost and performance evaluations p 43 N82-22695
User's manual for the vertical axis wing turbine code VDART2
[DE82-000796] p 112 N82-26828
User's manual for DELSOL2: A computer code for calculating the optical performance and optimal system design for solar-thermal central-receiver plants
[DE82-003875] p 61 N82-27026
PERFORMANCE TESTS
The Southern California Edison Wind Turbine Generator Test Program
[ASME PAPER 82-PET-2] p 96 A82-35482
Wisconsin Power and Light Company's wind energy research and demonstration program
[ASME PAPER 82-PET-4] p 97 A82-35484
Performance test of solar collector with intermittent output p 37 A82-35921
Some aspects of small aerogenerator design and testing p 100 A82-36094
Tests performed on the 2 MW Tvind WECS --- Wind Energy Conversion System p 100 A82-36100
PERIODIC VARIATIONS
Results of roof pond heating experiments using the Passive Test Facility for warm, humid climates
[DE82-003226] p 60 N82-26850
PERTURBATION THEORY
Distributed series resistance effects in solar cells
p 25 A82-32693
PETROGRAPHY
Petrographic characterization of Kentucky coals
[DE82-000411] p 71 N82-22834
PETROLEUM PRODUCTS
Small-scale combustion testing of synthetic fuels
[DE82-002791] p 71 N82-23286
PHASE CHANGE MATERIALS
Some thermophysical properties of paraffin wax as a thermal storage medium
[AIAA PAPER 82-0846] p 119 A82-31869
Latent heat thermal energy storage: Determination of properties of storage media and development of a new transfer system
[BMFT-FB-T-82-016] p 121 N82-22789
Design and demonstration of a storage-assisted air conditioning system p 123 N82-24655
PHASED ARRAYS
High-power microwave optics for flexible power transmission systems p 117 N82-22742
PHENANTHRENE
Supercritical solvent coal extraction
[NASA-CASE-NPO-15210-1] p 82 N82-26481
PHOSPHORIC ACID FUEL CELLS
Develop and test fuel cell powered on-site integrated total energy systems: Phase 3: Full-scale power plant development
[NASA-CR-165568] p 12 N82-24648
PHOSPHORUS
Non-mass-analyzed ion implantation from a solid phosphorus source p 26 A82-33685

PHOTOCHEMICAL REACTIONS
Calculated effects of temperature, intensity and atmospheric conditions on the thermodynamic limits for conversion of solar energy to work on stored energy
[DE81-030876] p 57 N82-26815
PHOTOCONDUCTIVITY
Determination of the grain boundary recombination velocity in polycrystalline silicon as a function of illumination from photoconductance measurements
p 24 A82-32183
As-deposited CVD amorphous silicon films for solar photovoltaic applications p 38 A82-36227
PHOTODECOMPOSITION
Solar hydrogen production using two-step thermochemical cycles p 63 A82-37437
PHOTODIODES
High-efficiency silicon solar cells and prospects for their improvement p 22 A82-30057
ZAP - Introducing the zero-bias avalanche photodiode
p 38 A82-36215
PHOTOELECTRIC CELLS
Two-element cascade Al-Ga-As solar cell
p 37 A82-36117
PHOTOELECTRIC EMISSION
Processing for high photocurrent in IBC solar cells
p 29 A82-34087
Theory of photocurrent in semiconductor-electrolyte junction solar cells p 37 A82-35816
PHOTOELECTRIC MATERIALS
Current aspects in low-cost silicon technology
p 27 A82-34078
Metallurgical grade silicon substrates for solar cell application p 28 A82-34084
PHOTOELECTRICITY
Photovoltaics as a terrestrial energy source. Volume 2: System value
[NASA-CR-168809] p 41 N82-22656
Photovoltaics as a terrestrial energy source. Volume 3: An overview
[NASA-CR-168810] p 42 N82-22657
PHOTOELECTROCHEMICAL DEVICES
A photoelectrochemical cell based on chemically deposited Sb2Se3 thin film electrode and dependence of deposition on various parameters p 23 A82-30863
Overview of the current status of solid-liquid interface science p 35 A82-35505
Basic research needs and opportunities at the solid-liquid interface p 35 A82-35510
Solar energy conversion and storage through synthetic light-driven proton pumps p 37 A82-35920
Ternary chalcogenide-based photoelectrochemical cells. II - The n-CdIn2Se4/aqueous polysulfide system
p 40 A82-37629
PHOTOELECTROCHEMISTRY
Further studies of the photoelectrochemical properties of the group VI transition metal dichalcogenides
p 23 A82-30865
Photoassisted electrolysis applied to coal gasification
[DE82-000224] p 72 N82-23294
Photochemical energy storage: Studies of inorganic photoassistance agents
[DE82-000403] p 122 N82-23764
Recent work in advanced hydrogen production concepts p 65 N82-24711
PHOTOGRAMMETRY
Timesaving methods adaptable to mining which utilize structural information on the forefield while applying new technologies — forefield survey methods, data processing and analysis
[BMFT-FB-T-81-220] p 4 N82-22637
PHOTOGRAPHIC PROCESSING
Thermal performance of a photographic laboratory process: Solar Hot Water System
[NASA-TM-83299] p 52 N82-25641
PHOTOGRAPHIC RECORDING
Holography creates new breed of optical components — construction, reconstruction and application of surface relief and volume holograms p 37 A82-35886
PHOTOMAPPING
Appropriateness in using LANDSAT in development energy related data bases p 4 N82-22585
PHOTOSYNTHESIS
Photochemical energy conversion in chlorophyll-containing lipid bilayer vesicles
p 21 A82-28317
PHOTOTHERMAL CONVERSION
Efficiency of hot-carrier solar energy converters
p 25 A82-32891
Chemically sprayed PbS coatings for photothermal solar energy conversion. R. C. Agarwal and P. K. C. Pillai
p 38 A82-36210
A conceptual design study of a high temperature solar thermal receiver
[NASA-CR-168925] p 51 N82-24720
Pilot solar power plant
[MBB-UR-533-81-O] p 53 N82-25656
Quality assurance and standards plan for solar thermal technologies
[DE81-030831] p 54 N82-26699
PHOTOVOLTAIC CELLS
A photoelectrochemical cell based on chemically deposited Sb2Se3 thin film electrode and dependence of deposition on various parameters p 23 A82-30863
Parametric photovoltaic cell p 23 A82-31207
Single-crystal Zn/x/Cd/1-x/S/Cu2S photovoltaic cells
p 31 A82-34542
Modification of open-circuit voltage of metal-insulator-semiconductor solar cells due to a nonuniform insulating layer p 34 A82-35500
Ionized impurity induced photocarrier generation in organic energy conversion systems p 41 A82-37944
The 19th Project Integration Meeting
[NASA-CR-168822] p 41 N82-22652
The design of low cost structures for extensive ground arrays p 43 N82-22702
Some tradeoffs in ingot shaping and price of solar photovoltaic modules p 47 N82-23666
A simplified solar cell array modelling program
p 52 N82-25111
Satellite power system. Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237] p 53 N82-25642
Data report for the Northeast Residential Experiment Station, September 1981
[DE82-005616] p 54 N82-26514
Efficiency of silicon solar cells containing chromium
[NASA-CASE-NPO-15179-1] p 54 N82-26777
Integrated residential photovoltaic array development
[NASA-CR-169042] p 54 N82-26786
Development and testing of a high-efficiency/high-concentration, photovoltaic module employing AlGaAs/GaAs solar cells
[DE82-002683] p 59 N82-26839
Electrochemical photovoltaic cells 2-6 compound thin film electrodes
[DE82-000394] p 59 N82-26840
Shared inverter residential photovoltaic system concept
[DE82-006281] p 60 N82-26859
Metals processing p 118 N82-27405
Integrated residential photovoltaic array development
[NASA-CR-169112] p 61 N82-27836
Accelerated stress testing of solar photovoltaic modules
[AD-A107378] p 61 N82-27840
Fuel from the Sun: Solar commercial and industrial applications for the 1980's
[DE82-003285] p 61 N82-27847
Photovoltaics: Current status and future projections
[DE82-002684] p 62 N82-27852
PHOTOVOLTAIC CONVERSION
Back surface field and vertical solar cell
p 21 A82-29695
Solar grade silicon as a potential candidate material for low-cost terrestrial solar cells p 23 A82-30861
Parametric photovoltaic cell p 23 A82-31207
Thick optical films for the conduction of optical and infrared radiation — for light concentration onto solar cells p 24 A82-32543
Energy conversion process of p-i-n amorphous Si solar cells p 26 A82-33255
Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings p 27 A82-34076
Solar photovoltaic programs in the Sunshine Project and present status of R&D in Japan p 27 A82-34077
Silicon sheet - A key to low cost solar cells
p 28 A82-34082
Photovoltaic power systems - State of the art - 1980
p 28 A82-34085
Low-cost processes for thin-film solar cells
p 29 A82-34091
Photovoltaic encapsulation materials
p 29 A82-34053
Terrestrial solar modules p 30 A82-34095
Technology transfer - LSA project to industry
p 30 A82-34099
Preparation and analysis of CdS-Cu2S solar cells
p 30 A82-34540
Photovoltaic performances of Cu2S/CdS sprayed solar cells p 31 A82-34541
Trends and problems in CdS/Cu/x/S thin film solar cells - A review p 31 A82-34543
Simulation of the behaviour of a set of Cu2S-CdS unit photocells p 31 A82-34544
The effects of non-uniform illumination of solar cells with concentrated light p 31 A82-34546
Evidence for hot-electron injection across p-GaP/electrolyte junctions — during photoconversion process of solar energy p 37 A82-35716
As-deposited CVD amorphous silicon films for solar photovoltaic applications p 38 A82-36227
Conductor-insulator-semiconductor organic solar cells
p 39 A82-36865
A comment on the generalization of the theoretical basis of photovoltaic concentrators for extended light sources
p 39 A82-36869
Photovoltaics as a terrestrial energy source. Volume 2: System value
[NASA-CR-168809] p 41 N82-22656
Photovoltaics as a terrestrial energy source. Volume 3: An overview
[NASA-CR-168810] p 42 N82-22657
Photovoltaic Systems Test Facilities: Existing capabilities compilation
[NASA-CR-168802] p 42 N82-22660
Design handbook for photovoltaic-power systems. Simplified methods for utility interconnected systems
[DE82-003909] p 48 N82-23745
Intermediate photovoltaic system application experiment operational performance report. Volume 4: For Newman Power Station, El Paso, Texas
[DE82-002681] p 48 N82-23746
Intermediate photovoltaic system application experiment operational executive summary. Volume 3: For Lovington Square Shopping Center, Lovington, New Mexico
[DE82-003082] p 48 N82-23747
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1: Lovington Square Shopping Center, Lovington, New Mexico
[DE82-001710] p 49 N82-23755
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 2: Newman power station, El Paso, Texas
[DE82-001711] p 49 N82-23756
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume for Beverly High School, Beverly, Massachusetts
[DE82-001726] p 49 N82-23757
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1 for Mt. Laguna Radar Station, Mt. Laguna, California
[DE82-001727] p 49 N82-23758
Intermediate photovoltaic system application experiment operational executive summary. Volume 2: For Lovington Square Shopping Center, Lovington, New Mexico
[DE81-003081] p 50 N82-23772
Intermediate photovoltaic system application experiment operational executive summary. Volume 3: For Newman Power Station, El Paso, Texas
[DE82-003088] p 50 N82-23773
Process development for automated solar cell and module production. Task 4: Automated array assembly
[NASA-CR-168923] p 51 N82-24719
Calculated effects of temperature, intensity and atmospheric conditions on the thermodynamic limits for conversion of solar energy to work on stored energy
[DE81-030876] p 57 N82-26815
Intermediate photovoltaic system application experiment operational performance report. Volume 3: For Newman Power Station, El Paso, Texas
[DE82-000797] p 60 N82-26856
PHOTOVOLTAIC EFFECT
Photovoltaic effects in Cu2O-Cu solar cells grown by anodic oxidation p 23 A82-31187
Quality assurance and standards plan for solar thermal technologies
[DE81-030831] p 54 N82-26699
Shared inverter residential photovoltaic system concept
[DE82-006281] p 60 N82-26859
PHYSIOCHEMISTRY
Alternate matrix material for molten carbonate fuel cell electrolyte structures p 21 A82-31844
PHYSIOLOGICAL EFFECTS
Nonmicrowave health and ecological effects: Overview p 5 N82-22691
SPS microwave health and ecological effects: Program area overview p 5 N82-22692
PILOT PLANTS
Construction of a 15 t/hr prototype plant for the VEW coal conversion process — Westfalen Joint Electricity Generating Company (VEW)
[BMFT-FB-T-81-216] p 70 N82-22385
Coal-hydrogasification process development, government fiscal year 1981
[DE82-004146] p 72 N82-23329
Analysis of 70-tube pilot-plant solar-receiver-panel test data
[DE82-001728] p 49 N82-23752
Characterization of the corrosion environment of the desert near Bartstow, California
[DE82-003876] p 50 N82-23800

Environmental report: Combustion Engineering/Gulf States Utilities Company fuel gas demonstration plant, Westlake, Louisiana
[DE82-004141] p 11 N82-23806
Pilot solar power plant
[MBB-UR-533-81-O] p 53 N82-25656

PIPELINES
Fuel conservation by the application of spill prevention and fail-safe engineering (a guideline manual)
p 8 N82-23682
Fossil and synthetic fuels miscellaneous, part 1
[GPO-84-010] p 76 N82-24351
Hydraulic transport of coarse solids in circular and segmented pipes
[CSIR-ME-1716] p 118 N82-27685
Transient analysis of heat transmission systems
[AD-A112365] p 126 N82-27691

PISTON ENGINES
Solar engine
[NASA-CASE-LAR-12148-1] p 50 N82-24640

PITCH (INCLINATION)
Analysis of open inclined surface solar regenerators for absorption cooling applications - Comparison between numerical and analytical models p 21 A82-29319
Passive cyclic pitch control for horizontal axis wind turbines p 107 N82-23715

PLANAR STRUCTURES
Current-voltage response of tandem junction solar cells p 40 A82-37850

PLANNING
Energy-economy analysis and application to R and D planning
[PB82-141128] p 20 N82-26221

PLANT DESIGN
Assessment of atmospheric fluidized-bed combustion recycle systems
[DE82-900879] p 68 N82-22337
Westinghouse coal-gasification combined-cycle preliminary plant evaluation for electric-utility applications
[DE82-002701] p 72 N82-23326
Fort Hood solar cogeneration facility conceptual design study. Volume 1: Technical report
[DE82-000836] p 49 N82-23765
Fort Hood solar cogeneration facility conceptual design study. Volume 2: System specification
[DE82-001579] p 49 N82-23766
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 11: Plant design. UPH
[DE82-000918] p 122 N82-23771
Geothermal energy market study on the Atlantic Coastal plain: Ocean City, Maryland geothermal energy evaluation
[PB82-123050] p 10 N82-23780
ELMO Bumpy Torus Reactor and power plant: Conceptual design study
[DE82-002437] p 112 N82-25984
High-temperature turbine technology program rotor water delivery and distribution tests
[DE82-000400] p 84 N82-26692
User's manual for DELSOL2: A computer code for calculating the optical performance and optimal system design for solar-thermal central-receiver plants
[DE82-003875] p 61 N82-27026
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 2: Engineering. Volume 3: Costs and schedules
[NASA-CR-165452-VOL-2] p 114 N82-27637
Comparative analysis of the conceptual design studies of potential early commercial MHD power plants (CSPEC)
[NASA-TM-82897] p 114 N82-27638

PLANTS (BOTANY)
Environmental effects of solar-thermal power systems. Environmental effects of heat transfer and storage fluids: Plant toxicity and movement in soils
[DE82-002603] p 17 N82-26881

PLASMA DECAY
Alfven-wave generation in a beam-plasma system
p 90 A82-29738

PLASMA HEATING
The age of fusion - On the brink p 103 A82-37971

PLASMA-ELECTROMAGNETIC INTERACTION
Alfven-wave generation in a beam-plasma system
p 90 A82-29738

PLASTIC DEFORMATION
Biaxial cyclic deformation and creep-fatigue behavior of materials for solar thermal systems
[ASME PAPER 82-PVP-74] p 27 A82-33714

PLUTONIUM OXIDES
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments
[DE82-002439] p 14 N82-25665

PLUTONIUM 238
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments
[DE82-002439] p 14 N82-25665
Space nuclear safety and fuels program
[DE82-004183] p 80 N82-25944
Space nuclear safety and fuels program
[DE82-004188] p 80 N82-25945

POISONING (REACTION INHIBITION)
Development status of solid polymer electrolyte water electrolysis for large scale hydrogen generation
p 64 N82-24697

POLARIZATION (CHARGE SEPARATION)
The effect of sulfur on the anodic H2 /Ni/ electrode in fused Li2CO3-K2CO3 at 650 C p 103 A82-37627

POLLUTION CONTROL
Melting chamber combustion with reduced emission of nitrogen oxides --- coal fired power plant furnace design
[BMFT-FB-T-81-228] p 7 N82-22810
The determination of a range of concern for mobile source emissions of sulfuric acid
[PB82-117870] p 11 N82-23826
Sulfate control technology vehicle testing
[PB82-154345] p 17 N82-26889

POLLUTION MONITORING
The Br/Cl ratio in atmospheric aerosols as a tracer of automobile pollution p 1 A82-32147
Dust-emission measurements in two power plants
p 2 A82-33407
Characterization of exhaust emissions from high mileage catalyst-equipped automobiles
[PB82-131566] p 7 N82-22811
Brief synopsis of EPA Office of Research and Development and the Health Effects Institute mobile source work
[PB82-124421] p 11 N82-23821

POLYCRYSTALS
Polycrystalline thin films for terrestrial solar cells
p 22 A82-30328
Determination of the grain boundary recombination velocity in polycrystalline silicon as a function of illumination from photoconductance measurements
p 24 A82-32183
Fracture of directionally solidified multicrystalline silicon p 36 A82-36283
The 19th Project Integration Meeting
[NASA-CR-168822] p 41 N82-22652
Silicon materials task of the Low Cost Solar Array Project: Effect of impurities and processing on silicon solar cells
[NASA-CR-169051] p 56 N82-26806

POLYMER CHEMISTRY
Investigation of the application of a cryogenic blending process to produce antimisting diesel fuels
[AD-A110917] p 78 N82-25399

POLYMERIZATION
Supercritical solvent coal extraction
[NASA-CASE-NPO-15210-1] p 82 N82-26481

POLYSULFIDES
Ternary chalcogenide-based photoelectrochemical cells. II - The n-CdIn2Se4/aqueous polysulfide system
p 40 A82-37629

POLYVINYL ALCOHOL
Cross-linked polyvinyl alcohol films as alkaline battery separators
[NASA-TM-82802] p 103 N82-22327

POROUS WALLS
The thermodynamics of electrolyte distribution in molten carbonate fuel cells p 91 A82-31843

PORPHYRINS
Chromatographic studies of vanadium compounds from boscan crude oil
[DE82-000977] p 68 N82-22335

POSITIONING DEVICES (MACHINERY)
A deployment mechanism for the double roll-out flexible solar array on the space telescope p 46 N82-23359

POTABLE WATER
Potable water standards project
[MLM-2819] p 10 N82-23791

POTASSIUM
Airborne gamma-ray spectrometer and magnetometer survey, Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 75 N82-23638
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 79 N82-25621
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D
[DE81-027156] p 79 N82-25622

POTENTIAL ENERGY
Hydropowered electrolysis in New York State
p 111 N82-24707

POTTING COMPOUNDS
Photovoltaic encapsulation materials
p 29 A82-34093

POWDER METALLURGY
Powder metallurgy in space manufacturing
p 36 A82-35637

POWER CONDITIONING
Some aspects of small aerogenerator design and testing p 100 A82-36094
Analytical expressions for the determination of the maximum power point and the fill factor of a solar cell
p 39 A82-36868
Integration of SPS with utility system networks
p 43 N82-22684
Electric power processing, distribution, management and energy storage p 117 N82-22743

POWER CONVERTERS
Development of a dual-field heteropopiar power converter
[NASA-CR-165168] p 110 N82-24424

POWER EFFICIENCY
Power optimization of wind electric conversion systems integrated into the utility grid p 90 A82-30868
Interaction between MHD generator and DC-AC power conversion system
[AIAA PAPER 82-0923] p 91 A82-31912
Design, performance and economics of the DAF Indal 50 kW and 375 kW vertical axis wind turbine
[ASME PAPER 82-PET-6] p 97 A82-35486
On wind turbine power measurements
p 99 A82-36088
The capacity credit of wind power - A numerical model
p 101 A82-36110
Analytical expressions for the determination of the maximum power point and the fill factor of a solar cell
p 39 A82-36868
Design and performance characteristics of a CW subsonic HF chemical laser with 120 W power output
p 103 A82-37577
Physical basis of power conversion of energy fluctuations p 40 A82-37671
Straight and chopped DC performance data for a General Electric 5BY436A1 DC shunt motor with a General Electric EV-1 controller
[NASA-CR-165507] p 110 N82-24425

POWER GAIN
Effect of wind turbine generator model and siting on wind power changes out of large WECS arrays
p 108 N82-23723

POWER MODULES (STS)
Satellite thermal design and analyses for Titan 34D/IUS and STS/IUS launch vehicle environments
[AIAA PAPER 82-0828] p 24 A82-31856

POWER PLANTS
An optical heliostat for solar power stations
p 23 A82-31492

POWER SPECTRA
On the spectral energy and power components in horizontal wind gusts p 90 A82-30866

POWER SUPPLIES
Lead-acid batteries in solar photovoltaic power systems for marine aids to navigation
[AD-A112151] p 57 N82-26811

POWER TRANSMISSION (LASERS)
Meteorological effects on laser propagation for power transmission p 115 A82-32368
Power availability at terrestrial receptor sites for laser-power transmission from the satellite power system
p 116 A82-32369
Laser satellite power systems - Concepts and issues
p 116 A82-32370

PREDICTION ANALYSIS TECHNIQUES
GE MOD-1 noise study p 108 N82-23727
Prediction of low frequency and impulsive sound radiation from horizontal axis wind turbines
p 109 N82-23729
The NASA-LeRC wind turbine sound prediction code
p 109 N82-23730
Noise generation of upwind motor wind turbine generators p 109 N82-23731
Downwind rotor horizontal axis wind turbine noise prediction p 109 N82-23732
User's manual for DELSOL2: A computer code for calculating the optical performance and optimal system design for solar-thermal central-receiver plants
[DE82-003875] p 61 N82-27026

PRESSURE PULSES
Effect of pulse loads on dynamic rock fracture
[DE82-002311] p 76 N82-23637

PRESSURE VESSELS
Development of automated welding process for field fabrication of thick walled pressure vessels --- for coal gasification plants
[DE82-004421] p 85 N82-26695

PROBABILITY DISTRIBUTION FUNCTIONS
The probability distribution of wind power from a dispersed array of wind turbine generators
p 92 A82-32760

PROBABILITY THEORY
Reliability analysis of combined wind-electric and conventional generation systems p 91 A82-31572
PROCESS CONTROL (INDUSTRY)
Process for underground gasification [DE82-000493] p 72 N82-23327
Coal-hydrogasification process development, government fiscal year 1981 [DE82-004146] p 72 N82-23329
Feasibility study of medium Btu coal gas for fuel and feedstock at Mobay's New Martinsburg, West Virginia plant [DE82-004321] p 72 N82-23330
ID slicing and the automated factory p 47 N82-23672
Fuel quality processing study, volume 1 [NASA-CR-165327-VOL-1] p 77 N82-24649
Fuel quality/processing study. Volume 2: Appendix. Task 1 literature survey [NASA-CR-165327-VOL-2] p 77 N82-24650
Molten salt coal gasification process development unit, phase 2 [DE82-004717] p 83 N82-26498
Process Research ON Semix Silicon Materials (PROSSM) [NASA-CR-169049] p 55 N82-26794
PROCESS HEAT
A point focusing collector for an integrated water/power complex [MBB-UR-579-81-OE] p 46 N82-23149
Solar industrial process heat systems: An assessment of standards for materials and components [PB82-133703] p 50 N82-24394
Application of thermal energy storage to process heat recovery in the aluminum inoustry p 124 N82-24685
Collection and dissemination of thermal energy storage system information for the pulp and paper industry p 125 N82-24686
Applications of thermal energy storage to waste heat recovery in the food processing industry p 125 N82-24687
Once-through heat supply system for City of Bellingham p 125 N82-24688
Overview of the Chemical/Hydrogen Energy Systems (C/HES) program p 64 N82-24689
A cost-effectiveness evaluation of chemical heat pumps p 12 N82-24693
Synthetic-fuel production using Texas lignite and a very high temperature gas cooled reactor for process heat and electrical power generation [DE82-900466] p 83 N82-26492
USAF solar thermal applications case studies [NASA-CR-169054] p 56 N82-26801
PRODUCT DEVELOPMENT
AGT 100 automotive gas turbine system development [AIAA PAPER 82-1165] p 94 A82-35038
AGT101 automotive gas turbine system development [AIAA PAPER 82-1166] p 94 A82-35039
Development of control systems for solar water and solar space heating equipment. Choice of heat conducting fluid. Testing [BMFT-FB-T-81-185] p 45 N82-22785
Oxygen electrodes for energy conversion and storage [DE82-005305] p 115 N82-27848
PRODUCTION COSTS
Some tradeoffs in ingot shaping and price of solar photovoltaic modules p 47 N82-23666
Sensitivity analysis of add-on price estimate for select silicon watering technologies p 47 N82-23667
Watering economies for industrialization from a wafer manufacturer's viewpoint p 47 N82-23668
Comparative analysis of the conceptual design studies of potential early commercial MHD power plants (CSPEC) [NASA-TM-82897] p 114 N82-27838
PRODUCTION ENGINEERING
Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings p 27 A82-34076
ID slicing and the automated factory p 47 N82-23672
Modification and operation of the hydrogen homestead hydride vessel energy storage system p 65 N82-24705
Process development for automated solar cell and module production. Task 4: Automated array assembly [NASA-CR-168923] p 51 N82-24719
Safety and liability considerations for photovoltaic modules/panels [NASA-CR-168938] p 52 N82-24721
Application of ultrasonic techniques to chemical coal cleaning processes [DE82-003093] p 83 N82-26497
Assessment of secondary residues. Engineering and economic analysis [DE82-000925] p 85 N82-26771
PRODUCTION PLANNING
Second-generation heliostat development for solar-central central receivers. Detail design report: Volume 2, appendices I, J [DE82-001837] p 45 N82-22780
Feasibility study of medium Btu coal gas for fuel and feedstock at Mobay's New Martinsburg, West Virginia plant [DE82-004321] p 72 N82-23330
PROJECT MANAGEMENT
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 1: Executive summary [DE82-000270] p 121 N82-23735
Overview of the Chemical/Hydrogen Energy Systems (C/HES) program p 64 N82-24689
FSA field test [NASA-CR-168991] p 52 N82-25638
Evaluation of the solar cities program [DE81-030868] p 53 N82-25649
OTEC support services [DE82-005470] p 115 N82-27853
PROP-FAN TECHNOLOGY
Propellers come full circle --- prop-fan technology for aircraft fuel savings p 2 A82-35881
PROPANE
Deposit formation in hydrocarbon fuels [ASME PAPER 82-GT-49] p 67 A82-35307
PROPELLANT DECOMPOSITION
Deposit formation in hydrocarbon fuels [ASME PAPER 82-GT-49] p 67 A82-35307
PROPELLER EFFICIENCY
Propellers come full circle --- prop-fan technology for aircraft fuel savings p 2 A82-35881
PROPELLER FANS
Fuel efficient and Mach 0.8, too p 1 A82-29774
PROPULSION
Concept evaluation of automotive propulsion using liquid air/nitrogen. Task 1 report. Thermodynamics. [DE82-002460] p 114 N82-27193
PROPULSION SYSTEM PERFORMANCE
The TM 333, a trump card for Turbomeca p 93 A82-33750
PROTON DAMAGE
Proton damage annealing kinetics in silicon solar cells p 43 N82-22720
PROTON ENERGY
High temperature fuel and steam electrolysis cells using proton conductive solid electrolytes p 63 A82-32375
PROTON IRRADIATION
Proton damage annealing kinetics in silicon solar cells p 43 N82-22720
PROTONS
Solar energy conversion and storage through synthetic light-driven proton pumps p 37 A82-35920
Introduction to proton conduction in solids [RISO-M-2244] p 114 N82-27172
PULTRUSION
Use of pultruded reinforced plastics in energy generation and energy related applications p 102 A82-37077
PUMPS
Feasibility of using large vertical pumps as turbines for small scale hydropower [DE82-004267] p 112 N82-26694
Conceptual design of the Truscott brine lake solar-pond system, volume 1: Utility-independent scenario [DE82-003024] p 58 N82-26833
A program for single-phase moderate-temperature geothermal well drawdown and pumping energy for the HP-97 and other desk calculators [PB82-148420] p 89 N82-27829
PURIFICATION
Electrodeposition of solar silicon p 20 A82-29248
Solar grade silicon as a potential candidate material for low-cost terrestrial solar cells p 23 A82-30861
Purification of rice hulls as a source of solar grade silicon for solar cells p 27 A82-34079
Application of ultrasonic techniques to chemical coal cleaning processes [DE82-003093] p 83 N82-26497
PYROELECTRICITY
Large area, high speed detectors for the ultraviolet --- pyroelectric sensor for laser fusion applications p 92 A82-32566
PYROLYSIS
Relatively low-temperature pyrolysis of silane in free space p 28 A82-34080
Carbon formation by the pyrolysis of gas turbine fuels in preflame regions of gas turbine combustors [ASME PAPER 82-GT-84] p 67 A82-35330
Chemically sprayed PbS coatings for photothermal solar energy conversion. R. C. Agarwal and P. K. C. Pillai p 38 A82-36210
Process selection and investment analysis, methanation facility for purox pyrolysis system off-gas [DE82-004584] p 18 N82-27452

Q

Q FACTORS
Analytical expressions for the determination of the maximum power point and the fill factor of a solar cell p 39 A82-36868
QUALITY CONTROL
A field monitor for the stability and cleanliness of distillate fuel [AD-A110694] p 76 N82-24354
Fuel quality processing study, volume 1 [NASA-CR-165327-VOL-1] p 77 N82-24649
Fuel quality/processing study. Volume 2: Appendix. Task 1 literature survey [NASA-CR-165327-VOL-2] p 77 N82-24650
Quality assurance and standards plan for solar thermal technologies [DE81-030831] p 54 N82-26699
QUANTUM EFFICIENCY
Efficiency of hot-carrier solar energy converters p 25 A82-32891
Processing for high photocurrent in IBC solar cells p 29 A82-34087
QUINOLINE
Crossed-reaction networks in the catalytic hydrodenitrogenation of synthetic liquid fuels [DE82-003092] p 81 N82-26422

R

RADIANT FLUX DENSITY
A method for calculating the radiant energy incident on a vapor generator in a solar power station p 22 A82-30062
RADIATION DETECTORS
Large area, high speed detectors for the ultraviolet --- pyroelectric sensor for laser fusion applications p 92 A82-32566
RADIATION EFFECTS
Moessbauer spectroscopy study on the effect of infrared and gamma radiation on the structure of minerals. Part of coordinated programme on developrment of methods for application of Moessbauer spectroscopy in mineralogy, soil sciences and the study of ceramics [DE81-700780] p 76 N82-24350
RADIATION HAZARDS
Potable water standards project [MLM-2819] p 10 N82-23791
RADIATION TOLERANCE
High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
RADIATIVE HEAT TRANSFER
Solar power stations - Heat transfer and thermal optimization in the production of saturated water vapor p 22 A82-30060
Stationary thermal ignition of particle suspensions [AIAA PAPER 82-0881] p 66 A82-31886
RADIO FREQUENCY HEATING
Simulation of D and E region high-power microwave heating with HF ionospheric modification experiments --- solar power satellite transmission effects p 116 A82-33447
RF sputtered gold-amorphous silicon Schottky-barrier diodes p 34 A82-35246
RADIO TRANSMISSION
Ionospheric disturbance overview p 5 N82-22689
RADIO TRANSMITTERS
Potential reduction of DSN uplink energy cost p 13 N82-25110
RADIOACTIVE CONTAMINANTS
Potable water standards project [MLM-2819] p 10 N82-23791
RADIOACTIVE ISOTOPES
Natural radioactivity contamination problems [PB82-140443] p 89 N82-27884
RADIOACTIVE WASTES
Space and energy - A global viewpoint p 2 A82-34119
Space and energy: Global viewpoint [MB3-UR-489-81-O] p 45 N82-22784
Potable water standards project [MLM-2819] p 10 N82-23791
Natural radioactivity contamination problems [PB82-140443] p 89 N82-27884
RADIOACTIVITY
Influence of the carrying vehicle in the aerospatial survey of natural radioactivity [E82-10169] p 70 N82-22604
RADIOISOTOPE BATTERIES
Space nuclear safety and fuels program [DE82-004183] p 80 N82-25944
Space nuclear safety and fuels program [DE82-004188] p 80 N82-25945

RADIOMETERS
Airborne gamma-ray spectrometer and magnetometer survey, Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 75 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A
[DE81-027158] p 79 N82-25620
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D
[DE81-027156] p 79 N82-25622
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1
[DE82-005542] p 88 N82-27804
RAIL TRANSPORTATION
France's superfast train p 102 A82-36394
Present and future energy consumption for passenger transportation in Germany
[ISBN-3-87977-051-4] p 8 N82-23072
RAMJET ENGINES
Combustion behavior of solid fuel Ramjets. Volume 2: Effects of fuel properties and fuel-air mixing on combustion efficiency
[AD-A110796] p 80 N82-26303
RANDOM LOADS
Combined effects of deterministic and random loads in wind turbine design p 98 A82-36085
RANKINE CYCLE
Thermal energy buffer storage for the small community solar thermal power experiment p 124 N82-24684
Future fuels and engines for railroad locomotives. Volume 2: Technical document
[NASA-CR-168983] p 14 N82-26050
Comparison of Rankine-cycle power systems: Effects of seven working fluids
[DE82-005599] p 113 N82-26844
Concept evaluation of automotive propulsion using liquid air/nitrogen. Task 1 report. Thermodynamics.
[DE82-002460] p 114 N82-27193
RAPID TRANSIT SYSTEMS
France's superfast train p 102 A82-36394
REACTION KINETICS
Experimental investigation of methanol oxidation in flames Mechanisms and rate constants of elementary steps p 65 A82-28679
Investigation of coal-gasification catalysis-reaction mechanisms
[DE82-003305] p 68 N82-22334
Fundamentals of coal depolymerization: Kinetic modeling and experimental determination of free radical chemistry and mineral matter effects in direct coal hydroliquefaction
[DE82-003689] p 81 N82-26425
REACTOR DESIGN
ELMO Bumpy Torus Reactor and power plant: Conceptual design study
[DE82-002437] p 112 N82-25984
REACTOR SAFETY
Potable water standards project
[MLM-2819] p 10 N82-23791
RECEIVERS
Subsystems design and component development for the parabolic dish module for solar thermal power systems
[NASA-CR-168941] p 51 N82-24646
RECLAMATION
LANDSAT Remote Sensing: Observations of an Appalachian mountaintop surface coal mining and reclamation operation — kentucky
[E82-10247] p 77 N82-24525
Turbine engine lubricant reclamation
[AD-A112098] p 80 N82-26312
RECTENNAS
Integration of SPS with utility system networks p 43 N82-22684
An evaluation of the land and material requirements for the satellite power system p 5 N82-22693
Reference system characterization and cost overview p 43 N82-22694
Microwave system performance summary p 117 N82-22724
Rectenna system design p 117 N82-22736
Solid-state configurations p 117 N82-22739
Offshore rectenna feasibility p 117 N82-22741
Electric power processing, distribution, management and energy storage p 117 N82-22743
Summary of the electromagnetic compatibility evaluation of the proposed satellite power system p 44 N82-22748
The effects of a satellite power system on ground-based astronomy p 44 N82-22749
Rectenna related atmospheric effects p 6 N82-22754
RECYCLING
Assessment of atmospheric fluidized-bed combustion recycle systems
[DE82-900879] p 68 N82-22337
Application of thermal energy storage to process heat recovery in the aluminum industry p 124 N82-24685
Applications of thermal energy storage to waste heat recovery in the food processing industry p 125 N82-24687
REDOX CELLS
Requirements for optimization of electrodes and electrolyte for the iron/chromium Redox flow cell
[NASA-CR-165218] p 125 N82-25640
REFINING
Fuel quality processing study, volume 1
[NASA-CR-165327-VOL-1] p 77 N82-24649
Fuel quality/processing study. Volume 2: Appendix. Task 1 literature survey
[NASA-CR-165327-VOL-2] p 77 N82-24650
On the processing of manganese nodules with sulphur containing reagents
[CSIR-TRANS-1603] p 13 N82-25336
Research on solvent refined coal
[DE82-004535] p 86 N82-27454
REFLECTANCE
Petrographic characterization of Kentucky coals
[DE82-000411] p 71 N82-22834
REFRACTED WAVES
Enhancement of far field sound levels by refractive focusing p 108 N82-23728
REFRACTORY MATERIALS
Use of solar furnaces. II - Thermophysical properties p 24 A82-31568
REFRIGERATING
Helium research in support of superconducting power transmission
[PB82-122987] p 118 N82-23412
REGENERATORS
Analysis of open inclined surface solar regenerators for absorption cooling applications - Comparison between numerical and analytical models p 21 A82-29319
High temperature metallic recuperator
[PB82-141102] p 8 N82-23373
REGIONAL PLANNING
Wind power generation for national and regional grid systems Design proposals for generation and transmission p 98 A82-36078
Greater energy efficiency can be achieved through land use management
[EMD-82-1] p 4 N82-22647
REGULATIONS
Utility siting of WECS: A preliminary legal/regulatory assessment
[SERI/TR-744-778] p 4 N82-22667
REINFORCED PLASTICS
The practical utilisation of fibre composite hybrids p 126 A82-28642
REINFORCED SHELLS
Energy storage capacity of rotating composite disks and shells /Review/ p 119 A82-31562
RELIABILITY ANALYSIS
Reliability analysis of combined wind-electric and conventional generation systems p 91 A82-31572
RELIABILITY ENGINEERING
Alternator designs for direct coupling to remote wind energy systems p 99 A82-36092
Structural design and maintenance policies for large wind turbines p 100 A82-36095
REMOTE REGIONS
Small wind energy conversion systems, application and performance
[ASME PAPER 82-PET-3] p 96 A82-35483
REMOTE SENSING
Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 66 A82-29327
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 1 A82-29537
High spectral resolution airborne spectrometry p 67 A82-32443
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[DE82-900580] p 18 N82-27802
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[DE82-900581] p 19 N82-27803
REMOTELY PILOTED VEHICLES
Nickelzinc batteries for RPV applications
[AD-A111067] p 125 N82-26809
RESEARCH AND DEVELOPMENT
Salinity-gradient vapor-pressure power conversion p 92 A82-32331
Solar photovoltaic programs in the Sunshine Project and present status of R&D in Japan p 27 A82-34077
The AGT 100 automotive gas turbine status and assessment
[ASME PAPER 82-GT-118] p 95 A82-35349
The potential impact of future fuels on small gas turbine engines
[ASME PAPER 82-GT-133] p 68 A82-35362
The Southern California Edison Wind Turbine Generator Test Program
[ASME PAPER 82-PET-2] p 96 A82-35482
Basic research needs and opportunities in thin films and coatings p 36 A82-35513
Basic research needs and opportunities for characterizing the microstructure and microchemistry of interfaces p 36 A82-35514
Development of composite blades for large wind turbines p 98 A82-36083
The status of windpower research and development for space and water heating in the United States p 101 A82-36106
Development effort of sheet molding compound /SMC/ parabolic trough panels p 39 A82-37116
Research and development at MBB. Technical and scientific publications, 1981 p 127 N82-23137
Overview of energy-conservation research opportunities. Executive summary
[DE82-004031] p 12 N82-24727
Energy-economy analysis and application to R and D planning
[PB82-141128] p 20 N82-28221
RESEARCH FACILITIES
Photovoltaic Systems Test Facilities: Existing capabilities compilation
[NASA-CR-168802] p 42 N82-22660
The sulfuric acid/water chemical heat pump/energy storage program p 125 N82-24691
RESEARCH MANAGEMENT
Overview of the Chemical/Hydrogen Energy Systems (C/HES) program p 64 N82-24689
RESEARCH PROJECTS
A review of the SERI wind energy innovative systems program p 98 A82-36079
RESERVES
Strategic petroleum reserve: Substantial progress made, but capacity and oil quality concerns remain
[EMD-82-19] p 3 N82-22537
RESERVOIRS
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5
[DE82-002520] p 78 N82-25616
RESIDENTIAL ENERGY
Small wind energy conversion systems, application and performance
[ASME PAPER 82-PET-3] p 96 A82-35483
Some aspects of small aerogenerator design and testing p 100 A82-36094
Heat pump demand characteristics: A study of the impacts of single-family residential heat-pump technologies on electric-utility-system loads
[DE82-900861] p 3 N82-22464
Energy conservation in houses. A technical press day report on the results of the low energy experimental house project in Garsfontein, Pretoria p 6 N82-22771
The potential for utility conservation investments in Minnesota
[PB82-122219] p 7 N82-22792
Demand 80/81: Forecasts of energy consumption to the year 2000. Volume 1: Forecasts and description of the forecasting model
[DE82-900871] p 9 N82-23769
Residential Energy Consumption Survey (RECS): National interim energy consumption survey, 1978-1979. Household monthly energy consumption and expenditures. User's guide
[PB82-114919] p 9 N82-23778
Residential Energy Consumption Survey (RECS): National interim energy consumption survey, 1978-1979, household monthly energy consumption and expenditures. Shopper's guide
[PB82-114927] p 10 N82-23779
ORNL Thermal Energy Storage program overview p 123 N82-24654
Design and demonstration of a storage-assisted air conditioning system p 123 N82-24655
Distributed thermal energy storage in the residential sector: Commercialization readiness assessment and implementation strategy p 12 N82-24661
A cost-effectiveness evaluation of chemical heat pumps p 12 N82-24693
Building and occupant characteristics as determinants of residential energy consumption
[DE82-002417] p 12 N82-24728
Evaluation for FY 1981 of MASEC's retrofit residential single-family dwellings passive solar heating project
[DE82-001188] p 52 N82-25409
Passive solar class B monitoring reports
[DE82-003139] p 53 N82-25646
Evaluation for FY 1981 of MASEC'S new residential multi-family dwelling passive solar heating project
[DE82-001206] p 53 N82-25647

Residential conservation service program support
[DE82-001205] p 13 N82-25650
Analysis of the SOLAR 80 program in fiscal year 1981
[DE82-001190] p 53 N82-25653
Solar energy research at Los Alamos
[DE82-004222] p 53 N82-25654
Data report for the Northeast Residential Experiment Station, September 1981
[DE82-005616] p 54 N82-26514
Integrated residential photovoltaic array development
[NASA-CR-169042] p 54 N82-26786
Design, fabrication and test of block 4 design solar cell modules. Part 2: Residential module
[NASA-CR-169158] p 55 N82-26795
Loyola University, New Orleans, Louisiana solar energy system performance evaluation, February 1981 - June 1981
[DE82-003357] p 57 N82-26825
Summerwood Associates, House M, Old Saybrook, Connecticut: Solar energy system performance evaluation, June 1980 - May 1981
[DE82-002240] p 58 N82-26826
Solar energy system performance evaluation: General Electric, Normal operational test site, Normal, Illinois, September 1980 - March 1981
[DE82-001805] p 58 N82-26827
Solar-energy-system performance evaluation, Rymark I and Rymark II, Frederick, Maryland, January 1981 - April 1981
[DE82-001591] p 58 N82-26829
Solar-energy-system performance evaluation, General Electric Dallas operational test site, Dallas, Texas, October 1980 - March 1981
[DE82-001350] p 58 N82-26830
Solar-energy-system performance evaluation, General Electric Spokane operational test site, Spokane, Washington, October 1980 - March 1981
[DE82-001610] p 58 N82-26831
State solar initiatives. Volume 1: A review
[DE82-002425] p 59 N82-26842
State solar initiatives. Volume 2: A review
[DE82-002838] p 59 N82-26843
Shared inverter residential photovoltaic system concept
[DE82-006281] p 60 N82-26859
Solar energy hot water heating and electric utilities. A model validation
[DE82-005485] p 60 N82-26861
Data on energy conservation activity in multifamily housing
[DE82-000467] p 16 N82-26862
DOE/NASA SIMS Prototype Solar System, no. 4. Part 1: Market analysis. Part 2: Modular manufacturing cost estimate p 61 N82-27835
Integrated residential photovoltaic array development
[NASA-CR-169112] p 61 N82-27836

RESIDUES
Assessment of secondary residues. Engineering and economic analysis
[DE82-000925] p 85 N82-26771

RESONANCE
A review of resonance response in large horizontal-axis wind turbines p 107 N82-23711

RESONANT FREQUENCIES
The control of engine vibration using squeeze-film dampers
[ASME PAPER 82-GT-241] p 96 A82-35422
Experience on the use of MOSTAB-HFW computer code for horizontal-axis wind turbines p 107 N82-23709
A review of resonance response in large horizontal-axis wind turbines p 107 N82-23711
SWECS tower dynamics analysis methods and results p 107 N82-23712

RESOURCE ALLOCATION
An assessment of the industrial energy conservation program. Volume 1: Summary
[PB82-122755] p 7 N82-22793
Fossil and synthetic fuels miscellaneous, part 1
[GPO-84-010] p 76 N82-24351
Future Raw Materials and Energy Use in Industry: A Research Agenda
[DE82-005975] p 15 N82-26512

RESOURCES MANAGEMENT
Principles of efficient energy use at Interflug p 1 A82-33250
Appropriateness in using LANDSAT in development energy related data bases p 4 N82-22585
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 7 N82-23043

RESPIRATION
Toxic hazards research unit
[AD-A110587] p 80 N82-25780

RETORT PROCESSING
Oil shale project run summary large retort run L-4
[DE82-003627] p 73 N82-23816
Explosively produced fracture of oil shale
[DE82-004182] p 79 N82-25726
Modelling of oil shale retorts for electromagnetic sensing techniques
[PB82-153321] p 86 N82-27459
Investigation of the geokinetics horizontal in situ oil shale retorting process
[DE82-004273] p 88 N82-27798

RETROFITTING
Potential geothermal energy applications for Idaho Elks Rehabilitation Hospital
[DE82-003803] p 71 N82-22783
Evaluation for FY 1981 of MASEC's retrofit residential single-family dwellings passive solar heating project
[DE82-001188] p 52 N82-25409
Energy-performance targets for federal buildings: Retrofit energy-target bands for existing postal facilities
[DE82-000070] p 16 N82-26845

REYNOLDS NUMBER
MHD phenomena at high magnetic Reynolds number
[AD-A110929] p 113 N82-27081

RHODIUM COMPOUNDS
Recent work in advanced hydrogen production concepts p 65 N82-24711

RIBBONS
High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
LSA project perspective of wafering technology p 46 N82-23651

RICE
Purification of rice hulls as a source of solar grade silicon for solar cells p 20 A82-28881
Purification of rice hulls as a source of solar grade silicon for solar cells p 27 A82-34079

RING STRUCTURES
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p 126 N82-27749

RIVER BASINS
Penobscot River basin overview
[PB82-131467] p 4 N82-22639
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640

ROADWAY POWERED VEHICLES
Inductive power transfer for propulsion — Roadway Powered Electric Vehicle project p 95 A82-35229

ROASTING
On the processing of manganese nodules with sulphur containing reagents
[CSIR-TRANS-1603] p 13 N82-25336

ROCKET ENGINE DESIGN
Study of reactor Brayton power systems for nuclear electric spacecraft
[NASA-CR-168942] p 110 N82-24289

ROCKET PROPELLANTS
Toxic hazards research unit
[AD-A110587] p 80 N82-25780

ROCKS
Effect of pulse loads on dynamic rock fracture
[DE82-002311] p 76 N82-23837
Low cost, multipurpose solar energy system
[DE81-030955] p 62 N82-27854

ROLLER BEARINGS
Second-generation heliostat development for solar-central receivers: Volume 1, detail design report. Appendix 2
[DE82-001843] p 45 N82-22779

ROTATING BODIES
Energy storage capacity of rotating composite structures operating under uniaxial tension p 119 A82-31563

ROTATING DISKS
Energy storage capacity of rotating composite disks and shells /Review/ p 119 A82-31562

ROTATING GENERATORS
Helical screw expander evaluation project
[NASA-CR-168803] p 104 N82-22659

ROTOR AERODYNAMICS
RPE-10 composite flywheel testing
[UCRL-15379] p 120 N82-22498
Wind turbine dynamics
[NASA-CP-2185] p 105 N82-23684
Aerodynamic potpourri p 105 N82-23685
Aerodynamic performance prediction of horizontal axis wind turbines p 105 N82-23686
Double-multiple streamtube model for Darrieus in turbines p 105 N82-23687
The UTRC wind energy conversion system performance analysis for horizontal axis wind turbines (WECSPER) p 105 N82-23688
The velocity field of a system of unsteady cycloidal vorticies p 106 N82-23689
On the wake of a Darrieus turbine p 106 N82-23691
Recent Darrieus vertical axis wind turbine aerodynamical experiments at Sandia National Laboratories p 106 N82-23692
Performance of wind turbines in a turbulent atmosphere p 106 N82-23693
Wind turbulence inputs for horizontal axis wind turbines p 106 N82-23695
Applications of the DOE/NASA wind turbine engineering information system p 106 N82-23696
Performance testing of a 50 kW VAWT in a built-up environment p 106 N82-23698
Measured and calculated characteristics of wind turbine noise p 108 N82-23724
Dynamics of wakes downstream of wind turbine towers p 108 N82-23725
Acoustic noise generation by the DOE/NASA MOD-1 wind turbine p 108 N82-23726
User's manual for the vertical axis wing turbine code VDART2
[DE82-000796] p 112 N82-26828

ROTOR BLADES (TURBOMACHINERY)
A vertical axis wind energy converter with straight blades p 102 A82-36112
Evaluation of lightning accommodation systems for wind-driven turbine rotors
[NASA-TM-82784] p 105 N82-23679
Comparison of upwind and downwind rotor operation of the DOE/NASA 100-kW MOD-0 wind turbine p 107 N82-23710

ROTOR SPEED
The conceptual design of the high speed ratio wind rotor for the 52 m diameter horizontal axis Voith wind energy converter p 99 A82-36090
Drive train assembly of the Swedish WTS 3 — Wind Turbine System p 99 A82-36091
The hydraulic windmill p 108 N82-23700

ROTORS
Effect of rotor configuration on guyed tower and foundation designs and estimated costs for intermediate site horizontal axis wind turbines
[NASA-TM-82804] p 104 N82-22649
Development of a dual-field heteropoplar power converter
[NASA-CR-165168] p 110 N82-24424
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p 126 N82-27749

RP-1 ROCKET PROPELLANTS
Deposit formation in hydrocarbon fuels
[ASME PAPER 82-GT-49] p 67 A82-35307

S

SAFETY
Fossil and synthetic fuels miscellaneous, part 1
[GPO-84-010] p 76 N82-24351
Safety and liability considerations for photovoltaic modules/panels
[NASA-CR-168938] p 52 N82-24721
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments
[DE82-002439] p 14 N82-25665
Comparison of Rankine-cycle power systems: Effects of seven working fluids
[DE82-005599] p 113 N82-26844

SAFETY FACTORS
Health and safety evaluation of a modified tunnel borer design for application to single entry coal mine development
[NASA-CR-168807] p 70 N82-22631
Comparative health and safety assessment of the SPS and alternative electrical generation systems p 5 N82-22696
Modification and operation of the hydrogen homestead hydride vessel energy storage system p 65 N82-24705

SAFETY MANAGEMENT
Modification and operation of the hydrogen homestead hydride vessel energy storage system p 65 N82-24705

SAILS
Sail-type wind-turbines - A review and annotated bibliography p 93 A82-34488

SALINITY
Salinity-gradient vapor-pressure power conversion p 92 A82-32331

SALTON SEA (CA)
Salton sea project, phase 1 — solar pond power plant
[NASA-CR-168804] p 41 N82-22654

SANDSTONES
Mechanical behavior of Mesaverde shale and sandstone at high pressure
[DE82-001665] p 85 N82-26911

SANDWICH STRUCTURES
Design, fabrication and test of liquid metal heat-pipe sandwich panels
[AIAA PAPER 82-0903] p 115 A82-31898
SATELLITE ANTENNAS
Power transmission and reception. An overview and perspective p 116 N82-22723
Microwave system performance summary p 117 N82-22724
SATELLITE DESIGN
Satellite thermal design and analyses for Titan 34D/IUS and STS/IUS launch vehicle environments
[AIAA PAPER 82-0828] p 24 A82-31856
SATELLITE NAVIGATION SYSTEMS
Electric power processing, distribution, management and energy storage p 117 N82-22743
SATELLITE POWER TRANSMISSION (TO EARTH)
Meteorological effects on laser propagation for power transmission p 115 A82-32368
Power availability at terrestrial receptor sites for laser-power transmission from the satellite power system p 116 A82-32369
Simulation of D and E region high-power microwave heating with HF ionospheric modification experiments --- solar power satellite transmission effects p 116 A82-33447
The solar power satellite
[ONERA, TP NO. 1982-52] p 26 A82-33546
Military implications of a satellite power system p 36 A82-35608
The Final Proceedings of the Solar Power Satellite Program Review
[NASA-TM-84183] p 42 N82-22676
Overview of systems definition activities for satellite power systems p 43 N82-22677
Environmental assessment overview p 4 N82-22678
Societal assessment overview p 5 N82-22679
An overview on European SPS activities p 5 N82-22680
Critical technology areas of an SPS development and the applicability of European technology p 43 N82-22687
The design of low cost structures for extensive ground arrays p 43 N82-22702
Solar driven lasers for power satellite applications p 116 N82-22722
Rectenna system design p 117 N82-22736
Solid-state configurations p 117 N82-22739
Offshore rectenna feasibility p 117 N82-22741
Microwave heating of the lower ionosphere p 117 N82-22747
The effects of a satellite power system on ground-based astronomy p 44 N82-22749
The EMC of satellite power systems and DoD C-E systems p 44 N82-22750
Encounters between SPS power beams and satellites in lower orbits p 44 N82-22751
Electric power from orbit: A critique of a satellite power system
[PB82-133083] p 62 N82-27858
SATELLITE SOLAR ENERGY CONVERSION
Numerical simulation of recovery processes in a cyclotron converter --- for microwave to electric conversion p 94 A82-34522
The Final Proceedings of the Solar Power Satellite Program Review
[NASA-TM-84183] p 42 N82-22676
Societal assessment overview p 5 N82-22679
An overview on European SPS activities p 5 N82-22680
Passive solar reflector satellite revisited p 43 N82-22715
Satellite power system. Concept development and evaluation program. Volume 4: Energy conversion and power management
[NASA-TM-58237] p 53 N82-25642
Electric power from orbit: A critique of a satellite power system
[PB82-133083] p 62 N82-27858
SATELLITE SOLAR POWER STATIONS
The solar power satellite
[ONERA, TP NO. 1982-52] p 26 A82-33546
Optimization of the region of inverse conversion in a cyclotron microwave converter --- for microwave to electric conversion p 94 A82-34521
Ground-based receiving-converting complex for satellite solar power systems p 94 A82-34523
The Final Proceedings of the Solar Power Satellite Program Review
[NASA-TM-84183] p 42 N82-22676
Overview of systems definition activities for satellite power systems p 43 N82-22677

Critical technology areas of an SPS development and the applicability of European technology p 43 N82-22687
Overview of atmospheric effects p 5 N82-22688
Ionospheric disturbance overview p 5 N82-22689
Electromagnetic compatibility overview p 5 N82-22690
Nonmicrowave health and ecological effects: Overview p 5 N82-22691
SPS microwave health and ecological effects: Program area overview p 5 N82-22692
An evaluation of the land and material requirements for the satellite power system p 5 N82-22693
Reference system characterization and cost overview p 43 N82-22694
SPS and alternative technologies cost and performance evaluations p 43 N82-22695
Rectenna related atmospheric effects p 6 N82-22754
Advanced space system concepts and their orbital support needs (1980 - 2000) p 118 N82-27362
SATELLITE TEMPERATURE
Satellite thermal design and analyses for Titan 34D/IUS and STS/IUS launch vehicle environments
[AIAA PAPER 82-0828] p 24 A82-31856
SAWS
Proceedings of the Low-Cost Solar Array Wafering Workshop
[NASA-CR-168847] p 46 N82-23650
Comparison of various silicon sawing methods p 46 N82-23652
Arco Solar, Incorporated: The industrial point of view p 47 N82-23653
Field experience with various slicing methods p 47 N82-23665
ID slicing and the automated factory p 47 N82-23672
SCHEDULES
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 9: Cost estimate and schedule
[DE82-000667] p 122 N82-23740
SCHOTTKY DIODES
The effect of the intermediate layer on the characteristics of Schottky-barrier solar-cell elements p 22 A82-30059
Photovoltaic effects in Cu2O-Cu solar cells grown by anodic oxidation p 23 A82-31187
Ground-based receiving-converting complex for satellite solar power systems p 94 A82-34523
Preparation and analysis of CdS-Cu2S solar cells p 30 A82-34540
RF sputtered gold-amorphous silicon Schottky-barrier diodes p 34 A82-35246
Grain boundary recombination analysis of GaAs Schottky barrier solar cells p 34 A82-35496
Ionized impurity induced photocarrier generation in organic energy conversion systems p 41 A82-37944
SEALING
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] p 126 N82-27749
SEAMS (JOINTS)
Coal seam exploration with special regard to the application of seismic methods for the detection of dykes
[CSIR-ME-1721] p 71 N82-22831
SEDIMENTARY ROCKS
The boreholes Ortenburg 1 and 2 (1980/81)
[BMFT-FB-T-82-004] p 86 N82-27516
SEISMIC WAVES
Coal seam exploration with special regard to the application of seismic methods for the detection of dykes
[CSIR-ME-1721] p 71 N82-22831
SEISMOLOGY
Seismic and geodetic studies of the Imperial Valley, California
[DE82-001686] p 85 N82-26915
SELENIDES
A photoelectrochemical cell based on chemically deposited Sb2Se3 thin film electrode and dependence of deposition on various parameters p 23 A82-30863
SELF ALIGNMENT
Optical characterization method for concentrating solar collectors using reverse illumination p 25 A82-32570
SEMICONDUCTING FILMS
Amorphous thin films for terrestrial solar cells p 22 A82-30329
High current post-hydrogenated chemical vapor deposited amorphous silicon p-i-n diodes p 27 A82-33686
The CLEFT process - A technique for producing epitaxial films on reusable substrates p 30 A82-34097
Germanium selective solar absorber surfaces p 38 A82-36163
Current-voltage response of tandem junction solar cells p 40 A82-37850
Properties and structure of a-SiC:H for high-efficiency a-Si solar cell p 40 A82-37851
Electrochemical photovoltaic cells 2-6 compound thin film electrodes
[DE82-000394] p 59 N82-26840
SEMICONDUCTOR DEVICES
Photochemical energy storage: Studies of inorganic photoassistance agents
[DE82-000403] p 122 N82-23764
Improved slicing method for silicon
[DE82-003517] p 57 N82-26817
SEMICONDUCTOR DIODES
Distributed series resistance effects in solar cells p 25 A82-32693
SEMICONDUCTOR JUNCTIONS
Ion implantation of solar cell junctions without mass analysis p 29 A82-34092
Theory of photocurrent in semiconductor-electrolyte junction solar cells p 37 A82-35816
Current-voltage response of tandem junction solar cells p 40 A82-37850
SEMICONDUCTORS (MATERIALS)
Purification of rice hulls as a source of solar grade silicon for solar cells p 20 A82-28881
Photochemical energy storage: Studies of inorganic photoassistance agents
[DE82-000403] p 122 N82-23764
SEPARATORS
Cross-linked polyvinyl alcohol films as alkaline battery separators
[NASA-TM-82802] p 103 N82-22327
SEWAGE
Feasibility study: Codisposal with energy recovery from wastewater sludge and municipal refuse. Phase 2, Gloucester County, New Jersey
[DE82-000882] p 9 N82-23759
SEWAGE TREATMENT
Investigation into the economy of methane gas utilization in sewage treatment plants
[BMFT-FB-T-82-025] p 89 N82-27857
SHALE OIL
Paraho oil shale module. Critical items identification, task 11
[DE82-003727] p 70 N82-22634
Oil shale project run summary large retort run L-4
[DE82-003627] p 73 N82-23616
Western oil shale development: A technology assessment. Volume 1: Main report
[DE82-003132] p 74 N82-23617
Western oil shale development. A technology assessment
[DE82-003004] p 74 N82-23622
Explosively produced fracture of oil shale
[DE82-004182] p 79 N82-25726
Supercritical fluids for reaction and extraction of coal and heavy oils
[DE82-005496] p 81 N82-26426
Jet fuel from shale oil: The 1981 technology review
[AD-A111217] p 82 N82-26484
Development of accelerated fuel-engines qualification procedures methodology, volume 1
[AD-A113461] p 85 N82-27317
Development of accelerated fuel-engines qualification procedures methodology. Volume 1: Appendices
[AD-A113532] p 85 N82-27318
Modelling of oil shale retorts for electromagnetic sensing techniques
[PB82-153321] p 86 N82-27459
Suitability of shale fuels for Army generator sets
[AD-A112609] p 87 N82-27522
Evaluation of hydrocracking catalysts for conversion of whole shale oil into high yields of jet fuels
[AD-A112820] p 87 N82-27523
Investigation of the geokinetics horizontal in situ oil shale retorting process
[DE82-004273] p 88 N82-27798
Shale characterization and resource appraisal of Devonian black shales of the Appalachian basin
[DE82-004191] p 89 N82-27909
SHALES
Mechanical behavior of Mesaverde shale and sandstone at high pressure
[DE82-001665] p 85 N82-26911
Shale characterization and resource appraisal of Devonian black shales of the Appalachian basin
[DE82-004191] p 89 N82-27909
SHAPES
Some tradeoffs in ingot shaping and price of solar photovoltaic modules p 47 N82-23666
SHELLS (STRUCTURAL FORMS)
Case study of the Mastin double-envelope house
[DE82-006833] p 15 N82-26513

SHORT CIRCUITS
The effect of the intermediate layer on the characteristics of Schottky-barrier solar-cell elements
p 22 A82-30059
Grain boundary recombination analysis of GaAs Schottky barrier solar cells p 34 A82-35496
SHUTDOWNS
Thermal energy buffer storage for the small community solar thermal power experiment p 124 N82-24684
SILANES
Relatively low-temperature pyrolysis of silane in free space p 28 A82-34080
SILICON
Purification of rice hulls as a source of solar grade silicon for solar cells p 20 A82-26881
Electrodeposition of solar silicon p 20 A82-29248
Solar grade silicon as a potential candidate material for low-cost terrestrial solar cells p 23 A82-30861
Determination of the grain boundary recombination velocity in polycrystalline silicon as a function of illumination from photoconductance measurements
p 24 A82-32183
Current aspects in low-cost silicon technology
p 27 A82-34078
Relatively low-temperature pyrolysis of silane in free space p 28 A82-34080
Metallurgical grade silicon substrates for solar cell application p 28 A82-34084
Practical limiting efficiencies for crystalline silicon solar cells p 29 A82-34090
Fracture of directionally solidified multicrystalline silicon p 38 A82-36283
Evaluation of solar cell materials for a Solar Power Satellite p 44 N82-22721
Proceedings of the Low-Cost Solar Array Wafering Workshop
[NASA-CR-168847] p 46 N82-23650
LSA project perspective of wafering technology
p 46 N82-23651
Comparison of various silicon sawing methods
p 46 N82-23652
Arco Solar, Incorporated: The industrial point of view
p 47 N82-23653
Some disconnected speculations on slicing silicon
p 47 N82-23654
Overview of a new slicing method: Fixed Abrasive Slicing Technique (FAST) p 47 N82-23669
ID slicing and the automated factory
p 47 N82-23672
A conceptual design study of a high temperature solar thermal receiver
[NASA-CR-168925] p 51 N82-24720
Process Research ON Semix Silicon Materials (PROSSM)
[NASA-CR-169049] p 55 N82-26794
Silicon materials task of the Low Cost Solar Array Project: Effect of impurities and processing on silicon solar cells
[NASA-CR-169051] p 56 N82-26806
SILICON CARBIDES
Hydrogenated amorphous silicon carbide as a window material for high efficiency a-Si solar cells
p 23 A82-30862
Fracture strength of sintered and siliconized SiC and SiC joints
[ACS PAPER 35-N-80] p 127 A82-33029
Properties and structure of a-SiC:H for high-efficiency a-Si solar cell p 40 A82-37851
SILICON DIOXIDE
Purification of rice hulls as a source of solar grade silicon for solar cells p 27 A82-34079
Investigations of low-temperature geothermal potential in New York state
[DE82-002517] p 78 N82-25617
SILICON FILMS
Silicon sheet - A key to low cost solar cells
p 28 A82-34082
High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
Diagnostic study of BSF silicon solar cells
p 28 A82-34086
As-deposited CVD amorphous silicon films for solar photovoltaic applications p 38 A82-36227
Improved slicing method for silicon
[DE82-003517] p 57 N82-26817
SILICON JUNCTIONS
High-efficiency silicon solar cells and prospects for their improvement p 22 A82-30057
Effect of thickness on silicon solar cell efficiency
p 25 A82-32696
An effect of back-surface boron implantation on silicon solar cells p 26 A82-32995
Efficient CdSe/p/ +/n Si tunnel junction photoanode for solar cell p 26 A82-33683
High current post-hydrogenated chemical vapor deposited amorphous silicon p-i-n diodes
p 27 A82-33686
Ineffectiveness of low-high junctions in optimized solar cell designs p 31 A82-34545
RF sputtered gold-amorphous silicon Schottky-barrier diodes p 34 A82-35246
Effective drift current densities in the n-type heavily doped emitter region of p-n/plus/ junction silicon solar cells p 39 A82-36867
p-type amorphous silicon/liquid junction solar cell
p 40 A82-37634
SILICON NITRIDES
Improved slicing method for silicon
[DE82-003517] p 57 N82-26817
SILICONIZING
Fracture strength of sintered and siliconized SiC and SiC joints
[ACS PAPER 35-N-80] p 127 A82-33029
SINGLE CRYSTALS
Further studies of the photoelectrochemical properties of the group VI transition metal dichalcogenides
p 23 A82-30865
Single-crystal Zn/x/Cd/1-x/S/Cu2S photovoltaic cells
p 31 A82-34542
Ribbon growth of single crystal GaAs for solar cell application
[AD-A112038] p 56 N82-26810
SINTERING
Fracture strength of sintered and siliconized SiC and SiC joints
[ACS PAPER 35-N-80] p 127 A82-33029
SIS (SEMICONDUCTORS)
Spray-deposited SnO2/n-Si/polycrystalline/ solar cells
p 38 A82-36863
Conductor-insulator-semiconductor organic solar cells
p 39 A82-36865
SITE SELECTION
Power availability at terrestrial receptor sites for laser-power transmission from the satellite power system
p 116 A82-32369
Procedures for modeling wind turbine performance from site wind data
[ASME PAPER 82-PET-7] p 97 A82-35487
Assessment of offshore siting of wind turbine generators p 97 A82-36077
Sites for wind-power installations - Physical modelling of the wind field over Kahuku Point, Oahu, Hawaii
p 98 A82-36080
Utility siting of WECS: A preliminary legal/regulatory assessment
[SERI/TR-744-778] p 4 N82-22667
An evaluation of the land and material requirements for the satellite power system p 5 N82-22693
Compressed-air energy storage: Preliminary design and site development program in an aquifer. Volume 3B: Site selection study, part 2
[DE82-000674] p 120 N82-22773
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary
[DE82-001349] p 74 N82-23619
Effect of wind turbine generator model and siting on wind power changes out of large WECS arrays
p 108 N82-23723
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 1: Executive summary
[DE82-000270] p 121 N82-23735
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 3A: Site selection study, part 1
[DE82-000675] p 121 N82-23736
OTEC support services
[DE82-005470] p 115 N82-27853
SIZE DETERMINATION
Ultrasonically enhanced size reduction of coal
[DE82-001601] p 71 N82-22989
SKIN (ANATOMY)
Toxic hazards research unit
[AD-A110587] p 80 N82-25780
SLICING
Proceedings of the Low-Cost Solar Array Wafering Workshop
[NASA-CR-168847] p 46 N82-23650
LSA project perspective of wafering technology
p 46 N82-23651
Comparison of various silicon sawing methods
p 46 N82-23652
Arco Solar, Incorporated: The industrial point of view
p 47 N82-23653
Some disconnected speculations on slicing silicon
p 47 N82-23654
Field experience with various slicing methods
p 47 N82-23665
Some tradeoffs in ingot shaping and price of solar photovoltaic modules p 47 N82-23666
Sensitivity analysis of add-on price estimates for select silicon wafering technologies p 47 N82-23667
Wafering economies for industrialization from a wafer manufacturer's viewpoint p 47 N82-23668
Overview of a new slicing method: Fixed Abrasive Slicing Technique (FAST) p 47 N82-23669
Improved slicing method for silicon
[DE82-003517] p 57 N82-26817
SMELTING
Energy and materials flows in the production of primary aluminum
[DE82-005963] p 15 N82-26453
SOCIOLOGY
Societal assessment overview p 5 N82-22679
SODIUM CHLORIDES
Thermodynamics of geothermal fluids
p 76 N82-24123
SOIL MECHANICS
Environmental effects of solar-thermal power systems. Environmental effects of heat transfer and storage fluids: Plant toxicity and movement in soils
[DE82-002603] p 17 N82-26881
SOLAR ARRAYS
Possible applications of large solar arrays in astronomy and astrophysics p 24 A82-31571
Photovoltaic power systems - State of the art - 1980
p 28 A82-34085
Photovoltaic encapsulation materials
p 29 A82-34093
Terrestrial solar modules p 30 A82-34095
Technology transfer - LSA project to industry
p 30 A82-34099
Simulation of the behaviour of a set of Cu2S-CdS unit photocells p 31 A82-34544
Czochralski silicon solar cell modules - Present cost and future prospects p 38 A82-36864
The 19th Project Integration Meeting
[NASA-CR-168822] p 41 N82-22652
Overview of systems definition activities for satellite power systems p 43 N82-22677
Critical technology areas of an SPS development and the applicability of European technology
p 43 N82-22687
The design of low cost structures for extensive ground arrays p 43 N82-22702
Design aspects of a solar array drive for spot, with a high platform stability objective p 46 N82-23353
A deployment mechanism for the double roll-out flexible solar array on the space telescope p 46 N82-23359
Design handbook for photovoltaic-power systems: Simplified methods for utility interconnected systems
[DE82-003909] p 48 N82-23745
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1: Lovington Square Shopping Center, Lovington, New Mexico
[DE82-001710] p 49 N82-23755
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 2: Newman power station, El Paso, Texas
[DE82-001711] p 49 N82-23758
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume for Beverly High School, Beverly, Massachusetts
[DE82-001726] p 49 N82-23757
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1 for Mt. Laguna Radar Station, Mt. Laguna, California
[DE82-001727] p 49 N82-23758
Process development for automated solar cell and module production. Task 4: Automated array assembly
[NASA-CR-168923] p 51 N82-24719
Safety and liability considerations for photovoltaic modules/panels
[NASA-CR-168938] p 52 N82-24721
A simplified solar cell array modelling program
p 52 N82-25111
FSA field test
[NASA-CR-168991] p 52 N82-25638
Integrated residential photovoltaic array development
[NASA-CR-169042] p 54 N82-26786
Development and testing of a high-efficiency/high-concentration, photovoltaic module employing AlGaAs/GaAs solar cells
[DE82-002683] p 59 N82-26839
Intermediate photovoltaic system application experiment operational performance report. Volume 3: For Newman Power Station, El Paso, Texas
[DE82-000797] p 60 N82-26856
Shared inverter residential photovoltaic system concept
[DE82-006281] p 60 N82-26859
Integrated residential photovoltaic array development
[NASA-CR-169112] p 61 N82-27836

SOLAR BLANKETS
A deployment mechanism for the double roll-out flexible solar array on the space telescope p 46 N82-23359

SOLAR CELLS
Purification of rice hulls as a source of solar grade silicon for solar cells p 20 A82-28881
Variation of minority carrier lifetime with level of injection in p-n-junction devices p 20 A82-29233
Electrodeposition of solar silicon p 20 A82-29248
Temperature dependence of silicon solar cell characteristics p 20 A82-29249
Characterization of electron traps in n/plus/ indium tin oxide on p-type InP solar cells p 21 A82-29693
Reduction of solar cell efficiency by bulk defects across the back-surface-field junction p 21 A82-29694
Back surface field and vertical solar cell p 21 A82-29695
Transport in hydrogenated amorphous silicon p-i-n solar cells p 21 A82-29696
High-efficiency silicon solar cells and prospects for their improvement p 22 A82-30057
Numerical solution of the one-dimensional boundary value problem of charge transfer in solar-cell elements p 22 A82-30058
The effect of the intermediate layer on the characteristics of Schottky-barrier solar-cell elements p 22 A82-30059
Investigation of mirror concentrators intended for operation with high-current solar cells p 22 A82-30061
Polycrystalline thin films for terrestrial solar cells p 22 A82-30328
Amorphous thin films for terrestrial solar cells p 22 A82-30329
Solar grade silicon as a potential candidate material for low-cost terrestrial solar cells p 23 A82-30861
Hydrogenated amorphous silicon carbide as a window material for high efficiency a-Si solar cells p 23 A82-30862
Further studies of the photoelectrochemical properties of the group VI transition metal dichalcogenides p 23 A82-30865
Photovoltaic effects in Cu2O-Cu solar cells grown by anodic oxidation p 23 A82-31187
Thick optical films for the conduction of optical and infrared radiation --- for light concentration onto solar cells p 24 A82-32543
Distributed series resistance effects in solar cells p 25 A82-32693
Effect of thickness on silicon solar cell efficiency p 25 A82-32696
Frequency dependent capacitance studies of the CdS/Cu2S thin-film solar cell p 25 A82-32892
Deep trap levels in CdS solar cells observed by capacitance measurements p 26 A82-32893
Temperature coefficients of the open-circuit voltage of p-n junction solar cells p 26 A82-32894
An effect of back-surface boron implantation on silicon solar cells p 26 A82-32895
Energy conversion process of p+/n amorphous Si solar cells p 26 A82-33255
Efficient CdSe/p/+/n Si tunnel junction photoanode for solar cell p 26 A82-33683
Non-mass-analyzed ion implantation from a solid phosphorus source p 26 A82-33685
Symposium on Materials and New Processing Technologies for Photovoltaics, Hollywood, FL, October 1980, Proceedings p 27 A82-34076
Current aspects in low-cost silicon technology p 27 A82-34078
Purification of rice hulls as a source of solar grade silicon for solar cells p 27 A82-34079
Silicon sheet - A key to low cost solar cells p 28 A82-34082
High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
Metallurgical grade silicon substrates for solar cell application p 28 A82-34084
Photovoltaic power systems - State of the art - 1980 p 28 A82-34085
Diagnostic study of BSF silicon solar cells p 28 A82-34086
Processing for high photocurrent in IBC solar cells p 29 A82-34087
Parabolic model for optimizing grid and bus metallization patterns in circular solar cells p 29 A82-34088
Analytical calculation of thickness versus diameter requirements of silicon solar cells p 29 A82-34089
Practical limiting efficiencies for crystalline silicon solar cells p 29 A82-34090
Low-cost processes for thin-film solar cells p 29 A82-34091
Ion implantation of solar cell junctions without mass analysis p 29 A82-34092
The role of Be in /GaAl/As/GaAs solar cells p 30 A82-34096
The CLEFT process - A technique for producing epitaxial films on reusable substrates p 30 A82-34097
Preparation and analysis of CdS-Cu2S solar cells p 30 A82-34540
Photovoltaic performances of Cu2S/CdS sprayed solar cells p 31 A82-34541
Single-crystal Zn/x/Cd/1-x/S/Cu2S photovoltaic cells p 31 A82-34542
Trends and problems in CdS/Cu/x/S thin film solar cells - A review p 31 A82-34543
Simulation of the behaviour of a set of Cu2S-CdS unit photocells p 31 A82-34544
Ineffectiveness of low-high junctions in optimized solar cell designs p 31 A82-34545
The effects of non-uniform illumination of solar cells with concentrated light p 31 A82-34546
New experimental evidence for minority-carrier reflection at negative-barrier MIS contacts --- from solar cell open circuit voltage measurement p 34 A82-35247
Grain boundary recombination analysis of GaAs Schottky barrier solar cells p 34 A82-35496
Modification of open-circuit voltage of metal-insulator-semiconductor solar cells due to a nonuniform insulating layer p 34 A82-35500
Overview of the current status of solid-gas interface science p 35 A82-35506
Basic research needs and opportunities at the solid-solid interface - Diffusion p 35 A82-35509
Basic research needs and opportunities in thin films and coatings p 36 A82-35513
Basic research needs and opportunities for characterizing the microstructure and microchemistry of interfaces p 36 A82-35514
Theory of photocurrent in semiconductor-electrolyte junction solar cells p 37 A82-35816
Two-element cascade Al-Ga-As solar cell p 37 A82-36117
ZAP - Introducing the zero-bias avalanche photodiode p 38 A82-36215
Spray-deposited SnO2/n-Si/polycrystalline/ solar cells p 38 A82-36863
Czochralski silicon solar cell modules - Present cost and future prospects p 38 A82-36864
Conductor-insulator-semiconductor organic solar cells p 39 A82-36865
Effective drift current densities in the n-type heavily doped emitter region of p-n/plus/ junction silicon solar cells p 39 A82-36867
Analytical expressions for the determination of the maximum power point and the fill factor of a solar cell p 39 A82-36868
The role of Be in /GaAl/As/GaAs solar cells p 40 A82-37633
p-type amorphous silicon/liquid junction solar cell p 40 A82-37634
Current-voltage response of tandem junction solar cells p 40 A82-37850
Properties and structure of a-SiC:H for high-efficiency a-Si solar cell p 40 A82-37851
Photovoltaic Systems Test Facilities: Existing capabilities compilation [NASA-CR-168802] p 42 N82-22660
Proton damage annealing kinetics in silicon solar cells p 43 N82-22720
Evaluation of solar cell materials for a Solar Power Satellite p 44 N82-22721
Proceedings of the Low-Cost Solar Array Wafering Workshop [NASA-CR-168847] p 46 N82-23650
Field experience with various slicing methods p 47 N82-23665
Sensitivity analysis of add-on price estimate for select silicon wafering technologies p 47 N82-23667
Wafering economies for industrialization from a wafer manufacturer's viewpoint p 47 N82-23668
Process development for automated solar cell and module production. Task 4: Automated array assembly [NASA-CR-168923] p 51 N82-24719
A simplified solar cell array modelling program p 52 N82-25111
Satellite power system. Concept development and evaluation program. Volume 4: Energy conversion and power management [NASA-TM-58237] p 53 N82-25642
Efficiency of silicon solar cells containing chromium [NASA-CASE-NPO-15179-1] p 54 N82-26777
Silicon dendritic web material [NASA-CR-169053] p 55 N82-26793
Process Research ON Semix Silicon Materials (PROSSM) [NASA-CR-169049] p 55 N82-26794
Design, fabrication and test of block 4 design solar cell modules. Part 2: Residential module [NASA-CR-169158] p 55 N82-26795
Large-area sheet task advanced dendritic web growth development [NASA-CR-169047] p 55 N82-26796
Development of technique for AR coating and nickel and copper metallization of solar cells. FPS Project: Product development [NASA-CR-169055] p 55 N82-26797
Evaluation and verification of epitaxial process sequence for silicon solar-cell production [NASA-CR-169044] p 56 N82-26802
Silicon web process development [NASA-CR-169050] p 56 N82-26805
Silicon materials task of the Low Cost Solar Array Project: Effect of impurities and processing on silicon solar cells [NASA-CR-169051] p 56 N82-26806
Ribbon growth of single crystal GaAs for solar cell application [AD-A112038] p 56 N82-26810
Lead-acid batteries in solar photovoltaic power systems for marine aids to navigation [AD-A112151] p 57 N82-26811
Improved slicing method for silicon [DE82-003517] p 57 N82-26817
Development and testing of a high-efficiency/high-concentration, photovoltaic module employing AlGaAs/GaAs solar cells [DE82-002683] p 59 N82-26839
Shared inverter residential photovoltaic system concept [DE82-006281] p 60 N82-26859
Accelerated stress testing of solar photovoltaic modules [AD-A107378] p 61 N82-27840
Photovoltaics: Current status and future projections [DE82-002684] p 62 N82-27852
Terrestrial solar spectra, solar simulation and solar cell efficiency measurement [DE82-002082] p 62 N82-27908

SOLAR COLLECTORS
On the climatic optimization of the tilt and azimuth of flat-plate solar collectors p 21 A82-29318
Daily efficiency of solar collectors p 23 A82-31098
Enhancement of concentration using simple multi-plane mirrors p 23 A82-31099
Possible applications of large solar arrays in astronomy and astrophysics p 24 A82-31571
Optical characterization method for concentrating solar collectors using reverse illumination p 25 A82-32570
Comparison of Fresnel lenses and parabolic mirrors as solar energy concentrators p 26 A82-33022
Solar heat collector-generator for cooling purposes p 27 A82-33925
Properties of spray-deposited cobalt oxide selective coatings on aluminium and galvanised iron substrates --- for solar absorbers p 30 A82-34489
Basic research needs and opportunities at the solid-solid interface - Diffusion p 35 A82-35509
Basic research needs and opportunities for characterizing the microstructure and microchemistry of interfaces p 36 A82-35514
Calculating the solar contribution to solar assisted systems p 37 A82-35918
Performance test of solar collector with intermittent output p 37 A82-35921
Heat loss factor for linear solar concentrators p 38 A82-36208
A comment on the generalization of the theoretical basis of photovoltaic concentrators for extended light sources p 39 A82-36869
Determination of the stagnation temperature of flat plate solar collectors p 39 A82-37588
Central solar receivers - Applications for utilities and industry p 41 A82-37973
The trade-off between collector area, storage volume, and building conservation in annual storage solar heating systems [SERI/TR-721-907] p 42 N82-22668
Second-generation heliostat development for solar-central receivers [DE82-001844] p 45 N82-22777
Second-generation heliostat development for solar-central receivers, detail design report. Volume 1, appendix [DE82-001842] p 45 N82-22778
Second-generation heliostat development for solar-central receivers: Volume 1, detail design report. Appendix 2 [DE82-001843] p 45 N82-22779
Second-generation heliostat development for solar-central central receivers. Detail design report: Volume 2, appendices I, J [DE82-001937] p 45 N82-22780
Test station for solar collectors in Brazil [BMFT-FB-T-81-224] p 46 N82-22788

A point focusing collector for an integrated water/power complex
[MBB-UR-579-81-OE] p 46 N82-23149
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power. Executive summary
[DE82-001856] p 48 N82-23741
Low cost solar energy collection for cooling applications
[DE82-003255] p 48 N82-23751
Analysis of 70-tube pilot-plant solar-receiver-panel test data
[DE82-001728] p 49 N82-23752
Characterization of the corrosion environment of the desert near Barstow, California
[DE82-003876] p 50 N82-23800
A conceptual design study of a high temperature solar thermal receiver
[NASA-CR-168925] p 51 N82-24720
Optical characterization of solar concentrator mirrors using the solar beam of the JPL 25-foot space simulator
p 52 N82-25296
Automotive absorption air conditioner utilizing solar and motor waste heat
[NASA-CASE-NPO-15183-1] p 54 N82-26776
Air Brayton Solar Receiver, phase 1
[NASA-CR-169081] p 55 N82-26787
Luminescent solar-concentrator development
[DE82-000815] p 57 N82-26824
Optical analysis and optimization of parabolic-trough collectors: A user's guide
[DE82-003146] p 58 N82-26834
Custom Engineering parabolic glass reflector for the Sandia prototype solar collector
[DE82-000800] p 59 N82-26836
Solar-central-receiver system integrated with a cogeneration facility for copper smelting, volume 1
[DE82-001580] p 60 N82-26863
Solar production of industrial-process hot water. Phase 3: Operation and evaluation of the York Building Products Co., Inc. solar facility
[DE82-003526] p 60 N82-26865
Environmental effects of solar-thermal power systems. The potential production of air pollutants near STPS receiver stations
[DE82-002413] p 17 N82-26882
User's manual for DELSOL2: A computer code for calculating the optical performance and optimal system design for solar-thermal central-receiver plants
[DE82-003875] p 61 N82-27026
Solar equipment system packages for old and new buildings to provide domestic water and partial heating
[BMFT-FB-T-82-029] p 61 N82-27545
Fuel from the Sun: Solar commercial and industrial applications for the 1980's
[DE82-003285] p 61 N82-27847
Low cost, multipurpose solar energy system
[DE81-030955] p 62 N82-27854

SOLAR COOLING

Analysis of open inclined surface solar regenerators for absorption cooling applications - Comparison between numerical and analytical models p 21 A82-29319
Solar heat collector-generator for cooling purposes
p 27 A82-33925
Low cost solar energy collection for cooling applications
[DE82-003255] p 48 N82-23751
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
A chemical heat pump based on the reaction of calcium chloride and methanol for solar heating, cooling and storage p 51 N82-24692
Description of five houses instrumented for class B analysis --- solar houses
[DE82-001186] p 52 N82-25412
Summary of commercial demonstration projects
[DE82-002278] p 53 N82-25651
Results of roof pond heating experiments using the Passive Test Facility for warm, humid climates
[DE82-003226] p 60 N82-26850

SOLAR ELECTRIC PROPULSION

Solar-powered airplane design for long-endurance, high-altitude flight
[AIAA PAPER 82-0811] p 24 A82-31984

SOLAR ENERGY

The rates of solar energy storage and retrieval in a zeolite-water system p 37 A82-35922
Space and energy: Global viewpoint

[DE82-001350] p 58 N82-26830
Solar-energy-system performance evaluation, General Electric Spokane operational test site, Spokane, Washington, October 1980 - March 1981
[DE82-001610] p 58 N82-26831
Oakmead Industries, Santa Clara, California solar-energy-system performance evaluation October 1980 - May 1981
[DE82-002509] p 59 N82-26836
State solar initiatives. Volume 1: A review
[DE82-002425] p 59 N82-26842
State solar initiatives. Volume 2: A review
[DE82-002838] p 59 N82-26843
Results of roof pond heating experiments using the Passive Test Facility for warm, humid climates
[DE82-003226] p 60 N82-26850
Solar central receivers: The technology, industry, markets, and economics
[DE82-005267] p 60 N82-26857
Solar energy hot water heating and electric utilities. A model validation
[DE82-005485] p 60 N82-26861
Solar production of industrial-process hot water. Phase 3: Operation and evaluation of the York Building Products Co., Inc. solar facility
[DE82-003526] p 60 N82-26865
Fuel from the Sun: Solar commercial and industrial applications for the 1980's
[DE82-003285] p 61 N82-27847
Low cost, multipurpose solar energy system
[DE81-030955] p 62 N82-27854

SOLAR ENERGY ABSORBERS

Solar absorptance and thermal emittance of Al2O3 films on Al - A theoretical assessment p 21 A82-29250
Spectral selectivity of nickel and chromium rough surfaces p 23 A82-31440
Germanium selective solar absorber surfaces
p 36 A82-36163
Thermal and photochemical studies of solar energy absorbers dissolved in heat transfer fluids
p 36 A82-36750
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power. Executive summary
[DE82-001898] p 48 N82-23741

SOLAR ENERGY CONVERSION

Photochemical energy conversion in chlorophyll-containing lipid bilayer vesicles
p 21 A82-29317
Optical fibers and solar energy p 21 A82-29790
Conversion of blackbody radiation into laser energy
[AIAA PAPER 82-0871] p 24 A82-31879
Efficiency of hot-carrier solar energy converters
p 25 A82-32891
Biaxial cyclic deformation and creep-fatigue behavior of materials for solar thermal systems
[ASME PAPER 82-PVP-74] p 27 A82-33714
Solar bacterial biomass farm for space vehicles
p 27 A82-33895
Solar photovoltaic programs in the Sunshine Project and present status of R&D in Japan p 27 A82-34077
The Themis solar receiver p 32 A82-34553
The thermodynamic conversion of solar energy - Technical and economic comparison of different power plants p 32 A82-34554
Power plant I - Fused salt p 32 A82-34555
Power plant II - Sodium-water p 32 A82-34556
Power plant III - Steam p 32 A82-34557
Power plant IV - Therm-Thek p 33 A82-34558
Power plant V - Thek generating station
p 33 A82-34559
Power plant VI - Sodium-air p 33 A82-34560
Power plant VI revisited - Sodium-air /a grid-boiler/
p 33 A82-34561
Power plant VII - Air-air /tube boiler/
p 33 A82-34562
Power plant VII revisited - Air-air /Scirocco/
p 33 A82-34563
Annual productivity of a solar thermoelectric power plant p 33 A82-34564
State of the art in solar thermoelectric power plant research p 33 A82-34565
Basic research needs and opportunities on interfaces in solar materials; Proceedings of the Workshop, Denver, CO, June 30-July 3, 1980 p 34 A82-35501
Overview of solar energy conversion technologies - Quantum processes and thermal processes
p 34 A82-35502
Design requirements for interfaces in solar energy conversion technologies p 34 A82-35503
Overview of the current status of solid-liquid interface science p 35 A82-35505
Limitation of experimental capabilities for interfacial studies p 35 A82-35507
Basic research needs and opportunities at the solid-liquid interface p 35 A82-35510
Basic research needs and opportunities at the solid-gas interface p 36 A82-35511
Solar energy conversion and storage through synthetic light-driven proton pumps p 37 A82-35920
Substitution of diesel power plants by solar and wind electricity generators - A case study for a tropical island
p 101 A82-36107
Chemically sprayed PbS coatings for photothermal solar energy conversion. R. C. Agarwal and P. K. C. Pillai
p 36 A82-36210
As-deposited CVD amorphous silicon films for solar photovoltaic applications p 36 A82-36227
Solar hydrogen production using two-step thermochemical cycles p 63 A82-37437
Design of a system for solar energy storage via water electrolysis p 39 A82-37438
Salton sea project, phase 1 --- solar pond power plant
[NASA-CR-168804] p 41 N82-22654
Photovoltaics as a terrestrial energy source. Volume 2: System value
[NASA-CR-168809] p 41 N82-22656
Photovoltaics as a terrestrial energy source. Volume 3: An overview
[NASA-CR-168810] p 42 N82-22657
Photovoltaic Systems Test Facilities: Existing capabilities compilation
[NASA-CR-168802] p 42 N82-22660
The trade-off between collector area, storage volume, and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22668
Passive and hybrid solar manufactured housing and buildings. Phase 1: Technical proposal
[DE82-002098] p 45 N82-22776
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power. Executive summary
[DE82-001898] p 48 N82-23741
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power
[DE82-001921] p 48 N82-23742

Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power, appendices
[DE82-001852] p 48 N82-23743
Intermediate photovoltaic system application experiment operational performance report. Volume 4: For Newman Power Station, El Paso, Texas
[DE82-002681] p 48 N82-23746
Intermediate photovoltaic system application experiment operational executive summary. Volume 3: For Lovington Square Shopping Center, Lovington, New Mexico
[DE82-003082] p 48 N82-23747
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1: Lovington Square Shopping Center, Lovington, New Mexico
[DE82-001710] p 49 N82-23755
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 2: Newman power station, El Paso, Texas
[DE82-001711] p 49 N82-23756
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume for Beverly High School, Beverly, Massachusetts
[DE82-001726] p 49 N82-23757
Intermediate photovoltaic system application experiment operational performance: Executive summary. Volume 1 for Mt. Laguna Radar Station, Mt. Laguna, California
[DE82-001727] p 49 N82-23758
Texasgulf solar cogeneration program. Volume 2: Appendices
[DE82-001848] p 50 N82-23768
Intermediate photovoltaic system application experiment operational executive summary. Volume 2: For Lovington Square Shopping Center, Lovington, New Mexico
[DE81-003061] p 50 N82-23772
Intermediate photovoltaic system application experiment operational executive summary. Volume 3: For Newman Power Station, El Paso, Texas
[DE82-003088] p 50 N82-23773
Solar engine
[NASA-CASE-LAR-12148-1] p 50 N82-24640
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
Systems analysis of thermal storage p 123 N82-24668
Cost and performance of thermal storage concepts in solar thermal systems p 51 N82-24669
High-temperature molten salt thermal energy storage systems for solar applications p 123 N82-24670
Thermal energy storage for residential energy conservation p 124 N82-24674
Solar thermal power storage applications lead laboratory overview p 51 N82-24675
Corrosion behavior of alloys p 51 N82-24679
Evaluation for FY 1981 of MASEC'S new residential multi-family dwelling passive solar heating project
[DE82-001206] p 53 N82-25647
Summary of commercial demonstration projects
[DE82-002278] p 53 N82-25651
Analysis of the SOLAR 80 program in fiscal year 1981
[DE82-001190] p 53 N82-25653
Pilot solar power plant
[MBB-UR-533-81-O] p 53 N82-25656
Data report for the Northeast Residential Experiment Station, September 1981
[DE82-005616] p 54 N82-26514
Solar-energy-system performance evaluation, General Electric - Milwaukee operational test site, Milwaukee, Wisconsin, September 1980 - March 1981
[DE82-001934] p 57 N82-26814
Calculated effects of temperature, intensity and atmospheric conditions on the thermodynamic limits for conversion of solar energy to work on stored energy
[DE81-030876] p 57 N82-26815
OTEC support services
[DE82-005470] p 115 N82-27853

SOLAR FLUX DENSITY

On the climatic optimization of the tilt and azimuth of flat-plate solar collectors p 21 A82-29318

SOLAR FURNACES

Use of solar furnaces. II - Thermophysical properties p 24 A82-31568
Concentration of a Cassegrain solar furnace p 25 A82-32546

SOLAR GENERATORS

Solar power stations - Heat transfer and thermal optimization in the production of saturated water vapor p 22 A82-30060
A method for calculating the radiant energy incident on a vapor generator in a solar power station p 22 A82-30062
An optical heliostat for solar power stations p 23 A82-31492
Solar heat collector-generator for cooling purposes p 27 A82-33925
Photovoltaic power systems - State of the art - 1980 p 29 A82-34085
Themis - A solar power station p 31 A82-34551
The Themis heliostat field p 32 A82-34552
The Themis solar receiver p 32 A82-34553
The thermodynamic conversion of solar energy - Technical and economic comparison of different power plants p 32 A82-34554
Power plant I - Fused salt p 32 A82-34555
Power plant II - Sodium-water p 32 A82-34556
Power plant III - Steam p 32 A82-34557
Power plant IV - Therm-Thek p 33 A82-34558
Power plant V - Thek generating station p 33 A82-34559
Power plant VI - Sodium-air p 33 A82-34560
Power plant VI revisited - Sodium-air /a grid-boiler/ p 33 A82-34561
Power plant VII - Air-air /tube boiler/ p 33 A82-34562
Power plant VII revisited - Air-air /Scirocco/ p 33 A82-34563
Annual productivity of a solar thermoelectric power plant p 33 A82-34564
State of the art in solar thermoelectric power plant research p 33 A82-34565
Solar powered desiccant air conditioning system
[DE82-002656] p 44 N82-22775
Second-generation heliostat development for solar-central receivers
[DE82-001844] p 45 N82-22777
Second-generation heliostat development for solar-central receivers: Volume 1, detail design report Appendix 2
[DE82-001843] p 45 N82-22779
Second-generation heliostat development for solar-central central receivers. Detail design report: Volume 2, appendices I, J
[DE82-001837] p 45 N82-22780
A point focusing collector for an integrated water/power complex
[MBB-UR-579-81-OE] p 46 N82-23149
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power
[DE82-001921] p 48 N82-23742

[DE82-001852] p 48 N82-23743
Cooperative effort urged for development of orbital power stations p 118 N82-24261
Thermal energy buffer storage for the small community solar thermal power experiment p 124 N82-24684
Quality assurance and standards plan for solar thermal technologies
[DE81-030831] p 54 N82-26699
Effects off system factors on the economics of and demand for small solar thermal power systems
[NASA-CR-169043] p 56 N82-26800
Lead-acid batteries in solar photovoltaic power systems for marine aids to navigation
[AD-A112151] p 57 N82-26811
Conceptual design of the Truscott brine lake solar-pond system, volume 1: Utility-independent scenario
[DE82-003024] p 58 N82-26833
Shared inverter residential photovoltaic system concept
[DE82-006281] p 60 N82-26859
User's manual for DELSOL2: A computer code for calculating the optical performance and optimal system design for solar-thermal central-receiver plants
[DE82-003875] p 61 N82-27026
Photovoltaics: Current status and future projections
[DE82-002684] p 62 N82-27852

SOLAR HEATING

Solar power stations - Heat transfer and thermal optimization in the production of saturated water vapor p 22 A82-30060
A method for calculating the radiant energy incident on a vapor generator in a solar power station p 22 A82-30062
Performance test of solar collector with intermittent output p 37 A82-35921
The trade-off between collector area, storage volume, and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22668
The trade-off between collector area, storage volume and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22670
Energy conservation in houses. A technical press day report on the results of the low energy experimental house project in Garsfontein, Pretoria p 6 N82-22771
Development of control systems for solar water and solar space heating equipment. Choice of heat conducting fluid. Testing
[BMFT-FB-T-81-186] p 45 N82-22785
Audio-visual summary of passive solar commercial buildings development in the MASEC region
[DE82-003136] p 46 N82-23368
- Fort Hood solar cogeneration facility conceptual design study. Volume 1: Technical report
[DE82-000836] p 49 N82-23765
Fort Hood solar cogeneration facility conceptual design study. Volume 2: System specification
[DE82-001579] p 49 N82-23766
Solar industrial process heat systems: An assessment of standards for materials and components
[PB82-133703] p 50 N82-24394
Thermal energy storage for residential energy conservation p 124 N82-24674
Solar thermal power storage applications lead laboratory overview p 51 N82-24675
A chemical heat pump based on the reaction of calcium chloride and methanol for solar heating, cooling and storage p 51 N82-24692
Evaluation for FY 1981 of MASEC's retrofit residential single-family dwellings passive solar heating project
[DE82-001188] p 52 N82-25409
Description of five houses instrumented for class B analysis --- solar houses
[DE82-001188] p 52 N82-25412
Thermal performance of a photographic laboratory process: Solar Hot Water System
[NASA-TM-83299] p 52 N82-25641
Passive solar class B monitoring reports
[DE82-003139] p 53 N82-25646
Evaluation for FY 1981 of MASEC'S new residential multi-family dwelling passive solar heating project
[DE82-001206] p 53 N82-25647
Residential conservation service program support
[DE82-001205] p 13 N82-25650
Summary of commercial demonstration projects
[DE82-002278] p 53 N82-25651
National solar data network success stories
[DE82-002281] p 14 N82-25652
Analysis of the SOLAR 80 program in fiscal year 1981
[DE82-001190] p 53 N82-25653
Solar energy research at Los Alamos
[DE82-004222] p 53 N82-25654
Quality assurance and standards plan for solar thermal technologies
[DE81-030831] p 54 N82-26699
An overview of the value of parabolic dish solar thermal systems in industrial cogeneration applications
[NASA-CR-169063] p 54 N82-26785
RHRU Clemson, Clemson, South Carolina: Solar-energy-system performance evaluation, November 1980 - May 1981
[DE82-002692] p 59 N82-26837
Results of roof pond heating experiments using the Passive Test Facility for warm, humid climates
[DE82-003226] p 60 N82-26850
Solar-central-receiver system integrated with a cogeneration facility for copper smelting, volume 1
[DE82-001580] p 60 N82-26863
Solar production of industrial-process hot water. Phase 3: Operation and evaluation of the York Building Products Co., Inc. solar facility
[DE82-003526] p 60 N82-26865
DOE/NASA SIMS Prototype Solar System, no. 4. Part 1: Market analysis. Part 2: Modular manufacturing cost estimate p 61 N82-27835
Fuel from the Sun: Solar commercial and industrial applications for the 1980's
[DE82-003285] p 61 N82-27847
Low cost, multipurpose solar energy system
[DE81-030955] p 62 N82-27854
Passive solar heating system
[DE82-003269] p 62 N82-27855

SOLAR HOUSES

Description of five houses instrumented for class B analysis --- solar houses
[DE82-001188] p 52 N82-25412
Passive solar class B monitoring reports
[DE82-003139] p 53 N82-25646
Analysis of the SOLAR 80 program in fiscal year 1981
[DE82-001190] p 53 N82-25653
Integrated residential photovoltaic array development
[NASA-CR-169042] p 54 N82-26786
Design, fabrication and test of block 4 design solar cell modules. Part 2: Residential module
[NASA-CR-169158] p 55 N82-26795
Summerwood Associates, House M, Old Saybrook, Connecticut: Solar energy system performance evaluation, June 1980 - May 1981
[DE82-002240] p 58 N82-26826

Solar energy system performance evaluation: General Electric, Normal operational test site, Normal, Illinois, September 1980 - March 1981
[DE82-001606] p 58 N82-26827
Solar-energy-system performance evaluation, Rymark I and Rymark II, Frederick, Maryland, January 1981 - April 1981
[DE82-001691] p 58 N82-26829
Solar-energy-system performance evaluation, General Electric Dallas operational test site, Dallas, Texas, October 1980 - March 1981
[DE82-001350] p 58 N82-26830
State solar initiatives. Volume 1: A review
[DE82-002425] p 59 N82-26842
State solar initiatives. Volume 2: A review
[DE82-003838] p 59 N82-26843
Solar energy hot water heating and electric utilities. A model validation
[DE82-005485] p 60 N82-26861
Solar equipment system packages for old and new buildings to provide domestic water and partial heating
[BMFT-FB-T-82-029] p 61 N82-27545

SOLAR INSTRUMENTS
Conceptual design of the Truscott brine lake solar-pond system, volume 1: Utility-independent scenario
[DE82-003024] p 58 N82-26833

SOLAR PONDS (HEAT STORAGE)
Solar pond power plant feasibility study for Davis, California
[NASA-CR-166819] p 41 N82-22653
Salton sea project, phase 1 — solar pond power plant
[NASA-CR-166804] p 41 N82-22654
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 1: Executive summary
[NASA-CR-166805] p 42 N82-22664
Regional applicability and potential of salt-gradient solar ponds in the United States. Volume 2: Detailed report
[NASA-CR-166806] p 42 N82-22665
The trade-off between collector area, storage volume and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22670
Conceptual design of the Truscott brine lake solar-pond system, volume 1: Utility-independent scenario
[DE82-003024] p 58 N82-26833
Results of roof pond heating experiments using the Passive Test Facility for warm, humid climates
[DE82-003226] p 60 N82-26850
Solar central receivers: The technology, industry, markets, and economics
[DE82-005267] p 60 N82-26857

SOLAR POWER SATELLITES
Laser satellite power systems - Concepts and issues
p 116 A82-32370
The solar power satellite
[ONERA, TP NO. 1982-52] p 26 A82-33546
Space and energy - A global viewpoint
p 2 A82-34119
Military implications of a satellite power system
p 36 A82-35608
The Final Proceedings of the Solar Power Satellite Program Review
[NASA-TM-84183] p 42 N82-22676
SPS cost methodology and sensitivities
p 43 N82-22685
Comparative health and safety assessment of the SPS and alternative electrical generation systems
p 5 N82-22696
Passive solar reflector satellite revisited
p 43 N82-22715
Comparison of low Earth orbit and geosynchronous Earth orbits p 6 N82-22716
Proton damage annealing kinetics in silicon solar cells
p 43 N82-22720
Evaluation of solar cell materials for a Solar Power Satellite p 44 N82-22721
Solar driven lasers for power satellite applications
p 116 N82-22722
Power transmission and reception. An overview and perspective p 116 N82-22723
Microwave system performance summary
p 117 N82-22724
Rectenna system design p 117 N82-22736
Solid-state configurations p 117 N82-22739
Offshore rectenna feasibility p 117 N82-22741
High-power microwave optics for flexible power transmission systems p 117 N82-22742
High voltage systems (tube-type microwave)/low voltage system (solid-state microwave) power distribution p 117 N82-22744
Satellite power system operations p 44 N82-22745
Microwave heating of the lower ionosphere
p 117 N82-22747
Summary of the electromagnetic compatibility evaluation of the proposed satellite power system
p 44 N82-22748
The EMC of satellite power systems and DoD C-E systems p 44 N82-22750
Encounters between SPS power beams and satellites in lower orbits p 44 N82-22751
Space and energy: Global viewpoint
[MBB-UR-499-81-O] p 45 N82-22784
Cooperative effort urged for development of orbital power stations p 118 N82-24261

SOLAR RADIATION
A method for calculating the radiant energy incident on a vapor generator in a solar power station
p 22 A82-30052
Solar radiation characteristics and prediction methods
[FUB-7-1981] p 45 N82-22786
A simplified solar cell array modelling program
p 52 N82-25111
Terrestrial solar spectra, solar simulation and solar cell efficiency measurement
[DE82-002082] p 62 N82-27906

SOLAR REFLECTORS
Concentration of a Cassegrain solar furnace
p 25 A82-32546
Development effort of sheet molding compound /SMC/ parabolic trough panels p 39 A82-37116
Passive solar reflector satellite revisited
p 43 N82-22715
Subsystems design and component development for the parabolic dish module for solar thermal power systems
[NASA-CR-168941] p 51 N82-24646
Storage requirements definition and SRE design for dish Stirling systems p 124 N82-24683

SOLAR SAILS
Solar-powered airplane design for long-endurance, high-altitude flight
[AIAA PAPER 82-0811] p 24 A82-31984

SOLAR SIMULATION
Simulation of the behaviour of a set of Cu2S-CdS unit photocells p 31 A82-34544
Optical characterization of solar concentrator mirrors using the solar beam of the JPL 25-foot space simulator
p 52 N82-25296

SOLAR SPECTRA
Terrestrial solar spectra, solar simulation and solar cell efficiency measurement
[DE82-002082] p 62 N82-27906

SOLAR THERMAL PROPULSION
Environmental effects of solar-thermal power systems. Environmental effects of heat transfer and storage fluids: Plant toxicity and movement in soils
[DE82-002603] p 17 N82-26881
Environmental effects of solar-thermal power systems. The potential production of air pollutants near STPS receiver stations
[DE82-002413] p 17 N82-26882

SOLDERING
Terrestrial solar modules p 30 A82-34095

SOLID ELECTRODES
Vibrating zinc electrodes in Ni/Zn batteries
p 119 A82-31841

SOLID ELECTROLYTES
High temperature fuel and steam electrolysis cells using proton conductive solid electrolytes p 63 A82-32375

SOLID PROPELLANT COMBUSTION
Combustion behavior of solid fuel Ramjets. Volume 2: Effects of fuel properties and fuel-air mixing on combustion efficiency
[AD-A110796] p 80 N82-26303

SOLID PROPELLANTS
Combustion behavior of solid fuel Ramjets. Volume 2: Effects of fuel properties and fuel-air mixing on combustion efficiency
[AD-A110796] p 80 N82-26303

SOLID STATE DEVICES
American Vacuum Society, National Symposium, 28th, Anaheim, CA, November 2-6, 1981, Proceedings. Parts 1 & 2 p 22 A82-30327

SOLID SUSPENSIONS
Stationary thermal ignition of particle suspensions
[AIAA PAPER 82-0881] p 66 A82-31886

SOLID WASTES
Development of environmental assessment screening criteria for coal-conversion solid wastes
[DE82-000751] p 11 N82-23798

SOLID-SOLID INTERFACES
Limitation of experimental capabilities for interfacial studies p 35 A82-35507
Basic research needs and opportunities at the solid-solid interface - Diffusion p 35 A82-35509
Basic research needs and opportunities for characterizing the microstructure and microchemistry of interfaces p 36 A82-35514

SOLIDS
Introduction to proton conduction in solids
[RISO-M-2244] p 114 N82-27172

SOLIDS FLOW
Hydraulic transport of coarse solids in circular and segmented pipes
[CSIR-ME-1716] p 119 N82-27685

SOLVENT REFINED COAL
Development of environmental assessment screening criteria for coal-conversion solid wastes
[DE82-000751] p 11 N82-23798
Supercritical solvent coal extraction
[NASA-CASE-NPO-15210-1] p 82 N82-26481
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE82-004407] p 86 N82-27451

SOUND PRESSURE
Enhancement of far field sound levels by refractive focusing p 108 N82-23728

SOYBEANS
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning
p 1 A82-29537

SPACE COMMUNICATION
Advanced space system concepts and their orbital support needs (1980 - 2000) p 118 N82-27362

SPACE COOLING (BUILDINGS)
Earth-coupled heat pump
[DE82-900583] p 110 N82-24461
ORNL Thermal Energy Storage program overview
p 123 N82-24654
Design and demonstration of a storage-assisted air conditioning system p 123 N82-24655
Solar-energy-system performance evaluation, General Electric Dallas operational test site, Dallas, Texas, October 1980 - March 1981
[DE82-001350] p 58 N82-26830

SPACE HEATING (BUILDINGS)
The status of windpower research and development for space and water heating in the United States
p 101 A82-36106
The trade-off between collector area, storage volume, and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22668
The trade-off between collector area, storage volume and building conservation in annual storage solar heating systems
[SERI/TR-721-907] p 42 N82-22670
Utilization of waste heat from major transformer substations. Volume 3: Appendix
[DE82-900357] p 6 N82-22781
Potential geothermal energy applications for Idaho Elks Rehabilitation Hospital
[DE82-003803] p 71 N82-22783
Development of control systems for solar water and solar space heating equipment. Choice of heat conducting fluid. Testing
[BMFT-FB-T-81-185] p 45 N82-22785
Audio-visual summary of passive solar commercial buildings development in the MASEC region
[DE82-003136] p 46 N82-23368
Earth-coupled heat pump
[DE82-900583] p 110 N82-24461
ORNL Thermal Energy Storage program overview
p 123 N82-24654
Experimental evaluation of thermal energy storage
p 123 N82-24656
Performance of stratified thermal storage system for Oliver Springs Elementary School p 123 N82-24665
Application of thermal energy storage to process heat recovery in the aluminum industry p 124 N82-24685
Once-through heat supply system for City of Bellingham p 125 N82-24688
Energy consumed in 2010 by an energy-efficient building sector
[DE82-003520] p 12 N82-24731
Evaluation for FY 1981 of MASEC's retrofit residential single-family dwellings passive solar heating project
[DE82-001188] p 52 N82-25409
Evaluation for FY 1981 of MASEC'S new residential multi-family dwelling passive solar heating project
[DE82-001206] p 53 N82-25647
Quarterly report of solar federal buildings: Program in the MASEC region
[DE82-001185] p 53 N82-25648
Evaluation of the solar cities program
[DE81-030866] p 53 N82-25649
Summary of commercial demonstration projects
[DE82-002278] p 53 N82-25651
National solar data network success stories
[DE82-002281] p 14 N82-25652
Analysis of the SOLAR 80 program in fiscal year 1981
[DE82-001190] p 53 N82-25653
Solar energy research at Los Alamos
[DE82-004222] p 53 N82-25654

USAF solar thermal applications case studies
[NASA-CR-169054] p 56 N82-26801
Solar-energy-system performance evaluation, General Electric - Milwaukee operational test site, Milwaukee, Wisconsin, September 1980 - March 1981
[DE82-00-934] p 57 N82-26814
Loyola University, New Orleans, Louisiana solar energy system performance evaluation, February 1981 - June 1981
[DE82-003357] p 57 N82-26825
Summerwood Associates, House M, Old Saybrook, Connecticut: Solar energy system performance evaluation, June 1980 - May 1981
[DE82-002240] p 58 N82-26826
Solar energy system performance evaluation: General Electric, Normal operational test site, Normal, Illinois, September 1980 - March 1981
[DE82-001805] p 58 N82-26827
Solar-energy-system performance evaluation, Rymark I and Rymark II, Frederick, Maryland, January 1981 - April 1981
[DE82-001591] p 58 N82-26829
Solar-energy-system performance evaluation, General Electric Dallas operational test site, Dallas, Texas, October 1980 - March 1981
[DE82-001350] p 58 N82-26830
Solar-energy-system performance evaluation, General Electric Spokane operational test site, Spokane, Washington, October 1980 - March 1981
[DE82-001610] p 58 N82-26831
Oakmead Industries, Santa Clara, California solar-energy-system performance evaluation October 1980 - May 1981
[DE82-002508] p 59 N82-26836
RHRU Clemson, Clemson, South Carolina: Solar-energy-system performance evaluation, November 1980 - May 1981
[DE82-002692] p 59 N82-26837
Membrane-lined foundations for liquid thermal storage
[DE82-003651] p 126 N82-26851
Solar equipment system packages for old and new buildings to provide domestic water and partial heating
[BMFT-FB-T-82-029] p 61 N82-27545
Passive solar heating system
[DE82-003269] p 62 N82-27855

SPACE INDUSTRIALIZATION
Solar bacterial biomass farm for space vehicles
p 27 A82-33895

SPACE MANUFACTURING
Powder metallurgy in space manufacturing
p 36 A82-35637

SPACE PLATFORMS
Power Systems integration p 61 N82-27378

SPACE SHUTTLE ORBITERS
Orbiter fuel cell improvement assessment
p 104 N82-23121

SPACE SHUTTLE PAYLOADS
Research and development at MBB. Technical and scientific publications, 1981 p 127 N82-23137

SPACE SIMULATORS
Optical characterization of solar concentrator mirrors using the solar beam of the JPL 25-foot space simulator
p 52 N82-25296

SPACE STATIONS
Advanced space system concepts and their orbital support needs (1980 - 2000) p 118 N82-27362

SPACE TOOLS
Powder metallurgy in space manufacturing
p 36 A82-35637

SPACE TRANSPORTATION SYSTEM
Overview of atmospheric effects p 5 N82-22688

SPACECRAFT CONTROL
Power Systems integration p 61 N82-27378

SPACECRAFT DESIGN
Research and development at MBB. Technical and scientific publications, 1981 p 127 N82-23137

SPACECRAFT POWER SUPPLIES
The alkali metal thermoelectric converter /AMTEC/ - A new direct energy conversion technology for aerospace power
[AIAA PAPER 82-0952] p 91 A82-31876
Comparative health and safety assessment of the SPS and alternative electrical generation systems
p 5 N82-22696
Linear magnetic motor/generator --- to generate electric energy using magnetic flux for spacecraft power supply
[NASA-CASE-GSC-12518-1] p 110 N82-24421
Space nuclear safety and fuels program
[DE82-004183] p 60 N82-25944
Space nuclear safety and fuels program
[DE82-004186] p 60 N82-25945
Power Systems integration p 61 N82-27378

SPACECRAFT PROPULSION
Study of reactor Brayton power systems for nuclear electric spacecraft
[NASA-CR-168942] p 110 N82-24289

SPACETENNAS
Solid-state configurations p 117 N82-22739

SPATIAL DISTRIBUTION
Three-dimensional, conservation equation model for simulating LNG vapor dispersion in the atmosphere
[DE82-001053] p 20 N82-27874

SPECTRAL EMISSION
Use of solar furnaces. II - Thermophysical properties
p 24 A82-31568

SPECTRAL ENERGY DISTRIBUTION
On the spectral energy and power components in horizontal wind gusts p 90 A82-30866

SPECTRAL LINE WIDTH
Determination of temperature distribution in the flow of a hot gas on the basis of a self-reversed spectral line profile p 103 A82-37549

SPECTRAL RECONNAISSANCE
Appropriateness in using LANDSAT in development energy related data bases p 4 N82-22585

SPECTRAL REFLECTANCE
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning
p 1 A82-29537
Spectral selectivity of nickel and chromium rough surfaces p 23 A82-31440

SPECTRAL SENSITIVITY
Germanium selective solar absorber surfaces
p 36 A82-36163
Ternary chalcogenide-based photoelectrochemical cells. II - The n-CdIn2Se4/aqueous polysulfide system
p 40 A82-37629

SPECTROMETERS
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2
[DE82-005570] p 88 N82-27805

SPECTRORADIOMETERS
High spectral resolution airborne spectrometry
p 67 A82-32443

SPECTROSCOPIC ANALYSIS
Overview of the current status of solid-liquid interface science p 35 A82-35505
Overview of the current status of solid-gas interface science p 35 A82-35506
Characterization of Rocky Mountain coals and coal liquid by computerized analytical techniques
[DE82-001802] p 71 N82-23287

SPECTROSCOPY
Moessbauer spectroscopy study on the effect of infrared and gamma radiation on the structure of minerals. Part of coordinated programme on development of methods for application of Moessbauer spectroscopy in mineralogy, soil sciences and the study of ceramics
[DE81-700780] p 76 N82-24350

SPEED CONTROL
France's superfast train p 102 A82-36394
Multiroller traction drive speed reducer: Evaluation for automotive gas turbine engine
[NASA-TP-2027] p 112 N82-26678

SPENT FUELS
Preliminary assessment of alternative dry storage methods for the storage of commercial spent nuclear fuel
[DE82-002303] p 20 N82-28150

SPILLING
Fuel conservation by the application of spill prevention and fail-safe engineering (a guideline manual)
p 8 N82-23682
The biological degradation of spilled jet fuels: A literature review
[AD-A110758] p 17 N82-26873
Three-dimensional, conservation equation model for simulating LNG vapor dispersion in the atmosphere
[DE82-001053] p 20 N82-27874

SPIN TESTS
RPE-10 composite flywheel testing
[UCRL-15379] p 120 N82-22498

SPONTANEOUS COMBUSTION
Hydrogen microsphere hazard evaluation
p 65 N82-24706

SPOT (FRENCH SATELLITE)
Design aspects of a solar array drive for spot, with a high platform stability objective p 46 N82-23353

SPRAYED COATINGS
Properties of spray-deposited cobalt oxide selective coatings on aluminium and galvanised iron substrates --- for solar absorbers p 30 A82-34489
Chemically sprayed PbS coatings for photothermal solar energy conversion. R. C. Agarwal and P. K. C. Pillai
p 38 A82-36210
Spray-deposited SnO2/n-Si/polycrystalline/ solar cells
p 38 A82-36863

SPUTTERING
RF sputtered gold-amorphous silicon Schottky-barrier diodes p 34 A82-35246
Investigation of continuous deposition of AMA-type coatings onto strip and sheet by sputtering
[DE82-004266] p 53 N82-26458

SQUEEZE FILMS
The control of engine vibration using squeeze-film dampers
[ASME PAPER 82-GT-241] p 96 A82-35422

STABILITY TESTS
A field monitor for the stability and cleanliness of distillate fuel
[AD-A110694] p 76 N82-24354

STABILIZED PLATFORMS
Design aspects of a solar array drive for spot, with a high platform stability objective p 46 N82-23353

STAGNATION TEMPERATURE
Determination of the stagnation temperature of flat plate solar collectors p 39 A82-37566

STANDARD DEVIATION
Standard deviations and confidence intervals for atmospheric design criteria used in WECS development --- Wind Energy Conversion Systems p 98 A82-36082

STANDARDS
Wind turbine acoustic standards p 109 N82-23733
Potable water standards project
[MLM-2819] p 10 N82-23791
California experience with energy conservation standards for buildings
[DE81-000972] p 11 N82-24391
Solar industrial process heat systems: An assessment of standards for materials and components
[PB82-133703] p 50 N82-24394
Quality assurance and standards plan for solar thermal technologies
[DE81-030831] p 54 N82-26699

STATIC LOADS
Static feed water electrolysis for large scale hydrogen generation p 64 N82-24699

STATISTICAL ANALYSIS
On wind turbine power measurements
p 99 A82-36088
Applications of the DOE/NASA wind turbine engineering information system p 106 N82-23696
Energy use in office buildings: Analysis of use in a random sample of 1100 buildings
[DE82-000518] p 9 N82-23761

STATISTICAL CORRELATION
Short-term energy outlook: Methodology
[DE82-002940] p 9 N82-23754

STATORS
Dynamic characteristics of a wind driven induction generator equipped with thyristor controlled inductances on the stator side p 100 A82-36093

STEAM
Concepts of fundamental processes related to gasification of coal
[DE82-000764] p 84 N82-26502

STEAM TURBINES
Parametric performance analysis of steam-injected gas turbine with a thermionic-energy-converter-lined combustor
[NASA-TM-82736] p 105 N82-23678
Industrial Cogeneration Optimization Program: A summary of two studies
[DE82-005587] p 16 N82-26849
Transient analysis of heat transmission systems
[AD-A112365] p 126 N82-27691

STEEL STRUCTURES
Development of automated welding process for field fabrication of thick walled pressure vessels --- for coal gasification plants
[DE82-004421] p 85 N82-26695

STELLARATORS
Modular stellarator fusion reactor concept --- MSR
[DE82-001883] p 111 N82-25981

STIRLING CYCLE
Systems analysis of thermal storage
p 123 N82-24666
Storage requirements definition and SRE design for dish Stirling systems p 124 N82-24683

STORAGE BATTERIES
A new technique for determining battery internal resistance - Studies on Leclanche cells
p 119 A82-32373
New developments in battery technology
p 120 A82-36256
Requirements for optimization of electrodes and electrolyte for the iron/chromium Redox flow cell
[NASA-CR-165218] p 125 N82-25640

STORAGE TANKS
A novel batch-type hydrogen transmitting system using metal hydrides p 84 A82-37445
Fuel conservation by the application of spill prevention and fail-safe engineering (a guideline manual)
p 8 N82-23682

Status report of thermocline thermal energy storage studies at Sandia National Laboratories
p 124 N82-24880
Hydrogen microsphere hazard evaluation
p 65 N82-24706

STRATIGRAPHY
Shale characterization and resource appraisal of Devonian black shales of the Appalachian basin
[DE82-004191] p 89 N82-27909

STREAMS
Analysis of environmental issues related to small-scale hydroelectric development. 5: Instream flow needs for fishery resources
[DE82-000901] p 11 N82-23811

STRESS ANALYSIS
Application of the finite element method to the study of the behaviour of blades of industrial wind energy systems p 99 A82-36087
Dynamic analysis of Darrieus vertical axis wind turbine rotors
[DE82-000814] p 112 N82-26823
Custom Engineering parabolic glass reflector for the Sandia prototype solar collector
[DE82-000800] p 59 N82-26838
Mechanical behavior of Mesaverde shale and sandstone at high pressure
[DE82-001665] p 85 N82-26911

STRIP MINING
LANDSAT Remote Sensing: Observations of an Appalachian mountaintop surface coal mining and reclamation operation --- kentucky
[E82-10247] p 77 N82-24525
Application of remote sensing to state and regional problems
[E82-10288] p 77 N82-24566

STRONTIUM TITANATES
Alternate matrix material for molten carbonate fuel cell electrolyte structures p 91 A82-31844

STRUCTURAL BASINS
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary
[DE82-001349] p 74 N82-23619
Water and emerging energy technologies: Summary report
[PB82-153123] p 89 N82-27859
Water and emerging energy technologies
[PB82-153131] p 89 N82-27860

STRUCTURAL DESIGN
Design, fabrication and test of liquid metal heat-pipe sandwich panels
[AIAA PAPER 82-0903] p 115 A82-31898
International Symposium on Wind Energy Systems, 3rd, Danmarks Tekniske Hojskole, Lyngby, Denmark, August 26-29, 1980, Proceedings p 97 A82-36076
Structural design and maintenance policies for large wind turbines p 100 A82-36095
A vertical axis wind energy converter with straight blades p 102 A82-36112
Feasibility study of medium Btu coal gas for fuel and feedstock at Moby's New Martinsburg, West Virginia plant
[DE82-004321] p 72 N82-23330
Compressed-Air Energy Storage: Preliminary design and site development program in aquifer. Volume 6: Balance of plant design
[DE82-000670] p 121 N82-23737
Energy-performance targets for federal buildings: Retrofit energy-target bands for existing postal facilities
[DE82-000070] p 16 N82-26845

STRUCTURAL DESIGN CRITERIA
Fracture mechanics of ductile and tough materials and its applications to energy related structures --- Book
p 127 A82-29483
Standard deviations and confidence intervals for atmospheric design criteria used in WECS development --- Wind Energy Conversion Systems p 98 A82-36082
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 2: Engineering. Volume 3: Costs and schedules
[NASA-CR-165452-VOL-2] p 114 N82-27837

STRUCTURAL PROPERTIES (GEOLOGY)
The Mt. Hood region - Volcanic history, structure, and geothermal energy potential p 66 A82-31244
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary
[DE82-001349] p 74 N82-23619

SUBSONIC SPEED
Fuel efficient and Mach 0.8, too p 1 A82-29774

SUBSTRATES
Metallurgical grade silicon substrates for solar cell application p 28 A82-34084

SULFATES
Sulfate control technology vehicle testing
[PB82-154345] p 17 N82-26869

SULFUR
The effect of sulfur on the anodic H2 /Ni/ electrode in fused Li2CO3-K2CO3 at 650 C p 103 A82-37627

SULFUR DIOXIDES
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning
p 1 A82-29537
Screening methodology for calculating worst-case concentrations downwind from a large, isolated, air-pollutant-emission source
[DE82-002286] p 14 N82-25664
Sulfate control technology vehicle testing
[PB82-154345] p 17 N82-26869
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[DE82-900580] p 18 N82-27802
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[DE82-900581] p 19 N82-27803

SULFUR OXIDES
The debate over acid precipitation: Opposing views, status of research
[AD-A106925] p 19 N82-27870

SULFURIC ACID
Study project on the desulfurization of flue gas, using the Bergbauforschung (BF) process, as part of the integrated operation of a power plant with a chemical plant for producing sulfuric acid
[BMFT-FB-T-81-229] p 69 N82-22340
The determination of a range of concern for mobile source emissions of sulfuric acid
[PB82-117870] p 11 N82-23826
The sulfuric acid/water chemical heat pump/energy storage program p 125 N82-24691

SUPERCHARGERS
Advanced stratified charge rotary aircraft engine design study
[NASA-CR-165398] p 18 N82-27743

SUPERCONDUCTING MAGNETS
Design scoping study of the 12T Yin-Yang magnet system for the Tandem Mirror Next Step (TMNS)
[DE82-003218] p 114 N82-27151
Power supply subsystem for MHD generator superconducting magnet, baseline power supply designs and costs
[DE81-024285] p 115 N82-27850

SUPERCONDUCTING POWER TRANSMISSION
Materials research for hydrogen-cooled superconducting power transmission lines
[DE82-002170] p 116 N82-22444
Helium research in support of superconducting power transmission
[PB82-122967] p 118 N82-23412
Metals processing p 118 N82-27405
Active superconductive generator development 400 horsepower generator design
[AD-A107513] p 118 N82-27664

SUPERCONDUCTORS
Active superconductive generator development 400 horsepower generator design
[AD-A107513] p 118 N82-27664

SUPERCRITICAL PRESSURES
Supercritical fluids for reaction and extraction of coal and heavy oils
[DE82-005496] p 81 N82-26426

SURFACE PROPERTIES
Back surface field and vertical solar cell
p 21 A82-29695

SURFACE REACTIONS
Basic research needs and opportunities at the solid-gas interface p 36 A82-35511

SURFACE ROUGHNESS EFFECTS
Spectral selectivity of nickel and chromium rough surfaces p 23 A82-31440
Modification of open-circuit voltage of metal-insulator-semiconductor solar cells due to a nonuniform insulating layer p 34 A82-35500

SURVEYS
Fuel quality/processing study. Volume 2: Appendix. Task 1 literature survey
[NASA-CR-165327-VOL-2] p 77 N82-24650

SWINE
Passive and hybrid solar manufactured housing and buildings. Phase 1: Technical proposal
[DE82-002098] p 45 N82-22776

SWIRLING
Stability limits of natural gas diffusion flames with swirl
p 66 A82-28681
Modeling parameter influences on MHD swirl combustion nozzle design
[AIAA PAPER 82-0984] p 92 A82-31947

SWITCHING CIRCUITS
A new technique for determining battery internal resistance - Studies on Leclanche cells
p 119 A82-32373
Switching networks for realisation of variable DC transformers coupled to rectangular arrays
p 94 A82-34951

SYNTHANE
Concepts of fundamental processes related to gasification of coal
[DE82-000764] p 84 N82-26502

SYNTHETIC FUELS
Very large aircraft with alternate fuels - LH2 most promising
[AIAA PAPER 82-0813] p 62 A82-31966
Small-scale combustion testing of synthetic fuels
[DE82-002791] p 71 N82-23286
Environmental report: Combustion Engineering/Gulf States Utilities Company fuel gas demonstration plant, Westlake, Louisiana
[DE82-004141] p 11 N82-23806
Impact study of synthetic and alternative fuel usage in Army aircraft propulsion systems
[AD-A111048] p 77 N82-24355
Fuel quality processing study, volume 1
[NASA-CR-165327-VOL-1] p 77 N82-24649
Fuel quality/processing study. Volume 2: Appendix. Task 1 literature survey
[NASA-CR-165327-VOL-2] p 77 N82-24650
Low NOx heavy fuel combustor concept program
[NASA-CR-165367] p 79 N82-25635
Crossed-reaction networks in the catalytic hydrodenitrogenation of synthetic liquid fuels
[DE82-003092] p 81 N82-26422
Mobility fuels for the Navy
[AD-A112511] p 82 N82-26485
Development of Army high-energy fuel diesel/turbine-powered surface equipment, phase 2
[AD-A111942] p 82 N82-26487
Review of physical and chemical methods for characterization of fuels
[AD-A111943] p 83 N82-26488
Synthetic-fuel production using Texas lignite and a very high temperature gas cooled reactor for process heat and electrical power generation
[DE82-900466] p 83 N82-26492
Toxicology of high energy fuels
[AD-A111686] p 17 N82-26986
Development of accelerated fuel-engines qualification procedures methodology, volume 1
[AD-A113461] p 85 N82-27317
Development of accelerated fuel-engines qualification procedures methodology. Volume 1: Appendices
[AD-A113532] p 85 N82-27318
Process selection and investment analysis, methanation facility for purox pyrolysis system off-gas
[DE82-004584] p 18 N82-27452
Synthetic fuels development in the Upper Colorado Region: Section 13(a) water assessment report
[PB82-156781] p 88 N82-27535

SYSTEMS ANALYSIS
Societal assessment overview p 5 N82-22679
ID slicing and the automated factory
p 47 N82-23672
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power
[DE82-001921] p 48 N82-23742
Design handbook for photovoltaic-power systems: Simplified methods for utility interconnected systems
[DE82-003909] p 48 N82-23745
Electric power from orbit: A critique of a satellite power system
[PB82-133083] p 62 N82-27858

SYSTEMS ENGINEERING
Optimization of the operation of a wind power plant
p 92 A82-33397
Description of the two Danish 630 kw wind turbines, NIBE-A and NIBE-B, and some preliminary test results
p 99 A82-36089
Salton sea project, phase 1 --- solar pond power plant
[NASA-CR-168804] p 41 N82-22654
Overview of systems definition activities for satellite power systems p 43 N82-22677
Solar Cogeneration Facility: Cimarron River Station, Central Telephone and Utilities-Western Power
[DE82-001921] p 48 N82-23742
Advanced space system concepts and their orbital support needs (1980 - 2000) p 118 N82-27362

SYSTEMS INTEGRATION
A frequency and duration method for the evaluation of wind integration p 90 A82-30869
Integration of SPS with utility system networks
p 43 N82-22684

Power Systems integration p 61 N82-27378
SYSTEMS SIMULATION
Some aspects of small aerogenerator design and testing p 100 A82-36094

T

TABLES (DATA)
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp [DE82-001347] p 74 N82-23620
State energy data report: Statistical tables and technical documentation 1960 through 1979 [PB82-119470] p 10 N82-23784
TANKS (CONTAINERS)
Membrane-lined foundations for liquid thermal storage [DE82-003651] p 126 N82-26851
TECHNOLOGICAL FORECASTING
The potential for long-range high-payload aircraft with alternate fuels [AIAA PAPER 82-0814] p 62 A82-31987
Solutions to the aviation fuel problem p 2 A82-34113
The potential impact of future fuels on small gas turbine engines [ASME PAPER 82-GT-133] p 68 A82-35362
Czochralski silicon solar cell modules - Present cost and future prospects p 38 A82-36864
The possible share of soft/decentralized renewables in meeting the future energy demands of developing regions [RR-81-18] p 4 N82-22648
Energy consumed in 2010 by an energy-efficient building sector [DE82-003520] p 12 N82-24731
Photovoltaics: Current status and future projections [DE82-002684] p 62 N82-27852
TECHNOLOGY ASSESSMENT
Fuel efficient and Mach 0.8, too! p 1 A82-29774
American Vacuum Society, National Symposium, 28th, Anaheim, CA, November 2-6, 1981, Proceedings. Parts 1 & 2 p 22 A82-30327
Hydrogen economy assessment for long-term energy systems in Japan p 63 A82-32159
Cooperative international liquid hydrogen automotive progress report p 63 A82-32164
Laser satellite power systems - Concepts and issues p 116 A82-32370
The development of MHD energy conversion methods in the USSR p 93 A82-33996
Current aspects in low-cost silicon technology p 27 A82-34078
Low-cost processes for thin-film solar cells p 29 A82-34091
The thermodynamic conversion of solar energy - Technical and economic comparison of different power plants p 32 A82-34554
Annual productivity of a solar thermoelectric power plant p 33 A82-34564
State of the art in solar thermoelectric power plant research p 33 A82-34565
Energy efficient engine /E3/ technology status [AIAA PAPER 82-1052] p 2 A82-34980
The AGT 100 automotive gas turbine status and assessment [ASME PAPER 82-GT-118] p 95 A82-35349
Technology advancements for energy efficient aircraft engines [AIAA PAPER 82-1051] p 2 A82-35479
Overview of the current status of solid-liquid interface science p 35 A82-35505
Overview of the current status of solid-gas interface science p 35 A82-35506
Assessment of offshore siting of wind turbine generators p 97 A82-36077
New developments in battery technology p 120 A82-36256
A review of United Kingdom windpower p 3 A82-36752
The age of fusion - On the brink p 103 A82-37971
Corn to ethanol plant feasibility study [DE82-000029] p 69 N82-22375
The trade-off between collector area, storage volume and building conservation in annual storage solar heating systems [SERI/TR-721-907] p 42 N82-22670
Comparison of low Earth orbit and geosynchronous Earth orbits p 6 N82-22716
Geothermal source potential and utilization for alcohol production [DE82-003801] p 70 N82-22782
Western oil shale development: A technology assessment. Volume 1: Main report [DE82-003132] p 74 N82-23617
Wafering economies for industrialization from a wafer manufacturer's viewpoint p 47 N82-23668
Small-wind-systems application analysis. Technical report and executive summary [DE82-003748] p 109 N82-23749
Environmental readiness document. Industrial programs, fiscal year 1980 [DOE/ERD-0031] p 10 N82-23794
Solar industrial process heat systems: An assessment of standards for materials and components [PB82-133703] p 50 N82-24394
Experimental evaluation of thermal energy storage p 123 N82-24656
Overview of energy-conservation research opportunities. Executive summary [DE82-004031] p 12 N82-24727
Energy consumed in 2010 by an energy-efficient building sector [DE82-003520] p 12 N82-24731
Analysis of alternate-fueled passenger vehicles: A sample technology assessment [DE82-004190] p 80 N82-26053
Assessment of secondary residues. Engineering and economic analysis [DE82-000925] p 85 N82-26771
Comparison of Rankine-cycle power systems: Effects of seven working fluids [DE82-005599] p 113 N82-26844
Investigation of problems and benefits of underground multiple seam coal mining [DE82-002807] p 88 N82-27801
Technical and economic assessment of fluidized-bed-augmented compressed-air energy-storage system: System load following capability [DE82-000958] p 19 N82-27843
Technical and economic assessment of fluidized-bed-augmented compressed air energy-storage system. Volume 2: Introduction and technology assessment [DE82-000938] p 19 N82-27844
Preliminary assessment of alternative dry storage methods for the storage of commercial spent nuclear fuel [DE82-002303] p 20 N82-28150
TECHNOLOGY TRANSFER
Technology transfer - LSA project to industry p 30 A82-34099
TECHNOLOGY UTILIZATION
Space and energy - A global viewpoint p 2 A82-34119
The AGT 100 automotive gas turbine status and assessment [ASME PAPER 82-GT-118] p 95 A82-35349
Propellers come full circle --- prop-fan technology for aircraft fuel savings p 2 A82-35881
Holography creates new breed of optical components -- construction, reconstruction and application of surface relief and volume holograms p 37 A82-35886
Critical technology areas of an SPS development and the applicability of European technology p 43 N82-22687
TECTONICS
Seismic and geodetic studies of the Imperial Valley, California [DE82-001686] p 85 N82-26915
TELECOMMUNICATION
Advanced space system concepts and their orbital support needs (1980 - 2000) p 118 N82-27362
TEMPERATURE CONTROL
Satellite thermal design and analyses for Titan 34D/IUS and STS/IUS launch vehicle environments [AIAA PAPER 82-0826] p 24 A82-31856
Osmotic pumped heat pipes for large space platforms [AIAA PAPER 82-0902] p 116 A82-31897
Energy conservation in houses. A technical press day report on the results of the low energy experimental house project in Garsfontein, Pretoria p 6 N82-22771
TEMPERATURE DEPENDENCE
Temperature dependence of silicon solar cell characteristics p 20 A82-29249
Determination of the stagnation temperature of flat plate solar collectors p 39 A82-37588
Effect of heated diesel fuel on particulate generation and fuel consumption for a Deutz F6L 912 engine [DE82-900395] p 7 N82-22603
TEMPERATURE DISTRIBUTION
Determination of temperature distribution in the flow of a hot gas on the basis of a self-reversed spectral line profile p 103 A82-37549
TEMPERATURE EFFECTS
Temperature coefficients of the open-circuit voltage of p-n junction solar cells p 26 A82-32894
Calculated effects of temperature, intensity and atmospheric conditions on the thermodynamic limits for conversion of solar energy to work on stored energy [DE81-030876] p 57 N82-26815
TEMPERATURE GRADIENTS
Materials research for hydrogen-cooled superconducting power transmission lines [DE82-002170] p 116 N82-22444
Investigations of low-temperature geothermal potential in New York state [DE82-002517] p 78 N82-25617
TEMPERATURE MEASUREMENT
Heat flow and geothermal assessment of the Escalante Desert, southwestern Utah, with emphasis on the Newcastle KGRA [DE82-003952] p 74 N82-23618
TENSILE STRENGTH
Custom Engineering parabolic glass reflector for the Sandia prototype solar collector [DE82-000800] p 59 N82-26838
Mechanical behavior of Mesaverde shale and sandstone at high pressure [DE82-001665] p 85 N82-26911
TENSILE STRESS
Energy storage capacity of rotating composite structures operating under uniaxial tension p 119 A82-31563
TERNARY SYSTEMS
Ternary chalcogenide-based photoelectrochemical cells. II - The n-CdIn2Se4/aqueous polysulfide system p 40 A82-37629
TEST FACILITIES
Photovoltaic Systems Test Facilities: Existing capabilities compilation [NASA-CR-168802] p 42 N82-22660
Test station for solar collectors in Brazil [BMFT-FB-T-81-224] p 46 N82-22788
Thermal energy storage testing facility p 123 N82-24662
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 2: Engineering. Volume 3: Costs and schedules [NASA-CR-165452-VOL-2] p 114 N82-27837
TEST VEHICLES
Vehicle test report: Jet Industries Electra Van 600 [NASA-CR-168986] p 125 N82-26048
TEXAS
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data, part 1. Permian basin reservoir selection procedure, geology, and reservoir data summary [DE82-001349] p 74 N82-23619
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp [DE82-001347] p 74 N82-23620
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1 [DE82-005554] p 88 N82-27808
THEMATIC MAPPING
LANDSAT Remote Sensing: Observations of an Appalachian mountaintop surface coal mining and reclamation operation --- kentucky [E82-10247] p 77 N82-24525
THERMAL CONDUCTIVITY
High temperature fuel and steam electrolysis cells using proton conductive solid electrolytes p 63 A82-32375
THERMAL CONTROL COATINGS
Physical vapor deposition of ceramic coatings for gas turbine engine components [ASME PAPER 82-GT-264] p 96 A82-35440
THERMAL DECOMPOSITION
Deposit formation in hydrocarbon fuels [ASME PAPER 82-GT-49] p 67 A82-35307
THERMAL EMISSION
Solar absorptance and thermal emittance of Al2O3 films on Al - A theoretical assessment p 21 A82-29250
THERMAL ENERGY
Physical basis of power conversion of energy fluctuations p 40 A82-37671
Geothermal energy market study on the Atlantic Coastal plain: Ocean City, Maryland geothermal energy evaluation [PB82-123050] p 10 N82-23780
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting [CONF-801055] p 122 N82-24652
Overview of the Thermal Energy Storage (TES) Program p 122 N82-24653
ORNL Thermal Energy Storage program overview p 123 N82-24654

Experimental evaluation of thermal energy storage p 123 N82-24656
Distributed thermal energy storage in the residential sector: Commercialization readiness assessment and implementation strategy p 12 N82-24661
Thermal energy storage testing facility p 123 N82-24662
Performance of stratified thermal storage system for Oliver Springs Elementary School p 123 N82-24665
Direct contact heat transfer for thermal energy storage p 123 N82-24667
Systems analysis of thermal storage p 123 N82-24668
Cost and performance of thermal storage concepts in solar thermal systems p 51 N82-24669
High-temperature molten salt thermal energy storage systems for solar applications p 123 N82-24670
Active heat exchange: System development for latent heat thermal energy storage p 124 N82-24671
The 1980 report on NRL energy storage program p 124 N82-24672
Thermal energy storage for residential energy conservation p 124 N82-24674
Solar thermal power storage applications lead laboratory overview p 51 N82-24675
Status report of thermocline thermal energy storage studies at Sandia National Laboratories p 124 N82-24680
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5 [DE82-002520] p 78 N82-25616
Dish concentrators for solar thermal energy: Status and technology development [NAS 1.26:168994] p 52 N82-25639
Thermal performance of a photographic laboratory process: Solar Hot Water System [NASA-TM-83299] p 52 N82-25641
Effects off system factors on the economics of and demand for small solar thermal power systems [NASA-CR-169043] p 56 N82-26800

THERMAL FATIGUE
Biaxial cyclic deformation and creep-fatigue behavior of materials for solar thermal systems [ASME PAPER 82-PVP-74] p 27 A82-33714

THERMAL MAPPING
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1 [DE82-005554] p 88 N82-27808

THERMAL RESISTANCE
Ceramic applications in turbine engines --- for automotive application [AIAA PAPER 82-1168] p 95 A82-35040

THERMAL STABILITY
An alternate test procedure to qualify future fuels for Navy aircraft [AIAA PAPER 82-1233] p 68 A82-36175
Thermal and photochemical studies of solar energy absorbers dissolved in heat transfer fluids p 38 A82-36750

THERMAL STRESSES
A conceptual design study of a high temperature solar thermal receiver [NASA-CR-168925] p 51 N82-24720

THERMIONIC CONVERTERS
Parametric performance analysis of steam-injected gas turbine with a thermionic-energy-converter-lined combustor [NASA-TM-82736] p 105 N82-23678
Advanced thermionic technology program [DE82-002116] p 115 N82-27846

THERMIONIC EMISSION
Advanced thermionic technology program [DE82-002116] p 115 N82-27846

THERMIONIC POWER GENERATION
Advanced thermionic technology program [DE82-002116] p 115 N82-27846

THERMOCHEMICAL PROPERTIES
An overview of the SERI Solar Energy Storage Program p 51 N82-24666

THERMOCHEMISTRY
Experimental investigation of methanol oxidation in flames Mechanisms and rate constants of elementary steps p 65 A82-28679
Solar hydrogen production using two-step thermochemical cycles p 63 A82-37437
Process for underground gasification [DE82-000493] p 72 N82-23327
Oil shale project run summary large retort run L-4 [DE82-003627] p 73 N82-23616
Silicon materials task of the Low Cost Solar Array Project: Effect of impurities and processing on silicon solar cells [NASA-CR-169051] p 56 N82-26806
Investigation of the geokinetics horizontal in situ oil shale retorting process [DE82-004273] p 86 N82-27796

THERMODYNAMIC CYCLES
The thermodynamic conversion of solar energy - Technical and economic comparison of different power plants p 32 A82-34554
Solar engine [NASA-CASE-LAR-12148-1] p 50 N82-24640

THERMODYNAMIC EFFICIENCY
Design, fabrication and test of liquid metal heat-pipe sandwich panels [AIAA PAPER 82-0903] p 115 A82-31898
Performance test of solar collector with intermittent output p 37 A82-35921
Physical basis of power conversion of energy fluctuations p 40 A82-37671
Orbiter fuel cell improvement assessment p 104 N82-23121

THERMODYNAMIC PROPERTIES
Overview of solar energy conversion technologies - Quantum processes and thermal processes p 34 A82-35502
Thermodynamics of geothermal fluids p 76 N82-24123

THERMODYNAMICS
The thermodynamics of electrolyte distribution in molten carbonate fuel cells p 91 A82-31843

THERMOELECTRIC GENERATORS
The alkali metal thermoelectric converter /AMTEC/ - A new direct energy conversion technology for aerospace power [AIAA PAPER 82-0862] p 91 A82-31876
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments [DE82-002439] p 14 N82-25665

THERMOELECTRIC POWER GENERATION
Power plant IV - Therm-Thek p 33 A82-34558
Power plant V - Thek generating station p 33 A82-34559
Power plant VI - Sodium-air p 33 A82-34560
Power plant VI revisited - Sodium-air /a grid-boiler/ p 33 A82-34561
Power plant VII - Air-air /tube boiler/ p 33 A82-34562
Power plant VII revisited - Air-air /Scirocco/ p 33 A82-34563
Annual productivity of a solar thermoelectric power plant p 33 A82-34564
State of the art in solar thermoelectric power plant research p 33 A82-34565

THERMOGRAVIMETRY
Investigation of coal-gasification catalysis-reaction mechanisms [DE82-003305] p 68 N82-22334

THERMOHYDRAULICS
Osmotic pumped heat pipes for large space platforms [AIAA PAPER 82-0902] p 115 A82-31897

THERMONUCLEAR POWER GENERATION
Modular stellarator fusion reactor concept --- MSR [DE82-001883] p 111 N82-25981
Design scoping study of the 12T Yin-Yang magnet system for the Tandem Mirror Next Step (TMNS) [DE82-003218] p 114 N82-27151

THERMOPHYSICAL PROPERTIES
Use of solar furnaces. II - Thermophysical properties p 24 A82-31568
Some thermophysical properties of paraffin wax as a thermal storage medium [AIAA PAPER 82-0846] p 119 A82-31869
Latent heat thermal energy storage: Determination of properties of storage media and development of a new transfer system [BMFT-FB-T-82-016] p 121 N82-22789

THICK FILMS
Thick optical films for the conduction of optical and infrared radiation --- for light concentration onto solar cells p 24 A82-32543

THICKNESS
Analytical calculation of thickness versus diameter requirements of silicon solar cells p 29 A82-34089

THIN FILMS
Polycrystalline thin films for terrestrial solar cells p 22 A82-30328
Amorphous thin films for terrestrial solar cells p 22 A82-30329
A photoelectrochemical cell based on chemically deposited Sb2Se3 thin film electrode and dependence of deposition on various parameters p 23 A82-30863
Frequency dependent capacitance studies of the CdS/Cu2S thin-film solar cell p 25 A82-32892
Deep trap levels in CdS solar cells observed by capacitance measurements p 26 A82-32893
Low-cost processes for thin-film solar cells p 29 A82-34091
The CLEFT process - A technique for producing epitaxial films on reusable substrates p 30 A82-34097
Trends and problems in CdS/Cu/x/S thin film solar cells - A review p 31 A82-34543
Basic research needs and opportunities in thin films and coatings p 36 A82-35513
Germanium selective solar absorber surfaces p 38 A82-36163
Current-voltage response of tandem junction solar cells p 40 A82-37850
Luminescent solar-concentrator development [DE82-000815] p 57 N82-26824
Electrochemical photovoltaic cells 2-6 compound thin film electrodes [DE82-000394] p 59 N82-26840

THORIUM
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2 [DE82-001026] p 75 N82-23638

THRESHOLD CURRENTS
Axial field limitations in MHD generators. Part 2: Analytical investigation and comparison with experiments [LOG-E763] p 111 N82-24981

THRUST LOADS
Applications of the DOE/NASA wind turbine engineering information system p 106 N82-23696

THRUST PROGRAMMING
Flight management computer [SNIAS-821-111-110] p 12 N82-24842

THYRISTORS
Dynamic characteristics of a wind driven induction generator equipped with thyristor controlled inductances on the stator side p 100 A82-36093

TIME RESPONSE
Large area, high speed detectors for the ultraviolet --- pyroelectric sensor for laser fusion applications p 92 A82-32566

TIN OXIDES
Characterization of electron traps in n/plus/ indium tin oxide on p-type InP solar cells p 21 A82-29693
Spray-deposited SnO2/n-Si/polycrystalline/ solar cells p 38 A82-36863

TITAN LAUNCH VEHICLES
Satellite thermal design and analyses for Titan 34D/IUS and STS/IUS launch vehicle environments [AIAA PAPER 82-0828] p 24 A82-31856

TOKAMAK DEVICES
The age of fusion - On the brink p 103 A82-37971

TOLUENE
Supercritical solvent coal extraction [NASA-CASE-NPO-15210-1] p 82 N82-26481

TORQUE
Vertical axis wind turbine drive train transient dynamics p 107 N82-23719

TORQUE MOTORS
Design aspects of a solar array drive for spot, with a high platform stability objective p 46 N82-23353

TORSIONAL STRESS
Vertical axis wind turbine drive train transient dynamics p 107 N82-23719

TOWERS
Effect of rotor configuration on guyed tower and foundation designs and estimated costs for intermediate site horizontal axis wind turbines [NASA-TM-82804] p 104 N82-22649
SWECS tower dynamics analysis methods and results p 107 N82-23712
Measured and calculated characteristics of wind turbine noise p 108 N82-23724
Acoustic noise generation by the DOE/NASA MOD-1 wind turbine p 108 N82-23726
GE MOD-1 noise study p 108 N82-23727
Noise generation of upwind motor wind turbine generators p 109 N82-23731
Downwind rotor horizontal axis wind turbine noise prediction p 109 N82-23732

TOXIC HAZARDS
Nonmicrowave health and ecological effects: Overview p 5 N82-22691
Toxic hazards research unit [AD-A110587] p 80 N82-25780

TOXICOLOGY
Toxicology of high energy fuels [AD-A111686] p 17 N82-26966

TRACTION
Multiroller traction drive speed reducer: Evaluation for automotive gas turbine engine [NASA-TP-2027] p 112 N82-26678

TRADEOFFS
Some tradeoffs in ingot shaping and price of solar photovoltaic modules p 47 N82-23666

TRAINING EVALUATION
Quarterly report of solar federal buildings: Program in the MASEC region [DE82-001185] p 53 N82-25648

TRANSFORMERS
Switching networks for realisation of variable DC transformers coupled to rectangular arrays p 94 A82-34951
TRANSIENT RESPONSE
Simulation of the start-up transient responses of the UTSI coal-fired MHD power generating system [AIAA PAPER 82-0920] p 91 A82-31910
Vertical axis wind turbine drive train transient dynamics p 107 N82-23719
TRANSMISSION EFFICIENCY
Meteorological effects on laser propagation for power transmission p 115 A82-32368
Power availability at terrestrial receptor sites for laser-power transmission from the satellite power system p 116 A82-32369
TRANSMISSIONS (MACHINE ELEMENTS)
Multirotier traction drive speed reducer: Evaluation for automotive gas turbine engine [NASA-TP-2027] p 112 N82-26678
TRANSPORT AIRCRAFT
Fuel efficiency engines for large transport aircraft [PNR-90082] p 3 N82-22276
Cost and fuel consumption per nautical mile for two engine jet transports using OPTIM and TRAGEN [NASA-CR-166973] p 13 N82-25239
TRANSPORTATION
Investigating the relationship between land use planning, transportation and energy consumption [PB82-122185] p 3 N82-22393
Hydraulic transport of coarse solids in circular and segmented pipes [CSIR-ME-1716] p 118 N82-27685
TRANSPORTATION ENERGY
Inductive power transfer for propulsion --- Roadway Powered Electric Vehicle project p 95 A82-35229
Transit bus propulsion employing flywheel energy storage p 119 A82-35230
Demand 80/81: Forecasts of energy consumption to the year 2000. Volume 1: Forecasts and description of the forecasting model [DE82-900871] p 9 N82-23769
TRAPPED PARTICLES
Characterization of electron traps in n/plus/ indium tin oxide on p-type InP solar cells p 21 A82-29693
Deep trap levels in CdS solar cells observed by capacitance measurements p 26 A82-32893
TRITIUM
Potable water standards project [MLM-2819] p 10 N82-23791
TROMBE WALLS
Audio-visual summary of passive solar commercial buildings development in the MASEC region [DE82-003136] p 46 N82-23368
TROPICAL REGIONS
Substitution of diesel power plants by solar and wind electricity generators - A case study for a tropical island p 101 A82-36107
TRUCKS
Vehicle test report: Jet Industries Electra Van 600 [NASA-CR-168986] p 125 N82-26048
TUBE HEAT EXCHANGERS
Latent heat thermal energy storage: Determination of properties of storage media and development of a new transfer system [BMFT-FB-T-82-016] p 121 N82-22789
TURBINE BLADES
Air cooling of gas turbine blades p 94 A82-34700
Energy efficient engine /E3/ technology status [AIAA PAPER 82-1052] p 2 A82-34980
Physical vapor deposition of ceramic coatings for gas turbine engine components [ASME PAPER 82-GT-264] p 96 A82-35440
Development of composite blades for large wind turbines p 98 A82-36083
Evolution of the flexible blade concept /Vertical axis windmills/ p 98 A82-36084
Combined effects of deterministic and random loads in wind turbine design p 98 A82-36085
Application of the finite element method to the study of the behaviour of blades of industrial wind energy systems p 99 A82-36087
The conceptual design of the high speed ratio wind rotor for the 52 m diameter horizontal axis Volth wind energy converter p 99 A82-36090
Drive train assembly of the Swedish WTS 3 --- Wind Turbine System p 99 A82-36091
'L-180 Poseidon' - A new system concept in vertical axis wind turbine technology p 100 A82-36097
A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory p 100 A82-36098
Tests performed on the 2 MW Tvind WECS --- Wind Energy Conversion System p 100 A82-36100
Use of pultruded reinforced plastics in energy generation and energy related applications p 102 A82-37077
High-temperature-turbine technology program. Phase 2: Technology test and support studies. Turbine spool technology rig cascade tests [DE81-030352] p 104 N82-22502
The hydraulic windmill p 106 N82-23700
TURBINE ENGINES
The 25 m experimental horizontal axis wind turbine /25 m HAT/ p 100 A82-36089
Turbine engine lubricant reclamation [AD-A112098] p 80 N82-26312
TURBINE PUMPS
Preliminary design study of Underground Pumped Hydro and compressed-air energy storage in hard rock. Volume 6: Design approaches. UPH, Appendix D: Power plant [DE82-003075] p 122 N82-23753
TURBINES
Feasibility of using large vertical pumps as turbines for small scale hydropower [DE82-004267] p 112 N82-26694
User's manual for the vertical axis wing turbine code VDART2 [DE82-000796] p 112 N82-26828
TURBOCOMPRESSORS
Progress in the development of energy efficient engine components [ASME PAPER 82-GT-275] p 96 A82-35450
Advanced stratified charge rotary aircraft engine design study [NASA-CR-165396] p 18 N82-27743
TURBOFAN ENGINES
Energy efficient engine /E3/ technology status [AIAA PAPER 82-1052] p 2 A82-34980
TURBOMACHINERY
AGT100 turbomachinery --- for automobiles [AIAA PAPER 82-1207] p 95 A82-35061
TURBULENT FLOW
The turbulent reaction field in a concentric diffusion flame p 66 A82-28690
Amplified wind turbine apparatus [NASA-CASE-MFS-23830-1] p 111 N82-24639
TURBULENT WAKES
On the wake of a Darrieus turbine p 106 N82-23691
TWO DIMENSIONAL FLOW
Simulation of the start-up transient responses of the UTSI coal-fired MHD power generating system [AIAA PAPER 82-0920] p 91 A82-31910
TWO PHASE FLOW
Helical screw expander evaluation project [NASA-CR-168803] p 104 N82-22659
TWO STAGE TURBINES
Theory and tests of two-phase turbines [NASA-CR-168834] p 104 N82-22661

U

ULTRASONIC CLEANING
Application of ultrasonic techniques to chemical coal cleaning processes [DE82-003093] p 83 N82-26497
ULTRASONICS
Ultrasonically enhanced size reduction of coal [DE82-001601] p 71 N82-22989
ULTRAVIOLET RADIATION
Large area, high speed detectors for the ultraviolet --- pyroelectric sensor for laser fusion applications p 92 A82-32566
UNDERGROUND STORAGE
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 11: Plant design. UPH [DE82-000918] p 122 N82-23771
Preliminary assessment of alternative dry storage methods for the storage of commercial spent nuclear fuel [DE82-002303] p 20 N82-28150
UNDERGROUND STRUCTURES
Timesaving methods adaptable to mining which utilize structural information on the forefield while applying new technologies --- forefield survey methods, data processing and analysis [BMFT-FB-T-81-220] p 4 N82-22637
Process for underground gasification [DE82-000493] p 72 N82-23327
LLNL underground coal-gasification project [DE82-002074] p 83 N82-26493
UNITED KINGDOM
A review of United Kingdom windpower p 3 A82-36752
UNSTEADY FLOW
Simulation of the start-up transient responses of the UTSI coal-fired MHD power generating system [AIAA PAPER 82-0920] p 91 A82-31910
UPLINKING
Potential reduction of DSN uplink energy cost p 13 N82-25110
URANIUM
Influence of the carrying vehicle in the aerospatial survey of natural radioactivity [E82-10169] p 70 N82-22604
Airborne gamma-ray spectrometer and magnetometer survey, Kenora quadrangle, Minnesota, volume 1 [DE82-001029] p 74 N82-23625
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1 [DE82-004161] p 74 N82-23635
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2 [DE82-004168] p 75 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1 [DE82-001032] p 75 N82-23637
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2 [DE82-001026] p 75 N82-23638
Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A [DE81-027158] p 79 N82-25620
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C [DE81-027161] p 79 N82-25621
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D [DE81-027156] p 79 N82-25622
The boreholes Ortenburg 1 and 2 (1980/81) [BMFT-FB-T-82-004] p 86 N82-27516
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2 [DE82-005570] p 88 N82-27805
URBAN PLANNING
Investigating the relationship between land use planning, transportation and energy consumption [PB82-122185] p 3 N82-22393
Evaluation of the solar cities program [DE81-030868] p 53 N82-25649
Greater energy efficiency can be achieved through land use management [AD-A111552] p 15 N82-26808
URBAN TRANSPORTATION
Transit bus propulsion employing flywheel energy storage p 119 A82-35230
A fleet manager's guide to vehicles for valid results [DOE/CS-56051/04] p 8 N82-23533
Urban transportation energy accounts. Volume 1: Procedures. Volume 2: Case study of the Chicago region [PB82-135542] p 15 N82-26054
USER MANUALS (COMPUTER PROGRAMS)
Computer modeling of coal-gasification reactors. Volume 3: User's manual of CHEMFLUB: A numerical model for fluidized bed gasifiers (planar and axisymmtric versions) [DE82-000766] p 73 N82-23338
Computer modeling of coal-gasification reactors. Volume 4: Operating manual for EF (Entrained Flow coal gasifier) computer model [DE82-000765] p 73 N82-23339
User's manual for the vertical axis wing turbine code VDART2 [DE82-000796] p 112 N82-26828
UTAH
Heat flow and geothermal assessment of the Escalante Desert, southwestern Utah, with emphasis on the Newcastle KGRA [DE82-003952] p 74 N82-23618
UTILITIES
Power optimization of wind electric conversion systems integrated into the utility grid p 90 A82-30868
Wind system value analysis for electric utilities - A comparison of four methods p 93 A82-33703
The potential for utility conservation investments in Minnesota [PB82-122219] p 7 N82-22792
Design handbook for photovoltaic-power systems: Simplified methods for utility interconnected systems [DE82-003909] p 48 N82-23745
Intermediate photovoltaic system application experiment operational performance report. Volume 4: For Newman Power Station, El Paso, Texas [DE82-002681] p 48 N82-23746
Demand 80/81: Forcasts of energy consumption to the year 2000. Volume 2: Appendixes [DE82-900870] p 9 N82-23770
Intermediate photovoltaic system application experiment operational executive summary. Volume 3: For Newman Power Station, El Paso, Texas [DE82-003088] p 50 N82-23773

Experimental evaluation of thermal energy storage
p 123 N82-24656
Summary of hearings on the future of the nation's energy utilities: implications for Federal RD&D
[GPO-91-815] p 13 N82-21633
Effects off system factors on the economics of and demand for small solar thermal power systems
[NASA-CR-169043] p 58 N82-26800
Methodology for determining the value of wind energy conversion systems for specific utility systems
[DE82-002679] p 113 N82-26832
Solar energy hot water heating and electric utilities. A model validation
[DE82-005485] p 60 N82-26861

UTILIZATION
The practical utilisation of fibre composite hybrids
p 126 A82-26842

V

VACUUM
American Vacuum Society, National Symposium, 28th, Anaheim, CA, November 2-6, 1981, Proceedings. Parts 1 & 2
p 22 A82-30327

VALIDITY
Validation and Assessment of energy Models. Proceedings
[PB82-123951] p 10 N82-23782

VALUE ENGINEERING
Wind system value analysis for electric utilities - A comparison of four methods p 93 A82-33703

VANADIUM COMPOUNDS
Chromatographic studies of vanadium compounds from Boscan crude oil
[DE82-000977] p 68 N82-22335

VANES
Amplified wind turbine apparatus
[NASA-CASE-MFS-23830-1] p 111 N82-24639

VAPOR DEPOSITION
High current post-hydrogenated chemical vapor deposited amorphous silicon p-i-n diodes
p 27 A82-33686
Physical vapor deposition of ceramic coatings for gas turbine engine components
[ASME PAPER 82-GT-264] p 96 A82-35440
As-deposited CVD amorphous silicon films for solar photovoltaic applications p 38 A82-36227
Improved slicing method for silicon
[DE82-009317] p 57 N82-26817

VAPOR PHASE EPITAXY
The CLEFT process - A technique for producing epitaxial films on reusable substrates p 30 A82-34097

VAPOR PHASES
Theory and tests of two-phase turbines
[NASA-CR-168834] p 104 N82-22661

VAPOR PRESSURE
Salinity-gradient vapor-pressure power conversion
p 92 A82-32331

VEGETATION
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[DE82-900580] p 18 N82-27802
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[DE82-900581] p 19 N82-27803

VELOCITY DISTRIBUTION
The efficiency of wind turbine clusters
p 101 A82-36101
The velocity field of a system of unsteady cycloidal vortices p 106 N82-23689

VENTILATION
Case study of the Mastin double-envelope house
[DE82-006833] p 15 N82-26513

VERTICAL ORIENTATION
Vertical axis wind turbine drive train transient dynamics p 107 N82-23719

VIBRATION DAMPING
The control of engine vibration using squeeze-film dampers
[ASME PAPER 82-GT-241] p 96 A82-35422
Design aspects of a solar array drive for spot, with a high platform stability objective p 46 N82-23353
Experience on the use of MOSTAB-HFW computer code for horizontal-axis wind turbines p 107 N82-23709

VIBRATION EFFECTS
Vibrating zinc electrodes in Ni/Zn batteries
p 119 A82-31841

VIBRATION ISOLATORS
The control of engine vibration using squeeze-film dampers
[ASME PAPER 82-GT-241] p 96 A82-35422

VISCOSITY
Secondary recovery: Changing of the viscosity and compressibility of mineral oils with dissolved gas
[BMFT-FB-T-81-225] p 69 N82-22339

VOID RATIO
Modelling of oil shale retorts for electromagnetic sensing techniques
[PB82-153321] p 86 N82-27459

VOLATILITY
Analysis of potential methods to determine volatilities of heavy crude oils
[PB82-145384] p 87 N82-27534

VOLCANOLOGY
The Mt. Hood region - Volcanic history, structure, and geothermal energy potential p 66 A82-31244
Seismic and geodetic studies of the Imperial Valley, California
[DE82-001686] p 85 N82-26915

VOLT-AMPERE CHARACTERISTICS
Transport in hydrogenated amorphous silicon p-i-n solar cells p 21 A82-29696
Numerical solution of the one-dimensional boundary value problem of charge transfer in solar-cell elements
p,22 A82-30058
The effect of the intermediate layer on the characteristics of Schottky-barrier solar-cell elements
p 22 A82-30059
Investigation of mirror concentrators intended for operation with high-current solar cells
p 22 A82-30061
Polycrystalline thin films for terrestrial solar cells
p 22 A82-30328
Photovoltaic effects in Cu2O-Cu solar cells grown by anodic oxidation p 23 A82-31187
Distributed series resistance effects in solar cells
p 25 A82-32693
An effect of back-surface boron implantation on silicon solar cells p 26 A82-32895
Efficient CdSe/p/ + /n Si tunnel junction photoanode for solar cell p 26 A82-33683
High current post-hydrogenated chemical vapor deposited amorphous silicon p-i-n diodes
p 27 A82-33686
Preparation and analysis of CdS-Cu2S solar cells
p 30 A82-34540
Modification of open-circuit voltage of metal-insulator-semiconductor solar cells due to a nonuniform insulating layer p 34 A82-35500
Analytical expressions for the determination of the maximum power point and the fill factor of a solar cell
p 39 A82-36868
Current-voltage response of tandem junction solar cells p 40 A82-37850

VORTEX SHEETS
A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory
p 100 A82-36098

W

WAFERS
Proceedings of the Low-Cost Solar Array Wafering Workshop
[NASA-CR-168847] p 46 N82-23650
LSA project perspective of wafering technology
p 46 N82-23651
Comparison of various silicon sawing methods
p 46 N82-23652
Arco Solar, Incorporated: The industrial point of view
p 47 N82-23653
Some disconnected speculations on slicing silicon
p 47 N82-23654
Field experience with various slicing methods
p 47 N82-23665
Sensitivity analysis of add-on price estimates for select silicon wafering technologies p 47 N82-23667
Wafering economies for industrialization from a wafer manufacturer's viewpoint p 47 N82-23668
Overview of a new slicing method: Fixed Abrasive Slicing Technique (FAST) p 47 N82-23669
ID slicing and the automated factory
p 47 N82-23672
Evaluation and verification of epitaxial process sequence for silicon solar-cell production
[NASA-CR-169044] p 58 N82-26802

WAKES
A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory
p 100 A82-36098
On wake decay and row spacing for WECS farms
p 101 A82-36104
Measured and calculated characteristics of wind turbine noise p 108 N82-23724
Dynamics of wakes downstream of wind turbine towers p 108 N82-23725
Acoustic noise generation by the DOE/NASA MOD-1 wind turbine p 108 N82-23726
GE MOD-1 noise study p 108 N82-23727
Prediction of low frequency and impulsive sound radiation from horizontal axis wind turbines
p 109 N82-23729
The NASA-LeRC wind turbine sound prediction code
p 109 N82-23730
Noise generation of upwind motor wind turbine generators p 109 N82-23731
Downwind rotor horizontal axis wind turbine noise prediction p 109 N82-23732

WANKEL ENGINES
Advanced stratified charge rotary aircraft engine design study
[NASA-CR-165398] p 18 N82-27743

WASTE DISPOSAL
Space and energy: Global viewpoint
[MBB-UR-489-81-O] p 45 N82-22784
Western oil shale development. A technology assessment
[DE82-003004] p 74 N82-23622

WASTE ENERGY UTILIZATION
Utilization of waste heat from major transformer substations. Volume 3: Appendix
[DE82-900357] p 6 N82-22781
High temperature metallic recuperator
[PB82-141102] p 8 N82-23373
Proceedings of the DOE Thermal and Chemical Storage Annual Contractor's Review Meeting
[CONF-801055] p 122 N82-24652
Thermal energy storage for residential energy conservation p 124 N82-24674
Application of thermal energy storage to process heat recovery in the aluminum industry p 124 N82-24685
Collection and dissemination of thermal energy storage system information for the pulp and paper industry
p 125 N82-24686
Applications of thermal energy storage to waste heat recovery in the food processing industry
p 125 N82-24687
Once-through heat supply system for City of Bellingham p 125 N82-24688
Heat Energy Recovery from Domestic Output Fluids (HERDOF)
[PB82-134156] p 14 N82-25657
Energy and materials flows in the production of primary aluminum
[DE82-005963] p 15 N82-26453
Automotive absorption air conditioner utilizing solar and motor waste heat
[NASA-CASE-NPO-15183-1] p 54 N82-26776
Comparison of Rankine-cycle power systems: Effects of seven working fluids
[DE82-005599] p 113 N82-26844

WASTE TREATMENT
Feasibility study: Codisposal with energy recovery from wastewater sludge and municipal refuse. Phase 2, Gloucester County, New Jersey
[DE82-000882] p 9 N82-23759

WASTE UTILIZATION
Purification of rice hulls as a source of solar grade silicon for solar cells p 20 A82-28881
New York State industrial energy profile, volume 1
[PB82-126848] p 7 N82-22790
Feasibility study: Codisposal with energy recovery from wastewater sludge and municipal refuse. Phase 2, Gloucester County, New Jersey
[DE82-000882] p 9 N82-23759
Energy in New England: Transition to the 80's
[DE82-000234] p 9 N82-23763
An economic model of future coal/densified refuse-derived fuel use at Wright-Patterson AFB, Ohio
[AD-A111376] p 78 N82-25396
Conversion of cellulosic wastes to liquid fuels
[DE82-001173] p 83 N82-26496
Assessment of secondary residues. Engineering and economic analysis
[DE82-000925] p 85 N82-26771
Process selection and investment analysis, methanation facility for purox pyrolysis system off-gas
[DE82-004584] p 18 N82-27452

WATER
Production cost comparisons of hydrogen from fossil and nuclear fuel and water decomposition
p 65 N82-24710
Recent work in advanced hydrogen production concepts p 65 N82-24711
Environmental and radiological safety studies. Interaction of (238)PuO2 heat sources with terrestrial and aquatic environments
[DE82-002439] p 14 N82-25665

WATER FLOW
Mean annual streamflow of selected drainage basins in the coal area of southeastern Montana
[PB82-137698] p 79 N82-25627

WATER HEATING
Solar power stations - Heat transfer and thermal optimization in the production of saturated water vapor p 22 A82-30060
Performance test of solar collector with intermittent output p 37 A82-35921
The status of windpower research and development for space and water heating in the United States p 101 A82-36106
Development of control systems for solar water and solar space heating equipment. Choice of heat conducting fluid. Testing
[BMFT-FB-T-81-185] p 45 N82-22785
A point focusing collector for an integrated water/power complex
[MBB-UR-579-81-OE] p 46 N82-23149
Thermal performance of a photographic laboratory process: Solar Hot Water System
[NASA-TM-83299] p 52 N82-25641
Residential conservation service program support
[DE82-001205] p 13 N82-25650
National solar data network success stories
[DE82-002281] p 14 N82-25652
Solar-energy-system performance evaluation, General Electric - Milwaukee operational test site, Milwaukee, Wisconsin, September 1980 - March 1981
[DE82-001934] p 57 N82-26814
Summerwood Associates, House M, Old Saybrook, Connecticut: Solar energy system performance evaluation, June 1980 - May 1981

Solar energy system performance evaluation: General Electric, Normal operational test site, Normal, Illinois, September 1980 - March 1981
[DE82-001805] p 58 N82-26827
Solar-energy-system performance evaluation, General Electric Dallas operational test site, Dallas, Texas, October 1980 - March 1981
[DE82-001350] p 58 N82-26830
Solar-energy-system performance evaluation, General Electric Spokane operational test site, Spokane, Washington, October 1980 - March 1981
[DE82-001610] p 58 N82-26831
Oakmead Industries, Santa Clara, California solar-energy-system performance evaluation October 1980 - May 1981
[DE82-002508] p 59 N82-26836
Solar energy hot water heating and electric utilities. A model validation
[DE82-005485] p 60 N82-26861
Solar equipment system packages for old and new buildings to provide domestic water and partial heating
[BMFT-FB-T-82-029] p 61 N82-27545
Low cost, multipurpose solar energy system
[DE81-030955] p 62 N82-27854

WATER MANAGEMENT
Penobscot River basin overview
[PB82-131467] p 4 N82-22639
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640
US Lake Erie natural gas resource development. Programmatic environmental impact statement
[AD-A112074] p 14 N82-25662

WATER POLLUTION
Potable water standards project
[MLM-2819] p 10 N82-23791

WATER QUALITY
Potable water standards project
[MLM-2819] p 10 N82-23791

WATER RESOURCES
Penobscot River basin overview
[PB82-131467] p 4 N82-22639
St. Croix/Maine Eastern Coastal River Basins overview: Public review draft
[PB82-133091] p 4 N82-22640
Western oil shale development. A technology assessment
[DE82-003004] p 74 N82-23622
Analysis of environmental issues related to small-scale hydroelectric development. 5: Instream flow needs for fishery resources
[DE82-000901] p 11 N82-23811
Synthetic fuels development in the Upper Colorado Region: Section 13(a) water assessment report
[PB82-156761] p 88 N82-27535

WATER VAPOR
Solar power stations - Heat transfer and thermal optimization in the production of saturated water vapor p 22 A82-30060
A method for calculating the radiant energy incident on a vapor generator in a solar power station p 22 A82-30062
The rates of solar energy storage and retrieval in a zeolite-water system p 37 A82-35922

WAVE EXCITATION
Parametric photovoltaic cell p 29 A82-31207

WAXES
Some thermophysical properties of paraffin wax as a thermal storage medium
[AIAA PAPER 82-0848] p 119 A82-31669

WEATHER STATIONS
The southern California desert wind-energy assessment p 102 A82-36113

WEBS (SHEETS)
High efficiency and radiation hard solar cells from dendritic web silicon ribbon p 28 A82-34083
Silicon dendritic web material
[NASA-CR-169053] p 55 N82-26793
Large-area sheet task advanced dendritic web growth development
[NASA-CR-169047] p 55 N82-26796

WELLS
Target reservoirs for CO2 miscible flooding. Task two: Summary of available reservoir and geological data. Volume 1: Permian basin geological and reservoir data; part 3. Farmer-San Andres through NOLLEY-Wolfcamp
[DE82-001347] p 74 N82-23620
Raft River geoscience case study: Appendixes
[DE82-003553] p 75 N82-23835
A program for single-phase moderate-temperature geothermal well drawdown and pumping energy for the HP-97 and other desk calculators
[PB82-148420] p 89 N82-27829

WETLANDS
Application of remote sensing to state and regional problems
[E82-10288] p 77 N82-24566

WHEAT
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 1 A82-29537

WIND EFFECTS
Application of the finite element method to the study of the behaviour of blades of industrial wind energy systems p 99 A82-36087
Wind turbulence inputs for horizontal axis wind turbines p 106 N82-23695

WIND MEASUREMENT
The southern California desert wind-energy assessment p 102 A82-36113
Preliminary estimates of wind power potential at the Nevada test site
[PB82-127036] p 75 N82-23787

WIND PROFILES
Sites for wind-power installations - Physical modelling of the wind field over Kahuku Point, Oahu, Hawaii p 98 A82-36080

WIND SHEAR
Performance testing of a 50 kW VAWT in a built-up environment p 106 N82-23698

WIND TUNNEL TESTS
Wind energy in Argentina p 102 A82-36111
Dynamics of wakes downstream of wind turbine towers p 108 N82-23725

WIND TURBINES
A frequency and duration method for the evaluation of wind integration p 90 A82-30869
The probability distribution of wind power from a dispersed array of wind turbine generators p 92 A82-32780
Strategies for minimizing operational impacts of large wind turbine arrays on automatic generation control systems p 93 A82-33702
Wind system value analysis for electric utilities - A comparison of four methods p 93 A82-33703
Medicine Bow wind project p 93 A82-33704
Sail-type wind-turbines - A review and annotated bibliography p 93 A82-34488
The Southern California Edison Wind Turbine Generator Test Program
[ASME PAPER 82-PET-2] p 96 A82-35482
Small wind energy conversion systems, application and performance
[ASME PAPER 82-PET-3] p 96 A82-35483
Design, performance and economics of the DAF Indal 50 kW and 375 kW vertical axis wind turbine
[ASME PAPER 82-PET-6] p 97 A82-35486
Procedures for modeling wind turbine performance from site wind data
[ASME PAPER 82-PET-7] p 97 A82-35487
The development of a 10 meter wind turbine generator
[ASME PAPER 82-PET-10] p 97 A82-35489
International Symposium on Wind Energy Systems, 3rd, Danmarks Tekniske Hojskole, Lyngby, Denmark, August 26-29, 1980, Proceedings p 97 A82-36076
Assessment of offshore siting of wind turbine generators p 97 A82-36077
Wind power generation for national and regional grid systems. Design proposals for generation and transmission p 98 A82-36078
Standard deviations and confidence intervals for atmospheric design criteria used in WECS development — Wind Energy Conversion Systems p 98 A82-36082
Development of composite blades for large wind turbines p 98 A82-36083
Combined effects of deterministic and random loads in wind turbine design p 98 A82-36085
On wind turbine power measurements p 99 A82-36088
Description of the two Danish 630 kw wind turbines, NIBE-A and NIBE-B, and some preliminary test results p 99 A82-36089
The conceptual design of the high speed ratio wind rotor for the 52 m diameter horizontal axis Voith wind energy converter p 99 A82-36090
Drive train assembly of the Swedish WTS 3 — Wind Turbine System p 99 A82-36091
Alternator designs for direct coupling to remote wind energy systems p 99 A82-36092
Structural design and maintenance policies for large wind turbines p 100 A82-36095
'L-180 Poseidon' - A new system concept in vertical axis wind turbine technology p 100 A82-36097
A vortex-wake analysis of a horizontal-axis wind turbine and a comparison with a modified blade-element theory p 100 A82-36098
The 25 m experimental horizontal axis wind turbine /25 m HAT/ p 100 A82-36099
The efficiency of wind turbine clusters p 101 A82-36101
Modelling of wind turbine arrays p 101 A82-36102
On wake decay and row spacing for WECS farms p 101 A82-36104
A regional wind-hydro electricity supply system p 101 A82-36108
A simulation model of an electricity generating system incorporating wind turbine plant p 101 A82-36109
The capacity credit of wind power - A numerical model p 101 A82-36110
Wind energy in Argentina p 102 A82-36111
A vertical axis wind energy converter with straight blades p 102 A82-36112
A review of United Kingdom windpower p 3 A82-36752
Use of pultruded reinforced plastics in energy generation and energy related applications p 102 A82-37077
Effect of rotor configuration on guyed tower and foundation designs and estimated costs for intermediate site horizontal axis wind turbines
[NASA-TM-82804] p 104 N82-22649
Evaluation of lightning accommodation systems for wind-driven turbine rotors
[NASA-TM-82784] p 105 N82-23679
Wind turbine dynamics
[NASA-CP-2185] p 105 N82-23684
Aerodynamic potpourri p 105 N82-23685
Aerodynamic performance prediction of horizontal axis wind turbines p 105 N82-23686
Double-multiple streamtube model for Darrieus in turbines p 105 N82-23687
The UTRC wind energy conversion system performance analysis for horizontal axis wind turbines (WECSPER) p 105 N82-23688
On the wake of a Darrieus turbine p 106 N82-23691
Recent Darrieus vertical axis wind turbine aerodynamical experiments at Sandia National Laboratories p 106 N82-23692
Performance of wind turbines in a turbulent atmosphere p 106 N82-23693
Wind turbulence inputs for horizontal axis wind turbines p 106 N82-23695
Applications of the DOE/NASA wind turbine engineering information system p 106 N82-23696
Performance testing of a 50 kW VAWT in a built-up environment p 106 N82-23698
Experience on the use of MOSTAB-HFW computer code for horizontal-axis wind turbines p 107 N82-23709
Comparison of upwind and downwind rotor operation of the DOE/NASA 100-kW MOD-0 wind turbine p 107 N82-23710
A review of resonance response in large horizontal-axis wind turbines p 107 N82-23711
SWECS tower dynamics analysis methods and results p 107 N82-23712
Passive cyclic pitch control for horizontal axis wind turbines p 107 N82-23715
Vertical axis wind turbine drive train transient dynamics p 107 N82-23719
Dynamics and stability of wind turbine generators p 107 N82-23720
Kaman 40 kW wind turbine generator - control system dynamics p 107 N82-23721

Automatic control algorithm effects on energy production p 108 N82-23722
Effect of wind turbine generator model and siting on wind power changes out of large WECS arrays p 108 N82-23723
Measured and calculated characteristics of wind turbine noise p 108 N82-23724
Dynamics of wakes downstream of wind turbine towers p 108 N82-23725
Acoustic noise generation by the DOE/NASA MOD-1 wind turbine p 108 N82-23726
GE MOD-1 noise study p 108 N82-23727
Enhancement of far field sound levels by refractive focusing p 108 N82-23728
Prediction of low frequency and impulsive sound radiation from horizontal axis wind turbines p 109 N82-23729
The NASA-LeRC wind turbine sound prediction code p 109 N82-23730
Noise generation of upwind motor wind turbine generators p 109 N82-23731
Downwind rotor horizontal axis wind turbine noise prediction p 109 N82-23732
Wind turbine acoustic standards p 109 N82-23733
Small-wind-systems application analysis. Technical report and executive summary [DE82-003748] p 109 N82-23749
General introduction to wind energy conversion [NLR-MP-81014-U] p 109 N82-23775
Guide to the evaluation of human exposure to noise from large wind turbines [NASA-TM-83288] p 11 N82-24051
Amplified wind turbine apparatus [NASA-CASE-MFS-23830-1] p 111 N82-24639
Mod-2 wind turbine system cluster research test program. Volume 1: Initial plan E-1290 [NASA-TM-82906] p 112 N82-26807
Dynamic analysis of Darrieus vertical axis wind turbine rotors [DE82-000814] p 112 N82-26823

WIND VELOCITY
On the spectral energy and power components in horizontal wind gusts p 90 A82-30866
The probability distribution of wind power from a dispersed array of wind turbine generators p 92 A82-32760
The efficiency of wind turbine clusters p 101 A82-36101
The capacity credit of wind power - A numerical model p 101 A82-36110
The hydraulic windmill p 106 N82-23700

WIND VELOCITY MEASUREMENT
Wind energy in Argentina p 102 A82-36111

WINDMILLS (WINDPOWERED MACHINES)
The feasibility of electric power generation by the wind on the University of New Orleans campus [ASME PAPER 82-PET-1] p 96 A82-35481
International Symposium on Wind Energy Systems, 3rd, Danmarks Tekniske Hojskole, Lyngby, Denmark, August 26-29, 1980, Proceedings p 97 A82-36076
Evolution of the flexible blade concept /Vertical axis windmills/ p 98 A82-36084
Load cases for wind energy conversion systems p 99 A82-36086
Application of the finite element method to the study of the behaviour of blades of industrial wind energy systems p 99 A82-36087
Tests performed on the 2 MW Tvind WECS — Wind Energy Conversion System p 100 A82-36100
Wind turbine dynamics [NASA-CP-2185] p 105 N82-23684
Performance of wind turbines in a turbulent atmosphere p 106 N82-23693
The hydraulic windmill p 106 N82-23700

WINDPOWER UTILIZATION
A frequency and duration method for the evaluation of wind integration p 90 A82-30869
Wind power as an electrical energy source in Illinois p 92 A82-32772
Biennial Wind Energy Conference and Workshop, 5th, Washington, DC, October 5-7, 1981, Proceedings p 93 A82-33701
Strategies for minimizing operational impacts of large wind turbine arrays on automatic generation control systems p 93 A82-33702
Small wind energy conversion systems, application and performance [ASME PAPER 82-PET-3] p 96 A82-35483
Wisconsin Power and Light Company's wind energy research and demonstration program [ASME PAPER 82-PET-4] p 97 A82-35484
Energy storage options for harnessing wind energy [ASME PAPER 82-PET-9] p 120 A82-35488
A review of the SERI wind energy innovative systems program p 98 A82-36079
The status of windpower research and development for space and water heating in the United States p 101 A82-36106
The capacity credit of wind power - A numerical model p 101 A82-36110
Wind energy in Argentina p 102 A82-36111
The southern California desert wind-energy assessment p 102 A82-36113
Economic analysis of small wind-energy conversion systems p 102 A82-36209
Utility siting of WECS: A preliminary legal/regulatory assessment [SERI/TR-744-778] p 4 N82-22667
Near-term high potential counties for SWECS [SERI/TR-98262-11] p 104 N82-22671
Aerodynamic potpourri p 105 N82-23685
Aerodynamic performance prediction of horizontal axis wind turbines p 105 N82-23686
Double-multiple streamtube model for Darrieus in turbines p 105 N82-23687
The UTRC wind energy conversion system performance analysis for horizontal axis wind turbines (WECSPER) p 105 N82-23688
The velocity field of a system of unsteady cycloidal vortices p 106 N82-23689
Recent Darrieus vertical axis wind turbine aerodynamical experiments at Sandia National Laboratories p 106 N82-23692
General introduction to wind energy conversion [NLR-MP-81014-U] p 109 N82-23775
Preliminary estimates of wind power potential at the Nevada test site [PB82-127036] p 75 N82-23787
Amplified wind turbine apparatus [NASA-CASE-MFS-23830-1] p 111 N82-24639
Mod-2 wind turbine system cluster research test program. Volume 1: Initial plan E-1290 [NASA-TM-82906] p 112 N82-26807
Methodology for determining the value of wind energy conversion systems for specific utility systems [DE82-002679] p 113 N82-26832
Small wind systems application analysis. Executive summary [DE82-004206] p 113 N82-26841

WINDPOWERED GENERATORS
Power optimization of wind electric conversion systems integrated into the utility grid p 90 A82-30868
Reliability analysis of combined wind-electric and conventional generation systems p 91 A82-31572

Guide to the evaluation of human exposure to noise from large wind turbines [NASA-TM-83288] p 11 N82-24051
Mod-2 wind turbine system cluster research test program. Volume 1: Initial plan E-1290 [NASA-TM-82906] p 112 N82-26807
User's manual for the vertical axis wing turbine code VDART2 [DE82-000796] p 112 N82-26828
Small wind systems application analysis. Executive summary [DE82-004206] p 113 N82-26841

WING TIP VORTICES
The velocity field of a system of unsteady cycloidal vortices p 106 N82-23689

WOOD
Energy in New England: Transition to the 80's [DE82-000234] p 9 N82-23763

WORKING FLUIDS
Thermal and photochemical studies of solar energy absorbers dissolved in heat transfer fluids p 38 A82-36750
Comparison of Rankine-cycle power systems: Effects of seven working fluids [DE82-005599] p 113 N82-26844

Y

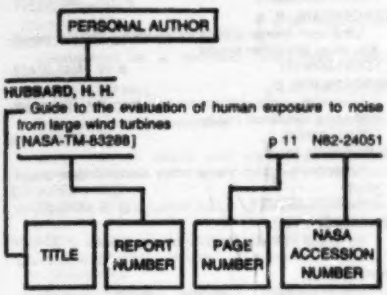
YAW
Comparison of upwind and downwind rotor operation of the DOE/NASA 100-kW MOD-0 wind turbine p 107 N82-23710

Z

ZEOLITES
The rates of solar energy storage and retrieval in a zeolite-water system p 37 A82-35922

ZINC SULFIDES
Single-crystal Zn/x/Cd/1-x/S/Cu2S photovoltaic cells p 31 A82-34542

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

AAMODT, R. L.
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5
[DE82-002520] p 78 N82-25616

AASEN, M. D.
The EMC of satellite power systems and DoD C-E systems p 44 N82-22750

ABDULLAH, K.
Solar heat collector-generator for cooling purposes p 27 A82-33925

ABHAT, A.
Latent heat thermal energy storage: Determination of properties of storage media and development of a new transfer system
[BMFT-FB T-82-016] p 121 N82-22789

ABOUL-ENEIN, S.
Latent heat thermal energy storage: Determination of properties of storage media and development of a new transfer system
[BMFT-FB-T-82-016] p 121 N82-22789

ABUJAWDEH, S. S.
A conceptual design study of a high temperature solar thermal receiver
[NASA-CR-168925] p 51 N82-24720

ACKERMAN, F. J.
Oil shale project run summary large retort run L-4
[DE82-003627] p 73 N82-23616

ACKERMANN, H. D.
The Mt. Hood region - Volcanic history, structure, and geothermal energy potential p 66 A82-31244

ADT, R. R., JR.
Characterization of alcohol/gasoline blends as automotive fuel: Performance and emissions characteristics
[DE82-000124] p 72 N82-23331

AGARWAL, S. K.
Variation of minority carrier lifetime with level of injection in p-n-junction devices p 20 A82-29233

AGNIHOTRI, O. P.
Spray-deposited SnO2/n-Si/polycrystalline/ solar cells p 38 A82-36863

AGUILAR, R. G.
Evaluation of the second hot dry rock geothermal energy reservoir: Results of phase 1, run segment 5
[DE82-002520] p 78 N82-25616

AIKEN, C. L. V.
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 88 N82-27808

AKHMETOV, R.
Cooperative effort urged for development of orbital power stations p 118 N82-24261

AKIYAMA, M.
Hydrogen economy assessment for long-term energy systems in Japan p 63 A82-32159

ALARIO, J.
Active heat exchange: System development for latent heat thermal energy storage p 124 N82-24671

ALBERT, M. E.
Status of Occidental Petroleum's coal-oil-mixture program: An industrial-boiler retrofit
[DE82-900076] p 73 N82-23340

Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 1: Executive summary
[DE82-000270] p 121 N82-23735
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 3A: Site selection study, part 1
[DE82-000675] p 121 N82-23736
Compressed-Air Energy Storage: Preliminary design and site development program in aquifer. Volume 6: Balance of plant design
[DE82-000670] p 121 N82-23737
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 7: Environmental, safety, and licensing considerations
[DE82-000669] p 121 N82-23738
Compressed-Air Energy Storage: Preliminary design and site development program in an aquifer. Volume 9: Cost estimate and schedule
[DE82-000667] p 122 N82-23740
Sassi Corp., Indianapolis, Ind.
Process selection and investment analysis, methanation facility for purox pyrolysis system off-gas
[DE82-004584] p 18 N82-27452
Satzler (Ron), Princeville, Ill.
Low cost, multipurpose solar energy system
[DE81-030955] p 62 N82-27854
Science Applications, Inc., Golden, Colo.
An overview of the value of parabolic dish solar thermal systems in industrial cogeneration applications
[NASA-CR-169063] p 54 N82-26785
Science Research Council, Chilton (England).
Heat Energy Recovery from Domestic Output Fluids (HERDOF)
[PB82-134156] p 14 N82-25857
Seattle City Light, Wash.
Utilization of waste heat from major transformer substations. Volume 3: Appendix
[DE82-900357] p 6 N82-22781
Semix, Inc., Gaithersburg, Md.
Watering economies for industrialization from a wafer manufacturer's viewpoint p 47 N82-23668
Silicon Technology Corp., Oakland, N. J.
ID slicing and the automated factory p 47 N82-23672
Simmonds Precision Products, Inc., Vergennes, Vermont.
Commercial aircraft airframe fuel systems surveys
[AD-A112241] p 87 N82-27524
Societe Europeenne de Propulsion, Vernon (France).
Design aspects of a solar array drive for spot, with a high platform stability objective p 46 N82-23353
Societe Nationale Industrielle Aerospatiale, Les Mureaux (France).
Magnetic bearing flywheels for electric storage
[SNIAS-821-422-110] p 126 N82-27750
Magnetic suspension and flywheels: Spaceborne and terrestrial applications
[SNIAS-821-422-111] p 126 N82-27751
Societe Nationale Industrielle Aerospatiale, Toulouse (France).
Flight management computer
[SNIAS-821-111-110] p 12 N82-24842
Solar Turbines International, San Diego, Calif.
High temperature metallic recuperator
[PB82-141102] p 8 N82-23373
Solarex Corp., Rockville, Md.
Process Research ON Semix Silicon Materials (PROSSM)
[NASA-CR-169049] p 55 N82-26794
Southwest Research Inst., San Antonio, Tex.
Characterization of exhaust emissions from high mileage catalyst-equipped automobiles
[PB82-131566] p 7 N82-22811
A field monitor for the stability and cleanliness of distillate fuel
[AD-A110694] p 76 N82-24354
Impact study of synthetic and alternative fuel usage in Army aircraft propulsion systems
[AD-A111046] p 77 N82-24355
Impact of gasohol on the L-141 and LDT-465-1C engines
[AD-A112010] p 82 N82-26486
Development of Army high-energy fuel diesel/turbine-powered surface equipment, phase 2
[AD-A111942] p 82 N82-26487
Review of physical and chemical methods for characterization of fuels
[AD-A111943] p 83 N82-26488
Development of accelerated fuel-engines qualification procedures methodology, volume 1
[AD-A113461] p 85 N82-27317
Development of accelerated fuel-engines qualification procedures methodology. Volume 1: Appendices
[AD-A113532] p 85 N82-27318
Suitability of shale fuels for Army generator sets
[AD-A112609] p 87 N82-27522
Spire Corp., Bedford, Mass.
Non-mass-analyzed ion implantation from a solid phosphorus source p 26 A82-33685
Springborn Labs., Inc., Enfield, Conn.
Photovoltaic encapsulation materials p 29 A82-34093
Stanford Univ., Calif.
Axial field limitations in MHD generators. Part 2: Analytical investigation and comparison with experiments
[LOG-E763] p 111 N82-24981
State Univ. of New York, Buffalo.
Corrosion behavior of alloys p 51 N82-24679
Stearns-Roger Corp., Denver, Colo.
Cost and performance of thermal storage concepts in solar thermal systems p 51 N82-24689
BI-GAS pilot plant
[DE82-004753] p 87 N82-27532
Systems Science and Software, La Jolla, Calif.
Computer modeling of coal-gasification reactors. Volume 1: Executive summary
[DE82-000766] p 73 N82-23336
Computer modeling of coal-gasification reactors. Volume 2: Technical report
[DE82-009767] p 73 N82-23337
Computer modeling of coal-gasification reactors. Volume 3: User's manual of CHEMFLUB: A numerical model for fluidized bed gasifiers (planar and axisymmtric versions)
[DE82-000766] p 73 N82-23338
Computer modeling of coal-gasification reactors. Volume 4: Operating manual for EF (Entrained Flow coal gasifier) computer model
[DE82-000765] p 73 N82-23339
SRI International Corp., Menlo Park, Calif.
Mechanism of catalytic gasification of coal char
[DE82-004074] p 81 N82-26427
STEAG A.G., Essen (West Germany).
Melting chamber combustion with reduced emission of nitrogen oxides
[BMFT-FB-T-81-229] p 7 N82-22810

T

Technische Universitaet, Brunswick (West Germany).
Investigations to predict and reduce the evaporation rate of the residual brine in salt caverns used for gas storage
[BMFT-FB-T-81-226] p 121 N82-22843
Telic Corp., Santa Monica, Calif.
Investigation of continuous deposition of AMA-type coatings onto strip and sheet by sputtering
[DE82-004266] p 53 N82-26456
Tennessee Univ. Space Inst., Tullahoma.
MHD coal-fired flow facility
[DE82-003814] p 113 N82-26853
Tennessee Univ., Knoxville.
Performance of stratified thermal storage system for Oliver Springs Elementary School p 123 N82-24665
Tennessee Valley Authority, Chattanooga.
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[DE82-900580] p 18 N82-27802
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[DE82-900581] p 19 N82-27803
Texas Univ., Austin.
Synthetic-fuel production using Texas lignite and a very high temperature gas cooled reactor for process heat and electrical power generation
[DE82-900466] p 83 N82-26492
Acid rain in Texas' energy future
[DE82-900465] p 17 N82-26880
Texas Univ., El Paso.
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 88 N82-27808
Thermo Electron Corp., Waltham, Mass.
Advanced thermionic technology program
[DE82-002116] p 115 N82-27846
Toledo Univ., Ohio.
Aerodynamic performance prediction of horizontal axis wind turbines p 105 N82-23686
Tracor MB Associates, San . amon, Calif.
Process development for automated solar cell and module production. Task 4: Automated array assembly
[NASA-CR-168923] p 51 N82-24719
Trinity Univ., San Antonio, Tex.
Results of roof pond heating experiments using the Passive Test Facility for warm, humid climates
[DE82-003226] p 60 N82-26850
TRW, Inc., McLean, Va.
A cost-effectiveness evaluation of chemical heat pumps p 12 N82-24693
Industrial Cogeneration Optimization Program: A summary of two studies
[DE82-005587] p 16 N82-26849
TRW, Inc., Oak Ridge, Tenn.
Thermal energy storage for residential energy conservation p 124 N82-24674

U

United Technologies Corp., East Hartford, Conn.
Microwave heating of the lower ionosphere p 117 N82-22747
The UTRC wind energy conversion system performance analysis for horizontal axis wind turbines (WECSPER) p 105 N82-23688
United Technologies Corp., South Windsor, Conn.
Ac/dc power converter for batteries and fuel cells
[DE82-900867] p 103 N82-22441

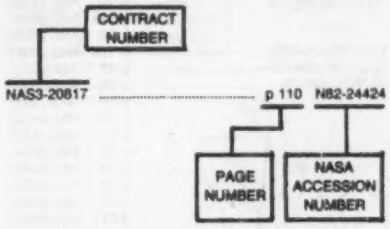
Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the *IAA* or *STAR* section.

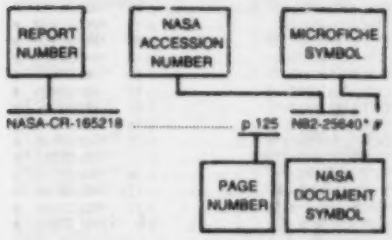
Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the actual page where the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

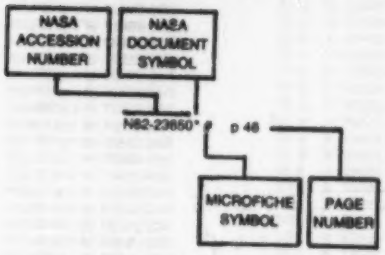
Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an '*' following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library
NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols '#' and '*' from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.
